5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.06 INSTALLATION OF CALCIUM SILICATE INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure single-layer insulation with stainless steel bands at 12-inch intervals, and tighten bands without deforming insulation materials.

2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with wire spaced at 12-inch intervals. Secure outer layer with stainless steel bands at 12-inch intervals.

3. Apply a skim coat of mineral-fiber, hydraulic-setting cement to insulation surface. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least 1 inch. Apply finish coat of lagging adhesive over glass cloth or tape. Thin finish coat to achieve smooth, uniform finish.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as that of pipe insulation.

4. Finish flange insulation same as pipe insulation.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as that of straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.

2. When preformed insulation sections of insulation are not available, install mitered sections of calcium silicate insulation. Secure insulation materials with wire or bands.

3. Finish fittings insulation same as pipe insulation.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install mitered segments of calcium silicate insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

2. Install insulation to flanges as specified for flange insulation application.

3. Finish valve and specialty insulation same as pipe insulation.

3.07 INSTALLATION OF CELLULAR-GLASS INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.

3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches o.c.

4. For insulation with factory-applied jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as that of pipe insulation.

4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as that of straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.

2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.

2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

3. Install insulation to flanges as specified for flange insulation application.

3.08 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as that of pipe insulation.

4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.

2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as that of pipe insulation when available.

2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

3. Install insulation to flanges as specified for flange insulation application.

4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.09 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.

3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches o.c.

4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.

4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as that of straight segments of pipe insulation when available.

2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as that of straight segments of pipe insulation when available.

2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.

3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

4. Install insulation to flanges as specified for flange insulation application.

3.10 INSTALLATION OF PHENOLIC INSULATION

A. General Installation Requirements:

1. Secure single-layer insulation with stainless steel bands at 12-inch intervals, and tighten bands without deforming insulation materials.

2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with 0.062-inch wire spaced at 12-inch intervals. Secure outer layer with stainless steel bands at 12-inch intervals.

B. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.

3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches o.c.

4. For insulation with factory-applied jackets with vapor retarders on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

C. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as that of pipe insulation.

D. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed insulation sections of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.

E. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed insulation sections of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.

2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

3. Install insulation to flanges as specified for flange insulation application.

3.11 INSTALLATION OF POLYISOCYANURATE INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with tape or bands and tighten without deforming insulation materials. Orient longitudinal joints between half sections in 3- and 9-o'clock positions on the pipe.

2. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive or tape, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic.

3. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, and same thickness as that of adjacent pipe insulation, not to exceed 1-1/2-inch thickness.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyisocyanurate block insulation of same thickness as that of pipe insulation.

C. Insulation Installation on Fittings and Elbows:

1. Install preformed sections of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of polyisocyanurate insulation to valve body.

2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

3. Install insulation to flanges as specified for flange insulation application.

3.12 INSTALLATION OF POLYOLEFIN INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Seal split-tube longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as that of pipe insulation.

4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of polyolefin pipe insulation.

2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install cut sections of polyolefin pipe and sheet insulation to valve body.

2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

3. Install insulation to flanges as specified for flange insulation application.

4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.13 INSTALLATION OF POLYSTYRENE INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation with tape or bands and tighten bands without deforming insulation materials. Orient longitudinal joints between half sections in 3- and 9-o'clock positions on the pipe.

2. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive or tape, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic.

3. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, and make thickness same as that of adjacent pipe insulation, not to exceed 1-1/2 inches.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polystyrene block insulation of same thickness that of as pipe insulation.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed insulation sections of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed section of polystyrene insulation to valve body.

2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

3. Install insulation to flanges as specified for flange insulation application.

3.14 INSTALLATION OF FIELD-APPLIED JACKETS

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.

2. Embed glass cloth between two 0.062-inch-thick coats of lagging adhesive.

3. Completely encapsulate insulation with coating, leaving no exposed insulation.

B. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.

2. Install lap or joint strips with same material as jacket.

3. Secure jacket to insulation with manufacturer's recommended adhesive.

4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch-wide joint strips at end joints.

5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

C. Where PVC jackets are indicated and for horizontal applications, install with 1-inch overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless steel bands 12 inches o.c. and at end joints.

E. Where PVDC jackets are indicated, install as follows:

1. Apply three separate wraps of filament tape per insulation section to secure pipe insulation to pipe prior to installation of PVDC jacket.

2. Wrap factory-presized jackets around individual pipe insulation sections, with one end overlapping the previously installed sheet. Install presized jacket with an approximate overlap at butt joint of 2 inches over the previous section. Adhere lap seal using adhesive or SSL, and then apply 1-1/4 circumferences of appropriate PVDC tape around overlapped butt joint.

3. Continuous jacket can be spiral-wrapped around a length of pipe insulation. Apply adhesive or PVDC tape at overlapped spiral edge. When electing to use adhesives, refer to manufacturer's written instructions for application of adhesives along this spiral edge to maintain a permanent bond.

4. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches or less. The 33-1/2-inch-circumference limit allows for 2-inch-overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.

5. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

3.15 FINISHES

A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

D. Do not field paint aluminum or stainless steel jackets.

3.16 FIELD QUALITY CONTROL

A. Owner will engage a qualified testing agency to perform tests and inspections.

B. Engage a qualified testing agency to perform tests and inspections.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

D. Perform tests and inspections[with the assistance of a factory-authorized service representative].

E. Tests and Inspections: Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.

F. All insulation applications will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports.

3.17 PIPING INSULATION SCHEDULE, GENERAL

A. Insulation conductivity and thickness per pipe size shall comply with schedules in this Section or with requirements of authorities having jurisdiction, whichever is more stringent.

B. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.

C. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:

1. Underground piping.

2. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.18 INDOOR PIPING INSULATION SCHEDULE

A. Condensate and Equipment Drain Water below 60 Deg F:

1. All Pipe Sizes: Insulation shall be[one of] the following:
    a. Cellular Glass: 1-1/2 inches thick.
    b. Flexible Elastomeric: 1 inch thick.
    c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
    d. Phenolic: 1 inch thick.
    e. Polyisocyanurate: 1 inch thick.
    f. Polyolefin: 1 inch thick.

B. Chilled Water and Brine, 40 Deg F and below:

1. NPS 3 and Smaller: Insulation shall be one of the following:
    a. Cellular Glass: 2 inches thick.
    b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1-1/2 inches thick.
    c. Phenolic: 2 inches thick.
    d. Polyisocyanurate: 1 inch thick.
2. NPS 4 to NPS 12: Insulation shall be one of the following:
    a. Cellular Glass: 2 inches thick.
    b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.
    c. Phenolic: 2 inches thick.
    d. Polyisocyanurate: 1 inch thick.
3. NPS 14 and Larger: Insulation shall be one of the following:
    a. Cellular Glass: 2 inches thick.
    b. Phenolic: [1-1/2 inches] [2 inches] [3 inches] <Insert dimension> thick.

C. Chilled Water and Brine, Above 40 Deg F:

1. NPS 12 and Smaller: Insulation shall be one of the following:
    a. Cellular Glass: 2 inches thick.
    b. Flexible Elastomeric: 1 inch thick.
    c. Phenolic: [1 inch] [1-1/2 inches] [2 inches] [3 inches] <Insert dimension> thick.

d. Polyisocyanurate: 1 inch thick.

e. Polyolefin: 1 inch thick.

2. NPS 14 and Larger: Insulation shall be one of the following:

a. Cellular Glass: 2 inches thick.

b. Phenolic: 2 inches thick.

D. Condenser-Water Supply and Return:

1. NPS 12and Smaller: Insulation shall be one of the following:

a. Cellular Glass: 2 inches thick.

b. Flexible Elastomeric: 1 inch thick.

c. Phenolic: [1 inch] [1-1/2 inches] thick.

2. NPS 14 and Larger: Insulation shall be one of the following:

a. Cellular Glass: 2 inches thick.

b. Phenolic: 2 inches thick.

E. Refrigerant Suction and Hot-Gas Piping:

1. All Pipe Sizes: Insulation shall be one of the following:

a. Cellular Glass: 1-1/2 inches thick.

b. Flexible Elastomeric: 1 inch thick.

c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.

d. Phenolic: 1 inch thick.

e. Polyisocyanurate: 1 inch thick.

f. Polyolefin: 1 inch thick.

F. Refrigerant Suction and Hot-Gas Flexible Tubing:

1. All Pipe Sizes: Insulation shall be one of the following:

a. Flexible Elastomeric: 2 inches thick.

b. Polyolefin: 2 inches thick.

G. Refrigerant Liquid Piping:

1. All Pipe Sizes: Insulation shall be[one of] the following:
    a. Cellular Glass: 1-1/2 inches thick.
    b. Flexible Elastomeric: 1 inch thick.
    c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
    d. Phenolic: 1 inch thick.
    e. Polyisocyanurate: 1 inch thick.
    f. Polyolefin: 1 inch thick.

3.19 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

A. Chilled Water and Brine:
1. All Pipe Sizes: Insulation shall be one of the following:
    a. Cellular Glass: 3 inches thick.
    b. Flexible Elastomeric: 3 inches thick.
    c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 3 inches thick.
    d. Phenolic: 2 inches thick.
    e. Polyisocyanurate: 2 inches thick.
    f. Polyolefin: 3 inches thick.
    g. Polystyrene: 2 inches thick.

B. Condenser-Water Supply and Return:
1. All Pipe Sizes: Insulation shall be one of the following:
    a. Cellular Glass: 2 inches thick.
    b. Flexible Elastomeric: 2 inches thick.
    c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.
    d. Phenolic: 2 inches thick.
    e. Polyisocyanurate: 2 inches thick.
    f. Polyolefin: 2 inches thick.
    g. Polystyrene: 2 inches thick.

C. Refrigerant Suction and Hot-Gas Piping:

1. All Pipe Sizes: Insulation shall be one of the following:

a. Cellular Glass: 2 inches thick.

b. Flexible Elastomeric: 2 inches thick.

c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.

d. Phenolic: 2 inches thick.

e. Polyisocyanurate: 2 inches thick.

f. Polyolefin: 2 inches thick.

g. Polystyrene: 2 inches thick.

D. Refrigerant Suction and Hot-Gas Flexible Tubing:

1. All Pipe Sizes: Insulation shall be one of the following:

a. Flexible Elastomeric: 2 inches thick.

b. Polyolefin: 2 inches thick.

E. Refrigerant Liquid Piping:

1. All Pipe Sizes: Insulation shall be one of the following:

a. Flexible Elastomeric: 2 inches thick.

b. Polyolefin: 2 inches thick.

F. Heat-Recovery Piping:

1. All Pipe Sizes: Insulation shall be one of the following:

a. Cellular Glass: 2 inches thick.

b. Flexible Elastomeric: 2 inches thick.

c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.

d. Phenolic: 2 inches thick.

e. Polyisocyanurate: 2 inches thick.

f. Polyolefin: 2 inches thick.

g. Polystyrene: 2 inches thick.

3.20 OUTDOOR, UNDERGROUND, PIPING INSULATION SCHEDULE

A. Insulation for belowground piping is specified in Section 232113.13 "Underground Hydronic Piping" and Section 232213.13 "Underground Steam and Condensate Heating Piping."

B. Chilled Water, All Sizes: Cellular glass, 2 inches thick.

C. Condenser-Water Supply and Return, All Sizes: Cellular glass, 2 inches thick.

D. Heating-Hot-Water Supply and Return, All Sizes, 200 Deg F and Below: Cellular glass, 3 inches thick.

E. Heating-Hot-Water Supply and Return, All Sizes, Above 200 Deg F:

1. Calcium Silicate: 3 inches thick.

2. Cellular Glass: 3 inches thick.

F. Steam and Steam Condensate, All Sizes, 350 Deg F and Below:

1. Calcium Silicate: 4 inches thick.

2. Cellular Glass: 4 inches thick.

G. Steam and Steam Condensate, All Sizes, Above 350 Deg F:

1. Calcium Silicate: 5 inches thick.

2. Cellular Glass: 5 inches thick.

H. Dual-Service Heating and Cooling, All Sizes, 40 to 200 Deg F: Cellular glass, 3 inches thick.

I. Fuel Oil Piping, All Sizes, Heated: Cellular glass, 2 inches thick.

3.21 INDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. If more than one material is listed, selection from materials listed is Contractor's option.

C. Piping, Concealed:

1. PVC, Color-Coded by System: 30 mils thick.

2. Aluminum, Smooth, Corrugated, Stucco Embossed: 0.024 inch thick.

3. Stainless Steel, Type 304 or Type 316, Smooth No. 2B Finish, Corrugated, Stucco Embossed: 0.016 inch thick.

D. Piping, Exposed:

1. PVC, Color-Coded by System: 30 mils thick.

2. Aluminum, Smooth, Corrugated, Stucco Embossed: 0.024 inch thick.

3. Stainless Steel, Type 304 or Type 316, Smooth No. 2B Finish, Corrugated, Stucco Embossed: 0.016 inch thick.

3.22 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. If more than one material is listed, selection from materials listed is Contractor's option.

C. Piping, Concealed:

1. PVC, Color-Coded by System: 30 mils thick.

2. Aluminum, Smooth, Corrugated, Stucco Embossed: 0.024 inch thick.

3. Stainless Steel, Type 304 or Type 316, Smooth No. 2B Finish, Corrugated, Stucco Embossed: 0.016 inch thick.

D. Piping, Exposed:

1. PVC: 30 mils thick.

2. Aluminum, Smooth, Corrugated, Stucco Embossed: 0.024 inch thick.

3. Stainless Steel, Type 304 or Type 316, Smooth No. 2B Finish, Corrugated, Stucco Embossed: 0.016 inch thick.

3.23 UNDERGROUND, FIELD-APPLIED INSULATION JACKET

A. For underground direct-buried piping applications, install underground direct-buried jacket over insulation material.

END OF SECTION

23 09 23

ENERGY MANAGEMENT AND CONTROL SYSTEM (EMCS)

PART 1 - GENERAL

1.01 GENERAL

A. The Energy Management and Control System (EMCS) shall be comprised of a Local Area Network (LAN) infrastructure, Operator Workstations (OWS), Engineering Workstations (EWS), a Primary Network Server (PNS), Network Area Controllers (NAC), Application Specific Controllers (ASC), Unitary System Controllers (USC), and Field Devices installed within the facility.

B. The Workstations, Primary Network Server, and Network Area Controllers shall be connected by an EMCS Contractor supplied and installed Local Area Network. The LAN shall comply with all IEEE Standards as outlined in: IEEE STD 802-2014: IEEE Standard for Local and Metropolitan Networks, Overview and Architecture.

C. If the EMCS Contractor wishes connect to the Owner's Wide Area/Local Area Network as part of the control system network, the EMCS Contractor shall acquire permission in writing and include the letter in the submittal. Any system that requires connection to the Owner's network for communication between NAC, ASC, USC and/or field devices that is submitted without the written permission from the Owner shall be rejected. The EMCS Contractor shall coordinate with the Owner and supply all required information.

D. Access to the system, either locally in the building, or remotely from a central site or sites, shall be accomplished through standard web browsers, via the Internet and/or a local area network. System shall be compatible across various devices including iPhone, Android and Windows phones and various tablets running these operating systems.

E. All EMCS controllers and workstations shall communicate using the protocols and network standards as defined by ANSI/ASHRAE Standard 135-2016, latest revision. Management level TCP/IP Ethernet network speeds shall be 1 Gbps minimum and the Automation Level MS/TP network speeds shall be 76.8 Kbps minimum.

F. The Server shall gather data from the system and generate HTML5 pages accessible through a conventional web browser from all personal computers (PCs), tablets and mobile phones connected to the network. System shall include any and all software and hardware to support unlimited users. The EMCS shall be compatible with all common web browsers.

G. Facility Operators shall be able to view and configure systems through the standard web browser and all graphical/data representations shall appear identical, whether the user is on site or viewing via the Internet at a remote location. Standard operator functions such as control point manipulation, configuration and viewing of trends, schedules and alarms shall be performed through the standard browser. Each mechanical system and building floor plan shall be depicted on the operator workstation by point-and-click graphics.

H. The EMCS shall directly control HVAC equipment as specified in the Sequence of Operations. Furnish Energy Conservation features such as Optimal Start/Stop, Night Setback, Setpoint Reset logic, and Demand Control Ventilation.

I. The EMCS vendor shall provide the following additional services as part of this Specification: warranty and service during the warranty period; submittals, samples and record documentation; comprehensive startup and testing of the EMCS with documentation; training services for the Owner and facility operators; coordination with other contractors and suppliers; operator and technician training program, and shall cooperate fully with the Project Commissioning Agent (CxA).

J. Products furnished under this Specification but installed by others.

1. Mechanical devices installed under Division 23 by the Mechanical Contractor or other suppliers: temperature sensing thermowells; automatic control dampers not installed in air handling unit mixing boxes or louver schedules; damper actuators for variable air volume (VAV) terminal units; mounting cost of controller and actuator for VAV terminal units.

2. Electrical devices installed under Division 26 by the electrical Contractor:

a. 120 VAC power to controllers and control panels at locations indicated on the Drawings. Review and verify that these locations are adequate for the proposed EMCS.

b. Interlock wiring to duct mounted smoke detector or fire alarm shutdown relays to HVAC equipment motor starters, variable frequency drives (VFD) and etc.

K. Provide and install all interconnecting cables between all operator’s terminals and peripheral devices (such as printers, etc.) supplied under this section.

L. DDC system to be tied in to emergency button/switch to initiate shut down of all HVAC equipment when activated.

M. System shall be fully compatible and interface with existing County system. Owner shall be able to use Maintenance Direct for Actions on individual Areas as needed and requested by Owner. Contractor responsible for all hardware, software and coordination involved.

N. It is Contractor responsibility to discover and integrate all devices and points into system as necessary. This includes, but not limited to, HVAC, electrical, plumbing and lighting devices.

O. It is the intent of this Specification to describe the basic architecture and performance requirements of the Energy Management and Control System (EMCS). The turn-key EMCS shall include all work station software including operator software, cables, programming tools, graphics editor, all other available software programs, modules, handhelds, or plug- ins offered by the DDC manufacturers, hardware, Control Units, Distributed Controllers, Unitary Controllers, Local Area Networks (LANs), sensors, modems, wiring, connectors, control devices, actuators, installation and calibration, supervision, adjustments and fine tuning necessary for a complete and fully operational system.

P. Systems shall be furnished and installed complete in all respects, including any and all equipment, controls, wiring, instrumentation, enclosures, labor, engineering, training, commissioning, programming, supervision, calibration, coordination with other trades, etc. No information given in (or omitted from) these Specifications shall relieve the Contractor of this absolute requirement. Include all associated electrical work except as noted. Work includes furnishing of all labor, superintendence, materials, tools, equipment and sources necessary for the complete installation or modification of the following systems as herein specified. It is the intent of these Specifications that the Contractor shall furnish and install the systems complete in every respect and ready to operate. All equipment, miscellaneous items and accessories required for such installation and for the correct and convenient operation of the entire installation whether or not each such item or accessory is shown on the plans or mentioned in these Specifications shall be furnished and installed.

Q. All systems shall be complete true stand-alone systems. Program database, data acquisition, and all control sequence logic shall reside in each DDC Device.

R. The Building Level Communication Network (BLCN) shall not be dependent upon connection to a Server or Master Controller for the performance of the Sequence of Control as outlined in this Specification. Each Device shall, to the greatest possible extent, perform its programmed sequence without reliance on the BLCN.

1. All devices installed shall be native BACnet. **LonWorks or proprietary protocols are NOT ALLOWED.** Devices that are not BACnet tested, compliant, certified, clearly stamped and listed by the BACnet Testing Laboratories (BTL) shall not be acceptable under this Specification and are strictly prohibited.

2. System shall be provided with a complete Web-enabled operator interface. The application shall operate on industry standard PC hardware. Proprietary server hardware or “Black Boxes” will not be acceptable. Third party Web-enabled applications are acceptable if they are configured to be indistinguishable from the OWS applications.

3. No Gateways, Communication Bridges, Protocol Translators or any other device that translates any proprietary or other communication protocol to the BACnet communication the protocol shall be permitted as a part of the EMCS installation under this Specification section. Gateways may only be used as required for communication to existing systems or systems installed under other Specification sections.

4. All EMCS DDC Devices shall be capable of updating firmware using software via the internet without replacing any hardware, microprocessors or chips.

5. Installed system must have full access to logic and functional blocks. User shall have full ability to modify programming.

6. Outside air temperature shall be supplied by the National Weather Service with a local backup at every site.

7. Point naming/labeling shall be consistent throughout buildings.

8. Where Drawings are provided as part of or supplement to these Specifications, such Drawings are inherently schematic only and not intended to convey all controls, wiring, installation, details, etc. It shall be the responsibility of the EMCS Contractor to verify

that control approaches presented are appropriate for the HVAC systems involved, and that bids include all work described, specified, or otherwise necessary for a complete and functioning system.

9. System shall have the ability to program schedules locally if needed during network outages.

1.02 RELATED DOCUMENTS & REFERENCES

A. Drawings and general provisions of the contract documents, apply to this section including:

1. Division 01 for General Conditions and Supplementary Conditions.
2. Division 21 for fire protection equipment.
3. Division 22 for plumbing equipment and domestic water systems.
4. Division 23 for mechanical equipment, ductwork, and piping systems.
5. Division 26 for electrical equipment, lighting control, and fire alarm systems.
6. Section 013300 Submittals.
7. Section 01524 Construction Waste Management
8. Section 01352 LEED Requirements
9. Section 01611 Environmental Management
10. Section 01570 Pollution Prevention and Control

B. The latest edition of the following standards and codes in effect as approved by the authority having jurisdiction and amended as of supplier's proposal date, and any applicable subsections thereof, shall govern design and selection of equipment and material supplied:

1. ANSI MC85.1 - Terminology for Automatic Control.
2. American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE).
3. ANSI/ASHRAE Standard 135-2016, BACnet.
4. BTL Mark by the BACnet Testing Laboratories.
5. International Building Code (IBC), 2015 edition including local amendments.
6. International Energy Conservation Code (IECC), 2015 edition including local amendments.
7. UL 916 Underwriters Laboratories Standard for Energy Management Equipment. Canada and the US.

8. National Electrical Code (NEC), 2017 edition.

9. FCC Part 15, Subpart J, Class A.

10. National Institute of Standards and Technology (NIST).

11. IEEE STD 802-2014: IEEE Standard for Local and Metropolitan Networks, Overview and Architecture.

1.03 RELATED WORK IN OTHER SECTIONS

A. Refer to Division 00 and Division 01 for allowances and related contractual requirements.

B. Refer to Division 21 for General Fire Protection Provisions and fire suppression pump.

1. The EMCS Contractor shall provide communications integration via BACnet/IP interface to each installed system listed above. BACnet MS/TP or Modbus acceptable if IP interface is not available from equipment manufacturer.

2. The EMCS Contractor shall coordinate with all vendors providing above systems to obtain communications requirements and points lists. Map all available points to EMCS.

C. Refer to Division 22 for General Plumbing Provisions, domestic water heating systems, domestic water pumping systems, and domestic water metering.

1. The EMCS Contractor shall provide communications integration via BACnet/IP interface to each installed system listed above. BACnet MS/TP or Modbus acceptable if IP interface is not available from equipment manufacturer.

2. The EMCS Contractor shall coordinate with all vendors providing above systems to obtain communications requirements and points lists. Map all available points to EMCS.

D. Refer to Division 23 for General Mechanical Provisions for equipment such as air-handling units, terminal units, ventilation fans, variable frequency drives, unitary AC units, etc.

1. The EMCS Contractor shall provide communications integration via BACnet/IP interface to each installed system listed above. BACnet MS/TP or Modbus acceptable if IP interface is not available from equipment manufacturer.

2. The EMCS Contractor shall coordinate with all vendors providing above systems to obtain communications requirements and points lists. Map all available points to EMCS.

E. Refer to Section 26 for General Electrical Provisions for equipment such as electrical switchgear control, electrical power monitoring, emergency generators, lighting control system, etc.

1. The EMCS Contractor shall provide communications integration via BACnet/IP interface to each installed system listed above. BACnet MS/TP or Modbus acceptable if IP interface is not available from equipment manufacturer.

2. The EMCS Contractor shall coordinate with all vendors providing above systems to obtain communications requirements and points lists. Map all available points to EMCS.

1.04 ELECTRICAL POWER PROVISIONS

A. Primary power will be provided under Division 26 by the electrical Contractor to the panel locations indicated on the mechanical & electrical Drawings. Provide step down transformers within panel enclosures. Provide all necessary fuses and circuit protection devices.

B. Power will be provided to the controllers serving fan powered terminal units with electric heat via the control transformer provided with the unit.

C. All components of the EMCS shall be powered from the sources above. Provide final terminations from the locations indicated on the Division 23 Drawings.

D. The EMCS Contractor shall provide any additional control power that is required as part of this contract and not indicated by other. This shall include all conduit, cabling, circuit breakers, etc.

1.05 CONTRACTOR QUALIFICATIONS

A. The EMCS Contractor shall:

1. Have a local office within 100 miles of jobsite before bid date and at a minimum until the completion of the warranty period.

2. Have a local staff of trained personnel capable of giving instructions and providing routine and emergency maintenance on the EMCS, all components and software/firmware and all other elements of the EMCS.

3. Have a proven record of experience in the supply and installation of equivalent EMCS/BACnet systems over a minimum period of five years. Provide documentation of at least three equal and complexity, if so requested by the Owner's Representative.

4. Be a factory certified representative of the native BACnet EMCS manufacturer for design, installation, and service of the proposed system.

5. Have comprehensive local service, training and support facilities for the total EMCS as provided. Maintain local, supplies of essential expendable parts.

6. Have a local 24/7 phone support service.

1.06 SUBMITTALS

A. All documents submitted shall be in native pdf format. Scans are not acceptable.

B. Shop Drawings:

1. The following information shall be included on the cover page for each shop drawing and equipment documentation submittal:

a. Project name with date. Refer to the applicable Specifications by name and number.

b. Provide submittal number and re-submittal number and date as applicable.

c. Provided name and address of Consulting Engineer, Mechanical Contractor, General Contractor

2. Shop drawings shall be CAD generated, plot size of 8-1/2" x 11" or 11" x 17". Drawings shall include diagrams, mounting instructions, installation procedures, equipment details and software descriptions for all aspects of the system to be installed.

3. Provide schematic of systems indicating instrumentation locations, all interconnecting cables between supplied cabinets on a mechanical floor plan.

4. Software specifications and descriptions including operating sequences.

5. Provide a bill of material that indicates specific manufacturer, part number, part description and quantity of each device for all system components.

6. Provide a list of the wire labels to be installed on each end of the control wiring, at the device and the control panel terminal. Labels shall be machine generated, typed and legible with a maximum of 17 characters. The label description “AHU-1 SAT” shall indicate the supply air temperature of AHU-1.

7. Equipment Schematic: Provide an electronic equipment schematic for each piece of mechanical equipment. The schematic shall display all mechanical equipment

8. characteristics including fans, dampers, valves, sensors and other applicable control devices. The schematic shall show wiring terminations to each control device as shown in the submittal and as-build documentation. Control devices shall be labeled by a symbol that can easily be identified in a bill of material that is shown on this graphic. The bill of material shall show the device symbol, description, manufacture and part number.

9. Sequence of Operations: The control sequences shall be viewable for each piece of mechanical equipment and be in a text format as shown in the as built documentation. The sequence of operations shall be selectable at the applicable location for the control program.

10. Provide detail points list on every piece of equipment.

11. Provide technical cut sheets showing all relevant devices and/or information highlighted to distinguish what was installed.

C. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

1. Recycled Content:

a. Indicate recycled content; indicate percentage of pre-consumer and post-consumer recycled content per unit of product.

2. Local/Regional Materials:

a. Indicate location of manufacturing facility; indicate distance between manufacturing facility and the project site.

b. Indicate location of extraction, harvesting, and recovery; indicate distance between extraction, harvesting, and recovery and the project site.

3. VOC data:

a. Submit manufacturer's product data for joint compounds. Indicate VOC and chemical component limits of the product. Submit MSDS highlighting VOC and chemical component limits. VOC contents and chemical component limits must be less than the limits of Green Seal’s Standard GS-11.

b. Submit manufacturer’s certification that products comply with Green Seal’s Standard GS-11

c. Submit environmental data in accordance with Table 1 of ASTM E2129 for products provided under work of this Section.

4. Submit the following according to Conditions of the Construction Contract.

a. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

D. Control Component Submittals:

1. Component technical data sheets with mounting and installation details.

2. The documentation shall include comprehensive and complete details of the BACnet Interoperability Building Blocks (BIBB) and automation level documentation including address, associated controller type, etc. as required and for the interface to the EMCS.

3. Details of networks/communications equipment, cabling and protocols proposed. Provide schedule of cabling including details of proposed cable types.

4. Module Drawing: Provide an electronic wiring diagram of each control module (as shown in submittal documentation). Diagram shall display wiring schematic and terminations to end devices. Diagram shall display each input and output terminals and label those that are used for the control application. Diagram shall display module type/name and network address.

5. Field sensor and instrumentation Specification sheets. Provide complete manufacturer’s specifications for all items that are supplied. Include vendor name of every item supplied.

6. Schedule and Specification sheets for dampers, valves and actuators.

7. Design and provide layout of all components of panel mounted control devices, terminal strips and power supplies.

E. Color Graphics: Provide sample layout of color graphic representations of the systems for review. The submittal shall indicate the quality of the graphic to be provided with the system with a sample of the specific control points to be included. Control points shall as a minimum include points indicated in the input/output summary, control schematic and primary controlling points defined in the sequences of operation. Provide a sample of a floor plan layout, typical AHU, terminal unit, outside air pretreatment unit, variable frequency drive, exhaust/supply fan, chiller plant and hot water plant. For control points to be provided by equipment BACnet integration provide sample of the control points.

F. Verification Reports. The submittal shall include a sample of the verification reports to be utilized during the verification section of this Specification. Sample reports shall be approved as submitted or be modified by the engineer or Owner’s representative. The verification reports shall be included in the final Operation & Maintenance Manuals. Reports shall be provided in electronic PDF format.

1. Project Systems Verification Form for each controller.

a. General information for each form shall include: project name; associated equipment with mark number; control panel number and location; controller number and model number; controller device instance number (address); MS/TP LAN segment number; verifying technician and date.

b. Each connected control point and device shall contain the following columns with a separate line for each connected physical point: point description (same as device label); input/output number for each connected control device (AI-XX, AO-XX, DI-XX, or DO-XX).

c. Check boxes confirming that the verification tasks have been completed: device location, proper termination at device; proper termination at control panel; sequence is verified; point trend is enabled.

d. Data entry boxes indicating measured/confirmed values: preliminary control point value on the graphic; observed control point value; calibration or adjustment value to correct offset; final displayed point value on the color-graphic; date of verification; engineer or Owner’s representative verification.

2. Control Panel Verification Form for each control panel.

a. General information: panel location and identification number; panel dimensions and NEMA rating; panel properly installed; Class 1 and Class 2 wiring are properly separated; correct voltage to the panel; no shorts or grounds in panel; no induce voltages in panel wiring; point to point termination match submittal; devices are mounted in the correct location; controller software revision number; address of controllers; panel device checkout is complete; panel startup is complete.

3. Sequence of Operation Verification Form per piece of equipment (AHU, VAV, chiller, boiler, etc.).

a. General information: project name; system identifier; building area served; control panel and controller numbers; controller model number and instance number (address); MS/TP LAN segment number; name of verifying technician and date.

b. Each step of the sequence of operation for each piece of equipment shall be documented shall include a "description of test", "input to trigger test" and "expected outcome". A pass/fail checkbox shall indicate each of these actions. Provide space for technician approval with associated date.

G. Operating and Maintenance (O&M) manuals: Provide O&M manual with full information to allow the Owner to operate, maintain and repair installed products. Include trade names with model numbers, color, dimensions and other physical characteristics.

1. Format: Produce on 8-1/2 x 11-inch pages, and bind in 3-ring/binders with durable plastic covers. Label binder covers with printed title "OPERATION AND MAINTENANCE MANUAL", title of project, and subject matter and "Number _ of _" of binder. Provide substantial dividers tabbed and titled by section/component number.

2. Table of Contents for each volume:

a. Part 1: Directory with name, address and telephone number of Designer, Contractor and Subcontractors and Suppliers for each Project Manual section.

b. Part 2: Operation and maintenance instructions, arranged by Project Manual Section number where practical and where not, by system. Include:

1) Product design criteria, functions, normal operating characteristic and limiting conditions. Installation, alignment, adjustment, checking instructions and troubleshooting guide. Operating instructions for start-up, normal operation,

2) regulation and control, normal shutdown and emergency shutdown. Test data and performance curves.

3) Spare parts list for operating products, prepared by manufacturers including detailed drawings giving location of each maintainable part, lists of spares recommended for user- service inventory and nearest source of in-stock spares.

H. Record Documentation:

1. Details of all alarm, diagnostic, error and other messages. Detail the Operator action to be taken for each instance.

2. Detail special programs provided and provide a complete programming instruction manual. Detail operation of all software applications.

3. Detailed list of the database for all installed devices.

4. Record drawings shall be CAD generated and shall include final locations and point ID for each monitored and controlled device.

5. In additional to the required hard-copies, provide electronic copies on a USB Drive with all of the record documentation in PDF format and a USB Drive containing backup copies of all installed software and graphics.

6. Provide an excel spreadsheet for tracking and maintenance by equipment type. Coordinate with Owner for database and template requirement.

7. Online as-built documentation: provide digital replications of as-builts that shall be accessible from each equipment graphic controlled or monitored by the EMCS.

1.07 WARRANTY

A. Warranty work and the equipment provided under this contract shall be for a period of one (1) year from the date of Substantial Completion. Warranty shall cover all components, system software, parts and assemblies supplied by this Contractor and shall be guaranteed against defects in materials and workmanship for one (1) year from the date of Substantial Completion. If manufacturer warranty on a product is longer than (1) year, Contractor is responsible for honoring and coordinating the warranty of that product up to the end of manufacturer warranty. Labor to troubleshoot, repair, reprogram or replace system components that have failed due to defects in materials and workmanship shall be provided by this Contractor at no charge to the Owner during the warranty period. All corrective software modifications made during warranty service periods shall be updated on all user documentation and on user and manufacturer archived software. All warranty work shall be performed by the EMCS Contractor’s local service group.

B. Warranty shall not include routine maintenance, e.g., equipment cleaning, mechanical parts lubrication, pilot lamp replacement, operational testing, etc. Warranty shall not cover repair or replacement of equipment damaged by under- or over-voltage, misuse, lack of proper maintenance, lightning, water damage from weather or piping failure.

C. Hardware and software personnel supporting this warranty agreement shall provide on- site or off-site service in a timely manner after failure notification to the EMCS Contractor. The maximum acceptable response time to provide this service at the site shall be 24 hours, during normal working hours.

1.08 OPERATOR WORKSTATION (OWS)

A. The Operator Workstation shall be any personal computer, connected to the WAN/LAN, with appropriate web browser software installed.

1.09 ENGINEERING WORKSTATION (EWS)

A. The Engineering Workstation shall be any personal computer or virtual pc and/or server, connected to the WAN/LAN, with a registered copy of the EMCS Contractor supplied engineering and/or programming software installed. The EMCS Contractor shall provide at least one copy of all required software(s) and files, to enable the Owner complete editing/programming functions of all controllers, graphics, and control logic.

B. The EMCS shall provide one (1) virtual pc and/or server which is compatible with the performance required by the EMCS Engineering Software. It shall be able to be reached locally and remotely as needed.

PART 2 - PRODUCTS

2.01 ENVIRONMENTALLY PREFERABLE PRODUCTS

A. Provide environmentally preferable products to the greatest extent possible.

1. To the greatest extent possible, provide products and materials that promote stewardship of the earth's resources, promote good indoor environmental quality (IEQ), and promote efficiencies in operational performance.

B. Provide products listed on the EPA Comprehensive Procurement Guidelines to the greatest extent practicable.

C. Provide products listed on the USGBC Directory of Products and Services to the greatest extent possible.

2.02 RECYCLED CONTENT

A. Provide recycled content products to the greatest extent possible.

1. To the greatest extent possible, provide materials with recycled content such that the sum of post-consumer recycled content plus one-half of the post-industrial content constitutes at least 10% of the total value of the materials in the project.

2.03 REGIONAL MATERIALS

A. Provide Regional materials and products to the greatest extent possible that are extracted and manufactured within the region.

1. Provide materials and products that use a minimum of 20 % of building products that are manufactured regionally within a radius of 500 miles from the project site.

a. Manufacturing refers to the final assembly of components into the building product that is furnished and installed by the tradesman.

2. Of the regionally manufactured materials used and documented, use a minimum of 50% of building materials and products that are extracted, harvested or recovered (as well as manufactured) within 500 miles of the project site.

2.04 CONTROL SYSTEM

A. Acceptable Manufacturer

1. Temperature control system: The BMCS system shall be fully integrated through the new operator workstation in compliance with the performance requirements set forth in this Specification. All equipment provided herein shall be required to communicate through a facility wide EMCS workstation by means of full binary interface to maintain operations for school district personnel. Any additional software or hardware required to maintain the integrity of the campus wide system shall be included in the bid price. DDC hardware and software introduced as part of this project shall in no way alter the integrity of the campus wide system.

2. Temperature control system:

   a. Manufacturers:

      1) Tracer by Trane

      2) Automated Logic

3. Installer is responsible for quality and satisfactory operation of devices, and for overall performance of system. New system shall integrate with existing campus BAS system.

4. Other manufacturers desiring approval shall comply with Section 01 60 00.

B. Temperature Control System:

1. Include:

   a. Temperature sensors.

   b. Humidity sensors.

   c. Controllers.

   d. Switches.

   e. Relays.

   f. Dampers.

   g. Damper operators.

   h. Thermostats.

   i. Humidistats.

   j. Hygrometers.

   k. Other associated controls required to maintain conditions described in detail on Drawings, together with thermometers, gauges and other accessory equipment.

2. Provide complete system of wiring and air piping as necessary to fill intent of these Specifications.

3. Control sequences indicated illustrate basic control functions only.

4. Provide additional controls required to meet intent of these Specifications and make a complete functional system.

5. Space temperature and humidity control.

6. Control of air handling units.

7. Control of exhaust systems.

8. Control of cooling systems.

9. Control of heating systems.

10. Control panels.

C. Where electronic sensing is used, furnish amplifier relays and transformer complete with overload protection.

D. Electrical drawings indicate type of motor control required by equipment.

2.05 PRIMARY NETWORK SERVER (PNS)

2.06 The EMCS shall be fully integrated and a continuation of Stafford MSD's existing Johnson Controls Server and system without exception. The EMCS Contractor shall either upgrade or provide a new ADX Server as part of this system if the existing server is not fully compatible with new Metasys EMCS being provided. The ADX Server shall utilize the Internet and provide efficient integration of standard open protocols. The ADX Server shall maintain comprehensive database management, alarm management and messaging services, and graphical user interface as follows:

1. Support an unlimited number of users and up to 5 concurrent users over the Internet/intranet with a standard web browser to access alarms, trend logs, graphics, schedules and configuration data. Access to the PNS shall be password protected utilizing authentication and encryption techniques. An audit trail of database changes indicating user, time stamp, and audit action shall be provided.

2. Enterprise level information exchange using an SQL database and HTML5 formats.

3. Synchronize controller databases, database storage scheduling, control and energy management routines

4. Alarm processing and routing shall include email, SMS text messages and paging as needed by the Owner.

5. HTML5 based help system that includes comprehensive online system documentation.

6. Support of multiple Network Area Controllers (NAC) connected to a Local Area Network.

7. Aggregate data and provide visualization interface and dashboard that includes, but not limited to, graphs, gauges, charts of relevant trends and energy usage.

B. Server Functions

1. It shall be possible to access all Network Area Controllers (NAC) via a single connection to the server through the Ethernet LAN. In this configuration, each Network Area Controller can be accessed from a single user login.

2. The PNS shall provide the following functions, at a minimum:

   a. The server shall provide complete access to distributed global data. The server shall provide the ability to execute global control strategies based on control and data objects in any NAC in the network, local or remote.

   b. The server shall include a master clock service for its subsystems and provide time synchronization for all NACs.

   c. The server shall provide scheduling for all NACs and their underlying field control devices.

   d. The server shall provide demand limiting control that operates across all NACs. The network server shall be capable of multiple demand limiting programs for sites with multiple meters and or multiple sources of energy. Each demand program shall be capable of supporting separate demand shed lists for effective demand control.

   e. The server shall implement the BACnet Command Prioritization scheme (16 levels) for safe and effective contention resolution of all commands issued to NACs. Each Network Area Controller supported by the server shall have the ability to archive its log data, alarm data and database to the server, automatically. Archiving options shall be user-defined including archive time and archive frequency.

   f. The server shall provide central alarm management for all NACs supported by the server. Alarm management shall include: routing of alarms to a video display, a printer, an email and pager; view and acknowledge alarms; query alarm logs based on user-defined parameters

   g. The system will be provided with a dedicated alarm window or console. This window will notify the operator of an alarm condition, and allow the operator to view details of the alarm and acknowledge the alarm. The use of the Alarm Console can be enabled or disabled by the system administrator.

   h. The server shall provide central management of logged data for all NACs supported by the server. Logged data shall include process logs, runtime and event counter logs, audit logs and error logs. Log data management shall include: viewing and printing log data; exporting log data to other software applications; query log data based on user-defined parameters. A report log of manually overridden points shall be part of the management system.

   i. Storage of the graphical screens shall be in the network web server, without requiring any graphics to be stored on the client machine. Systems that require graphics storage on each client are not acceptable.

   j. Modify common application objects, such as schedules, calendars, and set-points in a graphical manner. Schedule times will be adjusted using a graphical slider. Holidays shall be set by using a graphical calendar.

k. Commands to start and stop binary objects shall be done by right-clicking the selected object and selecting the appropriate command from the pop- up menu. No entry of text shall be required.

l. The Primary Network Server shall be capable of supporting at the very minimum the following open system drivers.

1) BACnet/IP

2) Modbus TCP

C. Network Server Platform Requirements

1. Rack-Mounted Server Computer Hardware: DELL PowerEdge R230 or equal, Intel Xeon Quad E3-1225 V53.3 GHz or higher, 16GB RAM, 1TB hard drive, video card, 22" color monitor, and Ethernet adapter 1Gbps or higher.

2. Operating system software shall be Microsoft Windows 10 Professional or higher. Exceptions shall be pre-approved by Owner.

2.07 NETWORK AREA AUTOMATION ENGINE (NAE)

A. General

1. The Network Automation Engine (NAE) shall be a fully user-programmable, supervisory controller. The NAE shall monitor the network of distributed application-specific controllers, provide global strategy and direction, and communicate on a peer-to-peer basis with other Network Engines.

2. Automation network – The NAE shall reside on the automation network and shall support a subnet of system controllers.

3. User Interface – Each NAE shall have the ability to deliver a web based User Interface using the Site Management Portal functionality previously described. All computers connected physically or virtually to the automation network shall have access to the web based user interface.

a. The web based user interface software shall be embedded in the NAE. Systems that require a local copy of the system database on the user's personal computer are not acceptable.

b. The NAE shall support a minimum of two (2) concurrent users.

c. The web-based user shall have the capability to access all system data through a single NAE.

d. Remote users connected to the network through an Internet Service Provider (ISP) or telephone dial up shall also have total system access through one NAE.

e. Systems that require the user to address more than one NAE to access all system information are not acceptable.

f. The NAE shall have the capability of generating web based user interface graphics. The graphics capability shall be embedded in the NAE.

g. Systems that only support user interface graphics from a central database or require the graphics to reside on the user's personal computer are not acceptable.

h. The web based user interface shall support the following functions using a standard version of Microsoft Internet Explorer:

1) Configuration

2) Commissioning

3) Data Archiving

4) Monitoring

5) Commanding

6) System Diagnostics

i. Systems that require workstation software or modified web browsers for system queries are not acceptable.

j. The NAE shall allow temporary use of portable devices without interrupting the normal operation of permanently connected modems.

4. Processor – The NAE shall be microprocessor-based with a minimum word size of 32 bits. The NAE shall be a multi-tasking, multi-user, and real-time digital control processor. Standard operating systems shall be employed. NAE size and capability shall be sufficient to fully meet the requirements of this Specification.

5. Memory – Each NAE shall have sufficient memory to support its own operating system, databases, and control programs, and to provide supervisory control for all control level devices.

6. User Authentication – The NAE shall support local users, Active Directory users, Microsoft Office 365 users and Remote Authentication Dial-in User Service (RADIUS).

7. Password Security – Access to the embedded user interface shall require a password of 8 to 50 characters including a minimum of one lower case letter, one upper case letter, one number, and one special character. An alarm shall be generated after three unsuccessful attempts within 15 minutes and the user shall be denied access until permission is renewed by a system administrator.

8. Network Security – Communication between the NAE and other system networked devices including additional Network Engines, Application and Data Servers, Open Data Servers (BACnet listed OWS), and user interface clients shall be encrypted and support HTTPS with Transport Level Security (TLS) Version 1.2. Self-signed certificates are to be provided with the option of configuring trusted certificates.

9. Hardware Real Time Clock – The NAE shall include an integrated, hardware-Based, real-time clock.

10. Diagnostics – The NAE shall continuously perform self-diagnostics, communication diagnosis, and diagnosis of all panel components. The Network Automation Engine shall provide both local and remote annunciation of any detected component failures, low battery conditions, or repeated failures to establish communication.

11. Power Failure – In the event of the loss of normal power, The NAE shall continue to operate for a user adjustable period of up to 10 minutes after which there shall be an orderly shutdown of all programs to prevent the loss of database or operating system software.

    a. During a loss of normal power, the control sequences shall go to the normal system shutdown conditions. All critical configuration data shall be saved into Flash memory.

    b. Upon restoration of normal power and after a minimum off-time delay, the controller shall automatically resume full operation without manual intervention through a normal soft-start sequence.

12. Certification – The NAE shall be listed by UL.

13. Controller network – The NAE shall selectively support the following communication protocols on the controller network:

    a. The NAE shall support BACnet Standard MS/TP Bus Protocol ASHRAE SSPC-135 on the controller network.

        1) The NAE shall support Remote field bus integration via a BACnet IP to MS/TP router.

        2) The NAE shall be BTL certified and carry the BTL Label.

        3) The NAE shall be tested and certified as a BACnet Building Controller (B-BC).

        4) A BACnet Protocol Implementation Conformance Statement shall be provided for the NAE.

        5) The Conformance Statements shall be submitted 10 days prior to bidding.

    b. The NAE shall support LonWorks enabled devices using the Free Topology Transceiver FTT10.

        1) All LonWorks controls devices shall be LonMark® certified.

B. Network Automation Engine – Large, Dual Trunk

1. The NAE shall support a minimum of:

a. One Hundred (100) BACnet Standard MS/TP controllers per trunk (200 total).

b. Two Hundred Fifty Five (255) LonWorks FTT10 Free Topology control devices.

c. One Hundred (100) N2 control devices per trunk (200 total).

2. The NAE shall include troubleshooting LED indicators to identify the following conditions:

3. Power – On/Off.

a. Ethernet Traffic – Ethernet Traffic/No Ethernet Traffic.

b. Ethernet Connection Speed – 10 Mbps/100 Mbps/1000 Mbps.

c. FC Bus A – Normal Communications/No Field Communications.

d. FC Bus B – Normal Communications/No Field Communications.

e. Peer Communication – Data Traffic between NAE Devices.

f. Run – NAE Running/NAE in Startup/NAE Shutting Down/Software Not Running.

g. Bat Fault – Battery Defective, Data Protection Battery Not Installed.

h. 24 VAC – 24 VAC Present/Loss of 24 VAC.

i. Fault – General Fault.

j. Modem RX – NAE Modem Receiving Data (as required).

k. Modem TX – NAE Modem Transmitting Data (as required).

4. Communications Ports – The NAE shall provide the following ports for operation of operator I/O devices, such as industry-standard computers, modems, and portable operator’s terminals.

a. Two (2) USB port.

b. Two (2) RS-232 serial data communication port.

c. Two (2) RS-485 port.

d. One (1) Ethernet port.

5. Provide Johnson Controls NAE-55XX or approved equal as indicated on plans.

2.08 FIELD EQUIPMENT CONTROLLERS (FEC)

A. The Field Equipment Controller (FEC) shall be a fully user-programmable, digital controller that communicates via BACnet MS/TP protocol or optionally via N2Open.

1. The FEC shall support BACnet Standard MS/TP Bus Protocol ASHRAE SSPC-135 on the controller network.

2. The FEC shall be BTL certified and carry the BTL Label.

3. The FEC shall be tested and certified as a BACnet Application Specific Controller (B-ASC).

4. A BACnet Protocol Implementation Conformance Statement shall be provided for the FEC.

5. The Conformance Statement shall be submitted 10 days prior to bidding.

B. The FEC shall employ finite state programming to eliminate unnecessary conflicts between control functions at crossover points in their operational sequences. Suppliers using non-state based DDC shall provide separate control strategy diagrams for all controlled functions in their submittals.

C. Controllers shall be factory programmed with a continuous adaptive tuning algorithm that senses changes in the physical environment and continually adjusts loop tuning parameters appropriately. Controllers that require manual tuning of loops or perform automatic tuning on command only shall not be acceptable. The FEC shall be assembled in a plenum-rated plastic housing with flammability rated to UL94-5VB.

D. The FEC shall include troubleshooting LED indicators to identify the following conditions:

1. Power On.

2. Power Off.

3. Download or Startup in progress, not ready for normal operation.

4. No Faults.

5. Device Fault.

6. Field Controller Bus – Normal Data Transmission.

7. Field Controller Bus – No Data Transmission.

8. Field Controller Bus – No Communication.

9. SA Bus – Normal Data Transmission.

10. SA Bus – No Data Transmission.

11. SA Bus – No Communication.

E. The FEC shall accommodate the direct wiring of analog and binary I/O field points with the following minimum A/D and D/A conversion resolution.

1. Provide a minimum 15 bit A/D resolution for analog inputs.

2. Provide a minimum 15 bit D/A resolution for analog outputs.

F. The FEC shall support the following types of inputs and outputs:

1. Universal Inputs – shall be configured to monitor any of the following:

2. Analog Input, Voltage Mode.

3. Analog Input, Current Mode.

4. Analog Input, Resistive Mode.

5. Binary Input, Dry Contact Maintained Mode.

6. Binary Input, Pulse Counter Mode.

7. Binary Inputs – shall be configured to monitor either of the following:

8. Dry Contact Maintained Mode.

9. Pulse Counter Mode.

10. Analog Outputs – shall be configured to output either of the following:

11. Analog Output, Voltage Mode.

12. Analog Output, current Mode.

13. Binary Outputs – shall output the following:

14. 24 VAC Triac.

15. Configurable Outputs – shall be capable of the following:

16. Analog Output, Voltage Mode.

17. Binary Output Mode.

18. The FEC shall have the ability to reside on a Field Controller Bus (FC Bus).

G. The FC Bus shall be a MS/TP Bus supporting BACnet Standard protocol SSPC-135.

1. The FC Bus shall support communications between the FECs and the NAE.

2. The FC Bus shall also support Input/Output Module (IOM) communications with the FEC and with the NAE.

3. The FC Bus shall support a minimum of 100 IOMs and FECs in any combination.

4. The FC Bus shall operate at a maximum distance of 15,000 Ft. between the FEC and the furthest connected device.

H. The FEC shall have the ability to monitor and control a network of sensors and actuators over a SA Bus.

1. The SA Bus shall be a MS/TP Bus supporting BACnet Standard Protocol SSPC-135.

2. The SA Bus shall support a minimum of 10 devices per trunk.

3. The SA Bus shall operate at a maximum distance of 1,200 Ft. between the FEC and the furthest connected device.

I. The FEC shall have the capability to execute complex control sequences involving direct wired I/O points as well as input and output devices communicating over the FC Bus or the SA Bus.

J. The FEC shall support, but not be limited to, the following applications.

1. Chilled water/central plant applications including but not limited to:

2. Selection and sequencing of up to eight chillers of different sizes.

3. Selection and sequencing of up to eight (each) primary and secondary chilled water pumps of varying pumping capacities.

4. Selection and sequencing of up to eight condenser water pumps.

5. Selection and sequencing of cooling towers and bypass valve, including single speed, multi-speed, and Vernier control.

6. Selection and sequencing of up to four heat exchangers, of different capacities.

7. A proven and documented central cooling plant optimization program that incorporates custom equipment efficiency profiles, without rewriting software code, in order to meet the building load using the least amount of energy as calculated.

8. The use of advanced control algorithms that apply equipment specific parameters, including operational limits and efficiency profiles, in order to determine equipment start and runtime preferences.

9. Identification of the most efficient equipment combination and automatic control of state and speed of all necessary equipment to balance runtime, optimize timing and sequencing and ensure the efficiency and stability of the central cooling plant.

10. Control definition for the chiller plant in a single FAC, FEC, or NCE, as supported by available memory and point I/O, or capable of being split across multiple FACs, FECs, or NCEs.

11. Heating central plant applications.

12. Built-up air handling units for special applications.

13. Terminal & package units.

14. Special programs as required for systems control.

K. The FEC shall support a Local Controller Display either as an integral part of the FEC or as a remote device communicating over the SA Bus.

1. The Display shall use a BACnet Standard SSPC-135 MS/TP protocol.

2. The Display shall allow the user to view monitored points without logging into the system.

3. The Display shall allow the user to view and change setpoints, modes of operation, and parameters.

4. The Display shall provide password protection with user adjustable password timeout.

5. The Display shall be menu driven with separate paths for:

6. Input/Output.

7. Parameter/Setpoint.

8. Overrides.

9. The Display shall use easy-to-read English text messages.

10. The Display shall allow the user to select the points to be shown and in what order.

11. The Display shall support a back lit LCD with adjustable contrast and brightens and automatic backlight brightening during user interaction.

12. The display shall be a minimum of 4 lines and a minimum of 20 characters per line.

13. The Display shall have a keypad with no more than 6 keys.

14. The Display shall be panel mountable.

L. Provide Johnson Controls FEC or approved equal as shown on plans.

2.09 VAV MODULAR ASSEMBLY (VMA)

A. The VAV Modular Assembly (VMA) shall provide both standalone and networked DDC of pressure-independent, VAV terminal units. It shall address both single and dual duct applications.

B. The VMA shall be BTL certified and carry the BTL Label.

1. The VMA shall be tested and certified as a BACnet Application Specific Controller (B-ASC).

2. A BACnet Protocol Implementation Conformance Statement shall be provided for the VMA.

3. The Conformance Statement shall be submitted 10 days prior to bidding.

C. The VAV Modular Assembly shall communicate over the Field Controller Bus using BACnet Standard protocol SSPC-135.

D. The VAV Modular Assembly shall have internal electrical isolation for AC power, DC inputs, and MS/TP communications as provided. An externally mounted isolation transformer shall not be acceptable.

E. The VAV Modular Assembly shall be a configurable digital controller with integral differential pressure transducer and damper actuator. All components shall be connected and mounted as a single assembly that can be removed as one piece. Alternate configurations shall be available as follows:

1. A configurable digital controller with integral differential pressure transducer but without a damper actuator – for controlling large VAV boxes that require high torque.

2. A configurable digital controller with an integral damper actuator but without a differential pressure transducer –for commercial zoning applications or for pressure-dependent VAV box applications.

3. A configurable digital controller with an integral damper actuator and ball valve linkage but without a differential pressure transducer –for chilled beam applications.

F. The VAV Modular Assembly shall be assembled in a plenum-rated plastic housing with flammability rated to UL94-5VB or the controller is designed and suitable for use in other environmental air space (plenums) in accordance with Section 300.252(C) of the National Electrical Code.

G. The integral damper actuator shall be a fast response stepper motor capable of stroking 90 degrees in 60 seconds for quick damper positioning to speed commissioning and troubleshooting tasks.

H. The controller shall determine airflow by a state-of-the-art digital non-flow pressure sensor to provide 14-bit resolution with bidirectional flow operation that supports automatic correction for polarity on high- and low-pressure DP tube connections; this pressure sensor eliminates high- and low-pressure connection mistakes.

I. Each controller shall have the ability to automatically calibrate the flow sensor to eliminate pressure transducer offset error due to ambient temperature / humidity effects.

J. The controller shall utilize a proportional plus integration (PI) algorithm for the space temperature control loops.

K. Each controller shall continuously, adaptively tune the control algorithms to improve control and controller reliability through reduced actuator duty cycle. In addition, this tuning reduces commissioning costs, and eliminates the maintenance costs of manually re-tuning loops to compensate for seasonal or other load changes.

L. The controller shall provide the ability to download and upload VMA configuration files, both locally and via the communications network. Controllers shall be able to be loaded individually or as a group.

M. Control setpoint changes initiated over the network shall be written to VMA non-volatile memory to prevent loss of setpoint changes and to provide consistent operation in the event of communication failure.

N. The controller firmware shall be flash-upgradeable remotely via the communications bus to minimize costs of feature enhancements.

O. The controller shall provide fail-soft operation if the airflow signal becomes unreliable, by automatically reverting to a pressure-dependent control mode.

P. The controller shall interface with balancer tools that allow automatic recalculation of box flow pickup gain (“K” factor), and the ability to directly command the airflow control loop to the box minimum and maximum airflow setpoints.

Q. Controller shall have on-board diagnostics. These diagnostics shall consist of control loop performance measurements executing at each control loop’s sample interval, which may be used to continuously monitor and document system performance. The VMA shall calculate Exponentially Weighted Moving Averages (EWMA) for each of the following. These metrics shall be available to the end user for efficient management of the VAV terminals.

1. Absolute temperature loop error.
2. Signed temperature loop error.
3. Absolute airflow loop error.
4. Signed airflow loop error.
5. Average damper actuator duty cycle.

R. The controller shall detect system error conditions to assist in managing the VAV zones. The error conditions shall consist of:

1. Unreliable space temperature sensor.
2. Unreliable differential pressure sensor.
3. Starved box.
4. Actuator stall.
5. Insufficient cooling.
6. Insufficient heating.

S. The controller shall provide a flow test function to view damper position vs. flow in a graphical format. The information would alert the user to check damper position. The VMA would also provide a method to calculate actuator duty cycle as an indicator of damper actuator runtime.

T. The controller shall provide a compliant interface for ASHRAE Standard 62-1989 (indoor air quality), and shall be capable of resetting the box minimum airflow based on the percent of outdoor air in the primary air stream.

U. The controller shall comply with ASHRAE Standard 90.1 (energy efficiency) by preventing simultaneous heating and cooling, and where the control strategy requires reset of airflow while in reheat, by modulating the box reheat device fully open prior to increasing the airflow in the heating sequence.

V. Inputs:

1. Analog inputs with user-defined ranges shall monitor the following analog signals, without the addition of equipment outside the terminal controller cabinet:

2. 0-10 VDC Sensors.

3. 1000ohm RTDs.

4. NTC Thermistors.

5. The AVMA shall provide minimum 15 bit A/D resolution for analog inputs.

6. Binary inputs shall monitor dry contact closures. Input shall provide filtering to eliminate false signals resulting from input “bouncing.”

7. For noise immunity, the inputs shall be internally isolated from power, communications, and output circuits.

8. Provide side loop application for humidity control.

W. Outputs

1. Analog outputs shall provide the following control outputs:

2. 0-10 VDC

3. The AVMA shall provide minimum 15 bit D/A resolution of analog outputs

4. Binary outputs shall provide a SPST Triac output rated for 500mA at 24 VAC.

5. For noise immunity, the outputs shall be internally isolated from power, communications, and other output circuits.

X. Application Configuration

1. The VAV Modular Assembly shall be configured with a software tool that provides a simple Question/Answer format for developing applications and downloading.

Y. Sensor Support

1. The VMA shall communicate over the SA Bus with a Network Sensor.

2. The VMA shall support an LCD display room sensor.

3. The VMA shall also support standard room sensors as defined by analog input requirements.

4. The VMA shall support humidity sensors defined by the AI side loop.

Z. Provide Johnson Controls VMAxx or approved equal as shown on plans.

2.10 AIR HANDLING UNIT CONTROLLER

A. All devices required for single loop control shall be terminated on a single controller, (for example, AHU static pressure control. The differential pressure sensor and the VFD ramp signal.)

B. The EMCS Contractor shall provide controllers required for chilled/hot water and DX/electric heat air handling units and fan coil units. Provide an enclosure to house the controller and associated components including suitable mounting brackets shall be NEMA 1 rated and located outside the FCUs.

C. The controller shall be capable of monitoring and controlling the following parameters per the sequences of operation and input/output summary; space temperature; space relative humidity sensor; cooling/heating stage control or modulating valve control; fan on/off control and status; supply air sensor; occupancy sensor; carbon dioxide sensor; VFD control and monitoring.

2.11 SOFTWARE OVERVIEW

A. Dedicated Web Based User Interface

1. Where indicated on plans the BMS Contractor shall provide and install a personal computer for command entry, information management, network alarm management, and database management functions. Real-time control functions, including scheduling, history collection and alarming, shall be resident in the BMS Network Automation Engines and Data Server(s) to facilitate greater fault tolerance and reliability.

2. Dedicated User Interface Architecture – The architecture of the computer shall be implemented to conform to industry standards, so that it can accommodate applications provided by the BMS Contractor and by other third party applications suppliers, including but not limited to Microsoft Office Applications. Specifically it must be implemented to conform to the following interface standards.

a. Microsoft Internet Explorer 11.0 or Edge for user interface functions.

b. Microsoft Office Professional for creation, modification and maintenance of reports, sequences other necessary building management functions.

c. Microsoft Outlook or other e-mail program for supplemental alarm functionality and communication of system events, and reports.

d. Required network operating system for exchange of data and network functions such as printing of reports, trends and specific system summaries.

e. PC Hardware/Software – The personal computer(s) shall be configured as specified in the Computing Hardware and Software section.

f. Provide one operational device as herein specified and located on plans.

3. Mobile, Web Based, User Interface (MUI)

a. General

1) The mobile, web based, user interface shall be HTML5-compliant and provide device-agnostic access to the system from smartphones, tablets, portable and desktop computers. User Interfaces that require software installation on the client device (e.g. Java, MicrosoftSilverlight®, Adobe® Flash®), or software downloads from an online app store shall not be acceptable for these purposes.

2) The mobile user interface shall provide system operators with a simple location-based navigation approach to finding information, including the ability to search for any location by name and to bookmark a location in a standard browser.

3) The mobile user interface shall organize and display information using customer specific locations and spaces. At a minimum, the user interface shall provide:

a) Organization of all space, equipment and point information in a familiar way (using standard equipment names and location descriptions), reducing the need for extensive training prior to use.

b) A navigation mechanism or tree for users to select the specific location or space for accessing information – only spaces and locations in the navigation tree or equipment serving that space, nothing more.

c) The ability to search for and/or bookmark any location, space, or equipment by name for quick access to critical or troublesome areas.

d) Application of the same navigation mechanisms across any client device (e.g. Smart phone, tablet, personal computer) for consistency and ease of use.

4) The same user interface elements shall be accessible from any type of personal computer or mobile device running any type of operating system supported (e.g. iOS, Android, Windows®). It shall automatically adapt and optimize the display for the screen size and touch screen navigation.

5) The user interface shall provide support for up to 50 concurrent users from individuals with defined access to the system.

b. Navigation Trees

1) A dedicated location based navigation tree shall be provided as part of the user interface in order to navigate to specific places within the facility on a hierarchical basis (typ. Facility, Building, Wing, Floor, Room.)

2) The location-based tree shall use place names familiar to the operator without training or familiarization regarding special codes and conventions utilized in the generation of the BMS.

3) Clicking or tapping on a location name in the tree shall display the home page associated with the space and simultaneously expand the tree to display the next level of spaces below the one selected.

4) It shall be possible for qualified users to view a navigation tree of devices connected to the BMS network in order to enable troubleshooting of equipment and communications. Clicking or tapping on the Network Icon at the top of the Navigation Tree will access this alternate view. Users without the necessary access rights shall not see the Network Icon.

5) A click or tap on a device in the network tree shall display a dashboard for that device including information regarding related equipment and access to a separate focus view of commandable points associated with the piece of hardware. A click or tap on such a point shall display a control dialogue box allowing the user to modify or command that point as indicated. The dialog box shall contain an annotation box for describing why the action was taken or special circumstances that apply.

6) Specific hardware and software types in the Network tree shall also include access to one or more the following views in their dashboard depending on hardware type or network element (e.g. MS/TP trunk):

a) Summary View

b) Diagnostic View

c) Network View

d) Trend View

7) It shall be possible to hide the Network Tree and return to the Spaces Tree at any time by clicking on the Spaces Icon above the tree.

c. Dashboard Displays

1) The user interface shall provide the ability to view equipment visualizations, floor plans, and/or other graphics on mobile or desktop client devices in a browser environment, without the need for additional plugins or software.

Graphics shall be accessible via a space (for floorplans, campus maps, etc.) or equipment dashboard.

2) Standard dashboards shall be configured for each defined space including one of the following predefined or custom elements:

a) Equipment Serving Space

b) Potential Problem Areas

c) Equipment Summary

d) Graphic Display (if specified)

e) Schedule

3) Standard dashboards shall be configured for each system or device (typ. mechanical or electrical equipment) including the following predefined or custom elements:

a) Trend

b) Equipment Activity Summary

c) Equipment Relationships Summary

d) Equipment Data

e) Graphic Display (if specified)

f) Schedule

4) Users with appropriate permissions shall have access to a Dashboards Manager that can change the display order of Summaries and Data elements, add or remove elements and apply custom dashboards layouts to equipment and space by type.

5) Dashboard Manager shall apply dashboards to spaces or equipment based on the viewing platform (Desktop/Tablet or Phone) in order to tailor the user experience to the needs of the specific user base.

6) Default dashboard displays by space and equipment type shall be created per the guidelines in this specification or by mutual agreement with the owner's representative.

d. Alarm Management

1) The user interface shall provide a single display of all potential issues in a facility including items currently in alarm, warning, override, out-of-service and offline.

2) The user interface shall provide notification of new alarms, visually and audibly.

3) The user interface shall provide the ability to view a summary of alarms, including a chart of the number of alarms in each of the defined alarm priority ranges. The priority ranges should be filterable.

4) The user interface shall provide the capability to view multiple occurrences of the same alarm, ultimately providing the ability to acknowledge or discard all occurrences of the alarm in a single action.

5) The user interface shall provide the capability to view, and filter on, all alarms present in a well-defined mechanical system using the equipment serving equipment relationships.

6) The user interface shall provide the capability to acknowledge and discard all occurrences of at least 1000 alarms in one operation.

7) The user interface shall provide the user with the understanding of what physical space is being affected when an alarm occurs. The user interface shall provide the ability to filter alarms by physical space affected when the alarm occurred.

8) The user interface shall provide the capability to monitor alarms 24/7 without requiring an active login to the system, accessible via segregated web page. The user interface shall provide the capability to enabled or disable the 24/7 alarm monitor mode if desired.

e. Equipment Activity Summary

1) The user interface shall provide a filterable, single display, of all activity related to a specific piece of equipment including user changes, discarded user changes, pending alarms, discarded alarms, and acknowledged alarms for at least one year of historical data.

2) Items shall be listed in timed order with the latest activity at the top of the list.

3) Filters shall allow only specific activities for specific data points occurring within a specific time and date window to be displayed.

4) It shall be possible to export a .csv copy of the currently displayed summary by clicking or tapping on the export icon.

5) It shall be possible to create a custom trend graph containing the data shown in the currently displayed summary by tapping or clicking on the trend icon in the header bar and selecting the specific points to trend in the resulting selection panel.

6) Clicking on the information icon in front of any displayed activity listed in the summary shall expand the display to include the name of the user, server

time, value prior to the activity, the ability to annotate the activity and a user selectable icon for displaying a trend graph of the point.

f. Equipment Relationships Summary

1) The user interface shall provide a summary of all equipment and spaces related to the operation of the system or device currently selected for viewing.

2) Include the capability to navigate to the home page of any related piece of equipment or space with a single click or tap on the desired element.

g. Equipment Data Summary

1) The user interface shall provide a summary of all data pertaining to a particular piece of mechanical or electrical equipment in a tabular format.

2) Clicking or tapping on any value in the summary shall display a related command panel allowing the user to command, override, or change service condition of the point selected and to annotate such actions for future reference.

3) It shall be possible to export a .pdf copy of the report with a single click on the associated export icon.

h. Equipment Serving Space Summary

1) The user interface shall provide a summary of all mechanical and electrical equipment as defined in the points list that serves a selected space from the navigation tree.

2) The summary shall be capable of including a subset of the viewable points for each system representing the key elements of interest to operators without subjecting them to long lists of points irrelevant to basic operation.

3) Clicking or tapping on any item in the summary shall navigate to the item's assigned home page in the user interface.

4) It shall be possible to view a custom trend of information contained in the summary with a single click of the trend icon residing in the title header.

5) It shall be possible to display specific systems and points by filtering equipment types desired.

6) Because the data is intended to be a snapshot of the current conditions in the space it shall not dynamically update but a click or tap on the update icon at any time performs that function.

i. Potential Problem Areas

1) The user interface shall provide a summary of all points in the system related to the space that are not operating correctly (e.g. alarm, off normal or not communicating correctly) in order to provide the operator with a quick update on current conditions.

2) The information shall include:

    a) Point status (via color.)

    b) Point name.

    c) Value of the point when the summary was taken.

    d) Equipment that contains the offending point.

    e) Space that is served by that equipment.

3) Data points in the summary may be filtered by one or more types of off-normal condition (e.g. above setpoint, offline and overridden).

4) The summary may be exported in .csv format for inclusion in spreadsheets or other documents.

j. Equipment Summary

1) The user interface shall provide a summary that allows the user to compare all similar equipment that serves the space as well as downstream (child) spaces in order to evaluate conditions quickly and determine patterns for troubleshooting purposes.

2) Each unique equipment type shall be selectable and display a representative set of values along with the space(s) being served by the device. Equipment types can be selected from a dropdown menu in the summary.

3) Clicking or tapping on a selected device in the summary shall navigate to the home page for that piece of equipment while clicking or tapping a data point shall display the command panel for that point.

4) It shall be possible to export a .pdf copy of the currently displayed summary by clicking or tapping on the export icon.

5) It shall be possible to create a custom trend graph containing the data shown in the currently displayed summary by clicking on the trend icon in the header bar and selecting the specific points to trend in the resulting selection panel.

k. User Defined Summaries

1) Provide the capability to view, command, and modify large quantities of similar data in summaries without the use of a secondary application (e.g. a spreadsheet). These summaries shall be generated automatically or user

defined. User defined summaries shall allow up to seven user defined columns describing attributes to be displayed including custom column labels with up to 100 rows per summary.

l. Trend

1) The user interface shall provide the capability to view historical trend data from multiple pieces of equipment in both bar and line formats.

2) The user shall have the ability to navigate to a selection list of frequently viewed trends.

3) Trend graphs shall have to ability to be smartly auto-generated based on equipment and space relationships.

4) Each graph shall include a dedicated selection icon to export a copy of the graphic and data in .pdf format or the data only as a .csv file.

m. Operator Access

1) The user interface shall provide the ability to segment access to building data based on the space(s) or location(s) the user is physically located in and/or manages. The user interface shall provide the capability to assign “inherited” space permissions and the ability to assign user’s space based access in bulk.

2) The user interface shall provide the ability to segment access to building data based on the space(s) or location(s) the user is physically located in and/or manages. The user interface shall provide the capability to assign “inherited” space permissions and the ability to assign user’s space based access in bulk.

n. Graphics

1) The user interface shall display an equipment visualization or graphic within the context of its associated space (building, floor, room, etc.) or equipment dashboard.

2) Graphics shall include the ability to define individual information layers for operator selection in order to clarify systems status and simplify operation on mobile devices. Where desired a master layer may be defined to include important information about the facility on all graphic screens.

3) Graphics shall support the use of photo-realistic symbols as well as color change and animation to match the status of the related system control point.

4) It shall be possible to export a time stamped .pdf file of the graphic being viewed in order to communicate the current conditions in the space or the equipment being viewed and to provide a historic record.

5) An integral graphic manager shall be provided including the following features and capabilities:

a) Creation and modification of graphics from any HTML5 capable browser without the need for additional plug-ins or software packages.

b) Access to a full suite of pre-defined templates for air and water sourced HVAC applications as well as the ability to add custom templates as created for other use. Pre-aliased graphic templates may be defined and saved for repetitive representations of common mechanical and electrical equipment.

c) A full suite of pre-defined three dimensional symbols for mechanical and electrical systems as well as all line, text and shape tools required for integration into a graphic with zoom and pan capabilities on multiple platforms and in multiple browsers.

d) The ability to search and replace items in multiple graphics with a single command.

e) The ability to import and insert photos and images into the graphic.

f) The ability of the graphics manager to create and edit graphics including the ability to bind graphic elements to the values and conditions of system points in both an on-line and off-line mode.

6) As required, the BMS Contractor shall provide software licenses in the name of the owner for programming, configuration and graphics building tools to allow designated representatives to make changes, modifications or additions to the system. While future updates or revisions may require an update fee, the owner shall incur no additional cost if they choose not to update. Systems that require any annual or time-limited licensing fees shall not be permitted.

o. Scheduling

1) The user interface shall provide the capability to display, in a singular view, all of the effective schedules in the context of the space (building/floor/room, etc.) or equipment that the schedule effects. The software should have the ability to display an effective schedule, for the present, or a future date.

2) The user interface shall provide a report of all schedules affecting a space or equipment. The report shall provide the user details of events that comprise the weekly schedule and exception schedule(s). The report shall provide a means of viewing individual breakout scheduling elements for Weekly Schedule, Exceptions and Default Commands.

3) The user interface shall provide the capability to efficiently change or modify schedules in mass quantities. This includes the capability to add, in

bulk, exceptions to schedules, in addition to assigning, in bulk, weekly schedules.

p. Command and Control

1) It shall be possible to command system analog and binary points via a dropdown menu accessed by clicking or tapping on the value shown in any equipment summary or graphic display and completing the task in the resultant menu including an optional annotation.

2) Commanding multiple points shall be possible on displays where multiple like system elements can be chosen.

q. Search

1) Typing a text string in the Search box shall display a list of all occurrences of that string in the mobile user interface. When a string is represented in the description of a space or network element, selecting it shall display its default dashboard.

2) Clicking or tapping on the Advanced Search Icon shall display the Advanced Search dialog box permitting the following:

a) Search by Space and Equipment, Equipment Definition or Network Reference.

b) Filter the search by wildcard name or object type.

c) Multi-selection of objects for commanding or the creation of reports including Trend, Alarm, Audit and Activity for a specific period of time.

r. Offline Operation

1) The mobile user interface shall have the ability to operate in an offline mode in order to create or edit graphics and dashboard elements.

2) Content created offline shall be available to all authorized users for inclusion of an operating user interface later.

2.12 ENERGY SAVING PROGRAMS

A. Demand Limiting: Monitor total power consumption for each power meter and shed associated loads automatically to reduce power consumption to an operator set maximum demand level.

B. Duty Cycling: Periodically stop and start loads, based on space temperature, and according to various on/off patterns.

C. Automatic Time Scheduling: Self-contained programs for automatic start/stop/scheduling of building loads. Support up to seven (7) normal day schedules, seven (7) "special day" schedules and two (2) temporary schedules.

D. Optimal Start/Stop: Perform optimized start/stop as function of outside conditions, inside conditions, or both. Optimization shall be adaptive and self-tuning, adjusting to changing conditions by modifying occupancy period based upon the desired temperature at beginning and end of the occupancy period. Base optimization on occupancy schedules, outside air temperature, seasonal requirements, and interior room temperature. Employ adaptive model prediction for how long building takes to warm up or cool down under different conditions.

E. Night-Setback Program: Reduce heating space temperature setpoint or raise cooling space temperature setpoint during unoccupied hours in conjunction with scheduled start/stop and optimum start/stop programs.

F. Setpoint Reset: Setpoints for control of variable load systems shall be reset based on load demand, as described in the Sequence of Operations.

G. Calculated Points: Define calculations and totals computed from monitored points (analog/digital points), constants, or other calculated points.

H. Event Initiated Programming: Any data point capable of initiating event, causing series of controls in a sequence.

I. Holiday Scheduling.

J. Direct Digital Control: Furnish software so operator is capable of customizing control strategies and sequences of operation by defining appropriate control loop algorithms and choosing optimum loop parameters.

K. Trend logging shall be provided for all points per the input/output summary where there is a change in the analog or binary signal. Each controller shall be capable of storing trend values and then automatically transfer data to the NAC or the NS hard disk. Trend data shall be updated continuously per the operator assigned interval at intervals as low as one minute. Collect samples at intervals specified in minutes, hours, days, or month. Output trend logs as line-graphs or bar graphs. Binary points (input and output) shall only be logged upon a change of value (COV). Display trend samples on workstation in graphic format. Automatically scale trend graph with minimum 60 samples of data in plot of time versus data.

2.13 FIELD INSTRUMENTATION

A. Temperature Sensors: All temperature sensors shall be thermistor type, factory- calibrated to within 1 degree F, interchangeable with housing appropriate for application. Sensors shall have a temperature curve rated for the application. Sensor wiring terminations shall be in a galvanized box.

1. Outside air temperature sensors shall be installed in weather proof enclosure with ventilated sun-shied

2. Duct mounted temperature sensors shall be averaging type for supply air, mixed air and low temperature applications for air handling units. Duct probe temperature sensor shall be acceptable for terminal units.

3. Space temperature sensors shall contain a backlit LCD digital display and user function keys along with temperature sensor, setpoint adjustment and after-hours override use. Override time may be set in one-hour increments.

4. Provide flat plate stainless steel space temperature sensors with no local setpoint adjustment as indicated on the Drawings.

B. Carbon Dioxide Sensors: The sensor shall be capable of monitoring carbon dioxide concentration with an accuracy of +/- 50 parts per million (PPM). The sensor shall produce a linear 0-10 VDC or 4-20 mA signal over the range of 0 to 2000 PPM. The sensor shall measure using non-dispersed infrared (NDIR) technology to measure carbon dioxide gas and shall be;

1. The EMCS Contractor shall utilize the required calibration devices to properly commission and calibrate the sensors per the manufacturer’s requirements.

C. Relative Humidity Sensors: relative humidity sensors shall be a two-wire type, 4-20 mA output proportional to the relative humidity range of 0-100%. The accuracy of the sensors shall be +2% over a range of 10-90% RH.

1. Outdoor relative humidity sensors: provide non-corroding outdoor shield to minimize wind effects and solar heating. Install wall-mount weather proof enclosure with conduit fitting.

2. Wall-mounted relative humidity sensor: sensor shall be installed in a wall- mounted enclosure with white cover.

3. Duct-mounted relative humidity sensor: sensor shall be provided with a moisture resistant enclosure with conduit fitting. The probe length shall be 8” minimum.

D. Pressure Transducers:

1. Air pressure sensor: The pressure sensors shall have an input range compatible with the medium being measured. The proportional output signal shall be 0-10 VDC or 4-20 mA.

E. Freezestat: Provide freezestats for all chilled water air handling systems that receive more than 10% untreated outside air. Freezestats shall provide vapor tension elements, which shall serpentine the inlet face on all coils. Provide additional sensors, wired in series, to provide one linear foot per square foot of coil surface area. Freezestat shall be manually reset at the switch. Interlock to the associated fan so that fan will shut down when HOA switch is in hand or auto position. Provide time delay relays with a 0-10 minute time delay relay duration to minimize nuisance freezestat trips. Time delay relay shall be adjustable at the associated control panel.

F. Air differential pressure switch: For fan shutdown, provide air differential pressure switches for all fans controlled by a variable frequency drive (VFD) to shut down the associated fan in the event of sensing high differential pressure. Air differential pressure switches shall have an adjustable setpoint with a range of 0-10 inches W.G. with manual reset at the switch. Provide ¼ inch copper tubing with compression fittings to mount to the side of the duct.

G. Momentary control relays: Provide momentary control relays as indicated. . Relays shall have coil ratings of 120 VAC, 50 mA or 10-30 VAC/VDC, 40 mA as suitable for the application. Contact ratings shall be 10 amp. Provide complete isolation between the control circuit and the digital output. Relays shall be located in the UC or other local enclosures and have pin-type terminals. Relays shall have LED indication of status.

H. Current sensing relay: Current sensing relays shall be rated for the applicable load. The output relay shall have an accessible trip adjustment over its complete operating range. Enclosure shall have an LED to indicate relay status.

I. Photocell: Ambient light level shall by a photocell in a non-corroding in a weatherproof housing with sun shield suitable for exterior installation. The control signal output shall be 4-20 ma or binary contact closure as specified in the sequences of operation. Mount the photocell on the north side of the building on the roof. The sensor reading shall be 0- 750 foot-candles.

J. Occupancy Sensors

1. The dual-technology occupancy ceiling mounted sensor shall be capable of detecting presence in the control area by via Doppler shifts in transmitted ultrasound and passive infrared (PIR) heat changes. Sensor shall utilize Dual Sensing Verification Principle for coordination between ultrasonic and PIR technologies. Detection verification of both technologies must occur in order to activate lighting systems. Sensor shall have a retrigger feature in which detection by either technology shall retrigger the lighting system on within 5 seconds of being switched off. The sensor shall operate at 24 VDC/VAC.

2. Sensors shall have a time delay that is adjustable with configuration software or shall have a fixed time delay of 5 to 30 minutes, set by a DIP switch. Sensors shall feature a walk-through mode, where lights turn off 3 minutes after the area is initially occupied if no motion is detected after the first 30 seconds.

3. The sensor shall have an additional single-pole, double throw isolated relay with normally open, normally closed and common outputs. The isolated relay is for use with HVAC control, data logging, and other control options. The sensor shall have an LED indicator that remains active at all times in order to verify detection within the area to be controlled.

2.14 WHOLE BUILDING METERING

A. Buildings are to monitor electrical, water and gas usage. Any additional sub metering is to be provided by the Contractor and determined by each specific project as called out on the Drawings or Specifications.

2.15 AIRFLOW MEASURING STATIONS (AFMS)

A. Duct mounted airflow measuring stations with combination airflow and air temperature measurement devices shall have the following features:

1. Multi-point sensors in one or more probe assemblies with a maximum of one to sixteen sensor nodes per location, and a single remotely mounted microprocessor-based transmitter for each measurement location. Each sensor node shall consist of two hermetically sealed bead-in-glass thermistors. Each sensing point shall independently determine the airflow rate and temperature at each node, which shall be equally weighted in calculations by the transmitter prior to output as the cross-sectional average. Each

ducted sensor probe shall have an integral, U.L. Listed, plenum rated cable. Each independent temperature sensor shall have a calibrated accuracy of +/-0.14° F (0.08° C) over the entire operating temperature range of -20° F to 160° F (-28.9° C to 71° C).and be calibrated at 3 temperatures against standards that are traceable to NIST. Acceptable manufacturer shall be EBTRON, Inc. GTx116-PC.

2. Each transmitter shall have a display capable of simultaneously displaying both airflow and temperature. Airflow rate shall be field configurable to be displayed as velocity or volumetric rates, selectable as IP or SI units. Each transmitter shall operate on 24 VAC and be fused and protected from over voltage, over current and power surges.

3. Each independent airflow sensor shall have a laboratory accuracy of +/-2% of reading over the entire calibrated airflow range of 0 to 5,000 fpm (25.4 m/s), and be wind tunnel calibrated at 16 points against air velocity standards that are traceable to NIST.

2.16 DAMPER ACTUATORS

A. Outside and exhaust air damper actuators shall be mechanical spring return. The actuator mounting arrangement and spring return feature shall permit normally open or normally closed positions of the damper as required.

B. Outside and return air modulating actuators shall utilize analog (proportional) control 0-10 VDC. Actuators shall be driven in both the open and closed directions.

C. Electric damper actuators shall be direct shaft mounted and use a V-bolt and toothed V- clamp causing a cold weld effect for positive gripping. Single bolt or setscrew type fasteners are not acceptable.

D. Single section dampers shall have one electronic actuator direct shaft mounted.

E. Multi-section dampers with electric actuators shall be arranged so that each damper section operates individually. One electronic actuator shall be direct shaft mounted per damper section.

F. Damper actuators shall be BELIMO or equivalent.

2.17 PANELS AND ENCLOSURES

A. Provide panels and enclosures for all components of the EMCS, which are susceptible to physical or environmental damage.

B. Interior panels and enclosures shall meet be NEMA 1 rated painted steel panels with locking door.

C. Exterior mounted panels and enclosures shall be NEMA 4 painted steel panels with locking door.

D. Panels for USCs shall be mounted on the outside of all unit ventilators and fan coil units with three feet of wall clearance in front of them and no higher than 7 feet to the bottom of the panel.

2.18 LABELING AND WARNING NOTICES

A. Provide labeling for all control panels and enclosures.

B. Provide labeling of all control wires and input/output points at the controller and at the control device; the label at each end of the wire shall be the same Labels shall be machine generated, typed and clearly legible with a maximum of 17 characters. Handwritten labels or labels written on the control wire jacket will not be acceptable. Each label shall be unique to its function and shall reference the applicable system. For example:

1. "AHU-1 SAT" will indicate the supply air temperature sensor for AHU-1. Improper labeling shall be removed and shall require re-commissioning of the control device and controller to document correct functionality.

C. Provide high voltage warning notices at all equipment controlled by the EMCS and at all associated motor starters when used by equipment controller.

2.19 TUBING AND PIPING

A. Provide tubing and piping as required for the field instrumentation.

B. Tubing within equipment rooms, vertical risers, and penetrations to ductwork shall be either copper pipe or shall be plastic tubing within conduit. Tubing for all water-based instrumentation shall be copper pipe. Identify the type of tubing proposed in the shop drawing submittal.

C. Provide suitable bulk head fittings for duct and panel penetrations.

D. Tubing in plenum rated areas may be plastic tubing. Polyethylene tubing shall meet, at minimum, the following requirements: flame retardant; crack resistant; 300 psi burst pressure.

2.20 CONDUIT AND FITTINGS

A. Provide all conduits, raceways and fittings for the EMCS monitoring, communication and control cabling. All work shall meet all applicable codes.

B. Conduit, where required, shall meet, the requirements specified within Division 26.

C. EMCS monitoring and control cable shall not share conduit with cable carrying voltages in excess of 90 VAC.

D. Conduit and fittings must be rated for exterior/outdoor conditions.

2.21 CABLING

A. Provide all cables for the EMCS. Cable shall meet, at minimum, the following requirements:

1. Minimum 98% conductivity stranded copper.

2. Proper impedance for the application as recommended by the EMCS component manufacturer.

3. Monitoring and control cable shall be #18 AWG or larger, dependent on the application. Analog input and output cabling shall be shielded.

4. Management Level Network cable shall be CAT 6, 24 gauge unshielded.

5. Automation Level Network cable shall be #24 AWG shielded.

6. Shield shall be grounded at the CCP, UC, or control panel. Ground at one end only to avoid ground loops.

7. Identification of each end at the termination point. Identification should be indicated on and correspond to the record drawings.

B. 120 VAC power wiring shall be of #12 AWG solid conductor or larger as required.

PART 3 - EXECUTION

3.01 PRE-CONSTRUCTION

A. The EMCS supplier shall provide a pre-construction coordination meeting with the affected trades to ensure a cooperative efficient process of installation. The invited trades shall include the general Contractor, mechanical Contractor, electrical Contractor, test and balance Contractor, Owner’s representative, consulting engineer and others with a direct interest in the coordination of the affected systems. The EMCS Contractor shall provide an outline of the meeting agenda highlighting the construction schedule, coordination with mechanical and electrical trades. Provide a sign-in sheet and submit it through the attendees along with a summary of the meeting notes for future reference.

3.02 INSPECTION DURING INSTALLATION

A. Provide a technician to assist the Engineer or Owner’s Representative, Test and Balance and Commissioning Agent with inspections made during the installation period that are required to review the progress and quality of ongoing work. The Engineer/Owner’s representative shall generate field observation reports on the findings of the inspection. The engineer or Owner’s representative shall advise the EMCS Contractor during the inspection of any concerns noted with respect to the installation and shall repeat the concerns in writing as soon as possible after the inspection is completed. The EMCS Contractor shall take corrective action to meet the requirements of the Specifications. Upon correction, the EMCS Contractor shall submit written documentation through the contractors to the engineer.

3.03 INSTALLATION OF COMPONENTS

A. Provide all interlock and control wiring. All wiring shall be installed in a neat and professional manner in accordance with Specification Division 26 and all national, state and local electrical codes.

B. Provide wire and wiring techniques recommended by equipment manufacturers. Control wiring shall not be installed in power circuit raceways. Magnetic starters and disconnect switches shall not be used as junction boxes. Provide auxiliary junction boxes as required. Coordinate location and arrangement of all control equipment with the Owner's Representative prior to rough-in. Provide auxiliary pilot duty relays on motor starters as required for control function.

C. Electrical Contractor shall provide 120 or 277 volt power at a junction box within 48” of the controller. The EMCS Contractor shall coordinate with the Electrical Contractor to identify locations of power requirements prior to the installation of the controls.

D. Conduit for control wiring shall be provided whenever one of the following conditions exists:

1. Conduit is indicated on the Drawings or specifically required by the Specifications.

2. Cabling runs through inaccessible areas such as within partitions/walls, above closed in ceilings, under floor; within trenches and underground; on the exterior of the building; exposed on the surface of the building; when encased in concrete or other material that makes the cable inaccessible or when located such that access to the cable is not readily obtained.

3. Cable within mechanical, telecommunications and electrical equipment rooms and control rooms.

4. Conduit shall be installed, inside wall from sensor box to above the wall, for all wall mounted temperature, humidity and CO_2 sensors.

E. Control wiring located above an accessible ceiling space may be plenum-rated cable. Plenum rated wire shall be bundled and routed at right angles to the building lines and secured to the building structure every 15 feet.

F. When communication bus enters or exits a building, a surge suppressor shall be installed. The surge suppressor shall be installed according to the controls manufacturer’s instructions.

G. Provide sleeves for all cable and conduit passing through walls, partitions, structural components, floors and roof

H. All sensor wiring shall be labeled to indicate the origination (at the device) and destination of data (at the control panel). The description shall indicate the type and location of the control device such as “AHU-1 SA temp” or “VAV 1-1 space temp”.

I. Wall temp sensors at 48" above the finished floor to comply with ADA requirements and to match the height of the light switches. Mount humidity sensor at equal height to wall temperature sensor.

3.04 VERIFICATION REQUIREMENTS

A. Verification shall be provided by the EMCS Contractor to demonstrate and confirm that the installed system complies with the Specifications and the control sequences of operation herein specified. Upon completion of the verification process the EMCS Contractor shall demonstrate to the Engineer or Owner’s representative and Commissioning Agent the functionality of the control system devices are in compliance with the Contract Documents.

1. The installing contractor shall perform a complete Performance Validation (PV) of the Building management system three (3) times throughout the project:

a. At project turnover to customer.

b. At six (6) months of project operation.

c. At twelve (12) months of project operation or end of warranty.

2. Performance Verification shall include a complete and current Building Automation System site inventory including the following information at a minimum: a listing of all field and supervisory controllers with the following key attribute data; corresponding model numbers, firmware versions, available security updates, CPU and memory performance data, battery conditions, integrations, controlled equipment, and device and point counts.

3. Performance Verification shall include a complete written evaluation of system configuration and performance in the following categories:

a. Security – The Security evaluation shall include information about controllers that require security updates and conformance of user accounts to latest security rules and best practices.

b. Energy Performance – The Energy Performance and Savings evaluation shall identify opportunities through schedule and nightly setbacks, economizers, eliminating simultaneous heating and cooling and adding VSD to equipment.

c. Comfort and Health – The Comfort and Health evaluation shall identify temperature, pressure, and carbon dioxide values that deviate from desired set points that could lead to occupant discomfort.

d. Reliability – The Reliability evaluation shall identify overridden control points, control points creating excessive alarms, and opportunities to adding control points and trends to further enable system functionality.

e. Standards – The Standards evaluation shall identify conformance to published standards for point count, network performance and protocol standards.

B. Technicians provided by the EMCS Contractor shall be factory trained and qualified in the operation of the provided control system. The EMCS Contractor shall provide, if requested, the factory training certificates of the individuals providing the verification services on this project.

C. Verification tools, applicable to the system provided, shall be utilized by the factory- trained technicians for proper verification of system operation and functionality. Temperature verification sensors shall be NIST certified within the last 12 months. Meters such as Fluke 52 series or better shall be utilized. Use of non-certified meters may require the system to be re-verified with certified meters at no cost to the Owner.

D. Documentation of the verification process shall be provided per the project general conditions in electronic PDF format as required. Documentation shall include the following forms:

1. Project System Verification Forms for each controller provided on the project to verify the proper function of each controller, control device and system component provided.

2. Panel Verification Forms for each control panel to document the proper installation and function of each control panel provided.

3. Sequence of Operation Verification Forms for each piece of controlled equipment to confirm compliance of the control system with the specified sequences of operation.

4. Not providing proper documentation for each control devices, panel, or system, upon request by the engineer or Owner's representative, may require the EMCS Contractor to re-verify the applicable systems at no additional cost to the Owner.

E. After completion of the verification, the EMCS Contractor shall be able to demonstrate the sequence of operations for each system to the engineer and the Owner's representative.

F. Equipment checkout sheets are to be produced by this Contractor showing checkboxes and compliance with the following procedures for each piece of equipment and turned over to the Owner and/or Mechanical Engineer.

3.05 COLOR GRAPHICS

A. The color graphics shall be provided for the EMCS system prior to system acceptance and Owner training. Owner has final approval and decision on all graphic templates.

B. The color graphics provided shall include the following as a template. Provide forward and backward links on the graphic.

1. Site plan with link to overall building plan including detached buildings. The site plan shall be referenced to an automatically updated aerial view or map view of the area such as Google Maps or Bing Maps. Provide link to proceed to the overall building floor plan.

2. The overall building plan shall indicate space temperature conditions referenced by the color of the zone. Specific details of the zone temperatures and equipment are not required. Provide a link to the floor plan wings, upper floors and remote buildings.

3. The floor plan color graphics shall indicate the space temperatures by color references. Additional information shall indicate the space temperature, the occupancy of the zone, air handling units, VAV terminals and ductwork with diffusers. A link at each terminal unit or AHU shall automatically connect the system operator to the equipment color graphic.

4. The color graphics for the equipment shall as a minimum be equal to the points from the input/output summary or control schematic. Primary control devices as required by the sequences of operation shall also be provided.

5. Control points from equipment that are integrated into the EMCS via BACnet shall be provided to convey the operating conditions of the attached equipment. Coordination of the integration points shall be accomplished during the submittal phase. The EMCS Contractor shall provide a list of all integrated points on their submittal.

3.06 CONTROL SYSTEM DEMONSTRATION AND ACCEPTANCE

A. Startup testing documentation: Prepare the checklist documenting startup testing of each input and output device, with technician's initials and date certifying each device has been tested and calibrated prior to acceptance testing. This document shall indicate proof that the following functions have been commissioned and shall be included in the as-built documentation: short to ground check, configuration of trends, confirmation that color- graphics are accurately representing actual systems, point to point checkout, all damper and valve actuators respond to input change, control modules are addressed and have functional descriptors, specified interlocks are functional, calibration report of all sensors, discrete outputs respond to time schedule or manual enable command.

B. Demonstration. Prior to acceptance, demonstrate the following performance tests to demonstrate system operation and compliance with the Specifications.

1. Engineer, Owner’s representative and mechanical Contractor shall be invited to observe and review system demonstration. Provide attendees at least 10 day’s notice.

2. Demonstration shall follow process approved as part of the submittal and shall include complete checklists and forms for each system as part of system demonstration.

3. Demonstrate actual field operation of each sequence of operation as specified. Demonstrate calibration and response of any input and output points requested by engineer or Owner’s representative.

4. Demonstrate complete operation of operator interface including review of color-graphics, time schedules, trend logs, alarm notification, functionality of tablet PC operation.

a. PID loop response. Supply graphical trend data output showing each PID loop's response to a set point change representing an actuator position change of at least 25% of full range. Trend sampling rate shall be selectable from 10 seconds to 3 minutes, depending on loop speed. Each sample's trend data shall show set point, actuator position, and controlled variable values.

b. Demand limiting. Supply trend data output showing demand-limiting algorithm action. Trend data shall document action sampled each minute over at least a 30-minute period and shall show building kW, demand limiting setpoint, and status of set points and other affected equipment parameters.

c. Trend logs for each system. Trend data shall indicate set points, operating points, valve positions, and other data as specified. Logs shall be accessible through system's operator interface and shall be retrievable for use in other software programs.

5. Alarms and Interlocks. Check each alarm with an appropriate signal at a value that will trip the alarm. Trip interlocks using field contacts to check logic and to ensure that actuators fail in the proper direction. Alarm verification shall include temperatures exceeding alarm threshold (high and low), fan failure safety, duct high static pressure switch, freezestat, and smoke detector shutdown.

6. Tests that fail to demonstrate proper system operation to the engineer shall be repeated after Contractor makes necessary repairs or revisions to hardware or software to successfully complete each test.

C. Owner Acceptance.

1. After tests described in this Specification are performed to the satisfaction of both Engineer and Owner’s representative and Commissioning Agent, the Engineer shall accept the control system as meeting completion requirements. Engineer may exempt tests from completion requirements that cannot be performed due to circumstances beyond EMCS Contractor's control. Engineer shall provide written statement of each exempted test. Exempted tests shall be performed as part of warranty.

2. System shall not be accepted until completed demonstration forms and checklists are submitted and approved by the Engineer, Owner and Commissioning Agent (CxA).

3. No portion of the total Contract will be declared substantially complete until the automatic temperature control system has been demonstrated to be complete and functioning as intended. The temperature control system will be complete and functioning as intended when all of the space temperatures are maintained at plus or minus two (2) degrees F of setpoint.

3.07 DEMONSTRATION AND OWNER TRAINING

A. Provide a training session for the Owner’s operations personnel. Training session shall be performed by a qualified person who is knowledgeable in the subject system/equipment. Submit a training agenda two (2) weeks prior to the proposed training session for review and approval. Training session shall include at the minimum:

1. Purpose of equipment.

2. Principle of how the equipment works.

3. Important parts and assemblies.

4. How the equipment achieves its purpose and necessary operating conditions

5. Most likely failure modes, causes and corrections.

6. On site demonstration that includes hands-on demonstration of the manipulation of setpoints, schedules and other adjustable elements of the system.

7. The demonstration shall be on the actual, completed graphic interface pages for the specific project.

B. Provide a second training session six (6) months after initial session for any follow-up or additional training requested by Owner’s personnel. Allow three (3) hours for the second training session.

C. EMCS Contractor shall provide ongoing free classroom training at their local office.

PART 4 - I/O POINTS

4.01 GENERAL

A. The sequences of operations indicated on the Control Drawings shall be accomplished by the EMCS. Coordinate with Owner in operating equipment to maximize comfort and economy. All points required to accomplish the sequences shall be provided and connected to the EMCS.

B. Equipment interfaces are acceptable for providing information but each piece of equipment (including but not limited to chillers, VFD's, unitary equipment, etc.) shall have a hardwired point for start/stop and speed control.

C. All Points added by Engineer and/or Control Contractor needed for the sequences shall be identified in the Submittals and Project Record Documents.

D. All VFD's and actuators shall have feedback that reports to the EMCS.

E. All units to have economizer sequences and economizer fault detection and diagnosis capabilities.

F. Flow meters at air handlers shall be integrated into the EMCS.

A. Interlock of fire suppression in IT spaces is required and shall be fully coordinated by the EMCS and Fire Suppression Contractors. BACnet interface to be provided by Fire Suppression Contractor for items installed by that contractor.

4.02 BUILDING METERING

A. I/O Points Lis

1. Electrical Switchgear – Modbus Integration

2. Domestic Water Meter – AI (Domestic Flow Meter by Plumbing Contractor)

B. Natural Gas Meter – AI (Natural Gas Meter by Plumbing Contractor)

4.03 BUILDING SHUTDOWN (SHELTER IN PLACE)

A. I/O Points List

1. Shutdown switch status – dry contact - DI

B. A maintained mushroom type emergency local override button shall be installed in the principal's office or the administration area shall shut down the HVAC system in case of emergency. Once pushed the button must be reset to allow the HVAC system to resume normal operation. The final location of the building shutdown is to be determined by Fort Bend County personnel.

4.04 IRRIGATION CONTROL

A. I/O Points List

1. Monitor and display current flow showing gallons per minute - AI
2. Monitor total gallons used (trend) - AI

B. EMCS system will interface with irrigation controller to allow owner to control scheduling and zoning of irrigation.

4.05 DOMESTIC WATER HEATING CIRCULATION PUMP

A. I/O Points List

1. Start/stop – DO
2. Return water temperature – AI
3. Status

4.06 VARIABLE AIR VOLUME BOX WITH SUPPLEMENTAL HEAT

A. I/O POINTS

1. Space temperature sensor – AI
2. Electric heating coil - AO
3. Cooling damper - AO
4. Fan status – DI
5. Fan speed (hi/lo) - DO
6. Discharge air temperature –AI
7. Space occupancy sensor – DI

4.07 EXHAUST FANS

A. I/O POINTS LIST

1. Fan start/stop – DO
2. Fan status – DI

4.08 OUTDOOR AIR CONDITIONS

A. I/O POINTS LIST

1. Outdoor air temperature – AI
2. Outdoor air humidity – AI

B. The sensors shall be mounted in an area on the North side of the building where the representative temperature and humidity can be monitored, both shall have sun shields. Based on the outside air temperature and humidity the B.A.S. shall calculate the outdoor enthalpy, wet bulb, and dew point temperatures. The outdoor air temperature and humidity shall be broadcast as global information for use by the other control programs.

4.09 IDF AND MDF ROOMS

A. I/O POINTS LIST

1. Space temperature – AI

B. The EMCS shall monitor the space temperature in the IDF and MDF rooms.

C. The EMCS shall report a high temperature alarm to the computers, pagers, and/or text message compatible cell phones designated by the School district personnel if the space temperature rises above 68°F (adjustable) for five (5) minutes (adjustable).

4.10 UNIT HEATER

A. I/O POINTS LIST

1. Space temperature - AI

2. UH start/stop and hot water valve open/close - DO

B. A space temperature sensor shall monitor the air temperature in the space. If the space temperature falls below 60 degrees F (operator adjustable) the Unit Heater fan shall be energized and the hot water valve shall be opened. The fan shall continue to run with the hot water valve open until the space temperature rises by 4 degrees F (operator adjustable).

4.11 DX/ GAS RTU WITH HOT GAS REHEAT AND CO_2

A. I/O POINTS LIST

1. Space temperature – AI

2. Discharge air temperature – AI

3. Return air temperature - AI

4. RTU fan status – current switch - DI

5. DX Cooling – Multiple stages as necessary- DO

6. Heating – multiple stages as necessary - DO

7. RTU fan start/stop - DO

8. Exhaust fan start/stop - DO

9. Outdoor air damper – AO

10. Return Air CO_2 – AI

END OF SECTION 23 09 23

23 21 13

HYDRONIC PIPING

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Furnish and install hydronic piping systems; including:

1. Pipe and pipe fittings.
2. Chilled water piping system.
3. Hot water piping system.
4. Condenser water piping system.

1.02 RELATED SECTIONS

B. ASME B16.23 - Cast Copper Alloy Solder Joint Drainage Fittings - DWV.

C. ASME B16.29 - Wrought Copper and Wrought Copper Alloy Solder Joint Drainage Fittings - DWV.

D. ASME B31.1 – Power Piping.

E. AWS D1.1 - Structural Welding Code.

F. ASTM A53 - Pipe, Steel, Black and Hot-Dipped Zinc Coated, Welded and Seamless.

G. ASTM A234 - Pipe Fittings and Wrought Carbon Steel and Alloy Steel for Moderate and Elevated Temperatures.

H. ASTM B32 - Solder Metal.

I. ASTM B88 - Seamless Copper Water Tube.

J. ANSI B16.9, factory-made wrought steel butt welding fittings.

K. National Association of Corrosion Engineers (NACE) Publication RP-01-69, Recommended Practice - Control of Corrosion on Underground or Submerged Metallic Piping Systems.

1.04 SUBMITTALS

A. Include data on pipe materials, pipe fittings and accessories.

B. Welding documents including WPS, WPQ, and PQR.

C. Include detailed shop drawings clearly indicating valve make, model, location, type, size and pressure rating.

D. Include component sizes, rough-in requirements, service sizes, and finishes. Include product description and model.

E. Provide operation and maintenance manual.

1.05 QUALITY ASSURANCE

A. Welding Materials and Procedures: Conform to ASME Section IX.

B. Conform to ASME B31.1 for Central Plant and Utility Distribution Piping.

C. Conform to ASME B31.9 for Building Piping.

D. For each product specified, provide components by same manufacturer throughout.

E. Designate and provide visual welding examination per ASME Section IX requirements. <u>Provide only full penetration welds with complete fusion.</u>

PART 2 - PRODUCTS

2.01 HOT & CHILLED WATER PIPING

A. Pipe 2 Inches and Smaller: Black steel, ASTM A53 or A106, Schedule 40, Grade B, seamless or Type K Copper with pressed or ASTM solder joint wrought copper fittings.

1. Fittings: ASME B16.3 threaded malleable iron Class 150

2. Unions: ASME B16.39 threaded malleable iron Class 150

3. Flanges: ASME B16.5 threaded companion type

B. Pipe 2-1/2 Inches and larger: Black steel, ASTM A53 or A106, standard wall, Grade B, Seamless or ERW as required with beveled ends.

1. Fittings: ASME B16.9 wrought steel standard wall butt-weld fittings

2. Flanges: ASME B16.5 Class 150 weld neck, raised face unless required for flat faced equipment connection.

C. EQUIPMENT CONNECTIONS

1. Grooved mechanical couplings may be used for *equipment connections* only.

D. FLANGE GASKETS

1. Non-asbestos compressed material gasket in accordance with ANSI B-16.21; 1/16-inch or 1-8-inch thick, full face or self-centering flat ring type. Provide gaskets containing aramid fibers bonded with styrene butadiene rubber (SBR) or nitrile butadiene rubber (NBR) suitable for a maximum 600 degrees F service. Gaskets must be compatible with flowing fluid and temperature and pressure of system.

2.02 EQUIPMENT DRAINS AND OVERFLOWS, PRIMARY AND AUXILIARY CONDENSATE DRAIN PIPING

A. Pipe 4" and larger: Galvanized steel ASTM A53 or A106, Schedule 40.

1. Fittings: Galvanized cast iron, or ASME B16.3 malleable iron.

2. Joints: Screwed.

B. Tubing 3" and smaller: Copper ASTM B88, Type L, hard drawn.

1. Fittings: ASME B16.23 cast brass, or ASME B16.29 solder wrought copper.

2. Joints: ASTM B32, solder, Grade 95TA.

2.03 CHILLED WATER PIPING – EXTERIOR AND UNDERGROUND

A. Underground chilled water and hot water piping shall be standard weight pre-insulated black steel as specified in paragraph 2.1 and shall be fabricated and factory insulated with Polyurethane foam for chilled water systems.

B. All piping shall be clean when it is installed. Before installation it shall be checked, upended, swabbed, if necessary, and all rust or dirt from storage or from lying on the ground shall be removed. The Contractor is cautioned to exercise rigid control of the interior cleanliness of the pipe as it will be impossible to flush clean after assembly.

C. Piping shall be temporarily supported on blocks in the excavation to an adequate height to make all welds. Blocks shall be removed after insulation is applied and supported on shields resting on permanent blocks of an inert material such as concrete construction blocks. Temporary blocks shall have a dimensional height greater than the permanent blocks equal to the thickness of the insulation plus saddle.

D. and supported on shields resting on permanent blocks of an inert material such as concrete construction blocks. Temporary blocks shall have a dimensional height greater than the permanent blocks equal to the thickness of the insulation plus saddle.

E. All steel piping shall have ends cut square and beveled for butt-welding. Straight sections of factory-insulated pipe shall have 6" of exposed pipe at each end for field joint fabrication.

F. Polyurethane foam insulation shall be injected with one shot into the annular space between carrier pipe and jacket with a minimum thickness of two (2) inch. Insulation shall be rigid, 90-95% closed cell polyurethane with a 2 to 3 pounds per cubic foot density and coefficient of thermal conductivity (K-Factor) of 0.14 and shall conform to ASTM C-591. Maximum operating temperature shall not exceed 250 degrees F. Insulation thickness shall be specified by calling out appropriate carrier pipe and jacket size combinations.

G. e combinations.

H. Jacketing material shall be extruded white polyvinyl chloride, consisting of clean, virgin NSF approved Class 12454-B PVC compound, conforming to ASTM D-1784, Type 1, Grade 1. PVC jacket shall have a wall thickness in mils equal to ten times the nominal jacket diameter and shall not be less than 60-mils. High density polyethylene (HDPE), conforming to ASTM D-1248, shall be used for jacketing larger than 20”. Wall thickness for HDPE jacketing shall be 90-mils for sizes 8″ and smaller, 100-mils for 10″-12″, 150-mils for 14″-22″, and 225-mils for 24″ and larger. Jacketing for above ground, outdoors. Installations shall contain ultraviolet inhibitors for protection from sunlight. No FRP jacket allowed.

I. Straight run joints are insulated using urethane foam to the thickness specified, jacketed with PVC sleeves and sealed with polyethylene backed, pressure sensitive bituminous rubber tape, 30-mils thick. Above ground installations shall use white, pressure sensitive PVC tape.

J. Where pre-insulated piping is exposed above grade, provide stainless steel jacketing for mechanical and UV protection. Reference Section 230713 for stainless jacketing requirements.

PART 3 - EXECUTION

3.01 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and dirt on inside and outside before assembly.

C. Prepare piping connections to equipment with flanges or unions.

D. After completion, fill, clean, and treat systems.

3.02 INSTALLATION

A. Route piping in orderly manner, plumb and parallel to building structure, and maintain gradient.

B. Install piping to conserve building space, and not interfere with use of space and other work.

C. Group piping whenever practical at common elevations.

D. Install piping with pipe rollers, guides, anchors, and expansion loops as required to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

E. Provide clearance for installation of insulation, and access to valves and fittings.

F. Provide access where valves and fittings are not exposed.

G. Slope piping and arrange systems to drain at low points. Use eccentric reducers to maintain top of pipe level.

H. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.

I. Prepare pipe, fittings, supports, and accessories for primer coat painting prior to insulation. Prepare pipe, fittings, supports, and accessories for primer coat, undercoat, and finish coat painting for all uninsulated piping.

J. Use grooved mechanical couplings and fasteners only in equipment rooms.

K. Install unions downstream of valves and at equipment or apparatus connections.

L. Install brass male adapters each side of valves in copper piped system. Sweat solder adapters to pipe.

M. Install ball or butterfly valves for shut-off and to isolate equipment, part of systems, or vertical risers and as shown on the drawings.

N. Install ball or plug valves where indicated for throttling, bypass, or manual flow control services.

O. Provide spring loaded check valves on discharge of chilled water and condenser water pumps.

P. Use plug valves for throttling or balancing service, unless indicated otherwise.

Q. Provide 3/4-inch ball drain valves at main shut-off valves, low points of piping, bases of vertical risers, and at equipment. Pipe to nearest drain.

R. Underground Piping

1. Install pre-insulated underground pipe in total compliance with the manufacturer’s recommendations. Provide pipe casing and sleeves at slab-on-grade penetrations. Provide concrete thrust blocks where piping turns up to exit above grade.

2. Underground systems shall be buried in a trench not less than two (2) feet deeper than the top of the pipe and not less than twelve inches wider than the combined O.D. of all piping systems. Bed piping according to manufacturer's recommendations in pea gravel. Backfill compacted stabilized bank sand to a minimum thickness of 24 inches over the top of the jacket to meet H-20 highway loading.

3. pacted stabilized bank sand to a minimum thickness of 24 inches over the top of the jacket to meet H-20 highway loading.

4. All piping shall be pressure tested for 150 psi for 48 hours prior to cover-up.

5. A representative of the manufacturer shall be present during critical periods of installation and testing, to verify that the installation is being made in accordance with the manufacturer's recommendations.

6. Install specialties in accordance with manufacturer's instructions to permit intended performance.

S. Provide manual air vents at system high points readily accessible.

T. Provide automatic air vents in ceiling spaces or other high or concealed locations, provide vent tubing to nearest drain.

U. Provide valved drain and hose connection on strainer blow down connection.

V. Provide a relief valve on discharge side of pumps.

W. Select system relief valve capacity so that it is greater than system operating pressure.

X. Pipe relief valve outlet to nearest floor drain.

Y. Where one line vents several relief valves, make cross sectional area equal to sum of individual vent areas.

Z. Provide pump suction fitting on suction side of base mounted centrifugal pumps where indicated. Remove temporary strainers after cleaning systems.

AA. Support pump fittings with floor mounted pipe and flange supports.

BB. Provide flow metering stations where indicated. Instruct the Owner's personnel in the proper use of the flow metering equipment.

CC. Provide thermometer and pressure gauges for all equipment as indicated.

DD. Insulate piping as required by Section 23 07 13 "HVAC Insulation".

EE. Pipe make-up line with pressure reducing and pressure relief valves to air separator fitting. Provide quick-fill/bypass line as shown on the drawings.

FF. Pipe chilled and heating hot water system air separator fittings. Install automatic air vent on air separator and pipe outlet to floor drain.

GG. Provide flat faced flanges at flat faced flanged equipment connections. Do not mate raised flanges to flat faced castings.

3.03 CLEANING OF HYDRONIC PIPING SYSTEMS:

A. General cleaning of piping systems. Purge pipe of construction debris and contamination before placing the systems in service. Provide and install temporary connections as required to clean, purge and circulate. Flush the chilled and hot water systems utilizing the filter feeders.

B. Install temporary strainers at the inlet of pumps and other equipment as necessary where permanent strainers are not indicated. Keep strainers in service until the equipment has been tested, then remove either entire strainer or straining element only. Fit strainers with a line size blow down ball valve and pipe to nearest drain. Blow down strainers, remove and clean as frequently as necessary.

C. or straining element only. Fit strainers with a line size blow down ball valve and pipe to nearest drain. Blow down strainers, remove and clean as frequently as necessary.

D. Phase One: Initial flushing of system. Remove loose dirt, mill scale, weld heads, rust and other deleterious substances without damage to system components. Open valves, drains, vents and strainers at all system levels during flushing procedures. Flush until “potable water clear” and particles larger than 5 microns are removed.

E. Connect dead-end supply and return headers, even if not shown on the drawings, and provide terminal drains in bottom of pipe end caps or blind flanges.

F. Dispose of water in approved manner.

G. Phase Two: Cleaning of Piping Systems. Remove, without chemical or mechanical damage to any system component, adherent dirt (organic soil), oil, grease, (hydrocarbons), welding and soldering flux, mill varnish, piping components, rust (iron oxide) and other deleterious substances not removed by initial flushing. Chemical shall be approved by district water treatment provide prepping compound. Insert anti-foam compound as necessary. Circulate for 48 hours or as recommended by the manufacture. Dispose of water in approved manner. Flush system and replace with clean water. Verify compatibility of chemicals used with existing chemical treatment program on remodel projects.

H. f water in approved manner. Flush system and replace with clean water. Verify compatibility of chemicals used with existing chemical treatment program on remodel projects.

I. Phase Three: Final flushing and rinsing until “potable water clear” and particles larger than 5 microns are removed. Operate valves to dislodge and debris in valve body. Dispose of water in approved manner. Submit status report upon completion of each phase of work on each system.

J. Special requirements, if any, are specified in the sections on each type of piping or in the section on Water Treatment Systems.

K. Owner’s representative or commissioning agent to be present to observe cleaning of piping systems at each phase.

3.04 HYDRONIC SYSTEM TESTING

A. Pressure test all chilled water and heating hot water piping prior to insulating. Test in place with pressures as prescribed for pressure classification of system. Maintain pressure without pumping for two (2) hours.

B. Coordinate pipe cleaning, flushing, and chemical water treatment activities with pressure testing to avoid wetting pipe surfaces prematurely. Do not leave wetted piping untreated.

C. After chilled water, condenser water and heating hot water piping have been pressure tested and approved for tightness, thoroughly clean and flush piping.

END OF SECTION 23 21 13

23 21 16

HYDRONIC PIPING SPECIALTIES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Hydronic specialty valves.
2. Air-control devices.
3. Strainers.
4. Connectors.

B. Related Requirements:

1. Section 230516 "Expansion Fittings and Loops for HVAC Piping" for expansion fittings and loops.
2. Section 230523.11 "Globe Valves for HVAC Piping" for specification and installation requirements for globe valves common to most piping systems.
3. Section 230523.12 "Ball Valves for HVAC Piping" for specification and installation requirements for ball valves common to most piping systems.
4. Section 230523.13 "Butterfly Valves for HVAC Piping" for specification and installation requirements for butterfly valves common to most piping systems.
5. Section 230523.14 "Check Valves for HVAC Piping" for specification and installation requirements for check valves common to most piping systems.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product:

1. Include construction details and material descriptions for hydronic piping specialties.
2. Include rated capacities, operating characteristics, and furnished specialties and accessories.

3. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.

1.04 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For hydronic piping specialties to include in emergency, operation, and maintenance manuals.

1.05 MAINTENANCE MATERIAL SUBMITTALS

A. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.

1.06 QUALITY ASSURANCE

A. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.

B. Safety Valves and Pressure Vessels: Shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

PART 2 - PRODUCTS

2.01 HYDRONIC SPECIALTY VALVES

A. Plastic Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Valve, Inc.

b. Asahi/America.

c. Charlotte Pipe and Foundry Company.

d. Colonial Engineering, Inc.

e. GF Piping Systems: Georg Fischer LLC.

f. Hayward Flow Control.

g. IPEX USA LLC.

h. Jomar Valve.

i. KBI (King Bros. Industries).

j. Legend Valve & Fitting, Inc.

k. NIBCO INC.

l. Plast-O-Matic Valves, Inc.

m. SMC The Specialty Mfg. Co.

n. Thermoplastic Valves, Inc.

o. WATTS.

2. Body: One-, two-, or three-piece CPVC or PVC to match piping.

3. Ball: Full-port CPVC or PVC to match piping.

4. Seats: PTFE.

5. Seals: EPDM.

6. End Connections: Socket, union, or flanged.

7. Handle Style: Tee shape.

8. CWP Rating: Equal to piping service.

9. Maximum Operating Temperature: Equal to piping service.

10. Comply with MSS SP-122.

B. Plastic Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Valve, Inc.

b. Asahi/America.

c. Colonial Engineering, Inc.

d. GF Piping Systems: Georg Fischer LLC.

e. Hayward Flow Control.

f. IPEX USA LLC.

g. Legend Valve & Fitting, Inc.

h. NIBCO INC.

i. Plast-O-Matic Valves, Inc.

j. SMC The Specialty Mfg. Co.

k. Thermoplastic Valves, Inc.

l. WATTS.

2. Body: PVC or CPVC to match piping wafer type for installation between flanges.

3. Disc: EPDM-coated steel.

4. Seats: PTFE.

5. Handle Style: Locking lever.

6. CWP Rating: Equal to piping service.

7. Maximum Operating Temperature: Equal to piping service.

C. Plastic Check Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Valve, Inc.

b. Asahi/America.

c. Colonial Engineering, Inc.

d. GF Piping Systems: Georg Fischer LLC.

e. Hayward Flow Control.

f. IPEX USA LLC.

g. KBI (King Bros. Industries).

h. Legend Valve & Fitting, Inc.

i. NIBCO INC.

j. Plast-O-Matic Valves, Inc.

k. SMC The Specialty Mfg. Co.

l. Thermoplastic Valves, Inc.

m. WATTS.

2. Body: Bronze, ball or plug type with calibrated orifice or venturi.

3. Ball: Brass or stainless steel.

4. Plug: Resin.

5. Seat: PTFE.

6. End Connections: Threaded or socket.

7. Pressure Gage Connections: Integral seals for portable differential pressure meter.

8. Handle Style: Lever, with memory stop to retain set position.

9. CWP Rating: Minimum 125 psig.

10. Maximum Operating Temperature: 250 deg F.

D. Bronze, Calibrated-Orifice, Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Armstrong Pumps, Inc.

b. Bell & Gossett; a Xylem brand.

c. Flow Design, Inc.

d. Gerand Engineering Co.

e. Grinnell G-Fire by Johnson Controls Company.

f. Griswold Controls.

g. Hays Fluid Controls.

h. HCI; Hydronics Components Inc.

i. Nexus Valve, Inc.

j. NIBCO INC.

k. NuTech Hydronic Specialty Products.

l. Oventrop Corporation.

m. Red-White Valve Corp.

n. TACO Comfort Solutions, Inc.

o. Tour & Andersson; available through Victaulic Company.

p. Tunstall Corporation.

q. Victaulic Company.

r. WATTS.

2. Body: Bronze, ball or plug type with calibrated orifice or venturi.

3. Ball: Brass or stainless steel.

4. Plug: Resin.

5. Seat: PTFE.

6. End Connections: Threaded or socket.

7. Pressure Gage Connections: Integral seals for portable differential pressure meter.

8. Handle Style: Lever, with memory stop to retain set position.

9. CWP Rating: Minimum 125 psig.

10. Maximum Operating Temperature: 250 deg F.

E. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Armstrong Pumps, Inc.

b. Bell & Gossett; a Xylem brand.

c. Flow Design, Inc.

d. Gerand Engineering Co.

e. Grinnell G-Fire by Johnson Controls Company.

f. Griswold Controls.

g. Hays Fluid Controls.

h. HCI; Hydronics Components Inc.

i. Nexus Valve, Inc.

j. NIBCO INC.

k. NuTech Hydronic Specialty Products.

l. Oventrop Corporation.

m. Red-White Valve Corp.

n. TACO Comfort Solutions, Inc.

o. Tour & Andersson; available through Victaulic Company.

p. Tunstall Corporation.

q. Victaulic Company.

r. WATTS.

2. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.

3. Ball: Brass or stainless steel.

4. Stem Seals: EPDM O-rings.

5. Disc: Glass and carbon-filled PTFE.

6. Seat: PTFE.

7. End Connections: Flanged or grooved.

8. Pressure Gage Connections: Integral seals for portable differential pressure meter.

9. Handle Style: Lever, with memory stop to retain set position.

10. CWP Rating: Minimum 125 psig.

11. Maximum Operating Temperature: 250 deg F.

F. Diaphragm-Operated, Pressure-Reducing Valves: ASME labeled.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.

b. Apollo Valves; a part of Aalberts Integrated Piping Systems.

c. Armstrong Pumps, Inc.

d. Bell & Gossett; a Xylem brand.

e. Spence Engineering Company, Inc.

f. Victaulic Company.

g. WATTS.

2. Body: Bronze or brass.

3. Disc: Glass and carbon-filled PTFE.

4. Seat: Brass.

5. Stem Seals: EPDM O-rings.

6. Diaphragm: EPT.

7. Low inlet-pressure check valve.

8. Inlet Strainer: , removable without system shutdown.

9. Valve Seat and Stem: Noncorrosive.

10. Valve Size, Capacity, and Operating Pressure: Selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

G. Diaphragm-Operated Safety Valves: ASME labeled.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. AMTROL, Inc.

   b. Apollo Valves; a part of Aalberts Integrated Piping Systems.

   c. Armstrong Pumps, Inc.

   d. Bell & Gossett; a Xylem brand.

   e. Spence Engineering Company, Inc.

   f. WATTS.

2. Body: Bronze or brass.

3. Disc: Glass and carbon-filled PTFE.

4. Seat: Brass.

5. Stem Seals: EPDM O-rings.

6. Diaphragm: EPT.

7. Wetted, Internal Work Parts: Brass and rubber.

8. Inlet Strainer: , removable without system shutdown.

9. Valve Seat and Stem: Noncorrosive.

10. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

H. Automatic Flow-Control Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Caleffi.

    b. Flow Design, Inc.

    c. Flowcon Americas LLC.

    d. Griswold Controls.

    e. Hays Fluid Controls.

    f. HCI; Hydronics Components Inc.

    g. Nexus Valve, Inc.

    h. NIBCO INC.

    i. NuTech Hydronic Specialty Products.

    j. Oventrop Corporation.

    k. Red-White Valve Corp.

    l. Tunstall Corporation.

    m. WATTS.

2. Body: Brass or ferrous metal.

3. Flow Control Assembly, provide either of the following:

    a. Piston and Spring Assembly: Stainless steel, tamper proof, self-cleaning, and removable.

    b. Elastomeric Diaphragm and Polyphenylsulfone Orifice Plate: Operating ranges within 2- to 80-psig differential pressure.

4. Combination Assemblies: Include bronze or brass-alloy ball valve.

5. Identification Tag: Marked with zone identification, valve number, and flow rate.

6. Size: Same as pipe in which installed.

7. Performance: Maintain constant flow within plus or minus 10 percent, regardless of system pressure fluctuations.

8. Minimum CWP Rating: 175 psig.

9. Maximum Operating Temperature: 200 deg F.

2.02 AIR-CONTROL DEVICES

A. Manual Air Vents:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.

b. Apollo Valves; a part of Aalberts Integrated Piping Systems.

c. Armstrong Pumps, Inc.

d. Bell & Gossett; a Xylem brand.

e. Hays Fluid Controls.

f. HCI; Hydronics Components Inc.

g. Nexus Valve, Inc.

h. NuTech Hydronic Specialty Products.

i. TACO Comfort Solutions, Inc.

j. WATTS.

2. Body: Bronze.

3. Internal Parts: Nonferrous.

4. Operator: Screwdriver or thumbscrew.

5. Inlet Connection: NPS 1/2.

6. Discharge Connection: NPS 1/8.

7. CWP Rating: 150 psig.

8. Maximum Operating Temperature: 225 deg F.

B. Automatic Air Vents:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.

b. Armstrong Pumps, Inc.

c. Bell & Gossett; a Xylem brand.

d. Flamco; a division of AALBERTS Ind.

e. Nexus Valve, Inc.

f. NuTech Hydronic Specialty Products.

g. Spirotherm, Inc.

h. TACO Comfort Solutions, Inc.

i. WATTS.

2. Body: Bronze or cast iron.

3. Internal Parts: Nonferrous.

4. Operator: Noncorrosive metal float.

5. Inlet Connection: NPS 1/2.

6. Discharge Connection: NPS 1/4.

7. CWP Rating: 150 psig.

8. Maximum Operating Temperature: 240 deg F.

C. Expansion Tanks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.

b. Armstrong Pumps, Inc.

c. Bell & Gossett; a Xylem brand.

d. Flo Fab Inc.

e. TACO Comfort Solutions, Inc.

f. WATTS.

2. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature, with taps in bottom of tank for tank fitting and taps in end of tank for gage glass. Tanks shall be factory tested after taps are fabricated and shall be labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

3. Air-Control Tank Fitting: Cast-iron body, copper-plated tube, brass vent tube plug, and stainless-steel ball check, 100-gal. unit only; sized for compression-tank diameter.

Provide tank fittings for 125-psig working pressure and 250 deg F maximum operating temperature.

4. Tank Drain Fitting: Brass body, nonferrous internal parts; 125-psig working pressure and 240 deg F maximum operating temperature; constructed to admit air to compression tank, drain water, and close off system.

5. Gage Glass: Full height with dual manual shutoff valves, 3/4-inch- diameter gage glass, and slotted-metal glass guard.

D. Bladder-Type ASME Expansion Tanks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.

b. Armstrong Pumps, Inc.

c. Bell & Gossett; a Xylem brand.

d. Flo Fab Inc.

e. TACO Comfort Solutions, Inc.

f. WATTS.

2. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature. Factory test after taps are fabricated and supports installed and are labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

3. Bladder: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.

4. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

E. Diaphragm-Type Non-ASME Expansion Tanks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.

b. Apollo Valves; a part of Aalberts Integrated Piping Systems.

c. Armstrong Pumps, Inc.

d. Bell & Gossett; a Xylem brand.

e. Flamco; a division of AALBERTS Ind.

f. Flo Fab Inc.

g. TACO Comfort Solutions, Inc.

h. WATTS.

2. Tank: Carbon steel, rated for minimum 100-psig working pressure at minimum 200 deg F maximum operating temperature. Non-ASME construction.

3. Diaphragm: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.

F. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

G. Coalescing-Type Air and Dirt Separators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Armstrong Pumps, Inc.

b. Bell & Gossett; a Xylem brand.

c. Spirotherm, Inc.

2. Tank: Fabricated steel tank; ASME constructed and stamped for 125-psig (862-kPa) working pressure and 270 deg F (130 deg C) maximum operating temperature.

3. Coalescing Medium: Stainless steel.

4. Air Vent: Threaded to the top of the separator.

5. Inline Inlet and Outlet Connections: Threaded for NPS 2 (DN 50) and smaller; Class 150 flanged connections for NPS 2-1/2 (DN 65) and larger.

6. Blowdown Connection: Threaded to the bottom of the separator.

7. Size: Match system flow capacity.

H. Tangential-Type Air Separators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.

b. Armstrong Pumps, Inc.

c. Bell & Gossett; a Xylem brand.

d. Flamco; a division of AALBERTS Ind.

e. TACO Comfort Solutions, Inc.

2. Tank: Welded steel; ASME constructed and labeled for 125-psig minimum working pressure and 375 deg F maximum operating temperature.

3. Air Collector Tube: Perforated stainless steel, constructed to direct released air into expansion tank.

4. Tangential Inlet and Outlet Connections: Threaded for NPS 2 and smaller; flanged connections for NPS 2-1/2 and larger.

5. Blowdown Connection: Threaded.

6. Size: Match system flow capacity.

I. In-Line Air Separators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.

b. Armstrong Products, Inc.

c. Bell & Gossett; a Xylem brand.

d. Spirotherm, Inc.

e. TACO Comfort Solutions, Inc.

2. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.

3. Maximum Working Pressure: Up to 175 psig.

4. Maximum Operating Temperature: Up to 300 deg F.

J. Air Purgers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.

b. Armstrong Pumps, Inc.

c. Bell & Gossett; a Xylem brand.

d. Spirotherm, Inc.

e. TACO Comfort Solutions, Inc.

f. WATTS.

2. Body: Cast iron with internal baffles that slow the water velocity to separate the air from solution and divert it to the vent for quick removal.

3. Maximum Working Pressure: 150 psig.

4. Maximum Operating Temperature: 250 deg F.

2.03 STRAINERS

A. Y-Pattern Strainers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Keckley Company.

b. Metraflex Company (The).

c. Titan Flow Control, Inc.

d. WATTS.

2. Body: ASTM A126, Class B, cast iron with bolted cover and bottom drain connection.

3. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.

4. Strainer Screen: Stainless-steel, 40-mesh strainer, or perforated stainless-steel basket.

5. CWP Rating: 125 psig.

B. Basket Strainers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Keckley Company.

b. Metraflex Company (The).

c. Titan Flow Control, Inc.

d. WATTS.

2. Body: ASTM A126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.

3. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.

4. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.

5. CWP Rating: 125 psig.

C. T-Pattern Strainers:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.

2. End Connections: Grooved ends.

3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.

4. CWP Rating: 750 psig.

2.04 CONNECTORS

A. Stainless-Steel Bellow, Flexible Connectors:

1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.

2. End Connections: Threaded or flanged to match equipment connected.

3. Performance: Capable of 3/4-inch misalignment.

4. CWP Rating: 150 psig.

5. Maximum Operating Temperature: 250 deg F.

B. Spherical, Rubber, Flexible Connectors:

1. Body: Fiber-reinforced rubber body.

2. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.

3. Performance: Capable of misalignment.

4. CWP Rating: 150 psig.

5. Maximum Operating Temperature: 250 deg F.

PART 3 - EXECUTION

3.01 VALVE APPLICATIONS

A. Install shutoff-duty valves at each branch connection to supply mains and at supply connection to each piece of equipment.

B. Install calibrated-orifice, balancing valves at each branch connection to return main.

C. Install calibrated-orifice, balancing valves in the return pipe of each heating or cooling terminal.

D. Install check valves at each pump discharge and elsewhere as required to control flow direction.

E. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

F. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

3.02 HYDRONIC SPECIALTIES INSTALLATION

A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.

B. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Install manual vents at heat-transfer coils and elsewhere as required for air venting.

C. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.

D. Install in-line air separators in pump suction. Install drain valve on air separators NPS 2 and larger.

E. Install tangential air separator in pump suction. Install blowdown piping with gate or full-port ball valve; extend full size to nearest floor drain.

F. Install expansion tanks above the air separator. Install tank fitting in tank bottom and charge tank. Use manual vent for initial fill to establish proper water level in tank.

1. Install tank fittings that are shipped loose.

2. Support tank from floor or structure above with sufficient strength to carry weight of tank, piping connections, fittings, plus tank full of water. Do not overload building components and structural members.

G. Install expansion tanks on the floor. Vent and purge air from hydronic system, and ensure that tank is properly charged with air to suit system Project requirements.

END OF SECTION

23 21 23

HYDRONIC PUMPS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Furnish and install pumps for mechanical systems except where integral with manufactured piece of equipment, including: Pumps and pump controls where self-contained.

1.02 RELATED SECTIONS

A. Section 23 05 13 – Common Motor Requirements for HVAC Equipment.

B. Section 23 05 48 – Vibration Controls for HVAC Ducts and Equipment.

C. Section 23 05 93 – Testing Adjusting and Balancing for HVAC.

D. Section 23 07 13 – HVAC Insulation.

E. Section 23 07 16 – Equipment Insulation.

1.03 SUBMITTALS

A. Include certified pump curves showing pump performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable. For each pump with a motor horsepower greater than 10, submit a certified shop performance test curve indicating capacity, head, horsepower and flow rates from shutoff to 125 percent of design flow.

B. For centrifugal pumps, include certification that pump impeller diameter is less than 85 percent of the diameter of the maximum impeller possible (not to exceed cutwater diameter) for the pump casing, and that fabricated structural steel base is of sufficient strength to prevent vibration, warping or misalignment of the pump.

C. eed cutwater diameter) for the pump casing, and that fabricated structural steel base is of sufficient strength to prevent vibration, warping or misalignment of the pump.

D. Provide operation and maintenance manual.

PART 2 - PRODUCTS

1.04 MANUFACTURERS

A. General Pumps

1. Armstrong Fluid Technology.

2. Bell & Gossett

3. Aurora

1.05 GENERAL

B. Statically and dynamically balance rotating parts.

A. Capacity test for design flow after final assembly.

B. Construction to permit complete servicing without breaking piping or motor connections.

C. Pumps to operate at 1750 rpm, unless specified otherwise.

D. Complete pump assembly, including casing, flanges and seals, suitable for the service intended and the working pressure and temperatures scheduled for the system. Scheduled working pressure applies to the entire pump assembly including the suction and discharge flanges.

E. Pumps to be complete with grease lubricated ball bearings, grease fittings and relief plugs, unless stated otherwise hereinafter.

F. Free of flashing and cavitation at all flow rates from 25 to 125 percent of design flow under the suction conditions of the actual pump installation.

G. Critical speed at least 115 percent of the running speed listed in the schedule.

H. Pump connections to be flanged, except that on end suction, base mounted pumps connection sizes 2-1/2 inches and less may be threaded.

I. Heating pumps to be suitable for handling water at 230 degrees F.

J. Select motors to drive the pump through its characteristics curve from zero flow to 25 percent above the design flow without exceeding rated full load nameplate horsepower. Provide a non-overloading motor, such that the rated horsepower will not be exceeded at any point on the pump curve. Do not use the motor service factor.

K. Paint pumps.

2.01

2.02

2.03 SEPARATELY COUPLED, BASE-MOUNTED, END-SUCTION CENTRIFUGAL PUMPS

A. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, end-suction pump designed for base mounting, with pump and motor shafts horizontal.

B. Pump Construction:

1. Casing: Radially split, cast iron, with replaceable bronze wear rings, threaded gage tappings at inlet and outlet, drain plug at bottom and air vent at top of volute, and flanged connections. Provide integral mount on volute to support the casing, and provide attached

piping to allow removal and replacement of impeller without disconnecting piping or requiring the realignment of pump and motor shaft.

2. d motor shaft.

3. Impeller: ASTM B584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For pumps not frequency-drive controlled, trim impeller to match specified performance.

4. Pump Shaft: Stainless steel.

5. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, Buna N or Viton bellows and gasket.

6. and gasket.

7. Pump Bearings: Grease-lubricated ball bearings in cast-iron housing with grease fittings.

C. Shaft Coupling: Molded-rubber insert and interlocking spider capable of absorbing vibration. EPDM coupling sleeve for variable-speed applications.

D. Coupling Guard: Dual rated; ANSI B15.1, Section 8; OSHA 1910.219 approved; steel; removable; attached to mounting frame.

E. Mounting Frame: Welded-steel frame and cross members, factory fabricated from ASTM A36/A36M channels and angles. Fabricate to mount pump casing, coupling guard, and motor.

F. Provide end suction pumps with suction diffusers.

G. Motor: Single speed, secured to mounting frame, with adjustable alignment.

1. Reference Section 230513for additional requirements.

2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

3. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

a. Enclosure: Totally enclosed, fan cooled.

b. Enclosure Materials: Cast iron or Rolled steel.

c. Permanently lubricated ball bearings are available up through 5 hp. Larger motors have grease-lubricated ball bearings.

d. Efficiency: Premium efficient.

e. Inverter Duty

f. Service Factor: 1.15 Min

PART 3 - EXECUTION

2.04 INSTALLATION

A. Provide drains for bases and stuffing boxes piped to and discharging into floor drains.

B. Provide air cock and drain connection on horizontal pump casings.

C. Provide line sized butterfly valve and strainer on suction side and line sized soft seated check valve and butterfly valve on discharge side of all pumps. Provide calibrated balancing valve at pump discharge where indicated.

D. Decrease from line size with long radius reducing elbows or reducers. Support piping adjacent to pump such that no weight is carried on pump casings. Provide supports under elbows on pump suction and discharge line sizes 4 inch and over.

E. Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

F. Level and align pump baseplate, pump and driver. Provide metal supporting blocks, wedges and shims as required. Rigidly bolt pump base plate to the concrete base. After final alignment of centrifugal pumps, 25 horsepower and larger, dowel the pump and motor to the base.

G. Install frame mounted pumps on housekeeping pad with inertia base where indicated. Pad shall be a minimum of 6″ in height. Use 3000-psi, 28-day compressive-strength concrete and reinforcement. Install anchor bolts to elevations required for proper attachment to supported equipment.

H. Install inline pumps in piping. Support per manufacturer's recommendations with spring isolation hangers.

I. Install pumps level in accordance with pump manufacturer's written recommendations

J. Ensure that pump is pipe-mounted and free to float with any movement, expansion and contraction of piping system.

1. Support pump using floor mounted saddle as required.

2. For vertical in-line pumps supported from structure, ensure no pipe strain is imposed on pump flanges.

3. Use vibration isolators, neoprene isolation pads to meet project conditions in accordance with Section 23 05 48 – Vibration Isolation.

4. Where pumps are supported entirely by piping system ensure hangers are sized for extra load of pump weight.

K. Install suction guides on pump suction connection.

L. Install pressure gauges on suction and discharge pump connections.

M. Install hangers and supports in accordance with Section 23 05 39 - Sleeves, Flashings, Supports and Anchors.

1. Adjust hangers and supports after pump is installed to ensure proper support.

N. Align pipe flanges with pump flanges and bolt together in accordance with pump manufacturer's written recommendations.

O. Connect pumps to electrical distribution system to IEEE regulations and with authority having jurisdiction in accordance with Section 26 05 00 – Common Work Results for Electrical.

1. Include wiring to most remote sensor in system where applicable.

a. Do not run pumps dry to check rotation.

2.05 FIELD QUALITY CONTROL

P. Field Inspection: Coordinate field inspection in accordance with Section 01 45 00 Quality Control.

Q. Manufacturer's Services:

1. Manufacturer's Field Services: Provide manufacturer's field services consisting of installation supervision and start-up services.

a. Report any inconsistencies from manufacturer's recommendations immediately to Consultant.

2. Schedule site visits to review work at stages listed:

a. After delivery and storage of pumps, controls and components, and when preparatory work on which Work of this Section depends is complete, but before installation begins.

b. Upon completion of Work, after cleaning is carried out.

c. Obtain reports within three (3) days of review and submit immediately to Consultant.

2.06 COMMISSIONING

R. Validate alignment, rotation, motor current draw, flows and pressures in accordance with Section 23 08 00 – Commissioning of HVAC.

2.07 PROTECTION

S. Protect installed products and components from damage during construction.

T. Repair damage to adjacent materials caused by hydronic pump installation.

END OF SECTION

23 25 13

WATER TREATMENT FOR CLOSED-LOOP HYDRONIC SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes the following water treatment for closed-loop hydronic systems:

1. [Manual] [Automatic] chemical-feed equipment.

2. Chemicals.

B. Related Requirements:

1. Section 232533 "HVAC Makeup-Water Filtration Equipment" for water treatment of water softeners, RO equipment, and filtration equipment.

1.03 DEFINITIONS

A. RO: Reverse osmosis.

B. TDS: Total dissolved solids consist of salts and other materials that combine with water as a solution.

C. TSS: Total suspended solids include both organic and inorganic solids that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

1.04 ACTION SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, and furnished specialties and accessories for the following products:

1. Bypass feeders.

2. Water meters.

3. Inhibitor injection timers.

4. pH controllers.

5. Chemical solution tanks.

6. Injection pumps.

7. Chemical-treatment test equipment.

8. Chemical material safety data sheets.

9. Inhibited ethylene glycol.

10. Inhibited propylene glycol.

B. Shop Drawings: Pretreatment and chemical-treatment equipment, showing tanks, maintenance space required, and piping connections to hydronic systems.

1. Include plans, elevations, sections, and attachment details.

2. Include diagrams for power, signal, and control wiring.

1.05 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Water-Analysis Provider Qualifications: Verification of experience and capability of HVAC water-treatment service provider.

C. Field quality-control reports.

D. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in "Performance Requirements" Article.

E. Water Analysis: Illustrate water quality available at Project site.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For sensors, injection pumps, and controllers to include in emergency, operation, and maintenance manuals.

1.07 QUALITY ASSURANCE

A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider, capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.

PART 2 - PRODUCTS

2.01 HVAC WATER-TREATMENT MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Anderson Chemical Company.
2. Aqua-Chem, Inc.
3. Barclay Water Management, Inc.
4. Boland Trane Services.
5. Cascade Water Services, Inc.
6. Earthwise Environmental Inc.
7. H-O-H Water Technology, Inc.
8. Metro Group, Inc. (The).
9. Nalco; an Ecolab company.
10. Sonitec-Vortisand Inc.
11. Suez Water Technologies (Formerly GE Water).
12. Watcon, Inc.

2.02 PERFORMANCE REQUIREMENTS

A. Provide all hardware, chemicals, and other material necessary to maintain HVAC water quality in all systems, as indicated in this Specification. Water quality for hydronic systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of hydronic equipment without creating a hazard to operating personnel or the environment.

B. erating personnel or the environment.

C. Base HVAC water treatment on quality of water available at Project site, hydronic system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.

D. Closed hydronic systems, including [hot-water heating below 250 deg F] [chilled water] [dual-temperature water] [glycol heating] [and] [glycol cooling] shall have the following water qualities:

1. pH: Maintain a value within <Insert range>.
2. Alkalinity: Maintain a value within <Insert range> mg/L as CaCO(3).

3. Steel Corrosion Inhibiters: Provide sufficient inhibitors to limit mild steel corrosion to 1 mils per year.

4. Yellow Metal Corrosion Inhibitor: Provide sufficient copper and brass corrosion inhibitors to limit copper corrosion to 1 mils per year.

5. Scale Control: Provide softened water for initial fill and makeup. Where softened water is not used, provide sufficient scale inhibitors to prevent formation of scale and maintain all scale-forming material in solution.

6. Dispersants: Provide sufficient dispersants to prevent sedimentation of fine particulate matter.

7. Microbiological Limits:

   a. Total Aerobic Plate Count: Maintain a maximum value of 1000 organisms/mL.

   b. Total Anaerobic Plate Count: Maintain a maximum value of 100 organisms/mL.

   c. Nitrate Reducers: Maintain a maximum value of 100 organisms/mL.

   d. Sulfate Reducers: Maintain a maximum value of 0 organisms/mL.

   e. Iron Bacteria: Maintain a maximum value of 0 organisms/mL.

2.03 MANUAL CHEMICAL-FEED EQUIPMENT

A. Bypass Feeders: Provide steel feeders with corrosion-resistant exterior coating, minimum 3-1/2-inch fill opening in the top, and NPS 3/4 bottom inlet and top side outlet. Provide quarter turn or threaded fill cap with gasket seal and diaphragm to lock the top on the feeder when exposed to system pressure in the vessel.

   1. Capacity: 5 gal..

   2. Minimum Working Pressure: 175 psig.

2.04 AUTOMATIC CHEMICAL-FEED EQUIPMENT

A. Water Meter, Piston Type, Threaded:

   1. AWWA C700, oscillating-piston, magnetic-drive, totalization meter.

   2. Body: Bronze.

   3. Minimum Working-Pressure Rating: 150 psig.

   4. Maximum Pressure Loss at Design Flow: 3 psig.

   5. Registration: Gallons or cubic feet.

   6. End Connections: Threaded.

7. Controls: Flow-control switch with normally open contacts, rated for maximum 10 A, 250-V ac, that will momentarily close at adjustable increments of total flow.

8. Electronic or digital interface for flow rate indication at central workstation compatible with DDC system, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC." Low-voltage signal must be capable of transmitting 1000 feet.

9. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Water Meter, Turbine Type, Threaded:

1. AWWA C701, turbine-type, totalization meter.

2. Body: Bronze.

3. Minimum Working-Pressure Rating: 100 psig.

4. Maximum Pressure Loss at Design Flow: 3 psig.

5. Registration: Gallons or cubic feet.

6. End Connections: Threaded.

7. Controls: Flow-control switch with normally open contacts. rated for maximum 10 A, 250-V ac, that will momentarily close at adjustable increments of total flow.

8. Electronic or digital interface for flow rate indication at central workstation compatible with DDC system, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC." Low-voltage signal must be capable of transmitting 1000 feet.

9. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Water Meter, Turbine Type, Flanged:

1. AWWA C701, turbine-type, totalization meter.

2. Body: Bronze.

3. Minimum Working-Pressure Rating: 150 psig.

4. Maximum Pressure Loss at Design Flow: 3 psig.

5. Registration: Gallons or cubic feet.

6. End Connections: Flanged.

7. Controls: Flow-control switch with normally open contacts, rated for maximum 10 A, 250-V ac, that will momentarily close at adjustable increments of total flow.

8. Electronic or digital interface for flow rate indication at central workstation compatible with DDC system, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC." Low-voltage signal must be capable of transmitting 1000 feet.

9. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Chemical Solution Tanks:

1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.

2. Molded cover with recess for mounting pump.

3. Capacity: 50 gal.

E. Chemical Solution Injection Pumps:

1. Self-priming, positive displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.

2. Adjustable flow rate.

3. Metal and thermoplastic construction.

4. Built-in relief valve.

5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A269/A269M, Type 304 stainless steel for steam boiler injection assemblies.

G. Injection Assembly:

1. Quill: Minimum NPS 1/2 with insertion length sufficient to discharge into at least 25 percent of pipe diameter.

2. Ball Valve: Two-piece, stainless steel; selected to fit quill.

3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.

4. Assembly Pressure/Temperature Rating: Minimum 600 psig at 200 deg F.

2.05 CHEMICAL-TREATMENT TEST EQUIPMENT

A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounted cabinet for testing pH, corrosion inhibitors, alkalinity, hardness, and other properties recommended by manufacturer.

B. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.

1. Two-station rack for closed-loop systems.

2.06 CHEMICALS

A. Chemicals shall be as recommended by water-treatment system manufacturer, compatible with piping system components and connected equipment, and able to attain water quality specified in "Performance Requirements" Article.

2.07 INHIBITED ETHYLENE GLYCOL AND PROPYLENE GLYCOL

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Dow Chemical Company (The).
2. Dynalene.
3. Fremont Industries.
4. Houghton Chemical Corp.

B. Inhibited Ethylene Glycol:

1. Ethylene glycol with inhibitor additive, to provide freeze protection for heat-transfer fluid and corrosion protection for carbon-steel, brass, copper, stainless steel, and cast-iron piping and fittings.

2. Inhibitor creates a passive layer on all surfaces that contact ethylene glycol to prevent corrosion and stabilizes fluid pH, to compensate for acids formed from glycol degradation.

3. pH value shall be maintained between 9.0 and 10.5, with reserve alkalinity greater than 12 mL.

4. Concentrated inhibited ethylene glycol is to be 95.5 percent ethylene glycol by weight and 4.5 percent performance additives.

5. Concentrated inhibited ethylene glycol is mixed with water in proper proportion specified by the manufacturer to provide freeze protection to 0 deg F. Premixed heat-transfer fluid

may be used, or glycol/water mixture may be prepared at time of installation. Use only deionized water for mixing.

6. Provide only ethylene glycol that is specifically blended for HVAC application. Automotive-type antifreeze is unacceptable.

C. Inhibited Propylene Glycol:

1. Propylene glycol with inhibitor additive, to provide freeze protection for heat-transfer fluid and corrosion protection for carbon steel, brass, copper, stainless steel, and cast-iron piping and fittings.

2. Inhibitor creates a passive layer on all surfaces that contact propylene glycol to prevent corrosion and stabilizes fluid pH, to compensate for acids formed from glycol degradation.

3. pH value shall be maintained between 8.8 to 9.5.

4. Concentrated inhibited propylene glycol is to be 95.5 percent propylene glycol by weight and 4.5 percent performance additives.

5. Concentrated inhibited propylene glycol is mixed with water in proper proportion specified by the manufacturer to provide freeze protection to 0 deg F. Premixed heat-transfer fluid may be used, or glycol/water mixture may be prepared at the time of installation. Use only deionized water for mixing.

6. Provide only propylene glycol that is specifically blended for HVAC application. Automotive-type antifreeze is unacceptable.

PART 3 - EXECUTION

3.01 WATER ANALYSIS

A. Perform an analysis of supply water to determine quality of water available at Project site.

3.02 INSTALLATION

A. Install chemical-application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units, so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate. Install all chemical application equipment within a spill-containment area without floor drain.

B. Install seismic restraints for equipment and floor-mounting accessories, and anchor to building structure. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.

C. Install water-testing equipment on wall near water-chemical-application equipment.

D. Install interconnecting control wiring for chemical-treatment controls and sensors.

E. Mount sensors and injectors in piping circuits.

F. Bypass Feeders: Install in closed hydronic systems and equip with the following:

1. Install bypass feeder in a bypass circuit around circulating pumps unless indicated otherwise on Drawings.

2. Install test-coupon assembly in bypass circuit around circulating pumps unless otherwise indicated on Drawings.

3. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below the feeder inlet.

4. Install a swing check on the inlet after the isolation valve.

G. Install automatic fluid make-up equipment for glycol water system, and include the following:

1. Chemical solution tanks.

2. Chemical solution injection pumps.

3. Water meter in makeup supply to system.

4. Pressure switch to operate injection pump as necessary to maintain glycol system pressure.

3.03 PIPING CONNECTIONS

A. Piping installation requirement are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to equipment, allow space for service and maintenance.

C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Section 232113 "Hydronic Piping."

D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."

E. Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for backflow preventers required in makeup-water connections to potable-water systems.

3.04 ELECTRICAL CONNECTIONS

A. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.

B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.05 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

D. Perform tests and inspections with the assistance of a factory-authorized service representative.

E. Tests and Inspections:

1. Inspect field-assembled components and equipment installation, including piping and electrical connections.

2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.

3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of hydronic systems' startup procedures.

4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.

5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.

7. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.

8. Repair leaks and defects with new materials, and retest piping until no leaks exist.

F. Equipment will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

H. At six-week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis, advising Owner of changes necessary to adhere to "Performance Requirements" Article.

I. Comply with ASTM D3370 and with the following standards:

1. Silica: ASTM D859.

2. Acidity and Alkalinity: ASTM D1067.

3. Iron: ASTM D1068.

4. Water Hardness: ASTM D1126.

3.06 MAINTENANCE SERVICE

A. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above, to inhibit corrosion and scale formation for hydronic piping and equipment. Services and chemicals shall be provided for a period of one year from date of Substantial Completion and shall include the following:

1. Initial water analysis and HVAC water-treatment recommendations.

2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.

3. Periodic field service and consultation.

4. Customer report charts and log sheets.

5. Laboratory technical analysis.

6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

3.07 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.

END OF SECTION 232513

23 31 13

METAL DUCTS

PART 1 - GENERAL

1.01 WORK INCLUDED

A. HVAC air distribution ductwork.

B. Duct pressure testing.

1.02 RELATED WORK

A. Section 09900 - Painting: Weld priming, weather resistant, paint or coating.

B. Section 15140 - Supports and Anchors: Sleeves.

C. Section 15250 - Mechanical Insulation.

D. Section 15910 - Duct Accessories.

E. Section 15990 - Testing, Adjusting and Balancing.

F. Section 013300 Submittals.

G. Section 01524 Construction Waste Management

H. Section 01611 Environmental Management

I. Section 01570 Pollution Prevention and Control

1.03 REFERENCES

A. ASHRAE – Fundamentals Handbook, Latest Version; Duct Design.

B. ASHRAE - HVAC Systems and Equipment Handbook, Latest Version; Duct Construction.

C. ASTM A 90 - Weight of Coating on Zinc-Coated (Galvanized) Iron or Steel Articles.

D. ASTM A 525 - General Requirements for Steel Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process.

E. ASTM A 527 - Steel Sheet, Zinc-Coated (Galvanized) by Hot-Dip Process, Lock Forming Quality.

F. NFPA 90A - Installation of Air Conditioning and Ventilating Systems.

G. NFPA 90B - Installation of Warm Air Heating and Air Conditioning Systems.

H. SMACNA - Duct Construction Standards.

I. UL 181 - Factory-Made Air Ducts and Connectors.

J. ASTM A 167 - Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.

K. NFPA 96 - Installation of Equipment for the Removal of Smoke and Grease-Laden Vapors from Commercial Cooling Equipment.

1.04 DEFINITIONS

A. WG - Water Gauge

B. Static Pressure - Total air pressure less velocity air pressure. Static pressure type is defines as positive or negative pressures relative to standard atmospheric conditions unless denoted otherwise.

C. Duct Size - Net inside clear dimensions after insulation. Where offsets or transitions are required, the duct shall maintain the equivalent area based on hydraulic diameter and rectangular duct size for equal flow, velocity and pressure drop as calculated by Huebscher Formula #30 and/or #31 in ASHRAE Duct Design Fundamentals Handbook and associated Friction Chart for round duct.

D. Pressure Classification - SMACNA standard classification system for ductwork applications not exceeding listed static pressure and velocity services. SMACNA standard static pressure classes are defined as follows:

Pressure Class	Operating Pressure (WG)	Pressure Type	Max Velocity (fpm)	Seal Class
½	< 1/2”	Any	< 2,000	C
1	>½” to 1”	Any	< 2,500	C
2	>1” to 2”	Any	< 2,500	B (note 1)
3	>2” to 3”	Any	<4,000	B
4	>3” to 4”	Positive Only	<4,000	A
6	>4” to 6”	Positive Only	As Indicated	A
10	>6” to 10”	Positive Only	As Indicated	A

Notes 1: Seal Class B required exceeding SMACNA minimum requirement.

1.05 SUBMITTALS

A. Refer to other applicable sections for additional coordination drawings, duct shop drawings and product data and conform to provisions of Division 1.

B. Shop Drawings:

1. Prepare and submit ductwork shop drawings prior to fabrication and installation of ductwork. Contract documents are schematic in nature and are not an acceptable substitute for ductwork shop drawings.

2. Include floor plans drawn to scale not less than 1"=1/4" over appropriate project backgrounds. Include duct elevations and sections where proposed duct configurations cannot be fully depicted in plan view.

3. Include relevant details such as duct size dimensions, pressure classification, sheet metal gages, joining methodology, duct construction technology, fittings and duct accessories prior to start of work.

4. Include coordination with the work of other applicable trades including architectural partitions, piping, electrical, lighting, and ceiling systems.

5. Indicate bottom of duct elevation dimensions.

6. Include details for offsets and transitions as required to permit ductwork to fit in the installation space allocated. Verify actual project field conditions and measurements as required.

7. Owner assumes no responsibility for reimbursing additional costs for duct revisions and/or rework required as a result of failure to prepare fully developed and detailed shop drawings.

C. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

1. Recycled Content:

   a. Indicate recycled content; indicate percentage of pre-consumer and post-consumer recycled content per unit of product.

2. Local/Regional Materials:

   a. Indicate location of manufacturing facility; indicate distance between manufacturing facility and the project site.

   b. Indicate location of extraction, harvesting, and recovery; indicate distance between extraction, harvesting, and recovery and the project site.

3. VOC data:

   a. Submit manufacturer's product data for joint compounds. Indicate VOC and chemical component limits of the product. Submit MSDS highlighting VOC and chemical component limits. VOC contents and chemical component limits must be less than the limits of Green Seal's Standard GS-11.

b. Submit manufacturer's certification that products comply with Green Seal's Standard GS-11

c. Submit environmental data in accordance with Table 1 of ASTM E2129 for products provided under work of this Section.

4. Submit the following according to Conditions of the Construction Contract.

a. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

5. General: Submit additional LEED submittal requirements included in other sections of the Specifications.

6. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and protect products under provisions of Division 1.

B. Protect duct from exposure to weather. Do not store duct in uncovered areas.

C. Protect duct from contamination by covering openings until the time of installation. Maintain coverings over installed duct openings throughout construction progress until duct system is fully closed and complete.

D. Prevent entry into and/or habitation of ductwork by animals during storage and construction.

E. Restore ductwork to like-new condition or replace contaminated by lack of adequate protection at no additional cost to owner.

1.07 QUALITY CONTROL

A. Obtain manufacturer's inspection and acceptance of installation of duct at beginning of installation for factory prefabricated duct systems.

B. Provide 100% visual inspection of duct joint sealing prior to installation of thermal insulation coverings.

C. PRESSURE TESTING

1. Pressure test ducts rated for Pressure Class 3 inch or higher.

2. Conduct tests using procedures consistent with SMACNA HVAC Duct Leakage Test Manual.

3. Determine maximum acceptable rate of air leakage using duct leakage formula as follows:

$$F = C_L \times P^{0.65}$$

Where: F = Maximum permissible airflow leakage in cfm/100 sq. ft. duct surface

P = Ducts static pressure in inch WG

C_L = Leakage Class according to the table below

Duct Construction	Seal Class A	Seal Class B
Rectangular Construction	$C_L = 6$	$C_L = 12$
Round or Oval Construction	$C_L = 3$	$C_L = 6$

4. Conduct duct leakage tests witnessed in writing by owner’s designated representative, independent TAB service, project commissioning authority, independent construction inspector, engineer of record, and/or authority having jurisdiction where required. Schedule testing with advance notification for test witness(s).

5. Correct and retest ducts failing leakage tests at no additional cost to owner.

PART 2 - PRODUCTS

2.01 ENVIRONMENTALLY PREFERABLE PRODUCTS

A. Provide environmentally preferable products to the greatest extent possible.

1. To the greatest extent possible, provide products and materials that promote stewardship of the earth's resources, promote good indoor environmental quality (IEQ), and promote efficiencies in operational performance.

B. Provide products listed on the EPA Comprehensive Procurement Guidelines to the greatest extent practicable.

C. Provide products listed on the USGBC Directory of Products and Services to the greatest extent possible.

2.02 RECYCLED CONTENT

A. Provide recycled content products to the greatest extent possible.

1. To the greatest extent possible, provide materials with recycled content such that the sum of post-consumer recycled content plus one-half of the post-industrial content constitutes at least 10% of the total value of the materials in the project.

2.03 REGIONAL MATERIALS

A. Provide Regional materials and products to the greatest extent possible that are extracted and manufactured within the region.

1. Provide materials and products that use a minimum of 20 % of building products that are manufactured regionally within a radius of 500 miles from the project site.

a. Manufacturing refers to the final assembly of components into the building product that is furnished and installed by the tradesman.

2. Of the regionally manufactured materials used and documented, use a minimum of 50% of building materials and products that are extracted, harvested or recovered (as well as manufactured) within 500 miles of the project site.

2.04 ACCEPTABLE MANUFACTURERS

A. Flexible Duct Runouts

1. Flex-master.

2. Thermaflex

3. JP Lamborn Co.

2.05 MATERIALS

A. General: Non-combustible and conforming to requirements for Class 1 air duct materials, or UL 181.

B. Non-Welded Steel Ducts: ASTM A525 galvanized steel sheet, lock-forming quality, having zinc coating of 1.25 oz per sq. ft. for each side in conformance with ASTM A90.

C. Welded Carbon Steel Ducts: ASTM 568 rolled carbon steel; SMAW, FCAW, or GMAW welded; minimum 18 gauge sheet metal thickness.

D. Welded Stainless Steel Ducts: ASTM A167, Type 304; GMAW welded; minimum 16 gauge sheet metal thickness.

E. Fasteners: Rivets, bolts, or sheet metal screws matching base duct materials.

F. Sealant: Non-hardening, water resistant, fire resistive, suitable for applications and compatible with mating materials

1. High solids mastics - high density type with excellent adhesions and elasticity suitable for sealing fillets, groves, and flanges.

2. Liquid sealants - formulated specifically for duct applications containing not more than 60% volatiles suitable for filling voids 1/16 inch or less. Provide taped joint reinforcement for liquid sealants except machine fabricated longitudinal seams and slip-type joints.

3. Reinforcing tapes - suitable for use with liquid sealed joints only. Pressure sensitive adhesive tape sealing systems are not acceptable without liquid mastic overcoat.

4. Gaskets: soft elastomeric butyl rubber with adhesive backing suitable for use with flanged joints.

5. Liquid sealants containing not more than 50% volatiles. May be used for slip type joint assembly to fill voids up to 1/16 inch clearance.

G. Hangers

1. Strap: Steel, galvanized

2. Rod: Steel, galvanized; continuously threaded.

2.06 CONSTRUCTION

A. GALVANIZED STEEL RECTANGULAR DUCT

1. Single or double wall construction as indicated by application.

2. Minimum 26 gauge sheet metal thickness

3. Longitudinal seams complying with the following industry standards:

a. Inside Groove Seam

b. Sliding Seam

c. Pittsburgh Lock

d. Button-Punch Snap Lock

4. Transverse joints complying with the following industry standards:

a. Drive Slip

b. S Slip

c. Reinforced Bar-S Slip

d. Pocket Joint

e. Flanged Systems (Ductmate, MEZ, or equal) comprised of;

1) Rolled flanges with integral mastic seals

2) Bolted preformed corner pieces

3) Sealing gaskets

4) Flange joint drive cleats

5. Sealing Requirements

a. Class A – All transverse joints, longitudinal seams, and duct wall penetrations

b. Class B – All transverse joints and longitudinal seams

c. Class C – All transverse joints

6. except that all duct joints and longitudinal seams for all SMACNA classes of duct shall be sealed with U.L. Listed Hardcast DT-tape and sealant FTA-20.

B. GALVANIZED STEEL ROUND OR OVAL DUCT

1. Single or double wall construction as indicated by application.

2. Minimum 26 gauge sheet metal thickness

3. Longitudinal seams complying with the following industry standards:

a. Continuous interlocking spiral wound

b. Continuously seam welded

c. Butt seam welded

d. Gore locked seam

4. Transverse joints complying with the following industry standards:

a. Pipe & fitting coupled slip joint with radial fasteners

b. Swedge sleeve

c. Welded flanged & gasketed

C. WELDED LOW CARBON STEEL DUCT

1. Minimum 16 gauge thickness for grease laden exhaust service

2. Minimum 18 gauge thickness for services other than grease laden exhaust

3. Fully welded construction complying with one of the following industry standards

a. Shielded metal arc welding (SMAW)

b. Flux core arc welding (FCAW)

c. Gas metal arc welding (GMAW)

4. Fully welded longitudinal joints and transverse seams for grease laden kitchen exhaust applications.

5. Welded longitudinal seams with gasketed flanged transverse joints for applications other than grease laden kitchen exhaust.

D. WELDED STAINLESS STEEL DUCT

1. Minimum 16 gauge thickness for laboratory exhaust service

2. Minimum 18 gauge thickness for services other than laboratory exhaust

3. Welded construction complying with industry standard gas metal arc welding (GMAW)

4. Fully welded longitudinal joints and transverse seams with gasketed flanged connections at equipment connections only for laboratory exhaust applications.

5. Welded longitudinal seams with gasketed flanged transverse joints for applications other than labratory exhaust.

E. FLEXIBLE ROUND DUCT

1. Flexmaster type 5M insulated or equal.

2. Complant with NFPA 90A & 90B

3. U.L. 181 Class 1 listed

4. ASTM E96 Proceedure A rated for 0.05 Perm

5. Interlocking spiral wire of galvanized steel or aluminum construction

6. Aluminum foil, fiberglass, & aluminized polyester trilaminate liner

7. Rated to 6 inches WG positive and 1 inches WG negative

8. Insulated with 1" thick fiberglass insulation meeting R4.2

9. Reinforced metalized outer vapor barrier

F. DOUBLE WALL THERMAL DUCT FOR INTERIOR APPLICATIONS

1. Shop fabricated or factory prefabricated double wall duct systems consisting of continuous inner and outer wall metal duct sections with integral thermal insulation preinstalled in the annular space separating the inner and outer wall sections.

2. Reference Section 230713 HVAC Insulation, or other applicable Division 23 Sections for specific insulation requirements by application.

3. Paintable outer surface suitable for use in aesthetically exposed applications.

4. Comply with requirements of Galvanized Steel Rectangular, Round, and Oval Duct as applicable.

5. Provide double wall systems complete with all fittings, taps, and accessories.

G. DOUBLE WALL THERMAL DUCT FOR EXTERIOR EXPOSED APPLICATIONS

1. Shop fabricated or factory prefabricated double wall duct systems consisting of continuous inner and outer wall metal duct sections with integral thermal insulation preinstalled within the annular space separating the inner and outer wall sections.

2. Galvanized steel inner wall with welded stainless steel outer wall fabricated in flanged sections.

3. Reference Section 230713 HVAC Insulation, or other applicable Division 23 Sections for specific insulation requirements by application.

4. Inner duct wall complying with requirements of Galvanized Steel Rectangular, Round, and Oval Duct as applicable. Outer duct wall complying with requirements of Welded Stainless Steel Duct.

5. Provide double wall systems complete with all fittings, taps, and accessories.

H. DOUBLE WALL ACOUSTICAL DUCT

1. Shop fabricated or factory prefabricated double wall duct systems consisting of perforated inner and continuous outer wall metal duct sections with integral thermal acoustic insulation preinstalled in the annular space separating the inner and outer wall sections.

2. Provide inner duct with 3/32 inch diameter perforation holes staggered at 3/16 inch on center.

3. Reference Section 230713 HVAC Insulation, or other applicable Division 23 Sections for specific insulation requirements by application.

4. Paintable outer surface suitable for use in aesthetically exposed applications.

5. Conform to the requirements of galvanized steel rectangular, round, and oval duct as applicable.

6. Provide double wall systems complete with all fittings, taps, and accessories.

PART 3 - EXECUTION

3.01 GENERAL INSTALLATION REQUIREMENTS

A. Fabricate and support in accordance with SMACNA Duct Construction Standards and ASHRAE handbooks, except as indicated. Provide duct material, gages, reinforcing, and sealing for pressures indicated.

B. Size round ducts installed in place of rectangular ducts in accordance with ASHRAE table of equivalent rectangular and round ducts. No reduction of equivalent duct area is permitted except by reviewed shop drawings.

C. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.

D. Construct duct fittings per SMACNA standard details.

1. Provide typical supply, return and exhaust duct as detailed by SMACNA Section II fittings and other construction.

2. The interior surface of all duct shall be smooth. No sheet metal parts, tabs, angles, or anything else may project into the ducts for any reason, except as specified to be so. All seams and joints shall be external.

3. Provide 90 degree elbows constructed in accordance with SMACNA Figure 2-2, style RE-1 radius elbow (center line radius = 1.5 times duct height or width), space permitting; or style RE-2 square throat with turning vanes (provide duct access panel up stream of turning vanes for cleaning purposes) where required.

4. Where rectangular elbows are used, provide single thickness turning vanes in accordance with SMACNA Figure 2.3; single wall type with trailing edge for duct velocities up to 1500 fpm and double wall turning vanes above 1500 fpm duct velocity.

5. Provide parallel flow branches constructed in accordance with SMACNA Figure 2-7.

6. Provide expanded 45 degree entry type rectangular duct branch connections.

7. Provide spin-in type round branch duct connections in accordance with SMACNA Figure 2-8.

8. Provide offsets and transitions in accordance with SMACNA Figure 2-9.

9. Provide round spin-in fittings with locking quadrant volume dampers for all round duct connections to rectangular ducts. Spin-in and flex duct shall be same size as air distribution device neck diameter. Secure flex duct to spin-in and air distribution device neck with stainless steel worm gear clamps and seal vapor barrier. Suspend flex duct from structure above; round and flexible duct installations shall be as detailed by SMACNA in section III round, oval and flexible duct. Flexible duct supports shall be constructed and installed in accordance with SMACNA figures 3-9 and 3-10.

10. Duct access doors shall be constructed in accordance with figure 2-12 and shall have a frame type 3, position 3 hinge with a type 2 locking handle; single and multi-blade volume dampers shall be in accordance with figures 2-14 and 2-15 respectively and shall have operator extensions when provided on externally insulated ducts; air distribution device connections shall be in accordance with figure 2-16 and ceiling diffuser branch ducts shall be in accordance with figure 2-17.

11. Rectangular duct connections at all air moving equipment shall be flexible neoprene fabric and installed in accordance with figure 2-19.

12. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible. Divergence upstream of equipment shall not exceed 30 degrees; convergence downstream shall not exceed 45 degrees.

13. All duct shall be fabricated in a manner to prevent the seams or joints being cut for the installation of air distribution devices.

14. Provide crimps in direction of air flow where crimp joints with bead are used for joining round duct sizes 6 inch smaller.

E. Where required, provide ducts with "ESS"-drive joints or flat seams to allow crossing of duct or installation of other equipment or piping requiring tight clearances. Raise ducts where required to allow installation of other duct or equipment using 45 degree radius elbows (center line radius = 1.5 times duct height) to offset.

F. Provide openings in duct where required to accommodate thermometers and controllers. Provide pilot tube openings where required for testing of systems, complete with metal well and closure device to ensure against air leakage. Where openings are provided in insulated duct, install insulation material inside a metal ring.

G. Connect fan coil units to low pressure OA intake ducts with short length of flexible duct. Hold in place with corrosion resistant clamp or strap.

H. Connect air distribution devices to low pressure ducts with 6 feet maximum, 4 feet minimum, length of flexible duct. Hold in place with corrosion resistant strap or clamp.

I. All rectangular duct located exposed on roof shall have top horizontal surface "crowned or sloped" to prevent water from ponding.

3.02 DUCT APPLICATION SCHEDULE

A. Unless indicated otherwise, provide duct systems complying with the following application schedule:

AIR SYSTEM	CONSTRUCTION	MATERIAL	Pressure Class
Main Supply Above Ceiling or Concealed	Single Wall	Galvanized Steel	Per AHU ESP, 3” Class Minimum

Main Supply Exposed in Unoccupied Spaces	Single Wall	Galvanized Steel	Per AHU ESP, 3” Class Minimum
Main Supply Exposed in Occupied Spaces	Double Wall	Galvanized Steel	Per AHU ESP, 3” Class Minimum
Main Supply Exposed Exterior	Single Wall	Welded Carbon Steel	Per AHU ESP, 3” Class Minimum
Downstream Supply Above Ceiling or Concealed	Single Wall	Galvanized Steel	Per Terminal ESP
Downstream Supply Exposed in Occupied Spaces	Double Wall	Galvanized Steel	Per Terminal ESP
Draw-thru Transfer, Return, or Relief	Single Wall	Galvanized Steel	1” Class
Pressurized Transfer, Return, or Relief	Single Wall	Galvanized Steel	Per Fan ESP
Draw-thru O/A Intake Above Ceiling or Concealed	Single Wall	Galvanized Steel	1” Class
Draw-thru O/A Intake Exposed in Occupied Spaces	Double Wall	Galvanized Steel	1” Class
Pressurized O/A Intake Above Ceiling or Concealed	Single Wall	Galvanized Steel	Per Fan ESP, 2” Class Minimum
Pressurized O/A Intake Exposed in Occupied Spaces	Double Wall	Galvanized Steel	Per Fan ESP, 2” Class Minimum
General Exhaust	Single Wall	Galvanized Steel	Per Fan ESP, 1” Class Minimum
Grease Laden Kitchen Exhaust	Single Wall	Welded Carbon Steel	Per Fan ESP, comply with local code
Kitchen Dishwasher Exhaust	Single Wall	Welded Stainless Steel	Per Fan ESP, 18 Gauge Minimum
Laboratory Exhaust (General & Fume Hood)	Single Wall	Welded Stainless Steel	Per Fan ESP. 16 Gauge Minimum

3.03 DUCT HANGERS AND SUPPORTS

A. All duct shall be properly suspended or supported from the building structure.

B. The spacing, size and installation of hangers shall be in accordance with the recommendations of SMACNA, latest edition.

C. Hangers shall be galvanized steel straps or hot-dipped galvanized rod with threads pointed after installation. Hangers shall be attached to the bottom of the duct.

D. Provide double nuts and lock washers on threaded rod supports

E. All duct shall be mounted tight to underside of structure and shall be top level with bottom and side transitions only, except that allowance shall be made for duct to be externally insulated, which shall be mounted 3" below structural beams and joists or other obstruction to allow installation of the external duct insulation.

F. All duct risers shall be supported by angles or channels secured to the sides of the ducts at each floor. Secure floor supports to duct using rods, angles or flat bar to the duct joint or reinforcing. Provide miscellaneous steel supports for duct risers as required at no additional cost to owner.

G. Where ducts pass through walls in exposed areas, provide framed openings constructed of welded metal angles. All angles shall be carried around all four sides of the duct or group of ducts.

3.04 ADJUSTING AND CLEANING

A. Clean duct system by vacuuming and force air at high velocity through duct to remove accumulated dust. To obtain sufficient air, clean half the system at a time. Protect equipment which may be harmed by excessive dirt with temporary filters, or bypass during cleaning.

3.05 TESTING

A. Pressure test ductwork per Quality Control requirements.

END OF SECTION 23 31 13

23 33 00

DUCTWORK ACCESSORIES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Backdraft and pressure relief dampers.
2. Barometric relief dampers.
3. Manual volume dampers.
4. Control dampers.
5. Fire dampers.
6. Duct-mounted access doors.
7. Flexible connectors.
8. Flexible ducts.
9. Duct accessory hardware.

B. RELATED SECTIONS:

1. Section 013300 Submittals.
2. Section 01524 Construction Waste Management
3. Section 01611 Environmental Management
4. Section 01570 Pollution Prevention and Control

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.

1. For duct silencers, include pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings.

B. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.

1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:

a. Special fittings.

b. Manual volume damper installations.

c. Control damper installations.

d. Fire-damper, smoke-damper, combination fire- and smoke-damper, ceiling, and corridor damper installations, including sleeves; and duct-mounted access doors and remote damper operators.

e. Duct security bars.

C. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved.

D. Source quality-control reports.

E. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

F. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

1. Recycled Content:

a. Indicate recycled content; indicate percentage of pre-consumer and post-consumer recycled content per unit of product.

2. Local/Regional Materials:

a. Indicate location of manufacturing facility; indicate distance between manufacturing facility and the project site.

b. Indicate location of extraction, harvesting, and recovery; indicate distance between extraction, harvesting, and recovery and the project site.

3. VOC data:

a. Submit manufacturer's product data for joint compounds. Indicate VOC and chemical component limits of the product. Submit MSDS highlighting VOC and chemical component limits. VOC contents and chemical component limits must be less than the limits of Green Seal’s Standard GS-11.

b. Submit manufacturer's certification that products comply with Green Seal's Standard GS-11

c. Submit environmental data in accordance with Table 1 of ASTM E2129 for products provided under work of this Section.

4. Submit the following according to Conditions of the Construction Contract.

a. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

1.04 QUALITY ASSURANCE

A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."

A. Comply with AMCA 500-D testing for damper rating.

1.05 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fusible Links: Furnish quantity equal to 10 percent of amount installed.

PART 2 - PRODUCTS

2.01 ENVIRONMENTALLY PREFERABLE PRODUCTS

A. Provide environmentally preferable products to the greatest extent possible.

1. To the greatest extent possible, provide products and materials that promote stewardship of the earth's resources, promote good indoor environmental quality (IEQ), and promote efficiencies in operational performance.

B. Provide products listed on the EPA Comprehensive Procurement Guidelines to the greatest extent practicable.

C. Provide products listed on the USGBC Directory of Products and Services to the greatest extent possible.

2.02 RECYCLED CONTENT

A. Provide recycled content products to the greatest extent possible.

1. To the greatest extent possible, provide materials with recycled content such that the sum of post-consumer recycled content plus one-half of the post-industrial content constitutes at least 10% of the total value of the materials in the project.

2.03 REGIONAL MATERIALS

A. Provide Regional materials and products to the greatest extent possible that are extracted and manufactured within the region.

1. Provide materials and products that use a minimum of 20 % of building products that are manufactured regionally within a radius of 500 miles from the project site.

a. Manufacturing refers to the final assembly of components into the building product that is furnished and installed by the tradesman.

2. Of the regionally manufactured materials used and documented, use a minimum of 50% of building materials and products that are extracted, harvested or recovered (as well as manufactured) within 500 miles of the project site.

2. 1 MATERIALS

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

C. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.

1. Galvanized Coating Designation: G90 (Z275).

2. Exposed-Surface Finish: Mill phosphatized.

D. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304, and having a No. 2 finish for concealed and exposed ducts.

E. Aluminum Sheets: Comply with ASTM B 209 (ASTM B 209M), Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.

F. Extruded Aluminum: Comply with ASTM B 221 (ASTM B 221M), Alloy 6063, Temper T6.

G. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.

H. Tie Rods: Galvanized steel, 1/4-inch (6-mm) minimum diameter for lengths 36 inches (900 mm) or less; 3/8-inch (10-mm) minimum diameter for lengths longer than 36 inches (900 mm).

2. 2 BACKDRAFT AND PRESSURE RELIEF DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Warming and Ventilating; a division of Mestek, Inc.

2. Greenheck Fan Corporation.

3. Nailor Industries Inc.

4. Pottorff; a division of PCI Industries, Inc.

5. Ruskin Company.

6. American Warming and Ventilating.

I. Description: Gravity balanced.

J. Maximum Air Velocity: 2000 fpm.

K. Maximum System Pressure: 2-inch wg.

L. Frame: 0.063-inch- thick extruded aluminum with welded corners and mounting flange.

M. Blades: Multiple single-piece blades, maximum 6-inch width, 0.025-inch- thick, roll-formed aluminum noncombustible with sealed edges.

N. Blade Action: Parallel.

O. Blade Seals: Neoprene, mechanically locked.

P. Blade Axles:

1. Material: Stainless steel.

2. Diameter: 0.20 inch.

Q. Tie Bars and Brackets: Galvanized steel.

R. Return Spring: Adjustable tension.

S. Bearings: Synthetic pivot bushings.

T. Accessories:

1. Adjustment device to permit setting for varying differential static pressure.

2. Counterweights and spring-assist kits for vertical airflow installations.

3. Electric actuators.

4. Chain pulls.

5. Screen Mounting: Front mounted in sleeve.

a. Sleeve Thickness: 20-gage minimum.

b. Sleeve Length: 6 inches minimum.

6. Screen Material: Aluminum.

7. Screen Type: Bird.

8. 90-degree stops.

2. 3 BAROMETRIC RELIEF DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

9. Air Balance Inc.; a division of Mestek, Inc.

10. American Warming and Ventilating; a division of Mestek, Inc.

11. Greenheck Fan Corporation.

12. Lloyd Industries, Inc.

13. Nailor Industries Inc.

14. Pottorff; a division of PCI Industries, Inc.

15. Ruskin Company.

16. American Warming and Ventilating.

U. Suitable for horizontal or vertical mounting.

V. Maximum Air Velocity: 2000 fpm.

W. Maximum System Pressure: 2-inch wg.

X. Frame: 0.063-inch- (thick extruded aluminum], with welded corners and mounting flange.

Y. Blades:

1. Multiple, 0.025-inch-thick, roll-formed aluminum.

2. Maximum Width: 6 inches (150 mm).

3. Action: Parallel.

4. Balance: Gravity.

5. Eccentrically pivoted.

Z. Blade Seals: Neoprene.

AA. Blade Axles: Nonferrous metal.

BB. Tie Bars and Brackets:

1. Material: Aluminum

2. Rattle free with 90-degree stop.

CC. Return Spring: Adjustable tension.

DD. Bearings: Synthetic.

EE. Accessories:

1. Flange on intake.

2. Adjustment device to permit setting for varying differential static pressures.

2. 4 MANUAL VOLUME DAMPERS

A. Standard, Steel, Manual Volume Dampers:

3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Air Balance Inc.; a division of Mestek, Inc.

b. American Warming and Ventilating; a division of Mestek, Inc.

c. McGill AirFlow LLC.

d. METALAIRE, Inc.

e. Nailor Industries Inc.

f. Pottorff; a division of PCI Industries, Inc.

g. Ruskin Company.

h. Trox USA Inc.

i. American Warming and Ventilating.

4. Standard leakage rating, with linkage outside air stream.

5. Suitable for horizontal or vertical applications.

6. Frames:

a. Hat-shaped, galvanized channels, 0.064-inch minimum thickness.

b. Mitered and welded corners.

c. Flanges for attaching to walls and flangeless frames for installing in ducts.

7. Blades:

a. Multiple or single blade.

b. Parallel- or opposed-blade design.

c. Stiffen damper blades for stability.

d. Galvanized, 0.064 inch thick.

8. Blade Axles: Nonferrous metal.

9. Bearings:

a. Oil-impregnated bronze.

b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.

10. Tie Bars and Brackets: Galvanized steel.

2. 5 FIRE DAMPERS

A. Manufacturers: Subject to compliance with requirements, [provide products by one of the following:

11. American Warming and Ventilating.

12. Greenheck Fan Corporation.

13. METALAIRE, Inc.

14. Nailor Industries Inc.

15. Pottorff; a division of PCI Industries, Inc.

16. Prefco; Perfect Air Control, Inc.

17. Ruskin Company.

FF. Type: Static; rated and labeled according to UL 555 by an NRTL.

GG. Closing rating in ducts up to 4-inch wg static pressure class and minimum4000-fpm velocity.

HH. Fire Rating: 1-1/2 hours.

II. Frame: Curtain type with blades outside air stream fabricated with roll-formed, 0.034-inch thick galvanized steel; with mitered and interlocking corners.

JJ. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.

1. Minimum Thickness: 0.052 or 0.138 inch thick, as indicated, and of length to suit application.

2. Exception: Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame must comply with sleeve requirements.

KK. Mounting Orientation: Vertical or horizontal as indicated.

LL. Blades: Roll-formed, interlocking, 0.034-inch- thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- thick, galvanized-steel blade connectors.

MM. Horizontal Dampers: Include blade lock and stainless-steel closure spring.

NN. Heat-Responsive Device: Replaceable, 165 deg F rated, fusible links.

OO. Furnish and install where shown on the drawings or required by the Specifications, fire dampers meeting the following requirements.

PP. Each fire damper shall be constructed and tested in accordance with Underwriters Laboratories Safety Standard 555. All dampers shall possess a 1-1/2 hour or 3 hour (as appropriate for the construction shown in the architectural drawings) protection rating, 165 or 212 degree F fusible link, and shall bear a U.L. label in accordance with Underwriters Laboratories labeling procedures. Fire dampers shall be constructed such that the damper frame material and the curtain material shall be galvanized.

QQ. Fire dampers shall be curtain blade or multi-blade type and the damper shall be so constructed that the blades are either out of the air stream or installed in an oversized sleeve to provide a 100 percent free area of the duct in which the damper is housed.

RR. The damper manufacturer's literature submitted for approval prior to the installation shall include performance data developed from testing in accordance with AMCA 500 Standards and shall show the pressure drops for all sizes of dampers required at anticipated air flow rates. Maximum pressure drop through fire damper shall not exceed 0.05 inch water gauge.

SS. Fire dampers shall be equipped for vertical or horizontal installation as required by the locations shown in the drawings. Fire dampers shall be installed in wall and floor openings utilizing steel sleeves, angles and other material and practices required to provide an installation equivalent to that utilized by the manufacturer when the respective dampers were tested by Underwriters Laboratories. Mounting angles shall be a minimum of 1 1/2 inch by 1 1/2 inch by 14-gauge and bolted, tack welded or screwed to the sleeve at maximum spacings of 12 inches and with a minimum of two connections at all sides. Mounting angles shall overlap at least equal to the gauge of the duct defined by the appropriate SMACNA Duct Construction Standard, latest edition, and as described in NFPA 90A. The entire assembly, following installation, shall be capable of withstanding 6" water gauge static pressure.

TT. The damper installation shall be in accordance with the damper manufacturer's instructions.

UU. All fire dampers shall comply with the specification as written above and shall be Ruskin Model IBD2 (Style C, CR or CO), Greenheck Model FD-150 (Type C, CR or CO), or Pottorff.

VV. The contractor shall completely seal the assembly to the building components using Hardcast 1602 sealant tape to allow for expansion and contraction of the sleeve and damper assembly.

WW. Dampers shall be UL labeled for use in dynamic systems. Closure reading shall be 110% of the maximum design airflow at the point of installation. The minimum closure pressure rating shall be 8” wg for airflow in either direction.

XX. Combination Fire/Smoke Dampers

1. Furnish and install where shown on the Drawings, or as required by the Specifications, combination fire/smoke dampers meeting the following requirements.

2. Each combination fire/smoke damper shall be 1 1/2 hour fire rated under UL Standard 555, 4th Edition, and shall be further classified by Underwriters Laboratories as a Leakage Rated Damper for use in smoke control systems under the latest version of UL555S, and bear a UL label attesting to same. The damper manufacturer shall have tested, and qualified with UL, a complete range of damper sizes covering all dampers required by this Specification. Testing and UL qualifying a single damper size is not acceptable. The leakage rating under UL555S shall be no higher than Leakage Class I (4 cfm per square foot at one inch water gauge pressure and 8 cfm per square foot at 4 inches water gauge pressure). The maximum air pressure drop through each combination fire/smoke damper shall not exceed 0.10 inch water gauge at the design air quantity. (Note that this may require a larger damper than the connected duct size.)

3. The damper frame shall be a minimum of 20-gauge galvanized steel formed into a structural hat channel shape with tabbed corners for reinforcement, as approved in testing by Underwriters Laboratories. Bearings shall be integral high surface area non electrolytic materials construction to incorporate a friction free frame blade lap seal, or molybdenum disulfide impregnated stainless steel or bronze oilite sleeve type turning in an extruded hole in the frame or an extruded frame raceway. The dampers may be either parallel or opposed blade type. The blades shall be constructed with a minimum of 14-gauge equivalent thickness. The blade edge seal material shall be able to withstand 450 degrees F. The jamb seals shall be flexible stainless steel compression type or lap seal type.

4. In addition to the leakage ratings specified herein, the combination fire/smoke dampers and their operators shall be qualified under UL555S to an elevated temperature of 250 degrees F. Electric operators shall be installed by the damper manufacturer at the time of damper fabrication. The damper and operator shall be supplied as a single entity which meets all applicable UL555 and UL555S qualifications for both dampers and operators. The manufacturer shall provide a factory assembled sleeve. The sleeve shall be a minimum of either 20-gauge for dampers where neither width nor height exceeds 48 inches or 16-gauge where either dimension equals or exceeds 48 inches.

5. As part of the UL qualification, dampers shall have demonstrated a capacity to operate (open and close) under HVAC system operation conditions, with pressures of at least 4 inches water gauge in the closed position, and 2500 fpm air velocity in the open position.

6. Each combination fire/smoke damper shall be equipped with a UL Classified Firestat /releasing device. The firestat/releasing device shall electrically and mechanically lock the damper in a closed position when the duct temperatures exceed 165 degrees F and still allow the appropriate authority to operate the damper as may be required for smoke control functions. The damper must be operable while the temperature is above 250 degrees F. The actuator/operator package shall include two damper position indicator

switches linked directly to damper blade to provide capability of remotely indicating damper position. One switch shall close when the damper is fully open, and the other switch shall close when the damper is fully closed. The Firestat/releasing device and position indicator switches shall be capable of interfacing electrically with the smoke detectors, building fire alarm systems, and remote indicating/control stations.

7. The damper releasing device shall be mounted within the airstream. The device shall be activated and the damper shall close and lock when subjected to duct temperatures in excess of approximately 285 degrees F.

8. Motors for operation of smoke dampers shall be smoke system fail safe, spring return normally open supplies and normally closed returns, or as indicated in the plans, and shall be furnished and installed by the damper manufacturer as required by the U.L. rating mentioned above. Motors shall be electric or pneumatic to match the type of temperature control system specified elsewhere in this specification. All required relays, EP switches, wiring piping and other labor and material necessary to completely interconnect the smoke detector system shall be furnished by the Contractor.

9. Each damper shall be furnished in a square or rectangular configuration. The Contractor shall furnish and install sleeves manufactured by the approved damper manufacturer for each damper. The sleeves shall be constructed with square or rectangular to square, rectangular, round, or oval adapters as required. Dampers shall be installed in the sleeves in accordance with manufacturers U.L. installation instructions. The entire assembly, following installation, shall be capable of withstanding 6" W.G. static pressure.

10. All combination fire/smoke dampers shall comply with the specification as written above and shall be Ruskin Model FSD-60, Greenheck Model FSD-33, or Pottorff.

11. The contractor shall completely seal the assembly to the building components using Hardcast 1602 sealant tape to allow for expansion and contraction of the sleeve and damper assembly.

12. Dampers shall be UL labeled for use in dynamic systems. Closure reading shall be 110% of the maximum design air flow at the point of installation. The minimum closure pressure rating shall be 8” wg for air flow in either direction.

2. 6 DUCT-MOUNTED ACCESS DOORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

13. American Warming and Ventilating; a division of Mestek, Inc.

14. Flexmaster U.S.A., Inc.

15. Greenheck Fan Corporation.

16. McGill AirFlow LLC.

17. Nailor Industries Inc.

18. Pottorff; a division of PCI Industries, Inc.

19. Ward Industries, Inc.; a division of Hart & Cooley, Inc.

YY. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 2-10, "Duct Access Doors and Panels," and 2-11, "Access Panels - Round Duct."

1. Door:

   a. Double wall, rectangular.

   b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.

   c. Vision panel.

   d. Hinges and Latches: 1-by-1-inch butt or piano hinge and cam latches.

   e. Fabricate doors airtight and suitable for duct pressure class.

2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.

3. Number of Hinges and Locks:

   a. Access Doors Less Than 12 Inches Square: No hinges and two sash locks.

   b. Access Doors up to 18 Inches Square: Two hinges and two sash locks.

   c. Access Doors up to 24 by 48 Inches: Three hinges and two compression latches. Access Doors Larger Than 24 by 48 Inches: Four hinges and two compression latches with outside and inside handles.

ZZ. Pressure Relief Access Door:

1. Door and Frame Material: Galvanized sheet steel.

2. Door: Double wall with insulation fill with metal thickness applicable for duct pressure class.

3. Operation: Open outward for positive-pressure ducts and inward for negative-pressure ducts.

4. Factory set at 10-inch wg.

5. Doors close when pressures are within set-point range.

6. Hinge: Continuous piano.

7. Latches: Cam.

8. Seal: Neoprene or foam rubber.

9. Insulation Fill: 1-inch thick, fibrous-glass or polystyrene-foam board.

2. 7 FLEXIBLE DUCTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

10. Flexmaster U.S.A., Inc.

11. McGill AirFlow LLC.

12. Ward Industries, Inc.; a division of Hart & Cooley, Inc.

AAA. Insulated, Flexible Duct: UL 181, Class 1, 2-ply vinyl film supported by helically wound, spring-steel wire; fibrous-glass insulation; aluminized vapor-barrier film.

1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.

2. Maximum Air Velocity: 4000 fpm.

3. Temperature Range: Minus 10 to plus 160 deg F.

4. Insulation R-value: Comply with ASHRAE/IESNA 90.1-2004.

BBB. Insulated, Flexible Duct: UL 181, Class 1, multiple layers of aluminum laminate supported by helically wound, spring-steel wire; fibrous-glass insulation; aluminized vapor-barrier film.

1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.

2. Maximum Air Velocity: 4000 fpm.

3. Temperature Range: Minus 20 to plus 210 deg F.

4. Insulation R-value: Comply with ASHRAE/IESNA 90.1-2004.

CCC. Flexible Duct Connectors:

1. Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear actionin sizes 3 through 18 inches to suit duct size.

2. Non-Clamp Connectors: Adhesive plus sheet metal screws.

2. 8 DUCT ACCESSORY HARDWARE

A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.

DDD. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

2. 9 LOW PRESSURE TAPS (CONICAL BELL MOUTH FITTINGS)

A. Conical fittings may be used for duct taps and shall include quadrant dampers on all lines to air devices (diffusers and grilles), even though a volume damper is specified for the air device. (This does not apply to medium pressure duct.) Spin-in fittings shall be sealed at the duct tap with a gasket, or compression fit, or sealed with sealant specified for medium pressure ductwork. The location of spin-in fittings in the ducts shall be determined after dual or single duct terminal units are hung or the location of the light fixtures is known so as to minimize flexible duct lengths and sharp bends.

EEE. The conical fitting shall be made of at least 26-gauge galvanized sheet metal. The construction to be a two-piece fitting with a minimum overall length of 6 inches and shall be factory sealed for high pressure requirements. Average loss coefficient for sizes 6, 8, and 10 shall be less than 0.055.

FFF. Each to be provided with minimum 24-gauge damper plate with locking quadrant operator and sealed end bearings. Damper blade shall be securely attached to shaft to prevent damper from rotating around shaft.

GGG. Provide flange and gasket with adhesive peel-back paper for ease of application. The fitting shall be further secured by sheet metal screws spaced evenly at no more than 4 inches on-center with a minimum of four screws per fitting.

HHH. The conical bellmouth fitting shall be Series 3000G as manufactured by Flexmaster U.S.A., Inc., or Buckley Air Products, Inc., 'AIR-TITE'.

PART 3 - EXECUTION

3. 1 INSTALLATION

A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.

B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.

3. 2 DAMPERS

A. Furnish and install dampers where shown on the Drawings and wherever necessary for complete control of the air flow, including all supply, return and exhaust branches, "division" in main supply, return and exhaust ducts, each individual air supply outlet and fresh air ducts. Where access to dampers through a fixed suspended ceiling is necessary, the Contractor shall be responsible for the proper location of the access doors.

C. Splitter dampers shall be fabricated of steel not lighter than 16-gauge. The leading edge of the damper shall be hemmed. Each splitter shall be a minimum of 12" long or 1-1/2 times the width of the smaller of the two branches it controls, whichever is greater. Dampers shall be carefully fitted, and shall be controlled by locking quadrants equal to Ventlok No. 555 on exposed uninsulated ductwork, No. 644 on exposed externally insulated ductwork and No. 677 (2-5/8" diameter) chromium plated cover plate for concealed ductwork not above lay-in accessible ceilings. Furnish and install end bearings for the damper rods on the end opposite the quadrant when No. 555 or No. 644 regulators are used, and on both ends when No. 677 regulators are used.

D. On concealed ductwork above lay-in accessible ceilings use Ventlok No. 555 or No. 644 locking quadrant for splitter dampers.

E. Dampers larger than three (3) square feet in area shall be controlled by means of rods hinged near the leading edge of the damper with provisions for firmly anchoring the rod and with end bearings supporting the axle.

F. Volume dampers shall be equal to those of American Foundry. Blades shall not exceed 48 inches (48") in length or twelve inches (12") in width and shall be of the opposed interlocking type. The blades shall be of not less than No. 16-gauge galvanized steel supported on one-half inch (1/2") diameter rust-proofed axles. Axle bearings shall be the self-lubricating ferrule type.

G. Install all dampers furnished by the Temperature Control Manufacturer in strict accordance with the manufacturer's recommendations and requirements of these Specifications.

H. All adjustable dampers installed in externally insulated ductwork shall be installed with Ventlok No. 639, or equal, elevated dial operators. Insulation shall extend under the elevated dial. All adjustable dampers installed in internally insulated ductwork shall be installed with Ventlok No. 635, or equal, dial operators. All damper shaft penetrations in the ductwork shall be installed with Ventlok #609 end bearings.

I. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.

    1. Install steel volume dampers in steel ducts.

    2. Install aluminum volume dampers in aluminum ducts.

J. Set dampers to fully open position before testing, adjusting, and balancing.

K. Install test holes at fan inlets and outlets and elsewhere as indicated.

L. Install fire dampers according to UL listing.

M. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:

    1. On both sides of duct coils.

    2. Upstream from duct filters.

    3. At outdoor-air intakes and mixed-air plenums.

4. At drain pans and seals.

5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.

6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.

7. At each change in direction and at maximum 50-foot spacing.

8. Upstream and downstream from turning vanes.

9. Upstream or downstream from duct silencers.

10. Control devices requiring inspection.

11. Elsewhere as indicated.

N. Install access doors with swing against duct static pressure.

3. 3 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Operate dampers to verify full range of movement.

2. Inspect locations of access doors and verify that purpose of access door can be performed.

3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.

4. Inspect turning vanes for proper and secure installation.

5. Operate remote damper operators to verify full range of movement of operator and damper.

END OF SECTION 23 33 00

23 34 16

FANS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Furnish and install roof and wall exhausters and cabinet and ceiling exhaust fans for mechanical systems.

1.02 RELATED SECTIONS

A. Section 016600 – Product Storage and Handling Requirements.

B. Section 016613 – Product Storage and Handling Requirements for Hazardous Materials.

C. Section 016616 – Product Storage and Handling Requirements for Toxic Materials.

D. Section 220526 – Hangers and Supports for Plumbing Piping and Equipment.

E. Section 220543 – Vibration and Seismic Control for Plumbing and Piping Equipment.

F. Section 233100 – HVAC Ducts and Casings.

G. Section 233416 – Centrifugal HVAC Fans.

H. Section 230593 – Testing, Adjusting, and Balancing for HVAC.

I. Section 230513 – Common Motor Requirements for HVAC.

J. Coordinate with Commissioning Requirements indicated in Section 019113. This contractor is responsible to comply with all requirements for the above section.

K. Section 013300 Submittals.

L. Section 01524 Construction Waste Management

M. Section 01611 Environmental Management

N. Section 01570 Pollution Prevention and Control

1.03 REFERENCES

A. AMCA 99 – Standards Handbook.

B. AMCA 210 – Laboratory Methods of Testing Fans for Rating Purposes.

C. AMCA 300 – Test Code for Sound Rating Air Moving Devices.

D. AMCA 301 – Method of Publishing Sound Ratings for Air Moving Devices.

E. SMACNA – Low Pressure Duct Construction Standard.

1.04 SUBMITTALS

A. Include fan curves with specified operating point clearly plotted.

B. Include sound power levels for both fan inlet and outlet at rated capacity.

C. Indicate special coating when required.

D. Provide operation and maintenance manual.

E. Operation and Maintenance Data: For centrifugal fans to include in emergency, operation, and maintenance manuals.

F. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

1. Recycled Content:

   a. Indicate recycled content; indicate percentage of pre-consumer and post-consumer recycled content per unit of product.

2. Local/Regional Materials:

   a. Indicate location of manufacturing facility; indicate distance between manufacturing facility and the project site.

   b. Indicate location of extraction, harvesting, and recovery; indicate distance between extraction, harvesting, and recovery and the project site.

3. VOC data:

   a. Submit manufacturer's product data for joint compounds. Indicate VOC and chemical component limits of the product. Submit MSDS highlighting VOC and chemical component limits. VOC contents and chemical component limits must be less than the limits of Green Seal’s Standard GS-11.

   b. Submit manufacturer’s certification that products comply with Green Seal’s Standard GS-11

   c. Submit environmental data in accordance with Table 1 of ASTM E2129 for products provided under work of this Section.

4. Submit the following according to Conditions of the Construction Contract.

   a. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

1.05 QUALITY ASSURANCE

A. Performance Ratings: Conform to AMCA 210 and bear the AMCA Certified Rating Seal.

B. Sound Ratings: AMCA 301, tested to AMCA 300.

C. Fabrication: Conform to AMCA 99.

1.06 MAINTENANCE

A. Provide twelve (12) months maintenance of all materials and equipment under this section. Cost of the twelve (12) month normal and preventive maintenance shall be included within this scope of work.

PART 2 - PRODUCTS

2.01 ENVIRONMENTALLY PREFERABLE PRODUCTS

A. Provide environmentally preferable products to the greatest extent possible.

1. To the greatest extent possible, provide products and materials that promote stewardship of the earth's resources, promote good indoor environmental quality (IEQ), and promote efficiencies in operational performance.

B. Provide products listed on the EPA Comprehensive Procurement Guidelines to the greatest extent practicable.

C. Provide products listed on the USGBC Directory of Products and Services to the greatest extent possible.

2.02 RECYCLED CONTENT

A. Provide recycled content products to the greatest extent possible.

1. To the greatest extent possible, provide materials with recycled content such that the sum of post-consumer recycled content plus one-half of the post-industrial content constitutes at least 10% of the total value of the materials in the project.

2.03 REGIONAL MATERIALS

A. Provide Regional materials and products to the greatest extent possible that are extracted and manufactured within the region.

1. Provide materials and products that use a minimum of 20 % of building products that are manufactured regionally within a radius of 500 miles from the project site.

a. Manufacturing refers to the final assembly of components into the building product that is furnished and installed by the tradesman.

2. Of the regionally manufactured materials used and documented, use a minimum of 50% of building materials and products that are extracted, harvested or recovered (as well as manufactured) within 500 miles of the project site.

2.04 MANUFACTURERS

A. Greenheck.

B. Cook.

C. Penn Barry

D. Acme

2.05 ROOF EXHAUSTERS

A. Centrifugal or Axial Fan Unit: Backward inclined or airfoil design, v-belt or direct driven, with spun aluminum housing, resilient mounted motor and drive assembly, 1/2-inch mesh, 16 gauge aluminum bird screen; square base to suit roof curb with continues curb gaskets; secured to roof curb with cadmium plated or stainless steel bolts and screws, as indicated in Drawings.

B. Roof Curb: 14 inch with continuously welded seams, built-in cant strip, 1 inch insulation and curb bottom, hinged curb adapter sand factory installed door mailer strip. Where scheduled, provide interior baffle with acoustic insulation and increase curb height as required.

C. Disconnect Switch: Factory wired, non-fusible, in housing for thermal overload protected motor.

D. Back draft Damper: Gravity activated, aluminum multiple blade construction, felt edged with nylon bearings.

E. Sheaves: Cast-iron or steel, dynamically balanced, bored to fit shafts and keyed; adjustable pitch motor sheave selected so required rpm is obtained with sheaves set at mid position; and will not overload motor when adjusted to maximum pitch; fan shaft with self-aligning pre-lubricated ball bearings.

F. Apply three coats of air dried Heresite coating both internal and external to all roof exhausters from corrosive areas.

G. Motors: In total compliance with Section 230513.

2.06 UP-BLASTS EXHAUST FANS

A. Centrifugal Fan Unit: Non-overloading backward inclined or airfoil design, v-belt driven, with spun aluminum housing, resilient mounted motor and drive assembly located out of airstream; square base to suit roof curb with continues curb gaskets; secured with cadmium plated or stainless steel bolts and screws.

B. Motor enclosures: Totally enclosed fan cooled

1. Motors are heavy duty ball bearing type to match with the fan load and furnished at the specific voltage and phase.

2. Mounted on vibration isolators, out of the airstream

3. For motor cooling there shall be fresh air drawn into the motor compartment through an area free of discharge contaminants.

4. Accessible for maintenance.

C. Shafts and Bearings:
- Fan shaft shall be ground and polished solid steel with an anti corrosive coating.
- Permanently sealed bearings or pillow block ball bearings.
- Bearing shall be selected for a minimum L10 life in excess of 100,000 hours (equivalent to L50 average life of 500,000 hours), at maximum cataloged operating speed.
- Bearings are 100 percent factory tested
- Fan Shaft first critical speed is at least 25 percent over maximum operating speed

D. Roof Curb: 14 inch high aluminum construction with continuous seams, built-in cant strip and factory installed mailer strip. Roof curb shall match fan and shall be supplied by fan manufacturer. Provide sloped roof curb as required for installed equipment to set level.

E. Disconnect Switch: Factory wired, non-fusible, in housing for thermal overload protected motor.

F. Grease Collector: Provide grease trough and collectors for kitchen hood fans.

G. Sheaves: Cast-iron or steel, dynamically balanced, bored to fit shafts and keyed; adjustable pitch motor sheave selected so required rpm is obtained with sheaves set at mid position; and will not overload motor when adjusted to maximum pitch; fan shaft with self-aligning pre-lubricated ball bearings. Drive shall be designed for 165% of rated horsepower capabilities.

H. Motors: In total compliance with Section 230513.

2.07 KITCHEN SUPPLY AIR FAN

A. Kitchen Supply Fan shall be as manufactured by Greenheck or approved equal provided all specifications are met. Greenheck Model KSF equipment is used as the basis of design.

B. Unit shall be of internal frame type construction of galvanized steel. All frames and panels shall be G90 galvanized steel. All metal-to-metal surfaces exposed to the weather shall be sealed, requiring no caulking at job site. Unit base to be designed for curb mounting. Unit base shall over hang the curb. Curb is recessed under the unit for a positive seal against water run-off. All components shall be easily accessible through removable doors. Permatector corrosion resistant exterior finish available for outdoor units.

C. Weather hood shall be the same finish as the unit and shall be sized for low intake velocities, preventing entrainment of moisture.

D. Filters shall be mounted in a straight or V-bank arrangement such that velocities across the filters do not exceed 550 feet per minute. Filters shall be 1 inch or 2 inch aluminum mesh and easily removable.

E. Centrifugal fans shall be double width, double inlet. Fan and motor shall be mounted on a common base and shall be internally isolated. All blower wheels shall be statically and dynamically balanced. Ground and polished steel fan shafts shall be mounted in permanently sealed ball bearing pillow blocks. Bearings shall be selected for a minimum (L10) life in excess of 100,000 hours at maximum cataloged speeds.

F. Motors shall be energy efficient, complying with EPACT standards, for single speed ODP and TE enclosures. Motors shall be permanently lubricated, heavy duty type, matched to the fan load and furnished at the specified voltage, phase and enclosure. Drives shall be sized for a minimum of 150% of driven horsepower. Pulleys shall be fully machined cast, 10 horse power and less shall be supplied with an adjustable drive pulley.

G. Control center shall include magnetic motor starter with thermal overload protection and manual reset, control circuit fusing, control transformer for 24 VAC circuit, integral door interlocking disconnect switch and distribution terminal strip. All internal electrical components shall be prewired for single point power connection. All electrical components shall be UL listed, approved or classified where applicable and wired in compliance with the National Electrical Code. Contactors and Class 20 adjustable overload protection shall be standard.

2.08 SOURCE QUALITY CONTROL

A. The following tests must be conducted at the project site.

1. Vibration test as described in Section 016600 – Product Storage and Handling Requirements, Section 016613 – Product Storage and Handling Requirements for Hazardous Materials, and Section 016616 – Product Storage and Handling Requirements for Toxic Materials.

B. The following listed tests must be conducted at the manufacturer=s test facility.

1. Vibration test as described in Section 230593 – Testing, Adjusting, and Balancing for HVAC.

2. Sound test under AMCA Guidelines and Conditions. The sound power levels must not exceed those indicated on Drawings.

2.09 FUME HOOD MIXED-FLOW INDUCED DILUTION FANS (GREENHECK, COOK OR EQUAL)

A. Impellers shall be mounted directly to the motor shaft to provide a direct drive arrangement 4 type fan. Motors shall be isolated from the primary exhaust air stream and shall be visible and accessible from the fan exterior for inspection and service.

B. Mixed flow impellers shall consist of combination axial/backward curved blades and shall be of welded steel construction. The impellers shall have non-stall and non-overloading performance characteristics with stable operation at any point on the fan curves.

C. Stationary discharge guide vane sections shall be provided to increase fan efficiencies.

D. Fan dynamic balance not to exceed 0.5 mil., peak to peak, at the blade pass area when operating at fan frequency. Vibration isolation shall be limited to rubber-in-shear pad type isolators.

E. Fan assemblies shall be designed for mounting on conventional roof curb without the need for guy wire supports.

F. Discharges shall include twin FRP nozzles with passive third central stacks that are capable of generating aspiration. The FRP shall be chemically and UV resistant.

G. Steel entrainment wind bands shall provide secondary induction of outside air. Induction shall take place downstream of the fan impeller and shall not influence BHP or static pressure requirements. Wind bands shall discharge up to 270% of the design flow rates. The manufacturer shall publish discharge volumes for all fans at specified primary exhaust flow.

H. A non-ferrous inlet bell shall be provided in order to reduce sparking in the event of a motor bearing failure.

I. Fans shall be modular construction and capable of being assembled on the roof.

J. PTFE gaskets shall be provided at all companion flanged joints.

K. Fasteners shall be 316 stainless steel.

L. A bolted access door shall be provided for impeller inspection on each fan.

M. Fans and accessories shall have internal drain systems to prevent rain water from entering building duct systems.

N. Electric motors shall be TEFC Mill & Chemical duty with a 1.15 service factor and an L-50 bearing life of 200,000 hours. Motors shall have sealed bearings up through a 256T NEMA frame. Motors on BS-1 and larger fans shall be C-Face and foot mounted.

O. A NEMA 3R non-fused disconnect switch shall be provided, mounted and wired to the motor.

P. Coatings-All steel and aluminum surfaces shall prepared for coating by blasting or chemical etching. Coating will be:

1. Epoxy (4-5 mils) for protection against weather and dry chemical fumes.
2. Epoxy (8-10 mils) for protection against weather, chemical vapors and splashes.

2.10 ACCESSORIES

A. Inlet mixing plenums shall be provided by the fan manufacturer. Each plenum shall be sized to support the weight and performance requirements of the number of fans listed on the schedule. Multiple fan plenums shall be double wall construction with structural stiffeners or shall be continuously welded, heavy gauge single wall construction. Single fan plenums shall be of continuously welded, heavy gauge steel construction. All plenums shall be capable of supporting the fan(s) without guy wires or supports. The plenums shall include hinged access doors and safety screens over primary air inlets. The primary air inlets shall be located on the bottom or side as noted on construction drawings. Coatings shall be the same as specified for the fans. Unless otherwise specified, plenums shall be suitable for mounting on roof curbs.

B. Stainless safety screens shall be supplied over bottom primary air inlets.

C. Bypass dampers shall be provided with all mixing plenums for outside make-up air with primary exhaust. Dampers will be:

1. Louver/damper combinations, aluminum construction, manual locking quadrant.

2. Opposed blade low leakage airfoil control dampers with extended shaft for connection to an operator. The dampers shall be aluminum construction. Rain hoods shall be provided with each damper. The dampers shall be controlled by a (hand quadrant/20 psi pneumatic/24V electric) operators. The operators shall be provided by controls manufacturer.

3. Barometric controlled dampers, adjustable up to 3.0” pressure. Rain hood shall be provided with each damper.

D. Low leakage isolation dampers shall be constructed of aluminum airfoil extrusions and coated with epoxy. Operators shall be 2 position, spring return and shall be 20 PSI pneumatic/24V/110V electric unless variable frequency drives are specified. The electric operator shall be factory wired (via a transformer when required) to the fan disconnect switch to open when the fan is energized and close via a spring return when de-energized. When the fan ships separate from the plenum, all wiring and conduit shall be factory supplied for easy connection in the field.

E. Vortex breakers shall be provided on all side inlet and multiple fan plenums.

F. Inlet spray nozzle(s) shall be mounted at fan inlet to provide wash down capability of fan while operating. Spray nozzles to be suitable for water or stream. Nozzles to be piped to the exterior of the fan with threaded end for field connection. All piping and nozzle components shall be stainless steel construction.

G. A 14 gauge galvanized steel roof curb shall be provided to support the fans/plenums. The curb shall be minimum 14 gauge and canted for rigid in wind loads. The curb shall be _” high. The curb shall include a rigid fiberglass liner wood nailer.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer’s instructions.

B. Secure roof exhausters with 1/2" x 2” S.S. lag screws roof curb.

C. Install flexible ductwork connections when fan connects to ductwork.

D. Provide al ventilating and exhaust fans with integral vibration isolation.

E. Water test ventilators after installation.

3.02 PAINTING

A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Division 23 Section "Air Duct Accessories."

B. Install ducts adjacent to fans to allow service and maintenance.

C. Install line-sized piping from scroll drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain.

D. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.03 FIELD QUALITY CONTROL

A. Provide equipment with factory finish in accordance with the manufacturer's standards. Touch scratches and marks from handling and installation with masking enamel to match manufacturer's color.

B. Where exhaust fans are required to have Heresite coating, have units factory finished with required number of coats prior to shipping to the job site.

END OF SECTION 23 34 16

23 37 13

DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Round ceiling diffusers.
2. Rectangular and square ceiling diffusers.
3. Perforated diffusers.
4. Louver face diffusers.
5. Jet flow diffusers.
6. Linear slot diffusers.
7. Related Sections:
8. Division 08 Section "Louvers and Vents" for fixed and adjustable louvers and wall vents, whether or not they are connected to ducts.
9. Division 23 Section "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

B. Related Sections:

1. Section 013300 Submittals.
2. Section 01524 Construction Waste Management
3. Section 01352 LEED Requirements
4. Section 01611 Environmental Management
5. Section 01570 Pollution Prevention and Control

1.03 SUBMITTALS

A. First three paragraphs below are defined in Division 01 Section "Submittal Procedures" as "Action Submittals."

B. Product Data: For each type of product indicated, include the following:

1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.

2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.

C. Samples for Initial Selection: For diffusers, registers, and grilles with factory-applied color finishes.

D. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.

E. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Ceiling suspension assembly members.

2. Method of attaching hangers to building structure.

3. Size and location of initial access modules for acoustical tile.

4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

5. Duct access panels.

F. Source quality-control reports.

G. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

1. Recycled Content:

a. Indicate recycled content; indicate percentage of pre-consumer and post-consumer recycled content per unit of product.

2. Local/Regional Materials:

a. Indicate location of manufacturing facility; indicate distance between manufacturing facility and the project site.

b. Indicate location of extraction, harvesting, and recovery; indicate distance between extraction, harvesting, and recovery and the project site.

3. VOC data:

a. Submit manufacturer's product data for joint compounds. Indicate VOC and chemical component limits of the product. Submit MSDS highlighting VOC and chemical component limits. VOC contents and chemical component limits must be less than the limits of Green Seal's Standard GS-11.

b. Submit manufacturer's certification that products comply with Green Seal's Standard GS-11

c. Submit environmental data in accordance with Table 1 of ASTM E2129 for products provided under work of this Section.

4. Submit the following according to Conditions of the Construction Contract.

a. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

PART 2 - PRODUCTS - REFER TO DRAWINGS FOR SCHEDULE.

2.01 ENVIRONMENTALLY PREFERABLE PRODUCTS

A. Provide environmentally preferable products to the greatest extent possible.

1. To the greatest extent possible, provide products and materials that promote stewardship of the earth's resources, promote good indoor environmental quality (IEQ), and promote efficiencies in operational performance.

B. Provide products listed on the EPA Comprehensive Procurement Guidelines to the greatest extent practicable.

C. Provide products listed on the USGBC Directory of Products and Services to the greatest extent possible.

2.02 RECYCLED CONTENT

A. Provide recycled content products to the greatest extent possible.

1. To the greatest extent possible, provide materials with recycled content such that the sum of post-consumer recycled content plus one-half of the post-industrial content constitutes at least 10% of the total value of the materials in the project.

2.03 REGIONAL MATERIALS

A. Provide Regional materials and products to the greatest extent possible that are extracted and manufactured within the region.

1. Provide materials and products that use a minimum of 20 % of building products that are manufactured regionally within a radius of 500 miles from the project site.

a. Manufacturing refers to the final assembly of components into the building product that is furnished and installed by the tradesman.

2. Of the regionally manufactured materials used and documented, use a minimum of 50% of building materials and products that are extracted, harvested or recovered (as well as manufactured) within 500 miles of the project site.

2.04 SOURCE QUALITY CONTROL

A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

2.05 ACCEPTABLE MANUFACTURERS

A. Titus

B. Price

C. Krueger

D. Tuttle & Bailey

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install diffusers, registers, and grilles level and plumb.

B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.03 ADJUSTING

A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 23 37 13

23 41 00

FILTERS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Disposable media filters.

B. Filter frames.

C. Filter gauges.

1.02 RELATED SECTIONS

A. Section 237300 – Indoor, Central-Station Air-Handling Units.

B. Section 233100 – HVAC Ducts and Casings.

C. Section 233600 – Air Terminal Units.

D. Section 013300 Submittals.

E. Section 01524 Construction Waste Management

F. Section 01611 Environmental Management

G. Section 01570 Pollution Prevention and Control

1.03 REFERENCES

A. UL 900 – Test Performance of Air Filter Units.

B. ASHRAE 52 – Method of Testing Air Cleaning Devices used in General Ventilation for Removing Particulate Matter.

1.04 SUBMITTALS

A. Include filter media, filter performance data, filter assembly and filter frames.

B. Provide Operation and Maintenance manual.

C. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

1. Recycled Content:

a. Indicate recycled content; indicate percentage of pre-consumer and post-consumer recycled content per unit of product.

2. Local/Regional Materials:

   a. Indicate location of manufacturing facility; indicate distance between manufacturing facility and the project site.

   b. Indicate location of extraction, harvesting, and recovery; indicate distance between extraction, harvesting, and recovery and the project site.

3. VOC data:

   a. Submit manufacturer's product data for joint compounds. Indicate VOC and chemical component limits of the product. Submit MSDS highlighting VOC and chemical component limits. VOC contents and chemical component limits must be less than the limits of Green Seal's Standard GS-11.

   b. Submit manufacturer's certification that products comply with Green Seal's Standard GS-11

   c. Submit environmental data in accordance with Table 1 of ASTM E2129 for products provided under work of this Section.

4. Submit the following according to Conditions of the Construction Contract.

   a. Product data. Unless otherwise indicated, submit the following for each type of product provided under work of this Section:

1.05 QUALITY ASSURANCE

A. Provide filter media that is UL 900 listed, Class 2, as approved by local authorities.

B. Provide all filters as product of one manufacturer.

C. Assemble filter components to form filter banks from products of one manufacturer.

1.06 EXTRA MATERIALS

A. Provide one spare set of disposable media filters at project final acceptance for each piece of equipment requiring filters.

1.07 MAINTENANCE

A. Provide twelve (12) months maintenance of all materials and equipment under this section. Cost of the twelve (12) month normal and preventive maintenance shall be included within this scope of work.

1.08 ENVIRONMENTAL REQUIREMENTS

A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation. During construction, if the air units operate at any time, minimum MERV 13 filters shall be installed and kept clean.

B. Provide two sets of belts and three sets of filters for each unit. One set of filters to be installed when unit is started up and shall be protected from construction debris with additional media either at the first bank of filters, or covering each air intake (outside air and return air). Second set of filters to be installed when test and balance activities begin. At substantial completion shall inspect filters to determine if the third set should be installed or delivered to school operations personnel. Tag to identify associated unit.

PART 2 - PRODUCTS

2.01 ENVIRONMENTALLY PREFERABLE PRODUCTS

A. Provide environmentally preferable products to the greatest extent possible.

1. To the greatest extent possible, provide products and materials that promote stewardship of the earth's resources, promote good indoor environmental quality (IEQ), and promote efficiencies in operational performance.

B. Provide products listed on the EPA Comprehensive Procurement Guidelines to the greatest extent practicable.

C. Provide products listed on the USGBC Directory of Products and Services to the greatest extent possible.

2.02 RECYCLED CONTENT

A. Provide recycled content products to the greatest extent possible.

1. To the greatest extent possible, provide materials with recycled content such that the sum of post-consumer recycled content plus one-half of the post-industrial content constitutes at least 10% of the total value of the materials in the project.

2.03 REGIONAL MATERIALS

A. Provide Regional materials and products to the greatest extent possible that are extracted and manufactured within the region.

1. Provide materials and products that use a minimum of 20 % of building products that are manufactured regionally within a radius of 500 miles from the project site.

   a. Manufacturing refers to the final assembly of components into the building product that is furnished and installed by the tradesman.

2. Of the regionally manufactured materials used and documented, use a minimum of 50% of building materials and products that are extracted, harvested or recovered (as well as manufactured) within 500 miles of the project site.

2.04 MANUFACTURERS

A. American Air Filter.

B. Cam-Farr.

C. Continental.

2.05 PANEL FILTERS

A. All air filters shall be listed as (Class 1, Class 2) in accordance with Underwriters Laboratories, Inc., Building Materials Director requirements, except ultra-high efficiency filters, (HEPA or ULPA,) shall be manufactured of materials that are so listed by UL. All filters other than the ultrahigh efficiency type are to be rated in accordance with ASHRAE Test Standard 52-76 and performance characteristics are to be published in the manufacturer's literature. When specified performance characteristics are not published in the manufacturer's literature, the submittal data shall include certified documentation of performance by an approved independent test laboratory.

B. Permanent, Washable: Viscous coated, high velocity filters. The net velocity through the filters shall not exceed 500 fpm. Filters shall be 2" (two inches) thick and the initial clean resistance to air flow shall not exceed 0.10" (one tenth inch) w.g. Filters shall be installed in side access or front access frames, as shown on the drawings. Filters in front access frames shall be furnished with lift handles. Furnish one complete set of spare filters for each system.

C. Sectional, Renewable Media: Air filters shall be 2" (two inches) thick adhesive coated glass fiber media pads enclosed in sectional frames of not less than 16 (sixteen) gauge galvanized steel and equipped with a quick opening mechanism for changing filter media. The airflow capacity of the filters shall be based on a net filter face velocity not exceeding 350' (three hundred and fifty feet) per minute with an initial resistance no greater than 0.10" (one tenth inch) water gauge. When used as pre-filters, and mounted in the same holding frames as higher efficiency secondary air filters, the airflow capacity may be based on 500' per minute with an initial resistance not to exceed 0.17" water gauge. Filters shall have an average arrestance of not less than 70 to 75% when tested in accordance with ASHRAE Test Standard 52.

D. Replaceable, Dry Type, Moderate Efficiency: Filters shall be of the pleated media, disposable type, 2" (two inches) deep in direction of airflow, Class 1 MERV 8. Each filter cell shall utilize a nonwoven, lofted cotton media with a net effective area of not less than 7.0 square feet of media per 1.0 square feet of filter face area, a media support grid, and enclosing high wet strength cell sides. The 96% free area welded wire support grid shall be continuously bonded to the leaving air face of the media to properly support the radially tapered, pleated media in the air stream through the life span of the filter. The media itself shall be cemented to the inside perimeter of the cell sides to prevent bypass of unfiltered air. Filter efficiency shall average not less than 25 to 30% when tested in accordance with ASHRAE Test Standard 52-76. Initial clean resistance to air flow shall not exceed 0.30" w.g. at 500 fpm filter face velocity. The 24" x 24" size shall be certified to have a dust holding capacity of not less than 265 grams of ASHRAE Test Dust when operated at 500 fpm to a final resistance of 1.0" w.g.

E. Replaceable, Dry Type, Medium and/or High Efficiency (minimum MERV 13): Filters shall be 12" deep of the extended surface, supported pleat type. Each filter shall consist of high density, micro fine glass fiber media, media support grid, contour stabilizers, and enclosing galvanized steel frame. Media shall be laminated to a nonwoven synthetic backing to form a lofted surface for maximum dust holding capacity. The edges of the media shall be continuously bonded to the internal surfaces of the galvanized steel frame to prevent bypass of unfiltered air. Filter efficiency shall average not less than 80 to 85% when tested in accordance with ASHRAE Test Standard 52-76. Filters shall be 24" x 24" x 12" deep with an initial clean resistance not to exceed 0.35 inches w.g. at 500 fpm face velocity. The filters shall be certified to have a dust holding capacity of not less than 700 grams of ASHRAE Test Dust when operated at 500 fpm face velocity to a final resistance of 1" w.g.

F. Fabricate filter frames and supporting structures of 16 gauge galvanized steel or extruded aluminum T-section construction with necessary gasketing between frames and walls.

G. Standard Sizes: Provide for interchangeability of filter media of other manufacturers; for panel filters, size for required installation of filter media minimum 2 inch thick; for extended surface and high efficiency particulate filters, provide for upstream mounting.

H. Side Servicing Housing: Flanged for connection of ductwork, of reinforced 16 gauge galvanized steel; access doors with continuous gasketing and positive locking devices on both sides; extended aluminum tracks or channels for primary or secondary filters with positive sealing gaskets.

2.06 FILTER GAUGES

A. Each individual filter or filter bank handling 2,000 cfm or more shall be equipped with a diaphragm actuated dial and pointer type gauge with zero adjustment capability. The range of the scale shall be no greater than 1" w.g. above the filter manufacturer's recommended final resistance for the type of filter to which the gauge is being applied. Each gauge shall be provided with an adjustable signal flag, two static pressure tips with compression fittings, two three way vent valves with compression fittings, two lengths of aluminum tubing, and a mounting plate with screws.

B. Provide dry contact switch to indicate high-pressure limit (adjustable) for connection by others to FCMS system.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install air cleaning devices in accordance with manufacturer’s instructions.

B. Prevent passage of unfiltered air around filters with felt, rubber, or neoprene gaskets.

C. Do not operate fan system until filters temporary or permanent are in place. Replace temporary filter used during construction.

D. Install static pressure tips upstream and downstream of filers. Mount on outside of filter housing of filter plenum, in accessible position. Adjust and level.

E. Provide differential pressure sensor at filter bank of each air handling unit.

END OF SECTION 23 41 00

23 64 26

AIR-COOLED WATER CHILLERS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Packaged, air-cooled chillers.

2. Microprocessor controlled, air-cooled liquid chiller for outdoor installation, utilizing scroll compressors, low sound fans, electronic expansion valve (60 Hz only).

1.03 DEFINITIONS

A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.

B. DDC: Direct digital control.

C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.

D. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.

E. kW/Ton: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.

F. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by AHRI 550/590 and intended for operating conditions other than AHRI standard rating conditions.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories.

2. Performance at AHRI standard conditions and at conditions indicated.

3. Performance at AHRI standard unloading conditions.

4. Minimum evaporator flow rate.

5. Refrigerant capacity of chiller.

6. Oil capacity of chiller.

7. Fluid capacity of evaporator.

8. Characteristics of safety relief valves.

9. Minimum entering condenser-air temperature.

10. Maximum entering condenser-air temperature.

11. Performance at varying capacities with constant-design, entering condenser-air temperature. Repeat performance at varying capacities for different entering condenser-air temperatures from design to minimum in 10 deg F increments.

B. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.

2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

3. Include diagrams for power, signal, and control wiring.

1.05 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Structural supports.

2. Piping roughing-in requirements.

3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.

4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.

B. Product Certificates: For certification required in "Quality Assurance" Article.

C. Seismic Qualification Data: Certificate, for chillers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Source quality-control reports.

E. Field Test Reports: Include startup service reports.

F. Sample Warranty: For AHRI special warranty.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each chiller to include in emergency, operation, and maintenance manuals.

1.07 QUALITY ASSURANCE

A. AHRI Certification: Certify chiller according to AHRI 590 certification program(s).

B. AHRI Rating: Rate chiller performance according to requirements in AHRI 550/590.

C. ASHRAE Compliance:

1. ASHRAE 15 for safety code for mechanical refrigeration.

2. ASHRAE 147 for refrigerant leaks, recovery, and handling and storage requirements.

D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. ASME Compliance: Fabricate and label chiller to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and include an ASME U-stamp and nameplate certifying compliance.

F. Comply with NFPA 70.

G. Comply with requirements of UL and UL Canada and include label by a qualified testing agency showing compliance.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Ship chillers from the factory fully charged with refrigerant.

B. Ship each chiller with a full charge of refrigerant. Charge each chiller with nitrogen if refrigerant is shipped in containers separate from chiller.

C. Ship each oil-lubricated chiller with a full charge of oil.

1. Ship oil factory installed in chiller.

1.09 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of chillers that fail in materials or workmanship within specified warranty period.

1. Extended warranties include, but are not limited to, the following:

a. Complete chiller including refrigerant and oil charge.

b. Complete compressor and drive assembly including refrigerant and oil charge.

c. Refrigerant and oil charge.

d. Parts and labor.

e. Loss of refrigerant charge for any reason.

2. Warranty Period: 5 years from date of equipment startup.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Chillers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified."

B. Site Altitude: Chiller shall be suitable for altitude in which installed without affecting performance indicated.

C. Performance Tolerance: Comply with the following in lieu of AHRI 550/590:

1. Allowable Capacity Tolerance: Zero percent.

2. Allowable IPLV/NPLV Performance Tolerance: Zero percent.

2.02 PACKAGED, AIR-COOLED CHILLERS

~~A.~~ Manufacturers: Subject to compliance with requirements:

1. Carrier Corporation Direct (Basis of design)

2. Trane

3. Daikin

B. Description: Factory-assembled and run-tested chiller complete with base and frame, condenser casing, compressors, compressor motors and motor controllers, evaporator, condenser coils, condenser fans and motors, electrical power, controls, and accessories.

C. Microprocessor controlled, air-cooled liquid chiller for outdoor installation, utilizing scroll compressors, low sound fans, electronic expansion valve and fluid storage tank.

D. Chiller units shall incorporate "*Greenspeed"* intelligence, all fans are controlled with variable speed fan drive motors. Chiller software shall be specifically developed to coordinate optimal fan speed for application conditions and provide refrigerant circuit optimization, resulting in higher part load efficiency and reduced acoustic levels.

E. Unit shall be full load run tested at the factory.

F. Fabricate base, frame, and attachment to chiller components strong enough to resist chiller movement during a seismic event when chiller base is anchored to field support structure.

G. Cabinet:

1. Base: Galvanized-steel base extending the perimeter of chiller. Secure frame, compressors, and evaporator to base to provide a single-piece unit.

2. Frame: Rigid galvanized-steel frame secured to base and designed to support cabinet, condenser, control panel, and other chiller components not directly supported by base.

3. Casing: Galvanized steel.

4. Finish: Coat base, frame, and casing with a corrosion-resistant coating.

5. Sound-reduction package designed to reduce sound level without affecting performance and consisting of the following:

   a. Acoustic enclosure around compressors.

6. Cabinet shall be capable of withstanding 500-hour salt spray test in accordance with the ASTM (American Society for Testing and Materials, U.S.A.) B-117 standard.

H. Compressors:

1. Description: Fully hermetic, direct-drive, scroll-type compressors.

2. Compressor motors shall be cooled by refrigerant gas passing through motor windings and shall have either internal line break thermal and current overload protection or external current overload modules with compressor temperature sensors.

3. Compressor motors shall be cooled by refrigerant gas passing through motor windings and shall have either internal line break thermal and current overload protection or external current overload modules with compressor temperature sensors.

4. Compressors shall be mounted on rubber in shear vibration isolators.

5. Staging of compressors shall provide unloading capability. Digital compressor unloading control shall be provided.

6. Each compressor provided with suction and discharge shutoff valves, crankcase oil heater, and suction strainer.

I. Service: Easily accessible for inspection and service.

J. Capacity Control: On-off compressor cycling and modulating slide-valve assembly or port unloaders combined with hot-gas bypass, if necessary, to achieve performance indicated.

1. Maintain stable operation throughout range of operation. Configure to achieve most energy-efficient operation possible.

2. Operating Range: From 100 to 20 percent of design capacity.

K. Oil Lubrication System: Consisting of pump if required, filtration, heater, cooler, factory-wired power connection, and controls.

1. Provide lubrication to bearings, gears, and other rotating surfaces at all operating, startup, shutdown, and standby conditions including power failure.

2. Thermostatically controlled oil heater properly sized to remove refrigerant from oil.

3. Factory-installed and pressure-tested piping with isolation valves and accessories.

4. Oil compatible with refrigerant and chiller components.

5. Positive visual indication of oil level.

L. Vibration Control:

1. Vibration Balance: Balance chiller compressors and drive assemblies to provide a precision balance that is free of noticeable vibration over the entire operating range.

a. Overspeed Test: 25 percent above design operating speed.

2. Isolation: Mount individual compressors on vibration isolators.

M. Compressor Motors:

1. Hermetically sealed and cooled by refrigerant suction gas.

2. High-torque, induction type with inherent thermal-overload protection on each phase.

~~N.~~ Compressor Motor Controllers:

1. Star-Delta, Reduced-Voltage Controller: NEMA ICS 2, closed transition.

O. Refrigerant Circuits:

1. Refrigerant: Type as indicated on Drawings.

2. Refrigerant Type: R-32

3. Refrigerant Compatibility: Chiller parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.

4. Refrigerant Circuit: Each shall include an expansion valve, refrigerant charging connections, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a filter-dryer, expend on filter dryer to have replaceable cores, a sight glass with moisture indicator, a liquid-line solenoid valve, Hot Gas By-pass and an insulated suction line.

5. Pressure Relief Device:

   a. Comply with requirements in ASHRAE 15 and in applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

   b. ASME-rated, spring-loaded pressure relief valve; single- or multiple-reseating type.

P. Evaporator:

1. Description: Shell-and-tube design.

   a. Flooded type with fluid flowing through tubes and refrigerant flowing around tubes within the shell.

2. Cooler shall be rated for a refrigerant working-side pressure of 450 psig and shall be tested for a maximum water-side pressure of 300 psig.

3. It shall be single-pass, ANSI (American National Standards Institute) type 316 stainless steel, brazed plate construction.

4. Shell shall be insulated with $^{3}/_{4}$-in. closed-cell, polyvinyl-chloride foam with a maximum K factor of 0.28.

5. Fluid Nozzles: Terminated with mechanical-coupling end connections for connection to field piping.

6. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.

7. Cooler shall have optional factory-installed heater, to protect cooler from ambient temperature freeze down to 0 F.

8. Unit shall incorporate 2 independent refrigerant circuits.

9. Unit shall be provided with a factory-installed flow switch.

10. Cooler fluid inlet line shall have a 40- mesh strainer just ahead of the cooler.

Q. Air-Cooled Condenser:

1. Coil shall be air-cooled Novation® heat exchanger technology with microchannel (MCHX) coils and shall have a series of flat tubes containing a series of multiple, parallel flow microchannels layered between the refrigerant manifolds.

2. Coils shall consist of a two-pass arrangement. Coil construction shall consist of aluminum alloys for fins, tubes, and manifolds in combination with a corrosion-resistant coating.

3. Tubes shall be cleaned, dehydrated, and sealed.

4. Assembled condenser coils shall be leak tested and pressure tested at 656 psig.

5. Plate-fin coil with integral subcooling on each circuit, rated at 450 psig.

   a. Hail Protection: Provide condenser coils with louvers to protect against hail damage.

6. Fans: Direct-drive propeller type with statically and dynamically balanced extra low noise fan blades design, arranged for vertical air discharge.

7. Fan Motors: Totally enclosed non-ventilating or totally enclosed air over enclosure, with permanently lubricated bearings. Equip each motor with overload protection integral to either the motor or chiller controls.

8. Condenser fan openings shall be equipped with PVC coated steel wire safety guards.

R. Corrosion-Resistant Coating:

1. Apply a corrosion-resistant coating capable of withstanding a 500-hour salt-spray test to base, frame, and casing according to:

   a. ASTM B117 for salt spray

   b. ASTM D2794 for minimum impact resistance of 100 in-lb.

   c. ASTM B3359 for cross-hatch adhesion of 5B.

2. Application: Immersion or Spray

3. Thickness: 1 mil.

4. Gloss: Minimum of 50 gloss units on a single-angle, 60-degree meter.

5. UV Protection: Spray-applied topcoat.

S. Electrical Power:

1. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a field-power connection to chiller.

2. House in a unit-mounted, outdoor rated, enclosure (NEMA 250, Type 3R) with hinged access door.

3. Wiring shall be numbered to match wiring diagram.

4. Install factory wiring outside of an enclosure in a raceway.

5. Field-power interface shall be to factory disconnect.

    a. Disconnect means shall be interlocked with door operation.

    b. Minimum withstand rating shall be as required by electrical power distribution system, but not less than 65,000A.

6. Provide branch power circuit to each motor and to controls with one of the following disconnecting means:

    a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.

    b. UL 489, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.

7. Provide each motor with overcurrent protection.

8. Overload relay sized according to UL 1995 or an integral component of chiller control microprocessor.

9. Phase-Failure and Undervoltage Relays: Solid-state sensing with adjustable settings.

10. Unit shall be shipped with factory control and power wiring installed.

11. Control Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.

    a. Power unit-mounted controls where indicated.

    b. Power unit-mounted, ground fault interrupt duplex receptacle.

12. Control Relays: Auxiliary and adjustable time-delay relays.

13. For chiller electrical power supply, indicate the following:

    a. Current and phase to phase for all three phases.

    b. Voltage, phase to phase, and phase to neutral for all three phases.

    c. Running log of total power versus time (kilowatt-hours).

    d. Fault log, with time and date of each.

T. Controls:

1. Standalone and microprocessor based. Microprocessor with non-volatile memory. Battery backup system shall not be accepted.

2. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure.

3. Control transformer to serve all controllers, relays, and control components

4. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. In either imperial or metric units, display the following information:

    a. Date and time.

    b. Operating or alarm status.

    c. Operating hours.

    d. Outdoor-air temperature if required for chilled-water reset.

    e. Temperature and pressure of operating set points.

    f. Entering and leaving temperatures of chilled water.

    g. Refrigerant pressures in evaporator and condenser.

    h. Saturation temperature in evaporator and condenser.

    i. No cooling load condition.

    j. Elapsed time meter (compressor run status).

    k. Pump status.

    l. Antirecycling timer status.

    m. Percent of maximum motor amperage.

    n. Current-limit set point.

    o. Number of compressor starts.

5. Control Functions:

    a. Manual or automatic startup and shutdown time schedule.

    b. Entering and leaving chilled-water temperatures, control set points, and motor load limits.

    c. Current limit and demand limit.

d. External chiller emergency stop.

e. Antirecycling timer.

f. Automatic lead-lag switching.

g. Variable evaporator flow.

h. Hermetic scroll compressors are maintenance free and protected by an auto-adaptive control that minimizes compressor wear.

i. Capacity control based on leaving chilled fluid temperature and compensated by rate of change of return-fluid temperature with temperature set point accuracy to 0.1°F.

j. Limiting the chilled fluid temperature pull-down rate at start-up to an adjustable range of 0.2°F to 2°F per minute to prevent excessive demand spikes at start-up.

k. Dual chiller control for parallel chiller applications without addition of hardware modules and control panels (additional thermistors and wells if required).

6. Manually Reset Safety Controls: The following conditions shall shut down chiller and require manual reset:

a. Low evaporator pressure or high condenser pressure.

b. Low chilled-water temperature.

c. Refrigerant high pressure.

d. High or low oil pressure.

e. High oil temperature.

f. Loss of chilled-water flow.

g. Control device failure.

7. Trending: Capability to trend analog data over an adjustable period and frequency of polling.

8. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.

9. Control Authority: At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.

10. BACnet Communication shall provide pre-programmed factory-installed communication capability with a BACnet MS/TP network. Allows integration with i-Vu® Open control system or a third-party BACnet building automation system. No field programming shall be required.

11. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display chiller status and alarms.

    a. Hardwired Points:

        1) Monitoring: On-off status.

        2) Control: On-off operation.

    b. ASHRAE 135 (BACnet) communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the chiller from an operator workstation. Control features and monitoring points displayed locally at chiller control panel shall be available through the DDC system for HVAC.

U. Insulation:

1. Material: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C534, Type I for tubular materials and Type II for sheet materials.

2. Thickness: 1 1/4 inch.

3. Factory-applied insulation over cold surfaces of chiller components.

    a. Adhesive: As recommended by insulation manufacturer and applied to 100 percent of insulation contact surface. Seal seams and joints.

4. Apply protective coating to exposed surfaces of insulation to protect insulation from weather.

V. Accessories:

1. Factory-furnished and installed, chilled-water flow switch.

2. Individual compressor suction and discharge pressure gages with shutoff valves for each refrigerant circuit.

3. Factory-furnished neoprene isolator blocks for field installation.

W. Capacities and Characteristics:

1. Low Ambient Operation: Chiller designed for operation to 25 deg F.

2. High Ambient Operation: Chiller designed for operation to 115 deg F.

X. Factory test and inspect evaporator and condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

Y. The control panel shall include, as standard, a scrolling marquee display capable of indicating the safety lockout condition by displaying a code for which an explanation may be scrolled at the display.

Z. Information included for display shall be:

1. Compressor lockout.
2. Loss of charge.
3. Low fluid flow.
4. Cooler freeze protection.
5. Cooler set point.
6. Chilled water reset parameters.
7. Thermistor and transducer malfunction.
8. Entering and leaving-fluid temperature.
9. Compressor suction temperature.
10. Cooler and condenser pressure.
11. System refrigerant temperatures.
12. Chiller run hours.
13. Compressor run hours.
14. Compressor number of starts.
15. Low superheat.
16. Time of day

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine chillers before installation. Reject chillers that are damaged.

B. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting chiller performance, maintenance, and operations before equipment installation.

1. Final chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 CHILLER INSTALLATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.

B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

D. Install chillers on support structure indicated.

E. Equipment Mounting:

1. Install chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."

2. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

F. Maintain manufacturer's recommended clearances for service and maintenance.

G. Charge chiller with refrigerant and fill with oil if not factory installed.

H. Install separate devices furnished by manufacturer and not factory installed.

3.03 CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping," Section 232116 Hydronic Piping Specialties,". Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to chiller to allow service and maintenance.

C. Evaporator Fluid Connections: Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with shutoff valve and pressure gage, flow meter and drain connection with valve. Make connection to chiller with a flange or grooved connection, and with flexible connector.

D. Connect each chiller drain connection with a union and drainpipe, and extend pipe, full size of connection, to floor drain. Provide a shut off valve at each connection.

3.04 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup check according to manufacturer's written instructions.

2. Verify that refrigerant charge is sufficient, and chiller has been leak tested.

3. Verify that pumps are installed and functional.

4. Verify thermometers and gauges are installed and have been leak checked.

5. Operate chiller for run-in period.

6. Check bearing lubrication and oil levels.

7. For chillers installed indoors, verify that refrigerant pressure relief device is vented outdoors.

8. Verify proper motor rotation.

9. Verify static deflection of vibration isolators, including deflection during chiller startup and shutdown.

10. Verify and record performance of fluid flow and low-temperature interlocks for evaporator and condenser.

11. Verify and record performance of chiller protection devices.

12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.

B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.

C. Prepare test and inspection startup reports.

3.05 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain chillers.

END OF SECTION

23 81 33

UNITARY SPLIT-SYSTEM AIR CONDITIONERS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Furnish and install and install direct expansion air condition system, including:

1. Air handling/ fan coil unit.

2. Outdoor condensing unit.

3. Plenum/ pedestal.

4. Thermostat.

1.02 RELATED SECTIONS

A. Section 220700 – Plumbing Piping Insulation

B. Section 230700 – HVAC Piping Insulation.

C. Section 230993 –Direct-Digital Control System for HVAC.

D. Section 230593 – Testing, Adjusting, and Balancing for HVAC.

E. Coordinate with Commissioning Requirements indicated in Section 019113. This contractor is responsible to comply with all requirements for the above section.

1.03 REFERENCES

A. ARI 240 – Air Source Unitary Heat Pump Equipment.

B. ARI 270 – Sound Rating of Outdoor Unitary Equipment.

1.04 SUBMITTALS

A. Include product data and schematic layouts showing condensing units, air handling/ fan coil unit, refrigerant piping and accessories required for complete system. Include complete pipe sizing data.

B. Include rated capacities, dimensions, weights, accessories, required clearances, electrical requirements, wiring diagrams and location and size of field connections.

C. Include manufacturer’s installation instructions.

D. Provide operation and maintenance manual.

1.05 QUALITY ASSURANCE

1.06 WARRANTY

A. Provide 1 year whole unit parts only warranty.

B. Provide five-year manufacturer’s replacement warranty on compressor.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Carrier.

B. Trane.

C. Daikin

2.02 SYSTEM DESCRIPTION

A. Provide split conditioning system consisting of indoor air handling/ fan coil unit, outdoor condensing unit, refrigerant piping, fittings and accessories, and controls. Factory assembled components and test unit.

B. Heating and Cooling Capacities: As indicated on Drawings.

C. Refrigerant shall be R-410A.

2.03 AIR HANDLING/FAN COIL UNIT

A. Basic Unit:

1. Fabricated exterior unit casing of heavy gauge galvanized steel, painted with epoxy based enamel paint. Provide color chart for color selection by Architect.

2. All unit panels must be removable with a minimum 2 inch microbial resistant and glass fiber thermal insulation liner with sealed edges.

3. Fabricate fan deck of galvanized steel. Fabricate drain pans of 304 stainless steel externally insulated with fire retardant, closed cell foam insulation.

4. Provide liquid sensor at the shallowest part of the pan with all corresponding controls within the drain pan. Upon the presence of liquid, the sensor shall de-energize the unit and send an alarm signal to the BAS.

5. Provide with integral double deflection supply grilles and hinged bar return grilles, unless otherwise indicated on the drawings to have ductwork connections with 1” duct collars, and one inch filter frame.

B. Coils:

1. Construct coils with 2” O.D. copper tubes with aluminum fins mechanically bonded to the tubes.

2. Test al coils for design working pressure of 250 psig @ 200EF.

3. Heating and cooling coils shall be sized as required to meet or exceed the capacities indicated on the drawings.

C. Fans: Centrifugal, forward-curved, double-width wheels. Mount frame on vibration isolators.

D. Motors: Resilient mounted, three-speed, permanent split capacitor type in total compliance with Section 230513 – Common Motor Requirements for HVAC.

E. Filters: 1 inch disposable with galvanized holding frame in total compliance with Section 234100 – Particulate Air Filtration.

2.04 AIR COOLED CONDENSING UNITS

A. Provide air cooled condensing units as scheduled; self-contained, packaged, factory assembled and pre-wired units suitable for outdoor use consisting of cabinet, compressors, condensing coil and fans, integral sub-cooling coil, controls, liquid receiver and screens.

B. Provide corrosion resistant materials for unit parts which come in contract with refrigerant.

C. Provide timer conduits to prevent rapid cycling of compressor.

D. Fabricate cabinet from galvanized steel, with baked enamel finish; provide removable access doors or panels with quick fasteners.

E. Compressor: Hermetically sealed or semi-hermetic type, 1750 rpm, resiliently mounted with positive lubrication, crankcase heater, cylinder un-loaders for capacity modulation, motor overload protection, service valves, filter direr, suction and discharge valves, with gauge ports, and high and low pressure safety controls.

F. Condenser:

1. Seamless copper tubing with aluminum fins coil.

2. Provide condenser fans which discharge, vertically and have direct fan resiliently mounted with guard and motor.

3. Provide fan motor with permanently lubricated ball bearing type with built-in current and overload protection.

G. Provide unit with high and low pressure cutouts for compressor, non-recycling pump down, reset relay and oil pressure safety (7 ½ ton units and larger). Provide with controls to permit operation down to 0 degree F ambient temperature at minimum compressor load.

2.05 PIPING

A. Provide one refrigerant lint filter dryer and outside pressure taps in each refrigerant circuit.

2.06 CONTROLS

A. Refer to Section 230993 –Direct-Digital Control System for HVAC.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer’s instructions.

B. Verify proper refrigerant charge and operating pressures. Supplement factory charge (R-410) if necessary.

C. Mount unit in safe and accessible location for maintenance.

END OF SECTION 238133

26 05 00

COMMON WORK RESULTS FOR ELECTRICAL

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Coordinate with Commissioning Requirements indicated in Section 019113. This Contractor is responsible to comply with all requirements for the above section.

1.02 SUMMARY

A. Section Includes:

1. Summary of Work.
2. Submittals, Analysis and Device Schedules.
3. Record Documents.
4. Operating and Maintenance Manuals.
5. General Electrical Product Requirements.
6. General Electrical Installation Requirements.
7. Electrical equipment coordination and installation.
8. Sleeves for raceways and cables.
9. Sleeve seals.
10. Grout.
11. Common electrical installation requirements.

B. Provide all work required for complete electrical and ancillary system as indicated on the drawings and in these specifications. This may include, but is not necessarily limited to; panelboards, transformers, cabinets, motor controllers, circuit breakers, fuses, disconnect switches, surge suppression, fire alarm system, Lighting Control System, interior and exterior lighting, parking lot lighting, lamps, relay panels, contactors, controls, wiring devices, wire and cable, grounding and bonding, lightning protection, equipment wiring system, conduit, raceways, boxes, supporting devices, identification, fire stopping, testing, excavating, concrete equipment bases, concrete duct encasements, conduit sleeves and supports, anchors, vibration and sound isolation, access panels, record drawings, installation permits, inspections by governing authorities, electrical work of certain temporary facilities and services, cutting-and-patching work, utility connection coordination, start-up of electrical systems and equipment, training of Owner's operating personnel, operating and maintenance manuals, final cleaning of electrical and similar work.

C. Except where otherwise indicated, electrical drawings prepared by Engineer (contract drawings) are diagrammatic in nature and may not show locations accurately for various components of electrical systems. It is the intention of the Construction Documents to establish the types and functions of the systems, but not to set forth each and every item essential to the functioning of any system. The Contractor shall make necessary changes or additions as may be reasonably inferred from the construction documents for a complete operating system as required and record these on the record documents at no cost to the Owner.

D. Contractor shall visit site prior to submitting his proposal and become familiar with the conditions under which the Work is to be performed, and correlate site observations with the requirements of the Contract Documents. Errors, inconsistencies or omissions discovered shall be reported to the Architect/Engineer at once.

E. All electrical products and installations shall comply with the latest additions of the following standards where applicable:

1. ADA - AMERICANS WITH DISABILITIES ACT
2. ANSI - AMERICAN NATIONAL STANDARDS INSTITUTE
3. ASTM - AMERICAN SOCIETY FOR TESTING AND MATERIALS
4. CBM - CERTIFIED BALLAST MANUFACTURERS
5. ETL - ELECTRICAL TESTING LABORATORIES
6. FM - FACTORY MUTUAL
7. ICEA - INSULATED CABLE ENGINEERS ASSOCIATION
8. IEEE - INSTITUTE OF ELECTRONICS AND ELECTRICAL ENGINEERS
9. NEC - NATIONAL ELECTRICAL CODE
10. NECA - NATIONAL ELECTRICAL CONTRACTORS ASSOCIATION
11. NEMA - NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION
12. NESC - NATIONAL ELECTRICAL SAFETY CODES
13. NFPA - NATIONAL FIRE PROTECTION ASSOCIATION
14. NETA - INTERNATIONAL ELECTRICAL TESTING ASSOCIATION
15. OSHA - OCCUPATIONAL SAFETY AND HEALTH ASSOCIATION
16. UBC - UNIFORM BUILDING CODE

17. IBC – INTERNATIONAL BUILDING CODE

18. ICC – INTERNATIONAL CODE COUNCIL

19. IECC – INTERNATIONAL ENERGY CONSERVATION CODE

20. ISO – INTERNATIONAL ORGANIZATION FOR STANDARDIZATIONUL

21. UNDERWRITERS LABORATORIES, INC.

22. TAS – TEXAS ACCESSIBILITY STANDARDS

23. STATE ENERGY CONSERVATION CODE

24. MUNICIPAL OR COUNTY CODES. In the event of conflicts between codes or standards, the more stringent requirements shall govern.

F. All work and materials shall be warranted as indicated in Division 1.

G. Contractor is responsible for filing and paying for all fees and obtaining necessary permits and certificates of inspection, and shall deliver all certificates of inspection to Owner, and include copies with maintenance manuals.

1.03 DEFINITIONS

A. NRTL: Nationally Recognized Testing Laboratory, including United Laboratories (UL) and Intertek (ETL).

1.04 SUBMITTALS

A. General Submittal Requirements:

1. All submittals shall be in accordance with Division 1 requirements.

1. Submit number of copies indicated in Division 1 or 6 copies, whichever is greater.

2. Applicability: Wherever it is indicated that shop drawings, samples, manufacturer's brochure, certification, test, copy of standard operating instructions, manual, extra stock, or warranty is required, appropriate submittal is required regardless of whether it is specified as "submittal"; Engineer’s decision shall be final.

3. Do not purchase equipment until submittals have been reviewed by Engineer with no exceptions taken.

4. Signed Commitments: Do not proceed with transfer of electrical systems to Owner for operation until warranties, performance certifications, maintenance agreements and similar commitments to be signed by Contractor and other entities have been executed and transmitted to Engineer (for Owner's records).

5. Response to Submittals: Where standard product data have been submitted in fulfillment of project requirements, it is recognized that submitter has already determined that

products fulfill specified requirements, and that submittals are for engineer's information only, but will be returned without action where observed to be non-complying with requirements. Where uniquely prepared information is submitted, it is recognized to represent preparer's interpretation or solution to specified requirements, subject to Engineer's concurrence and appropriate action as indicated in Division 1.

6. Submittals shall be signed by the General Contractor and Subcontractor responsible for this work.

7. The Engineer's review of submittals is solely for general conformance with the design concept. The Engineer's review does not relieve the Contractor from total responsibility for quantities, errors, omissions or compliance with the intent of the original contract documents. Review and approval by the Contractor is required before fabrication, shipment or installation.

B. Substitutions: Electrical submittals are not opportunities for gaining acceptance of substitutions. Any variance from the contract documents shall be identified in accordance with Division 1 requirements. Substitutions will be reviewed only for those reason identified in Division 1 and only if the procedures identified in Division 1 are followed. Any variances from the contract documents in the submittals which are not identified by the Contractor in accordance with the procedures of Division 1 and subsequently not identified by the Engineer's review shall be corrected by the Contractor at no cost to the Owner. Substitution request would only be considered if product is equal or better than what listed. No substitution will be allowed for fire alarm system and any electrical products and equipment.

C. Coordination Drawings: Prior to any submittals being reviewed, the Contractor shall provide the coordination drawings indicated in Division 1. In accordance with Division 1, the coordination drawings shall show work in and above ceilings and in mechanical and electrical rooms with horizontal and vertical dimensions to avoid interference with structural framing, ceilings, partitions and other services. The coordination drawings shall be to a scale of 1/4" = 1'-0" or larger. Coordination drawings in the buildings shall include but not be limited to all Electrical rooms with size and location, major electrical equipment and accessories, switchgear and clearances, HVAC ductworks in rooms, plumbing, air grilles, light fixtures, communications equipment, access panels, transformers, switchboards, panelboards, control panels, fire alarm equipment, code clearances for equipment, manufacturers required maintenance clearance for equipment, concrete equipment pads, exterior wall penetrations, foundation penetrations, and fire rated wall penetrations.

D. Short Circuit Analysis: Prior to any electrical submittals being reviewed, the Contractor shall perform short-circuit analysis of the specified electrical power distribution system. This analysis shall include:

1. A calculation of the maximum RMS symmetrical three-phase short-circuit current available at each panel location in the electrical system. The results shall represent the highest short-circuit currents to which the equipment might be subjected under the reported system conditions. The short circuit currents shall be calculated with the aid of a computer. The Contractor shall obtain necessary information from the utility to do this prior to furnishing equipment and coordinate with manufacturer to meet the greater of minimum required rating and rating indicated on Drawings.

1. Appropriate motor short-circuit contribution such that the calculated values will represent the highest short-circuit current to which the equipment will be subjected under fault conditions.

2. A tabular computer printout of equipment supplied by the electrical ratings of the electrical equipment supplied by the electrical manufacturer, the calculated short-circuits currents, X/R ratios, and notes regarding the adequacy or inadequacy of the equipment.

3. A computer printout of input circuit data including cable lengths, number of cables per phase, cable impedance values, insulation types, transformer impedances, X/R ratios and other circuit information as related to the short-circuit calculations.

4. A bus-to-bus computer printout listing the maximum available short-circuit current in RMS symmetrical amperes and the X/R ratio of the fault current. This printout shall have an accompanying printout explaining how to interpret the short-circuit results.

5. A computer-generated system one-line diagram clearly identifying individual equipment buses, bus numbers used in short-circuit analysis, cable and bus connections between the equipment and calculated maximum short-circuit current at each bus location.

6. A discussion section evaluating the adequacy or inadequacy of the equipment, with recommendations as required for improvements to the system.

7. Any inadequacies shall be called to the attention of the engineer and recommendations made for improvements.

8. Six (6) bound copies of the completed short-circuit analysis sealed by a Texas Licensed Professional Electrical Engineer shall be submitted for the Engineer to review.

E. Protective Device Time-Current Coordination Analysis: Prior to any electrical equipment submittals being reviewed, the Contractor shall perform a protective device time-current coordination analysis of the specified electrical power distribution system. This analysis shall include:

1. A determination of settings, ratings, or types for the over-current protective devices supplied. Where necessary, an appropriate compromise shall be made between system protection and service continuity with:

    a. System protection shall be more important than service continuity. The time current condition analysis shall be performed with the aid of a computer.

2. Computer generated log-log plots containing the time current characteristics of over-current devices. A sufficient number of log-log plots shall be provided to indicate the degree of system protection and coordination. The log-log plots shall include transformer ANSI withstand point and inrush currents of transformers where appropriate. Series rated devices shall not be acceptable.

3. Computer printouts to accompany the log-log plots containing descriptions for each of the devices shown on the plot, setting of the adjustable devices, device numbers to simplify locations of the devices on the system one-line diagram and short circuits where shown.

4. A tabular computer printout of the suggested settings of the adjustable over-current protective devices, the equipment where the devices are located, the device number corresponding to the device on the system one-line diagram and the number of the time-current log-log graphs where they are illustrated.

5. A computer generated system one-line diagram clearly identifying individual equipment buses, the bus numbers, the device numbers and the maximum available short-circuit at each bus which shall include short-circuit current motor contributions.

6. A discussion section evaluating the degree of system protection and service continuity with over-current devices, with recommendations as required for increased protection or coordination.

7. Any inadequacies shall be called to the attention of the engineer and recommendations made for improvements.

8. Six bound copies of the completed protective device time-current coordination analysis for the engineer.

F. Over-current Device Schedule: Prior to any electrical submittals being reviewed, Contractor shall provide a schedule for each piece of equipment required by Divisions 11, 14, 21, 22, 23, 25, 27, and 28 in coordination with subcontractors providing equipment under these sections. Submittals shall reflect required coordination by having related Contractor’s signatures on the submittals. This means that electrical requirement for chiller as an example, shall be coordinated by BOTH Electrical and Mechanical subcontractors, and Over-Current Device Schedule submitted shall be signed by both Contractors. For each piece of equipment actually supplied, the schedule shall indicate the full load amps (FLA), the minimum circuit amps (MCA), and the maximum over-current protection device (MOCPD). The schedule shall also indicate if the equipment is required to be protected by fuses only, thermal magnetic breaker only, HACR breakers only or any combination thereof. It shall also indicate if the equipment requires single point or multiple point of connections and hoe the Contractor is proposing to meet the requirements if different than construction documents. It shall explicitly indicate the required number of conductors, disconnect switch sizes and numbers (if required), and acceptable conduit sizes and number. These modifications shall be reflected in the electrical equipment submittal. Required changes shall be made at no cost to the Owner.

G. After the coordination drawings, short circuit analysis coordination analysis and over-current device schedule are submitted, the products in Division 26 shall be submitted in the groups identified below. By submitting shop drawings on the project, this Contractor is indicating that all necessary coordination has been completed and that the systems, products and equipment submitted can be installed in the building and will operate as specified and intended, in full coordination with all other trades. Submittals for each group will be returned without review unless all sections are included. Sections will not be reviewed separately. At the Engineer's discretion, when a re-submittal is required for one section, any other sections within each group may require re-submittal. Contractor shall expedite submittals and re-submittals as required to allow for the Engineer's review time specified in Division 1. The groups of equipment shall be divided as follows:

1. Raceways, Conductors and Miscellaneous Equipment

a. Fire stopping

b. Conduit

c. Raceways, Multi-outlet Assemblies, Wireways and Auxiliary Gutters

d. Wires and Cables

e. Outlet Boxes

f. Wiring Devices

g. Cabinets and Enclosures

h. Grounding and Bonding

i. Supporting Devices

j. Electrical Identification

k. Lightning Protection Systems

2. Distribution Equipment

a. Distribution Switchboards

a. Enclosed Switches

b. Dry Type Transformers

c. Distribution Panelboards

d. Branch Circuit Panelboards

e. Enclosed Motor Controllers

f. Motor Control Center

g. Variable Speed Drives

3. Electrical Controls

4. Lighting Fixtures

a. Interior and Building Lighting Fixtures

5. Specialty Systems

a. Transient Voltage Surge Suppression

a. Fire Alarm System

b. Intercom System

c. Cable TV System

d. Local sound reinforcement System

6. Testing

a. Field Electrical Testing

H. Shop Drawings: Prepare electrical shop drawings to accurate scale except where diagrammatic representations are specifically indicated. Show clearance dimensions of critical locations, and show dimensions of spaces required for operation and maintenance of equipment. Show conduit layouts and wire/cable connections and other electrical service connections and show interfaces with other work, including structural support. Indicate by note, portions of electrical work shown on shop drawings which deviates from indication of work in contract documents, and explain reasons for deviations. Show how such deviations coordinate with interfacing deviations on shop drawings for other portions of work, currently or previously submitted. Show wiring diagrams, erection, setting, weights, capacities, speeds, outputs, consumption, efficiencies, voltages, amperages, hertz, phases, noise levels, etc.

I. Samples: Engineer's review of required sample submittals will be limited to observation of general type, pattern, and finish; and will not include testing and inspection of submitted samples, except for those specifically indicated for that purpose in the contract documents. Compliance with specified requirements remains the exclusive responsibility of the Contractor.

J. Manufacturer's Data: Where pre-printed data covers more than one distinct product, size, type, material, trim, accessory group or other variation, mark submitted copy with black pen to indicate which variations are to be provided. Delete or mark-out all portions or pre-printed data which are not applicable. Where operating ranges are shown, mark data to show portions of range required for project application. Expansion or elaboration of standard data to describe non-standard product must be processed as shop drawing data to describe non-standard product. For each product include manufacturer's production specifications, installation or fabrication instructions, nearest source of supply (including telephone number), sizes, weights, speeds, operating characteristics, ratings, conduit and wire/cable connection sizes and locations, statements of compliance with required standard and governing regulations (include manufacturer's signed statements if not covered in printed data), performance data (where applicable) and similar information needed to confirm compliance with requirements.

K. Manufacturer's Certification: Each manufacturer is required to review the system design as related to the proper operation of his equipment, including electrical requirements, automatic controls, mechanical systems and equipment locations and related items. With shop drawings submit a letter from the manufacturer stating that his equipment will operate satisfactorily under the design conditions. The manufacturer's representative shall review the final installation at the site and submit a second letter stating that the equipment operates satisfactorily as installed. Furnish certification for the systems listed in each section of Division 26.

1. Test Reports: The Contractor for various sub-systems shall submit proposed testing procedure for their system, subject to review and approval and owner acceptance. The contract will not be declared to be substantially complete until the functional operation of the subsystems have been demonstrated and verified and reports have been provided, reviewed and accepted. The project will not be declared substantially complete until the following has taken place:

2. The "As-Built" drawings have been submitted, reviewed, and accepted by OWNER CM-PA/Bond Office.

3. The various systems have been commissioned and accepted. This will include the following systems:

    a. Building Fire Alarm System

    b. Clock System

    c. Television Distribution System

    d. Building Computer Network

    e. Surveillance and Security System

    f. Intercom/Telephone

L. Submit test report signed and dated by firms performing test, and prepare in manner specified in standard or regulation governing test procedure as indicated. Provide notarized executions on test reports.

M. Warranties: Refer to Division 1 for procedures and submittal requirements for warranties. Refer to individual equipment specifications for warranty requirements. A minimum of one-year warranty period is required for all materials and equipment. Warranty period starts upon first beneficial use or acceptance by OWNER whichever comes first.

1. Provide complete warranty information for each item to include product or equipment to include date of beginning of warranty or bond; duration of warranty or bond; names, addresses and telephone numbers and procedures for filing a claim and obtaining warranty services.

2. Where pre-printed and published warranty includes substantial deviation from required warranty (as judged by Engineer), product is automatically disqualified from use on project, except where manufacturer prepares and issues specific project, warranty on product, stating that it is in lieu of published warranty, and is executed by authorized officer, and complies with requirements.

N. Load Current and Overload Relay Heater List: Compiled by Contractor after motors have been installed. Arrange to demonstrate selection of heaters to suit actual motor nameplate full load currents.

1.05 RECORD DOCUMENTS

A. Prepare record documents in accordance with the requirements in Division 1. In addition to the requirements specified in Division 1, indicate installed conditions for:

1. Major raceway systems, size and location, for both exterior and interior; locations of control devices; distribution and branch electrical circuitry; access panels; and fuse and circuit breaker size and arrangements.

1. Equipment locations (exposed and concealed), dimensioned from prominent building lines.

2. Approved substitutions, Contract Modifications, and actual equipment and materials installed.

3. Underground cabling and conduits both interior and exterior, drawn to scale and fully dimensioned.

4. Work concealed behind or within other work, in a non-accessible arrangement.

5. Mains and branches of wiring/cabling systems, with switchboards, panelboards, and control equipment and devices located and numbered with terminals and connections located, and with equipment requiring maintenance located.

6. Grounding systems including primary, secondary and special.

B. Execution: Each installer or other entity responsible for recording installed work shall record firm name, signature and date on each drawing so marked.

C. Prior to transmittal of corrected drawings, obtain three (3) sets of blue-line prints of each drawing in each set, regardless of whether corrections were necessary, and include in transmittal (two (2) sets are for Owner's use, and one (1) is for Engineer's records).

1.06 OPERATING AND MAINTENANCE MANUALS

A. Prepare maintenance manuals in accordance with Division 1. In addition to the requirements specified in Division 1, provide the following.

B. Submit sets prior to final inspection, in electronic PDF format.

C. Contents:

1. Directory, listing names, addresses, and telephone numbers of Architect/Engineer, Contractor, Subcontractor, and major equipment suppliers.

1. Operation and maintenance instructions, arranged by system.

2. Project documents and certificates.

3. Description of function, normal operating characteristics and limitations, performance curves, engineering data and tests, and complete nomenclature and commercial numbers of replacement parts.

4. Manufacturer's original printed operating procedures to include start-up, break-in, and routine and normal operating instructions; regulation, control, stopping, shutdown, and emergency instructions; and summer and winter operating instructions. (Copies are not acceptable).

5. Maintenance procedures for routine preventative maintenance and troubleshoot; disassembly, repair, and re-assembly; aligning and adjusting instructions.

6. Servicing instructions and lubrication charts and schedules.

7. Warranty information including any corrections made during submittals.

8. Replacement parts list.

9. List of tools and accessories needed for maintenance.

1.07 COORDINATION

A. Coordinate arrangement, mounting, and support of electrical equipment:

1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.

1. To provide for ease of disconnecting the equipment with minimum interference to other installations.

2. To allow right of way for piping and conduit installed at required slope.

3. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.

B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

C. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."

D. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."

PART 2 - PRODUCTS

2.01 GENERAL MANUFACTURER QUALIFICATION

A. Production Experience: For all electrical equipment, manufacturer shall be firm with not less than five (5) years successful production experience. Experience means production of units similar to those required, as judged by Engineer. Comply with longer-period experience requirements specified in other Division 26 sections of these Specifications. Product shall be new and design for quiet, vibration free operation.

2.02 GENREAL ELECTRICAL PRODUCT REQUIREMENTS

A. Standard Products: Provide not less (quality) than manufacturer's standard products as specified by published product data. Do not assume that available off-the-shelf condition of product complies with requirements; as example, specific finish or color may be required.

B. Unencumbered Purchases: Avoid purchases and use of products which are encumbered with questionable title transfers, patent rights, trade union restrictions, code compliance, non-listings as "approved products" for compliance with governing regulations, duties due, embargoes and similar possible encumbrances, claims or seller's interest.

1. Purchasing: Do not purchase specific electrical materials and equipment for project until completion of submittals.

C. Condition of Products: Except as otherwise indicated, provide new electrical products, free of defects and harmful deterioration at time of installation. Do not use units, which have been subjected to destructive testing, or other high-limits testing except where pre-tested products are specified. Comply with Division 1 requirements for exposure or visual display limitations against trademarks and manufacturer's names. Provide each product complete with trim, accessories, finish, guards, safety devices and similar components specified or recognized as integral parts of products, or required by governing regulations.

D. Assembly and Testing: To greatest extent possible and unless otherwise indicated, complete fabrication, assembly, finishing and testing of products prior to delivery to project. Notify Engineer not less than one week in advance of pre-installation testing to be performed in response to project requirements. Engineer reserves right to be present at tests of electrical products; however, neither their absence nor presence relieves the Contractor of responsibility for compliance with requirements.

E. Uniformity: Where multiple units of generic product are required for single major system of electrical work, e.g., cable trays, lighting systems, provide identical products by same manufacturer, without variations.

1. Limitations: Product/manufacturer uniformity does not apply to conduit and fittings, 600V electrical wire, sheet metal, steel bar stock, welding rods, solder, factory applied paint between different systems, fasteners, motors for unalike equipment units, and similar items used in work, and except as otherwise indicated.

F. Product Compatibility, Options: Where more than one product selection is specified, selections are Purchaser's or Installer's options, except do not provide products which are not compatible with previously purchased or installed products which must interface with selections. Provide electrical adaptations as needed for interfacing of selected products in work.

G. Quality Assurance: Provide products listed by and installed in accordance with all references in each section under quality assurance any other applicable requirements.

H. Elevation Requirements: Electrical equipment provided shall perform at mean elevation of 1000 feet above sea level.

I. Listing: Provide products that are listed by a NRTL.

2.03 SLEEVES FOR RACEWAYS AND CABLES

A. Retain one of first two paragraphs below for penetrations through exterior walls above and below grade.

B. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

C. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral water-stop, unless otherwise indicated.

D. Sleeves for Rectangular Openings: Galvanized sheet steel.

1. Minimum Metal Thickness:

a. For sleeve cross-section rectangle perimeter less than 50 inches and no side more than 16 inches, thickness shall be 0.052 inch.

b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches and 1 or more sides equal to, or more than, 16 inches, thickness shall be 0.138 inch.

2.04 SLEEVE SEALS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

2.05 GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, non-staining, mixed with water to consistency suitable for application and a 30-minute working time.

PART 3 - EXECUTION

3.01 GENERAL ELECTRICAL INSTALLATIONS

A. The Contractor shall provide all necessary items for a complete operating system.

B. Provide all electrical systems required by and in accordance with Division 26.

C. Perform work for other divisions as required for electrical installations or coordinate such work with other trades which includes but is not necessarily limited to:

1. Division 1: Cutting and Patching, Temporary Controls, Submittals, Facility Start-up, Contract Close Out, Record Documents, etc.

2. Division 2: Trenching, Backfilling, Compaction, Demolition, etc.

3. Division 3: Concrete Formwork.

4. Division 5: Metal Fabrications.

5. Division 6: Rough Carpentry.

6. Division 7: Joint Sealers and Fire Stopping

7. Division 8: Electric Door Hardware and Access Doors

a. Deviation: Contractor is encouraged to coordinate and combine electrical access with mechanical access, and has the option to not add electrical access panels if acceptable coordination can be achieved.

8. Division 9 - Painting: In addition to Division 9, paint electrical equipment factory applied paint surfaces damaged during installation with paint purchased from equipment manufacturer to match each damaged surface.

9. Divisions 11 and 13: Laboratory Furniture, Electronic Systems, Intercoms, etc.

10. Division 15 for motors, controls, accessories, and connections.

D. Verify all dimensions by field measurements.

E. Arrange for chases, sleeve, slots, and openings in other building components during progress of construction, to allow for electrical installations.

F. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete and other structural components, as they are constructed.

G. Where mounting heights or locations are not detailed or dimensioned, install systems, materials, and equipment to provide the maximum headroom and working clearances possible, but not less than required by Code.

H. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings and manufacturer's instructions, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that portions of the Work are shown only in diagrammatic form. Where coordination requirements conflict with individual system requirements, refer conflict to the Architect.

I. Install systems, materials, and equipment level and plumb, parallel and perpendicular to other building systems and components, where installed exposed in finished spaces.

J. Install electrical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations.

K. Install J-boxes for all other equipment requiring access or maintenance, which are concealed behind surfaces so that these devices can be serviced from the access panels. Where practical, group J-boxes and equipment so that they can be accessed from the same panel or door. If additional panels are needed, panels must be submitted for approval.

L. Cut, remove and legally dispose of selected electrical equipment, components, and materials, including but not limited to removal of electrical items indicated to be removed and items made obsolete by the new work.

M. The A/E reserves the right to make relocations up to 6 feet of outlets, boxes, cabinets, lighting, etc. before finished rough-in at no cost to the Owner.

N. Contractor shall notify design prime consultant and associated owner representative when he requests an inspection by the City Inspector.

3.02 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATIONS

A. Comply with NECA 1.

B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.

C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.

D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

E. Right of Way: Give to piping systems installed at a required slope.

3.03 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.

B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

E. Cut sleeves to length for mounting flush with both surfaces of walls.

F. Extend sleeves installed in floors 2 inches above finished floor level.

G. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable, unless indicated otherwise.

H. Seal space outside of sleeves with grout for penetrations of concrete and masonry

1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.

I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants".

J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."

K. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

L. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

M. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing mechanical sleeve seals.

3.04 SLEEVE-SEAL INSTALLATION

A. Install to seal exterior wall penetrations.

B. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.05 FIRESTOPPING

A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

3.06 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Protection and Identification: Deliver products to project properly identified with names, model numbers, types, grades, compliance labels and similar information needed for distinct identification; adequately packaged or protected to prevent deterioration during shipment, storage and handling. Store in dry, well ventilated, indoor space, except where prepared and protected by manufacturer specifically for exterior storage.

3.07 DAMAGED EQUIPMENT

A. The following will be rejected (even after final installation) and must be replaced with same as original at no cost to Owner:

1. Dented, deformed, stepped-on, or otherwise physically damaged enclosures.

2. Stripped cover plate screws and the holes they screw into.

3. Door hinges that do not operate smoothly.

B. The following will require field repair to original condition:

1. Minor scratches to equipment enclosure finishes.

3.08 TEMPORARY WIRING

A. The electrical Contractor shall arrange for and provide all necessary equipment, outlets, temporary lights, metering and communications as required during the construction period for temporary electrical service to the project.

B. It shall be the responsibility of the electrical Contractor to consult with all other trades on the project in order to determine the voltage of temporary electrical service required to operate the construction equipment to be employed and to provide such services to the project.

C. It shall be the responsibility of the electrical Contractor to make all arrangements for, and to furnish and install, any and all temporary wiring, switches, and structures which may be required to maintain service continuity during the entire construction period. Temporary power and lights shall be UL listed and shall include a ground wire, a guard and a proper means of support.

D. All temporary installations shall be performed in accordance with the current edition of the National Electrical Code. All machinery and equipment powered by electricity shall have effective electrical equipment grounding provided with all electrical circuits.

3.09 UTILITIES

A. This Contractor shall examine the site and shall verify, to his own satisfaction, the location and elevation of all utilities, and shall adequately inform himself as to their relation to the work before entering into a contract.

B. Existing utility lines shown within the scope of this project to be abandoned or removed shall be performed as directed by the Owner, and/or utility companies.

C. Existing utility lines not shown on the drawings but encountered during construction shall be protected, relocated or capped as directed by the Owner, and/or utility companies. All precautions shall be exercised to prevent damage to existing lines not shown, but should work become necessary, it must be authorized prior to execution except in an emergency situation.

D. Before beginning excavations of any nature whatsoever, the Contractor shall make an attempt to locate all underground utilities of every nature occurring within the bounds of the area to be excavated. The Contractor shall then proceed with caution in his excavation work so that no utility shall be damaged with a resultant loss of service.

E. Should any damage result to any utility through the Contractor's negligence or failure to comply with the above directive, he will be liable for such damage and for all expense incurred in the expeditious repair or replacement of such damaged utilities.

F. Repair of damaged utilities shall be to a condition equal to or better than the adjacent undamaged portion of such utility and to the complete satisfaction of the Owner and/or utility companies.

3.10 EXCAVATION

A. The Contractor shall perform all excavation of every description and of whatever substances encountered, to the depths indicated and/or required for the installation of all portions of the utilities systems. All excavated materials not required for fill or backfill shall be removed. All excavation shall be made by open cut. The banks of trenches shall be kept as nearly vertical as practicable and where required shall be properly shored and braced. Trenches shall be at least 12" wider and not more than 16" wider than the outside diameter of the conduit, and shall be excavated true to line so that a clear space greater than 6" and less than 8" in width is provided on each side of the conduit or duct bank.

B. Except at locations where the excavation of rock from bottom of trenches is required, care shall be taken not to excavate below the depths indicated. Where rock excavation is required, the rock shall be excavated to a minimum over-depth of 4" below the trench depths indicated on the drawings or as specified. The over-depth rock excavation shall be back-filled with loose, moist earth and thoroughly tamped.

C. Whenever wet or otherwise unstable soil that is incapable of supporting the conduit duct bank, pole base or pad is encountered in the trench bottom, such soil shall be removed to a depth required. The trench bottom shall be filled with course sand, fine gravel, or other suitable material.

D. Backfill with earth under pole bases, pads or other buried structures will not be permitted, and any unauthorized excess excavation below the levels indicated for foundation of such structures shall be filled with sand, gravel or concrete at the expense of the Contractor.

E. All grading in the vicinity of excavations shall be controlled to prevent surface ground water from flowing into the excavations. Any water accumulated in the excavations shall be removed by pumping or by other approved method. During excavation, material suitable for backfilling shall be stacked in an orderly manner a sufficient distance back from the edges of trenches to avoid overloading and to prevent slides or cave-ins.

3.11 BACK-FILLING

A. Trenches shall not be back filled until all required tests are performed and until the utilities systems as installed conform to the requirements specified.

B. Trenches shall be carefully back filled with the excavated materials approved for back filling. This material shall consist of earth, loam, sandy clay, sand and gravel, soft shale, or other approved materials, free from large clods of earth or stones, deposited in thoroughly and carefully tamped 6" layers, until the conduit has a cover as specified. Broken rock, broken concrete or pavement, and large boulders shall not be used as backfill material.

C. Settling the backfill with water will be permissible and will be a requirement when so directed.

D. Any trenches across roadways or other areas to be paved shall be back filled with flowable fill (CLSM) or approved equal (ashes combined with concrete) in such manner as to permit the rolling and compaction of the filled trench. Together with the adjoining earth, shall provide required bearing value so that paving of the area can proceed immediately after the backfilling is completed.

3.12 CLOSEOUT PROCEDURES

A. General Coordination: Refer to Division 01 sections and individual Specification sections for coordination of electrical closeout work with variable loads on electrical system. Coordinate taking of final photographs (if any) with electrical closeout, so that maximum detail of work as finally accepted is shown. Sequence closeout procedures properly, so that work will not be endangered or damaged, and so that every required performance with be fully tested and demonstrated.

B. System Performance Test Runs: Coordinate test runs of electrical systems with test runs of equipment served thereby (heating, air conditioning, plumbing, etc.). Check each item in each system to determine that it is set for proper operation. With Owner's Representative and Engineer present, operate each system in test run of appropriate duration to demonstrate compliance with performance requirements. During or following test runs, make final corrections or adjustments of systems to refine and improve performances where possible, including noise and vibration reductions, elimination of hazards, better response of controls, signals and alarms, and similar system performance improvements. Provide testing or inspection devices as may be reasonably requested for Engineer's observation of actual system performances. Demonstrate that controls and items requiring service or maintenance are accessible.

C. Cleaning and Lubrication: After final performance test run of each electrical system, clean system both externally and internally. Comply with manufacturer's instructions for lubrication of both power and hand-operated equipment, and remove excess lubrication. Touch-up minor damage to factory-painted finishes and other painting specified as electrical work; refinish work where damage is extensive.

D. General Operating Instructions: In addition to specific training of Owner's operating personnel specified in individual Division 26 work sections, and in addition to preparation of written operating instructions and compiled maintenance manuals specified in Division-26 Sections and elsewhere in these specifications, provide general operating instructions for each operational system and equipment item of electrical work. Coordinate instructions with instructions for mechanical work, elevators and other equipment where associated with electrical systems or equipment.

1. Describe each basic electrical system and functioning of its control system.

2. Explain identification system, mimic diagrams, signals, actuators, sensors, alarms, telecommunication systems, and similar audio/visual provisions.

3. Describe interfaces with mechanical equipment, including interlocks, sequencing, start-up, shut down, emergency, safety, system failure, security and similar provisions.

4. Outline basic maintenance procedures and major equipment turnaround requirements, including adjustments to optimize output and efficiency of electrical system.

5. Display and conduct "thumb-through" explanation of maintenance manuals, record drawings, spare part inventory, storage of extra materials, meter readings and similar service items.

E. Construction Equipment: After completion of performance testing and Owner's operating instructions and demonstrations, remove installer's tools, test facilities, construction equipment and similar devices and materials used in execution of work but not incorporated in work.

F. Security and Protection: During electrical work closeout phase, meet with Owner's operating representative frequently (daily where necessary) and agree upon status of operational responsibility for electrical systems (including securing provisions to prevent unauthorized operations, and including protective measures to ensure that systems are not neglected or misused.

PART 4 - CONTINUED SYSTEM OPERATIONS

A. Acceptance and Continued Services: Coordinate Owner's take-over of electrical systems with take-over of mechanical systems, including the provision of skilled electrical operating and maintenance personnel until time Owner's personnel take over operation of entire mechanical and electrical plant. Contractor shall continue consultation and services (beyond take-over date) for electrical systems, matching required continued services on associated mechanical systems and equipment.

END OF SECTION 26 05 00

26 05 19

LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Building wires and cables rated 600V and less.

2. Connectors, splices, and terminations rated 600V and less.

3. Sleeves and sleeve seals for cables.

B. Related Sections include the following:

1.03 DEFINITIONS

A. Retain abbreviations that remain after this Section has been edited.

B. EPDM: Ethylene-propylene-dieneterpolymer rubber.

C. NBR: Acrylonitrile-butadiene rubber.

D. MCM: Thousand circular-mils.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Coordinate paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article.

C. Qualification Data: For testing agency.

D. Retain paragraph below if Contractor is responsible for field quality-control testing.

E. Field quality-control test reports.

1.05 QUALITY ASSURANCE

A. Retain first paragraph and subparagraph below if Contractor is required to provide services of an independent testing agency in Part 3 "Field Quality Control" Article. Qualification requirements supplement those specified in Division 01 Section "Quality Requirements", which also includes the definition for NRTL.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the International Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the International Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Comply with NFPA 70.

E. UL Compliance: Provide components which are listed and labeled by UL under the following standards.

1. UL Std. 83 - Thermoplastic-Insulated Wires and Cables.

2. UL Std. 4 - Armored Cable

3. UL Std. 1569 - Metal-Clad Cables

4. UL Std. 486A - Wire Connectors and Soldering Lugs for Use with Copper Conductors.

5. UL 13 - Power limited circuit cables.

6. UL 1666 - Test for flame propagation height of electrical and optical-fiber cables installed vertically in shafts.

7. UL 910 - Test for flame propagation and smoke density values for and optical fiber cables used in spaces environmental air.

8. UL 1685 - Vertical tray fire propagation and smoke release test for and optical fiber cables.

F. NEMA WC-5: Thermoplastic-insulated wire and cable for the transmission and distribution of electrical energy.

G. Federal Specifications

1. J-C-30B (1) cable and wire, electrical (power, fixed installation).

1.06 COORDINATION

A. Set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

PART 2 - PRODUCTS

2.01 CONDUCTORS AND CABLES

A. Manufacturers, 600 Volt or Less Wire and Cable: Subject to compliance with requirements, provide products by one of the following:

1. Carol

2. South wire.

3. Triangle PCW

4. American Insulated Wire Corp

5. BFCC Brand

6. Senator Wire and Cable

7. Encore Wire Corporation

B. Copper Conductors: Comply with NEMA WC 70.

C. Conductor Insulation: Comply with NEMA WC 70 for Types THW, THHN-THWN, XHHW, UF, USE and SO. All conductors are to be Copper wire or cable insulated for 600 V, color coded for the entire length. Use of electrical tape for marking is strictly prohibited.

1. Conductors shall be provided with insulation types indicated explicitly on drawings, and substitution is NOT acceptable without Engineer's approval.

2. Wiring BX and MC will not be acceptable for use on this project. MC may be used for light fixture whips only.

3. Where insulation type is not explicitly identified on drawings, branch circuit and feeder circuit conductors shall have THHN-THWN dual-rated insulation.

D. Multi-conductor Cable: Comply with NEMA WC 70 for armed cable, Type AC, metal clad cable, Type MC, mineral-insulated, sheathed cable, Type MI with ground wire.

2.02 CONNECTORS AND SPLICES

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFC Cable Systems, Inc.

2. Hubbell Power Systems, Inc.

3. O-Z/Gedney; EGS Electrical Group LLC.

4. 3M; Electrical Products Division.

5. Tyco Electronics Corp.

C. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

2.03 SLEEVES FOR CABLES

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral water stop, unless otherwise indicated.

C. Sleeves for Rectangular Openings: Galvanized sheet steel with minimum 0.052- or 0.138-inch thickness as indicated and of length to suit application.

D. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."

2.04 SLEEVE SEALS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

B. Basis-of-Design Product: Subject to compliance with requirements, provide a comparable product by one of the following:

1. Advance Products & Systems, Inc.

2. Calpico, Inc.

3. Metraflex Co.

4. Pipeline Seal and Insulator, Inc.

C. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and cable.

PART 3 - EXECUTION

3.01 CONDUCTOR MATERIAL APPLICATIONS

A. Copper:

1. Solid for #10 AWG and smaller;

2. Stranded for #8 AWG and larger.

B. Aluminum:

1. Use only for distribution or service feeders where explicitly indicated on Drawings.

2. Use AA-8030 alloy only.

3. Stranded only

4. Minimum size: 250 MCM.

5. Provide compression lugs.

3.02 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Service Entrance: Type XHHW-2 single conductors in raceway, unless specifically noted otherwise on Drawings.

B. Feeders to Switch Boards, Distribution-Class Panels, and Motor Control Centers located in central plant or main electrical room: Type XHHW-2 single conductors in raceway, unless specifically noted otherwise on Drawings.

C. Feeders to Distribution-Class Panels, Lighting-Class Panels, and distribution equipment located in any other area: Type THHN/THWN-2 dual-rated insulation conductors in raceway, unless specifically noted otherwise on Drawings.

D. Feeders to Emergency Equipment: Type RHW-2, unless specifically noted otherwise on Drawings.

E. Branch Circuits: Type THHN/THWN-2 dual-rated insulation conductors in raceway, unless specifically noted otherwise on Drawings.

1. Lighting Fixture Tails: A maximum of 6'-0" length of multi-conductor cable may be used for lighting fixture connection from above-ceiling junction boxes with Code-required support and minimum of one support point between junction box and fixture.

2. Wiring Devices: Multi-conductor cable is not acceptable for use in connection of wiring devices and associated boxes.

3. Equipment: Multi-conductor cable is not acceptable for use in connection of equipment by any Division.

F. Control Circuits: Type THHN/THWN-2 in raceway.

3.03 INSTALLATION OF CONDUCTORS AND CABLES

A. Conceal cables in finished walls, ceilings, and floors, unless otherwise indicated.

B. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

C. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway. Do not re-pull wires/conductors that been used. Do not use rope hitches for pulling attachment to wire or cable.

D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.

E. Support cables according to Division 26 Section "Hangers and Supports for Electrical Systems."

F. Identify and color-code conductors and cables according to Division 26 Section "Identification for Electrical Systems."

G. All wire shall be installed in conduit or raceways.

H. All circuits shall have a hot, neutral and green ground wire unless otherwise indicated.

I. Provide #12 conductors and #12 grounds minimum to all 20 amp devices unless otherwise indicated.

J. Provide #10 conductors and #10 grounds minimum to all 30 amp devices unless otherwise indicated.

K. Provide #10 minimum conductors for 120/208V 20 amp circuits for which the distance from the panelboard to the first device is greater than 100 feet.

L. Provide #10 minimum conductors for 277/480V 20 amp circuits for which the distance from the panelboard to the first device is greater than 200 feet and for all general lighting circuits with continuous load greater-than-or-equal-to 3.0 kVA.

M. Do not install wires in conduit until entire system of conduit and outlet boxes is permanently in place.

N. Exercise care when installing wire in conduit so as to prevent injury to the conductor insulation. Mechanical means of pulling shall not be used unless approved. Conductors shall be pulled using UL non-flammable listed lubricant when necessary. Do not re-pull wires/conductors that been used.

O. Whenever wiring leaves the conduit and terminates at a terminal board, the wiring shall be formed and laced with plastic wire ties. Conductors are to be installed neat, order and workmanlike manner and also comply per NEC 70; Article 312.

P. In the event circuits feed through outlet boxes, provide splice and pigtail for device connection, with sufficient slack to pull splice out of box at least 6 inches (for inspection). Terminate the conductors around the terminal screws not at the back of the receptacle.

Q. Coordinate cable installation with other Work.

R. Pull conductors simultaneously where more than one is being installed in same raceway.

S. Splices:

1. Branch Circuits: Keep conductor splices to a minimum.

2. Motor Branch Circuits: Splices are not allowed in motor branch circuit feeders.

3. Relocation of Existing Lighting-Class Panels: Provide splices to existing branch circuits that are active and will remain in above-ceiling junction boxes sized appropriately for the quantity of conductors. Verify existing branch circuit feeder condition and ampacity and provide new feeders where existing violations exist. Match and extend branch circuit feeders from splice to new panel location and provide new branch circuit breaker as indicated in Panel Schedules to re-feed existing load.

4. Service Entrance Feeders: Splices are not allowed in any service entrance feeder(s). All conductors must be single length.

5. Distribution Feeders: Splices are not allowed in any distribution feeder(s) including, but not limited to feeders between switch boards, distribution-class panels, lighting-class panels, motor control centers, transformers, safety switches, and motor controllers and drives.

6. Install splice and tap connectors which possess equivalent or better mechanical strength and insulation rating than conductors being spliced.

7. Use splice and tap connectors which are compatible with conductor material.

T. Provide adequate length of conductors within electrical enclosures and train the conductors to terminal points with no excess. Bundle multiple conductors, with conductors larger than no.10 AWG cabled in individual circuits. Make terminations so there is no bare conductor at the terminal.

U. Home Runs: except where specifically indicated, provide lighting branch circuit home runs with not more than three different line conductors and a common neutral in a single raceway for 4-wire, 3-phase systems.

V. Conductors may be run inn parallel in sizes 1/0 through 750 MCM where indicated and provided that all conductors of each phase are the same length and so arranged and terminated as to ensure equal division of the current between all paralleled phase conductors.

W. Feeders shall be installed in continuous pieces without splice.

X. Install a separate neutral for each circuit which serves GFCI or isolated ground receptacles.

Y. Each circuit originating from a GFCI type circuit breaker shall also have a separate neutral.

Z. Where specifically indicated, for receptacle branch circuits, provide a separate neutral conductor for each line conductor.

AA. Each circuit serving receptacles where data terminals are used shall have separate neutral.

3.04 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B. <u>Provide Documentation and records all torque terminations</u>.

B. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches of slack per Section 300.14.

3.05 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."

B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Rectangular Sleeve Minimum Metal Thickness:

1. For sleeve rectangle perimeter less than 50 inches and no side greater than 16 inches, thickness shall be 0.052 inch.

2. For sleeve rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, thickness shall be 0.138 inch.

E. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

F. Cut sleeves to length for mounting flush with both wall surfaces.

G. Extend sleeves installed in floors 2 inches above finished floor level.

H. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and cable unless sleeve seal is to be installed.

I. Seal space outside of sleeves with grout for penetrations of concrete and masonry and with approved joint compound for gypsum board assemblies.

J. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and cable, using joint sealant appropriate for size, depth, and location of joint according to Division 07 Section "Joint Sealants."

K. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at cable penetrations. Install sleeves and seal with firestop materials according to Division 07 Section "Penetration Firestopping."

L. Roof-Penetration Sleeves: Seal penetration of individual cables with flexible boot-type flashing units applied in coordination with roofing work.

M. Aboveground Exterior-Wall Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Size sleeves to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

N. Underground Exterior-Wall Penetrations: Install cast-iron "wall pipes" for sleeves. Size sleeves to allow for 1-inch annular clear space between cable and sleeve for installing mechanical sleeve seals.

3.06 SLEEVE-SEAL INSTALLATION

A. Install to seal underground exterior-wall penetrations.

B. Use type and number of sealing elements recommended by manufacturer for cable material and size. Position cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.07 FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Division 07 Section "Penetration Firestopping."

3.08 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

B. Tests and Inspections:

1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors, and conductors feeding the following critical equipment and services for compliance with requirements.

2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

3. Perform insulation resistance test for all branch and main circuit conductor. Perform test on each conductor with respect to ground and adjacent conductor. Applied potential shall be 1000 volts DC for one minute. Test values shall be evaluated and conductors with values less than 50 megohms shall be investigated. Replace any cable reading less than 1 megohm.

4. Provide torque test for all conductor terminations in transformers, switchboards; disconnect switches, panelboards, etc in accordance with NETA standards. Record test result in accordance with item D below.

5. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each termination of cables and conductors No. 3 AWG and larger. Remove box and equipment covers so terminations are accessible to portable scanner.

a. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

b. Record of Infrared Scanning: Prepare a certified report that identifies terminations checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

C. Test Reports: Prepare a written report to record the following:

1. Test procedures used.

2. Test results that comply with requirements.

3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

D. Remove and replace malfunctioning units and retest as specified above.

E. Cleaning:

1. Clean the area around and on top of the equipment.

END OF SECTION 26 05 19

26 05 26

GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes methods and materials for grounding systems and equipment, plus the following special applications:

1. Underground distribution grounding.

2. Common ground bonding with lightning protection system.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Retain paragraph and subparagraphs below to require that Contractor provide drawings to locate significant grounding features. Division 01 Sections "Project Record Documents" and "Operation and Maintenance Data" require submittals to be included in those documents for use by maintenance forces throughout the life of the Project.

C. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features specified in Part 3 "Field Quality Control" Article, including the following:

1. Test wells.

2. Ground rods.

3. Ground rings.

4. Grounding arrangements and connections for separately derived systems.

5. Grounding for sensitive electronic equipment.

D. Qualification Data: For testing agency and testing agency's field supervisor.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For grounding to include the following in emergency, operation, and maintenance manuals:

1. Instructions for periodic testing and inspection of grounding features at ground rings grounding connections for separately derived systems based on NFPA 70B.

a. Tests shall be to determine if ground resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if they do not.

b. Include recommended testing intervals.

c. Records documentation is required for all testing.

1.04 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent agency, with the experience, certified and capability to conduct the testing indicated, that is a member company of the International Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the International Electrical Testing Association to supervise on-site testing specified in Part 3.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with UL 467 for grounding and bonding materials and equipment.

PART 2 - PRODUCTS

2.01 GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

A. Acceptable Manufacturers: Erico, Copper weld, Cad weld, Bundy

2.02 CONDUCTORS

A. Insulated Conductors: All conductors are to be Copper wire or cable insulated for 600 V,color coded for the entire length. Use of electrical tape for marking is strictly prohibited.

B. Bare Copper Conductors: Only where specifically indicated on Drawings.

1. Solid Conductors: ASTM B 3.

2. Stranded Conductors: ASTM B 8.

3. Tinned Conductors: ASTM B 33.

4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor and 1/4 inch in diameter.

5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.

6. Bonding Jumper: Copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

C. Bare Grounding Conductor and Conductor Protector for Wood Poles:

1. No. 4 AWG minimum, soft-drawn copper.

2. Conductor Protector: Half-round PVC or wood molding. If wood, use pressure-treated fir or cypress or cedar.

D. Grounding Bus: Rectangular bars of annealed copper, 1/4 by 2 inches in cross section, unless otherwise indicated; with insulators.

2.03 CONNECTORS

A. Listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.

B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, bolted pressure-type, with at least two bolts.

1. Pipe Connectors: Clamp type, sized for pipe.

C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

2.04 GROUNDING ELECTRODES

A. Ground Rods: Copper-bonded steel; 3/4 inch diameter by 10 feet length; minimum 13 mil plating thickness.

PART 3 - EXECUTION

3.01 APPLICATIONS

A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger, unless otherwise indicated.

B. Underground Grounding Conductors: Install bare tinned copper conductor, No. 2/0 AWG minimum.

1. Bury at least 24 inches below grade.

2. Duct-Bank Grounding Conductor: Bury 12 inches above duct bank when indicated as part of duct-bank installation.

C. Isolated Grounding Conductors: Green-colored insulation with continuous yellow stripe. On feeders with isolated ground, identify grounding conductor where visible to normal inspection, with alternating bands of green and yellow tape, with at least three bands of green and two bands of yellow.

D. Grounding Bus: Install in electrical and telephone equipment rooms, in rooms housing service equipment, and elsewhere as indicated.

1. Install bus on insulated spacers 1 inch, minimum, from wall 6 inches above finished floor, unless otherwise indicated.

2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, down to specified height above floor, and connect to horizontal bus.

3. Install grounding conductor from main service to the grounding bus. The minimum conductor used per Article 250.

E. Conductor Terminations and Connections:

1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.

2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.

3. Connections to Ground Rods at Test Wells: Bolted connectors.

4. Connections to Structural Steel: Welded connectors.

3.02 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

A. Comply with IEEE C2 grounding requirements.

B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches above to 6 inches below concrete. Seal floor opening with waterproof, non-shrink grout.

C. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields as recommended by manufacturer of splicing and termination kits.

D. Pad-Mounted Transformers and Switches: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 2 AWG for ground ring and for taps to equipment grounding terminals. Bury ground ring not less than 6 inches from the foundation.

3.03 EQUIPMENT GROUNDING

A. Install insulated equipment grounding conductors with all feeders and branch circuits.

B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:

1. Feeders and branch circuits.

2. Lighting circuits.

3. Receptacle circuits.

4. Single-phase motor and appliance branch circuits.

5. Three-phase motor and appliance branch circuits.

6. Flexible raceway runs.

7. Armored and metal-clad cable runs.

8. Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in the switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.

9. Computer and Rack-Mounted Electronic Equipment Circuits: Install insulated equipment grounding conductor in branch-circuit runs from equipment-area power panels and power-distribution units.

C. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.

D. Water Heater, Heat-Tracing, and Anti-frost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.

E. Isolated Grounding Receptacle Circuits: Install an insulated equipment grounding conductor connected to the receptacle grounding terminal. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service, unless otherwise indicated.

F. Isolated Equipment Enclosure Circuits: For designated equipment supplied by a branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with a nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure and install a separate insulated equipment grounding conductor. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service, unless otherwise indicated.

G. Signal and Communication Equipment: For telephone, alarm, voice and data, and other communication equipment, provide No. 4 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.

1. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a 1/4-by-2-by-12-inch grounding bus.

2. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.

H. Metal Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode and a separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors.

3.04 INSTALLATION

A. Grounding Conductors: Route along shortest and straightest paths possible, unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

B. Common Ground Bonding with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor and install in conduit.

C. Ground Rods: Drive rods until tops are 2 inches below finished floor or final grade, unless otherwise indicated.

1. Use same-manufacturer, matched driving tool to drive ground rods without deformation. “Mushroomed” or otherwise deformed rods will be field-rejected.

2. Replace grounding rods that are deformed at no cost to Owner.

3. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated.

4. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.

D. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Division 26 Section "Underground Ducts and Raceways for Electrical Systems," and shall be at least 12 inches deep, with cover.

1. Test Wells: Install at least one test well for each service, unless otherwise indicated. Install at the ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.

E. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.

1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.

2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install so vibration is not transmitted to rigidly mounted equipment.

3. Use exothermic-welded connectors for outdoor locations, but if a disconnect-type connection is required, use a bolted clamp.

F. Grounding and Bonding for Piping:

1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes, using a bolted clamp connector or by bolting a lug-type connector to a pipe flange, using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.

2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.

3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

G. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install bonding jumper to bond across flexible duct connections to achieve continuity.

H. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet apart.

I. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to each indicated item, extending around the perimeter of building.

1. Install tinned-copper conductor not less than No. 2/0 AWG for ground ring and for taps to building steel.

2. Bury ground ring not less than 24 inches from building foundation.

3.05 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:

B. Perform the following tests and inspections and prepare test reports:

1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.

2. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal and at individual ground rods. Make tests at ground rods before any conductors are connected.

    a. Measure ground resistance not less than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.

    b. Perform tests by fall-of-potential method according to IEEE 81.

3. Prepare dimensioned drawings locating each test well, ground rod and ground rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

C. Report measured ground resistances that exceed the following values:

1. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: 1 Ω.

2. Power Distribution Units or Panelboards Serving Electronic Equipment: 0.5 Ω.

3. Substations and Pad-Mounted Equipment: 0.5 Ω.

4. Manhole Grounds: 5 Ω.

D. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Engineer promptly and include recommendations to reduce ground resistance.

HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Hangers and supports for electrical equipment and systems.

2. Construction requirements for concrete bases.

1.03 DEFINITIONS

A. Retain abbreviations that remain after this Section has been edited.

B. EMT: Electrical metallic tubing.

C. IMC: Intermediate metal conduit.

D. RMC: Rigid metal conduit.

1.04 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.

C. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

D. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

1.05 SUBMITTALS

A. Product Data: For the following:

1. Steel slotted support systems.

2. Nonmetallic slotted support systems.

B. Shop Drawings: Show fabrication and installation details and include calculations for the following:

1. Trapeze hangers. Include Product Data for components.

2. Steel slotted channel systems. Include Product Data for components.

3. Nonmetallic slotted channel systems. Include Product Data for components.

4. Equipment supports.

1.06 QUALITY ASSURANCE

A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Comply with NFPA 70.

1.07 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

PART 2 - PRODUCTS

2.01 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Retain this Article to specify default product requirements for basic supporting devices. Items to be supported include raceways, cables, wireways, cable trays, busways, boxes, cabinets, equipment, and other electrical products. Where support materials or workmanship is unique to a particular product, specify unique features that are the exception to these default requirements in the Section that specifies the product. Coordinate specifications for supporting devices with structural engineer and with Drawings.

B. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Allied Tube & Conduit.

b. Cooper B-Line, Inc.; a division of Cooper Industries.

c. ERICO International Corporation.

d. Thomas & Betts Corporation.

e. Unistrut; Tyco International, Ltd.

2. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.

3. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.

4. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA

5. Channel Dimensions: Selected for applicable load criteria.

C. Nonmetallic Slotted Support Systems: Structural-grade, factory-formed, glass-fiber-resin channels and angles with 9/16-inch diameter holes at a maximum of 8 inches o.c., in at least 1 surface.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Allied Tube & Conduit.

b. Cooper B-Line, Inc.; a division of Cooper Industries.

c. Fabco Plastics Wholesale Limited.

3. Fittings and Accessories: Products of channel and angle manufacturer and designed for use with those items.

4. Fitting and Accessory Materials: Same as channels and angles except metal items may be stainless steel.

5. Rated Strength: Selected to suit applicable load criteria.

D. Raceway and Cable Supports: As described in NECA 1 and NECA 101.

E. Conduit and Cable Support Devices: Steel and malleable-iron hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

F. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.

G. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

H. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:

1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

b. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Hilti Inc.

2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.

3) MKT Fastening, LLC.

4) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit.

2. Mechanical-Expansion Anchors: Insert-wedge-type, steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.

a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

b. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Cooper B-Line, Inc.; a division of Cooper Industries.

2) Empire Tool and Manufacturing Co., Inc.

3) Hilti Inc.

4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.

5) MKT Fastening, LLC.

3. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.

4. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.

5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.

6. Toggle Bolts: All-steel springhead type.

7. Hanger Rods: Threaded steel.

2.02 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

B. Materials: Comply with requirements in Division 05 Section "Metal Fabrications" for steel shapes and plates.

PART 3 - EXECUTION

3.01 APPLICATION

A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.

B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, IMC, and RMC as required by NFPA 70. Minimum rod size shall be 1/4 inch in diameter.

C. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted or other support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.

1. Secure raceways and cables to these supports with two-bolt conduit clamps.

D. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

E. All conduits shall be installed in uniformity, neat and equal space.

3.02 SUPPORT INSTALLATION

A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.

B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC, and RMC may be supported by openings through structure members, as permitted in NFPA 70.

C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:

1. To Wood: Fasten with lag screws or through bolts.

2. To New Concrete: Bolt to concrete inserts.

3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.

4. To Existing Concrete: Expansion anchor fasteners.

5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches thick.

6. To Steel: Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts.

7. To Light Steel: Sheet metal screws.

8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that meet seismic-restraint strength and anchorage requirements.

E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

3.03 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Division 05 Section "Metal Fabrications" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

3.04 CONCRETE BASES

A. Construct concrete bases of dimensions indicated but not less than 4 inches larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.

B. Use 3000-psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Division 03 Section "Cast-in-Place Concrete."

C. Anchor equipment to concrete base.

1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

2. Install anchor bolts to elevations required for proper attachment to supported equipment.

3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.05 PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.

B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Requirements of Division 26 "BASIC ELECTRICAL REQUIREMENTS" apply to this section.

1.02 SUMMARY

A. This Section includes raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.

B. Related Sections include the following:

1. Division 26 Section "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction.

1.03 DEFINITIONS

A. EMT: Electrical metallic tubing.

B. ENT: Electrical nonmetallic tubing.

C. EPDM: Ethylene-propylene-dieneterpolymer rubber.

D. FMC: Flexible metal conduit.

E. IMC: Intermediate metal conduit.

F. LFMC: Liquidtight flexible metal conduit.

G. LFNC: Liquidtight flexible nonmetallic conduit.

H. NBR: Acrylonitrile-butadiene rubber.

I. RNC: Rigid nonmetallic conduit.

J. RMC: Rigid metal conduit.

1. RGS: Rigid galvanized steel conduit.
2. RAL: Rigid aluminum conduit.

1.04 SUBMITTALS

A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.

B. Manufacturer's instructions: indicate application conditions, limitations, and maximum conductor fill.

C. Shop Drawings: For the following raceway components. Include plans, elevations, sections, details, and attachments to other work.

Custom enclosures and cabinets.

1. For handholes and boxes for underground wiring, including the following:

a. Duct entry provisions, including locations and duct sizes.

b. Frame and cover design.

c. Grounding details.

d. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

e. Joint details.

D. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Structural members in the paths of conduit groups with common supports.

2. HVAC and plumbing items and architectural features in the paths of conduit groups with common supports.

E. Qualification Data: For professional engineer and testing agency.

F. Source quality-control test reports.

1.05 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. Comply with NFPA 70, UL 5 surface metal electric raceways and fittings Guide RJPR, UL 870 wire way, auxiliary gutters and associated fittings.

PART 2 - PRODUCTS

2.01 METAL CONDUIT AND TUBING

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following: Acceptable Manufacturers: Triangle, Republic, Carlen, Centex, Western Tube Appleton, Crouse Hinds, Steel City, OOZY. Gender, Race

1. AFC Cable Systems, Inc.

2. Alflex Inc.

3. Allied Tube & Conduit; a Tyco International Ltd. Co.

4. Anamet Electrical, Inc.; Anaconda Metal Hose.

5. Electri-Flex Co.

6. Manhattan/CDT/Cole-Flex.

7. Maverick Tube Corporation.

8. O-Z Gedney; a unit of General Signal.

9. Wheatland Tube Company.

B. Rigid Steel Conduit: ANSI C80.1.

C. Rigid Aluminum Conduit: ANSI C80.5.

D. IMC: ANSI C80.6.

E. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit.

1. Comply with NEMA RN 1.

2. Coating Thickness: 0.040 inch, minimum.

F. EMT: ANSI C80.3.

G. FMC: Full wall, low-carbon steel with electrogalvanized Zinc coating. Reduced wall not acceptable.

H. LFMC: Flexible steel conduit with PVC jacket and UL bonded strip for grounding.

I. Fittings for Conduit (Including all Types and Flexible and Liquidtight), EMT, and Cable: NEMA FB 1; listed for type and size raceway with which used, and for application and environment in which installed.

1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886.

2. Fittings for EMT: compression type.

3. Coating for Fittings for PVC-Coated Conduit: Minimum thickness, 0.040 inch, with overlapping sleeves protecting threaded joints.

4. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Anamet Electrical, Inc.; Anaconda Metal

   b. Electri-Flex Co.

   c. Triangle PCW, Inc

5. Steel set screw fittings for electrical conduit are allowed only for EMT located in conditioned spaces.

J. All exterior raceways shall be rigid galvanized steel, unless specifically indicated otherwise on Drawings.

K. Joint Compound for Rigid Steel Conduit or IMC: Listed for use in cable connector assemblies, and compounded for use to lubricate and protect threaded raceway joints from corrosion and enhance their conductivity.

2.02 NONMETALLIC CONDUIT AND TUBING

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFC Cable Systems, Inc.

2. Anamet Electrical, Inc.; Anaconda Metal Hose.

3. Arnco Corporation.

4. CANTEX Inc.

5. CertainTeed Corp.; Pipe & Plastics Group.

6. Condux International, Inc.

7. ElecSYS, Inc.

8. Electri-Flex Co.

9. Lamson & Sessions; Carlon Electrical Products.

10. Manhattan/CDT/Cole-Flex.

11. RACO; a Hubbell Company.

12. Thomas & Betts Corporation.

C. ENT: NEMA TC 13.

D. RNC: NEMA TC 2, Type EPC-40-PVC, unless otherwise indicated on Drawings.

E. LFNC: UL 1660.

F. Fittings for ENT and RNC: NEMA TC 3; match to conduit or tubing type and material.

G. Fittings for LFNC: UL 514B.

H. All underground raceways shall be Schedule 40 PVC, unless otherwise indicated on Drawings.

2.03 OPTICAL FIBER/COMMUNICATIONS CABLE RACEWAY AND FITTINGS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Arnco Corporation.

2. Endot Industries Inc.

3. IPEX Inc.

4. Lamson & Sessions; Carlon Electrical Products.

C. Description: Comply with UL 2024; flexible type, approved for general-use installation.

2.04 METAL WIREWAYS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper B-Line, Inc.

2. Hoffman.

3. Square D; Schneider Electric.

4. Tanco.

5. General Electric.

6. Westinghouse/Cutler Hammer.

C. Description: Sheet metal sized and shaped as indicated, NEMA 250, Type 1, 12, 3R, unless otherwise indicated. Provide electrical wire ways of grades and number of channels for each type of service as indicated. Comply with U.L. 870 "Wire way, Auxiliary Gutters and Associated Fittings." And NEC 366.

D. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

E. Connectors: Provide wireway connectors suitable for "lay-in" conductors, with connector covers permanently attached that removal is not necessary to utilize the lay-in feature. Connectors shall be grounding bushing, raintight and seal the opening to prevent water getting t inside the boxes, junction, and wireway

F. Wireway Covers: Lay-In Wire ways: Construct lay-in wire ways with hinged covers with components UL-listed, including lengths, connectors, and fittings. Select units to allow fastening hinged cover closed without use of parts other than standard lengths, fittings and connectors. Construct units to be capable of sealing cover in closed position with sealing wire. Provide wire ways with knockouts.

G. Finish: Protect sheet metal parts with rust inhibiting coating and baked enamel finish. Plate finish hardware to prevent corrosion. Protect screws installed toward inside of wireway with spring nuts to prevent wire insulation damage. Use paint ANSI61- grey color.

H. Rain tight Wireway: Construct rain tight lay-in wire ways with hinged covers with components UL-listed, including lengths, connectors and fittings. Design units to allow fastening hinged cover closed without use of parts other than standard lengths, fittings and connectors. Construct units to be capable of sealing cover in closed position with sealing wire. Provide wireway units with knockouts only in bottom of troughs.

1. Construction: 16-gauge galvanized sheet metal parts for 4" x 4" to 6" x 6" sections, and 14-gauge parts for 8" x 8" and larger sections. Provide knockouts only in bottom of troughs, with suitable adapters to facilitate attaching to other NEMA 3R enclosures. Do not use gasketing that can rip or tear during installation or would compromise rain tight capability of the trough area and damage wire insulation.

2. Finish: Provide 14-gauge and 16-gauge galvanized sheet metal parts with corrosion-resistant phosphate primer and baked enamel finish. Plate hardware to prevent corrosion.

2.05 NONMETALLIC WIREWAYS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Hoffman.

2. Lamson & Sessions; Carlon Electrical Products.

C. Description: Fiberglass polyester, extruded and fabricated to size and shape indicated, with no holes or knockouts. Cover is gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections are flanged, with stainless-steel screws and oil-resistant gaskets.

D. Description: PVC plastic, extruded and fabricated to size and shape indicated, with snap-on cover and mechanically coupled connections with plastic fasteners.

E. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

2.06 SURFACE RACEWAYS

A. Surface Metal Raceways: Galvanized steel with snap-on covers. Manufacturer's standard enamel finish in color selected by Architect.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Thomas & Betts Corporation.

b. Walker Systems, Inc.; Wiremold Company (The).

c. Wiremold Company (The); Electrical Sales Division.

3. Multi outlet assemblies shall be used to provide power and/or low potential services as shown on the building plans.

4. The Electrical Contractor shall provide and install all surface metal raceways and appropriate fittings to provide safe and complete installation. The surface metal raceway and fittings shall be the two-piece with receptacles and data outlets (if any) as indicated.

5. When power and data are indicated, the raceway shall afford the capability of being divided into two equal but separate wiring compartments to facilitate installation of power and low potential wiring. "Separate compartments are to be identified by sharply contrasting colors of the interior finish of the divider."

6. A full line of fittings for the surface metal raceway shall be available. This shall include but not limited to elbows (90, internal and external), couplings for joining raceway sections, wire clips for holding conductors or cables in place, blank end fittings for closing open ends of the raceway, transition connectors to other surface metal communications (if any). All openings shall be grommet. Voice/Data connections (if any) shall be provided with interchangeable LAN adapters. When power and data are

indicated, device brackets to install single or two gang devices within the raceway and combination receptacle and telephone outlet covers shall be available.

7. The surface metal raceway and fittings shall meet all requirements of the NEC Article 376 and 380, and shall be listed by Underwriter's Laboratories, Inc. in full compliance with their standard for surface metal raceways and fittings (UL-5).

8. Multi outlet assemblies shall be Wiremold 2000 series with 5-15R simplex receptacles 18" on center.

9. Verify finish color with architect.

B. Surface Nonmetallic Raceways: Two-piece construction, manufactured of rigid PVC with texture and color selected by Architect from manufacturer's standard colors.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Butler Manufacturing Company; Walker Division.

   b. Enduro Systems, Inc.; Composite Products Division.

   c. Hubbell Incorporated; Wiring Device-Kellems Division.

   d. Lamson & Sessions; Carlon Electrical Products.

   e. Panduit Corp.

   f. Walker Systems, Inc.; Wiremold Company (The).

   g. Wiremold Company (The); Electrical Sales Division.

3. Multi outlet assemblies shall be used to provide power and/or low potential services as shown on the building plans.

4. The Electrical Contractor shall provide and install all surface metal raceways and appropriate fittings to provide safe and complete installation. The surface metal raceway and fittings shall be the two-piece with receptacles and data outlets (if any) as indicated.

5. When power and data are indicated, the raceway shall afford the capability of being divided into two equal but separate wiring compartments to facilitate installation of power and low potential wiring. "Separate compartments are to be identified by sharply contrasting colors of the interior finish of the divider."

6. A full line of fittings for the surface metal raceway shall be available. This shall include but not limited to elbows (90, internal and external), couplings for joining raceway sections, wire clips for holding conductors or cables in place, blank end fittings for

closing open ends of the raceway, transition connectors to other surface metal communications (if any). All openings shall be grommet. Voice/Data connections (if any) shall be provided with interchangeable LAN adapters. When power and data are indicated, device brackets to install single or two gang devices within the raceway and combination receptacle and telephone outlet covers shall be available.

7. The surface nonmetal raceway and fittings shall meet all requirements of the NEC Article 376 and 380, and shall be listed by Underwriter's Laboratories, Inc. in full compliance with their standard for surface metal raceways and fittings (UL-5).

8. Multi outlet assemblies shall be Wiremold NM2000 series with 5-15R simplex receptacles 18" on center.

9. Verify finish color with architect.

2.07 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper Crouse-Hinds; Div. of Cooper Industries, Inc.
2. EGS/Appleton Electric.
3. Erickson Electrical Equipment Company.
4. Hoffman.
5. Hubbell Incorporated; Killark Electric Manufacturing Co. Division.
6. O-Z/Gedney; a unit of General Signal.
7. RACO; a Hubbell Company.
8. Robroy Industries, Inc.; Enclosure Division.
9. Scott Fetzer Co.; Adalet Division.
10. Spring City Electrical Manufacturing Company.
11. Thomas & Betts Corporation.
12. Walker Systems, Inc.; Wiremold Company (The).
13. Woodhead, Daniel Company; Woodhead Industries, Inc. Subsidiary.

B. Sheet Metal Outlet and Device Boxes: NEMA OS 1.

C. Cast-Metal Outlet and Device Boxes: NEMA FB 1, aluminum, Type FD, with gasketed cover.

D. Nonmetallic Outlet and Device Boxes: NEMA OS 2.

E. Metal Floor Boxes: Cast or sheet metal rectangular.

F. Nonmettalic Floor Boxes: Cast or sheet metal rectangular.

G. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

H. Cast-Metal Access, Pull, and Junction Boxes: NEMA FB 1, galvanized, cast iron with gasketed cover.

I. Hinged-Cover Enclosures: NEMA 250, Type 1, with continuous-hinge cover with flush latch, unless otherwise indicated.

1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.

2. Nonmetallic Enclosures: Plastic.

J. Cabinets:

1. NEMA 250, Type 1, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.

2. Hinged door in front cover with flush latch and concealed hinge.

3. Key latch to match panelboards.

4. Metal barriers to separate wiring of different systems and voltage.

5. Accessory feet where required for freestanding equipment.

2.08 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

A. Description: Comply with SCTE 77.

1. Configuration: Units shall be designed for flush burial and have closed bottom, unless otherwise indicated.

2. Color of Fram and Cover: Green.

3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.

4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

5. Cover Legend: Molded lettering, "ELECTRIC." as indicated for each service.

6. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.

7. Handholes 12 inches wide by 24 inches long and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel or fiberglass or a combination of the two.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Armorcast Products Company.

b. Carson Industries LLC.

c. CDR Systems Corporation.

d. NewBasis.

C. Fiberglass Handholes and Boxes with Polymer-Concrete Frame and Cover: Sheet-molded, fiberglass-reinforced, polyester-resin enclosure joined to polymer-concrete top ring or frame.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Armorcast Products Company.

b. Carson Industries LLC.

c. Christy Concrete Products.

d. Synertech Moulded Products, Inc.; a division of Oldcastle Precast.

2.09 SLEEVES FOR RACEWAYS

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral water stop, unless otherwise indicated.

C. Sleeves for Rectangular Openings: Galvanized sheet steel with minimum 0.052- or 0.138-inch thickness as indicated and of length to suit application.

D. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."

2.10 SLEEVE SEALS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Advance Products & Systems, Inc.

2. Calpico, Inc.

3. Metraflex Co.

4. Pipeline Seal and Insulator, Inc.

B. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and cable.

1. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.

2. Pressure Plates: Plastic. Include two for each sealing element.

3. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.11 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by a independent testing agency.

2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.

3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.01 RACEWAY APPLICATION

A. Outdoors: Apply raceway products as specified below, unless otherwise indicated in Drawings:

1. Roof-Top Conduit penetrating through roof: RAL.

2. Aboveground, otherwise: RGS.

3. Underground:

a. Primary conduits to utility pad-mounted transformer: per Utility Standards.

b. RNC, Type EPC-40-PVC, direct buried

4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC limited to ≤ 72”.

5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.

6. Application of Handholes and Boxes for Underground Wiring:

   a. Handholes and Pull Boxes in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Non-deliberate Loading by Heavy Vehicles: Polymer concrete, SCTE 77, Tier 15 structural load rating.

   b. Handholes and Pull Boxes in Sidewalk and Similar Applications with a Safety Factor for Non-Deliberate Loading by Vehicles: Polymer-concrete units, SCTE 77, Tier 8 structural load rating.

   c. Handholes and Pull Boxes Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin structurally tested according to SCTE 77 with 3000-lbf vertical loading.

B. Comply with the following indoor applications, unless otherwise indicated in Drawings:

1. Exposed, Not Subject to Physical Damage: IMC.

2. Exposed and Subject to Severe Physical Damage: Rigid steel conduit. Includes raceways in the following locations:

   a. Mechanical rooms.

   b. Central Plants

3. Concealed in Ceilings and Interior Walls and Partitions:

   a. Trade size ≤ 1-inch: EMT or IMC.

   b. Trade size > 1-inch: IMC or RGS.

4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment):

   a. At dry locations ≥ 84” above finished floor to bottom of equipment: FMC

   b. Otherwise: LFMC.

5. Damp or Wet Locations: RGS, RAL, or IMC.

6. Raceways for Communications: EMT or IMC.

7. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4, galvanized steel in damp or wet locations, unless otherwise noted on Drawings.

C. Minimum Raceway Size:

1. Power and Fire Alarm:

a. Above grade: 3/4-inch trade size.

b. Below grade: 1-inch trade size.

2. Communication:

a. Above grade: 1-inch trade size.

b. Below grade: 1-1/2-inch trade size.

D. Raceway Fittings: Compatible with raceways and suitable for use and location.

1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.

2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with that material. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer.

E. Do not install aluminum conduits in contact with concrete.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions, NEC 366, NEC 380, and NEC 376. Comply with NECA 1 for installation requirements applicable to products specified in Part 2 except where requirements on Drawings or in this Article are stricter.

B. Use flat-head screws, clips, and straps to fasten raceway base to surfaces. Mount plumb and level.

C. Use suitable insulating bushings and inserts at connections to outlets and corner fittings.

D. Wireway and Auxiliary Gutter Supports: Provide steel channel as specified in Section 260529.

E. Close ends of wireway and unused conduit openings.

F. Ground and bond raceway and wireway under provisions of Section 260526.

G. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.

H. Complete raceway installation before starting conductor installation.

I. Support raceways as specified in Division 26 Section "Hangers and Supports for Electrical Systems."

J. Arrange stub-ups so curved portions of bends are not visible above the finished slab.

K. Install no more than the equivalent of three 90-degree bends in any conduit run except for communications conduits, for which fewer bends are allowed.

L. Conceal conduit and EMT within finished walls, ceilings, and floors, unless otherwise indicated.

M. Raceways Embedded in Slabs:

1. Run conduit larger than 1-inch trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support.

2. Arrange raceways to cross building expansion joints at right angles with expansion fittings.

3. Change from ENT to RNC, Type EPC-40-PVC, rigid steel conduit, or IMC before rising above the floor.

N. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.

O. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors, including conductors smaller than No. 4 AWG.

P. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire.

Q. Raceways for Optical Fiber and Communications Cable: Install raceways, metallic and nonmetallic, rigid and flexible, as follows:

1. 3/4-Inch Trade Size and Smaller: Install raceways in maximum lengths of 50 feet.

2. 1-Inch Trade Size and Larger: Install raceways in maximum lengths of 75 feet.

3. Install with a maximum of two 90-degree bends or equivalent for each length of raceway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.

R. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.

2. Where otherwise required by NFPA 70.

S. Expansion-Joint Fittings for RNC: Install in each run of aboveground conduit that is located where environmental temperature change may exceed 30 deg F, and that has straight-run length that exceeds 25 feet.

1. Install expansion-joint fittings for each of the following locations, and provide type and quantity of fittings that accommodate temperature change listed for location:

a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.

b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.

c. Indoor Spaces: Connected with the Outdoors without Physical Separation: 125 deg F temperature change.

d. Attics: 135 deg F temperature change.

2. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change.

3. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at the time of installation.

T. Flexible Conduit Connections: Use maximum of 72 inches of flexible conduit for recessed and semi-recessed lighting fixtures of 3/4 inch size minimum, equipment subject to vibration, noise transmission, or movement; and for transformers and motors are limited to no more than 4 feet in length.

1. Use LFMC in damp or wet locations subject to severe physical damage.

2. Use LFMC or LFNC in damp or wet locations not subject to severe physical damage.

U. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block and install box flush with surface of wall.

V. Set metal floor boxes level and flush with finished floor surface.

W. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

X. Label and marked all junction boxes, pull boxes, cabinets and conduits leaving and entering any of the boxes, cabinets, and panelboards.

Y. Boxes, junction, pull, cabinets, panelboards and other cabinets shall be rigidly supported with cross bars, Unistrut, all-thread, and any approved that will prevent from moving.

3.03 INSTALLATION OF UNDERGROUND CONDUIT

A. Direct-Buried Conduit:

1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Division 31 Section "Earth Moving" for pipe less than 6 inches in nominal diameter.

2. For Service entrance conduit shall be buried not less 48 inches depth from the top of the conduit to finish grade. For feeder conduit shall be buried not less 36 inches depth from the top of the conduit to finish grade. For branch conduit shall be buried not less 24 inches depth from the top of the conduit to finish grade unless subject to vehicle traffic. The conduits are to be level to the ground.

3. Install backfill as specified in Division 31 Section "Earth Moving."

4. After installing conduit, the conduit shall be supported anchor to the ground with a 3/4inch EMT crossways on every 4 feet intervals then backfill and compact with sand fill. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches of finished grade, make final conduit connection at end of run and complete backfilling with 95% compaction.

5. Install manufactured sweep 90-degree RMC duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Encase elbows for stub-up ducts throughout the length of the elbow.

6. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.

   a. Couple steel conduits to ducts with adapters designed for this purpose and encase coupling with 3 inches of concrete.

   b. For stub-ups at equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.

   c. Wrap elbow and first 12” of vertical conduit with Scotch #51 tape (no substitutions), 20-mil thick, 4” wide tape applied two full laps at each start and end of wrap, and 1” overlap for intermediate laps.

   d. Use special-radius elbow, minimum 24” radius unless otherwise indicated on Drawings.

7. Warning Planks: Bury warning planks approximately 12 inches above direct-buried conduits, placing those 24 inches o.c. align planks along the width and along the centerline of conduit.

3.04 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch above finished grade.

D. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.

E. Field-cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.05 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."

B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Rectangular Sleeve Minimum Metal Thickness:

1. For sleeve cross-section rectangle perimeter less than 50 inches and no side greater than 16 inches, thickness shall be 0.052 inch.

2. For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, thickness shall be 0.138 inch.

E. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

F. Cut sleeves to length for mounting flush with both surfaces of walls.

G. Extend sleeves installed in floors 2 inches above finished floor level.

H. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway unless sleeve seal is to be installed.

I. Seal space outside of sleeves with grout for penetrations of concrete and masonry and with approved joint compound for gypsum board assemblies.

J. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway, using joint sealant appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.

K. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway penetrations. Install sleeves and seal with firestop materials. Comply with Division 07 Section "Penetration Firestopping."

L. Roof-Penetration Sleeves: Seal penetration of individual raceways with flexible, boot-type flashing units applied in coordination with roofing work.

M. Aboveground, Exterior-Wall Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

N. Underground, Exterior-Wall Penetrations: Install cast-iron "wall pipes" for sleeves. Size sleeves to allow for 1-inch annular clear space between raceway and sleeve for installing mechanical sleeve seals.

3.06 SLEEVE-SEAL INSTALLATION

A. Install to seal underground, exterior wall penetrations.

B. Use type and number of sealing elements recommended by manufacturer for raceway material and size. Position raceway in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.07 FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

3.08 PROTECTION

A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.

2. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 26 05 33

26 05 43

UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Conduit, ducts, and duct accessories for concrete-encased duct banks.

2. Hand-holes and boxes.

3. Manholes.

1.03 DEFINITION

A. RNC: Rigid nonmetallic conduit.

1.04 SUBMITTALS

A. Product Data: For the following:

1. Duct-bank materials, including separators and miscellaneous components.

2. Ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.

3. Accessories for manholes, hand-holes, boxes.

4. Warning tape.

5. Warning planks.

B. Shop Drawings for Precast or Factory-Fabricated Underground Utility Structures: Include plans, elevations, sections, details, attachments to other work, and accessories, including the following:

1. Duct entry provisions, including locations and duct sizes.

2. Reinforcement details.

3. Frame and cover design and manhole frame support rings.

4. Ladder details.

5. Grounding details.

6. Dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.

7. Joint details.

C. Shop Drawings for Factory-Fabricated Handholes and Boxes Other Than Precast Concrete: Include dimensioned plans, sections, and elevations, and fabrication and installation details, including the following:

1. Duct entry provisions, including locations and duct sizes.

2. Cover design.

3. Grounding details.

4. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

D. Duct-Bank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures.

1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.

2. Drawings shall be signed and sealed by a qualified professional engineer.

E. Product Certificates: For concrete and steel used in pre-cast concrete manholes and handholes, as required by ASTM C 858.

F. Qualification Data: For professional engineer and testing agency.

G. Source quality-control test reports.

H. Field quality-control test reports.

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Comply with ANSI C2.

C. Comply with NFPA 70.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver ducts to Project site with ends capped. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.

B. Store pre-cast concrete and other factory-fabricated underground utility structures at Project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings are visible.

C. Lift and support pre-cast concrete units only at designated lifting or supporting points.

1.07 PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:

1. Notify Construction Manager and Owner no fewer than two (2) weeks in advance of proposed interruption of electrical service.

2. Do not proceed with interruption of electrical service without Owner's written permission.

1.08 COORDINATION

A. Coordinate layout and installation of ducts, manholes, hand-holes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field.

B. Coordinate elevations of ducts and duct-bank entrances into manholes, hand-holes, and boxes with final locations and profiles of ducts and duct banks as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations from those indicated as required to suit field conditions and to ensure that duct runs drain to manholes and hand-holes, and as approved by Architect.

1.09 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Furnish cable-support stanchions, arms, and insulators, and associated fasteners in quantities equal to 10 percent of quantity of each item installed.

PART 2 - PRODUCTS

2.01 CONDUIT

A. Refer to Section 26 05 33.

B. Rigid Steel Conduit: Galvanized. Comply with ANSI C80.1.

C. RNC: NEMA TC 2, Type EPC-40-PVC and Type EPC-80-PVC, UL 651, with matching fittings by same manufacturer as the conduit, complying with NEMA TC 3 and UL 514B.

2.02 NONMETALLIC DUCTS AND DUCT ACCESSORIES

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ARNCO Corp.

2. Beck Manufacturing.

3. Cantex, Inc.

4. CertainTeed Corp.; Pipe & Plastics Group.

5. Condux International, Inc.

6. ElecSys, Inc.

7. Electri-Flex Company.

8. IPEX Inc.

9. Lamson & Sessions; Carlon Electrical Products.

10. Manhattan/CDT; a division of Cable Design Technologies.

11. Spiraduct/AFC Cable Systems, Inc.

B. Duct Accessories:

1. Duct Separators: Factory-fabricated rigid PVC interlocking spacers, sized for type and sizes of ducts with which used for supporting ducts during concreting or backfilling.

a. Carlon “Snap-N-Stac” combination spacers, interlocking type with 3” separation and reducers as required.

2. Warning Tape: Underground-line warning tape specified in Division 26 Section "Identification for Electrical Systems."

3. Concrete Warning Planks: Nominal 12 by 24 by 3 inches in size, manufactured from 6000-psi concrete.

a. Color: Red dye added to concrete during batching.

b. Mark each plank with "ELECTRIC" in 2-inch- high, 3/8-inch- deep letters.

C. Concrete Encasement:

1. Encased in minimum 3” of 5000 PSI conc

2.03 PRECAST CONCRETE HANDHOLES AND BOXES

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Carder Concrete Products.

2. Christy Concrete Products.

3. Elmhurst-Chicago Stone Co.

4. Oldcastle Precast Group.

5. Riverton Concrete Products; a division of Cretex Companies, Inc.

6. Utility Concrete Products, LLC.

7. Utility Vault Co.

8. Wausau Tile, Inc.

B. Comply with ASTM C 858 for design and manufacturing processes.

C. Structural Rating: AASHTO HB 17, H-20.

D. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of hand-hole or box.

1. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.

2. Frame and Cover: Weatherproof steel frame, with steel cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.

3. Frame and Cover: Weatherproof steel frame, with hinged steel access door assembly with tamper-resistant, captive, cover-securing bolts.

    a. Cover Hinges: Concealed, with hold-open ratchet assembly.

    b. Cover Handle: Recessed.

4. Frame and Cover: Weatherproof aluminum frame with hinged aluminum access door assembly with tamper-resistant, captive, cover-securing bolts.

    a. Cover Hinges: Concealed, with hold-open ratchet assembly.

    b. Cover Handle: Recessed.

5. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

6. Cover Legend: Molded lettering.

7. Configuration: Units shall be designed for flush burial and have closed bottom, unless otherwise indicated.

8. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.

    a. Extension shall provide increased depth of 12 inches.

b. Slab: Same dimensions as bottom of enclosure and arranged to provide closure.

9. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches vertically and horizontally to accommodate alignment variations.

    a. Windows shall be located no less than 6 inches from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.

    b. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.

    c. Window openings shall be framed with at least two additional No. 4 steel reinforcing bars in concrete around each opening.

10. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.

    a. Type and size shall match fittings to duct or conduit to be terminated.

    b. Fittings shall align with elevations of approaching ducts and be located near interior corners of handholes to facilitate racking of cable.

11. Handholes 12 inches wide by 24 inches long and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.04 HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Description: Comply with SCTE 77.

1. Color: Gray.

2. Configuration: Units shall be designed for flush burial and have closed bottom, unless otherwise indicated.

3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.

4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

5. Cover Legend: Molded lettering, as indicated for each service.

6. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.

7. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.

8. Handholes 12 inches wide by 24 inches long and larger shall have factory-installed inserts for cable racks and pulling-in irons.

B. Polymer Concrete Handholes and Boxes with Polymer Concrete Cover: Molded of sand and aggregate, bound together with a polymer resin, and reinforced with steel or fiberglass or a combination of the two.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

3. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

a. Armorcast Products Company.

b. Carson Industries LLC.

c. CDR Systems Corporation.

d. NewBasis.

C. Fiberglass Handholes and Boxes with Polymer Concrete Frame and Cover: Sheet-molded, fiberglass-reinforced, polyester resin enclosure joined to polymer concrete top ring or frame.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

3. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

a. Armorcast Products Company.

b. Carson Industries LLC.

c. Christy Concrete Products.

d. Synertech Moulded Products, Inc.; a division of Oldcastle Precast.

D. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with covers of polymer concrete.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

3. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

    a. Carson Industries LLC.

    b. Christy Concrete Products.

    c. Nordic Fiberglass, Inc.

2.05 PRECAST MANHOLES

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Carder Concrete Products.

2. Christy Concrete Products.

3. Elmhurst-Chicago Stone Co.

4. Oldcastle Precast Group.

5. Riverton Concrete Products; a division of Cretex Companies, Inc.

6. Utility Concrete Products, LLC.

7. Utility Vault Co.

8. Wausau Tile, Inc.

B. Structural Rating: AASHTO HB 17, H-20.

C. Comply with ASTM C 858 and with interlocking mating sections, complete with accessories, hardware, and features.

1. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches vertically and horizontally to accommodate alignment variations.

    a. Windows shall be located no less than 6 inches from interior surfaces of walls, floors, or roofs of manholes, but close enough to corners to facilitate racking of cables on walls.

b. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.

c. Window openings shall be framed with at least two additional No. 4 steel reinforcing bars in concrete around each opening.

2. Duct Entrances in Manhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.

a. Type and size shall match fittings to duct or conduit to be terminated.

b. Fittings shall align with elevations of approaching ducts and be located near interior corners of manholes to facilitate racking of cable.

D. Concrete Knockout Panels: 1-1/2 to 2 inches thick, for future conduit entrance and sleeve for ground rod.

E. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

2.06 CAST-IN-PLACE MANHOLES

A. Description: Underground utility structures, constructed in place, complete with accessories, hardware, and features. Include concrete knockout panels for conduit entrance and sleeve for ground rod.

B. Materials: Comply with ASTM C 858 and with Division 03 Section "Cast-in-Place Concrete."

C. Structural Design Loading: As specified in Part 3 "Underground Enclosure Application" Article.

2.07 UTILITY STRUCTURE ACCESSORIES

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bilco Company (The).

2. Campbell Foundry Company.

3. Carder Concrete Products.

4. Christy Concrete Products.

5. East Jordan Iron Works, Inc.

6. Elmhurst-Chicago Stone Co.

7. McKinley Iron Works, Inc.

8. Neenah Foundry Company.

9. NewBasis.

10. Oldcastle Precast Group.

11. Osburn Associates, Inc.

12. Pennsylvania Insert Corporation.

13. Riverton Concrete Products; a division of Cretex Companies, Inc..

14. Strongwell Corporation; Lenoir City Division.

15. Underground Devices, Inc.

16. Utility Concrete Products, LLC.

17. Utility Vault Co.

18. Wausau Tile, Inc.

C. Manhole Frames, Covers, and Chimney Components: Comply with structural design loading specified for manhole.

1. Frame and Cover: Weatherproof, gray cast iron complying with ASTM A 48/A 48M, Class 30B with milled cover-to-frame bearing surfaces; diameter, 29 inches.

a. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

b. Special Covers: Recess in face of cover designed to accept finish material in paved areas.

2. Cover Legend: Cast in. Selected to suit system.

a. Legend: "ELECTRIC-LV" for duct systems with power wires and cables for systems operating at 600 V and less.

b. Legend: "ELECTRIC-HV" for duct systems with medium-voltage cables.

c. Legend: "COMMUNICATION" for communications, data, and telephone duct systems.

3. Manhole Chimney Components: Precast concrete rings with dimensions matched to those of roof opening.

a. Mortar for Chimney Ring and Frame and Cover Joints: Comply with ASTM C 270, Type M, except for quantities less than 2.0 cu. ft. where packaged mix complying with ASTM C 387, Type M, may be used.

D. Manhole Sump Frame and Grate: ASTM A 48/A 48M, Class 30B, gray cast iron.

E. Pulling Eyes in Concrete Walls: Eyebolt with reinforcing-bar fastening insert, 2-inch diameter eye, and 1-by 4-inch bolt.

1. Working Load Embedded in 6-Inch, 4000-psi Concrete: 13,000-lbf minimum tension.

F. Pulling Eyes in Non-concrete Walls: Eyebolt with reinforced fastening, 1-1/4-inch diameter eye, rated 2500-lbf minimum tension.

G. Pulling-In and Lifting Irons in Concrete Floors: 7/8-inch diameter, hot-dip galvanized, bent steel rod; stress relieved after forming; and fastened to reinforcing rod. Exposed triangular opening.

1. Ultimate Yield Strength: 40,000-lbf shear and 60,000-lbf tension.

H. Bolting Inserts for Concrete Utility Structure Cable Racks and Other Attachments: Flared, threaded inserts of noncorrosive, chemical-resistant, nonconductive thermoplastic material; 1/2-inch ID by 2-3/4 inches deep, flared to 1-1/4 inches minimum at base.

1. Tested Ultimate Pullout Strength: 12,000 lbf minimum.

I. Expansion Anchors for Installation after Concrete Is Cast: Zinc-plated, carbon-steel-wedge type with stainless-steel expander clip with 1/2-inch bolt, 5300-lbf rated pullout strength, and minimum 6800-lbf rated shear strength.

J. Cable Rack Assembly: Steel, hot-dip galvanized, except insulators.

1. Stanchions: T-section or channel; 2-1/4-inch nominal size; punched with 14 holes on 1-1/2-inch centers for cable-arm attachment.

2. Arms: 1-1/2 inches wide, lengths ranging from 3 inches with 450-lb minimum capacity to 18 inches with 250-lb minimum capacity. Arms shall have slots along full length for cable ties and be arranged for secure mounting in horizontal position at any vertical location on stanchions.

3. Insulators: High-glaze, wet-process porcelain arranged for mounting on cable arms.

K. Cable Rack Assembly: Nonmetallic. Components fabricated from nonconductive, fiberglass-reinforced polymer.

1. Stanchions: Nominal 36 inches high by 4 inches wide, with minimum of 9 holes for arm attachment.

2. Arms: Arranged for secure, drop-in attachment in horizontal position at any location on cable stanchions, and capable of being locked in position. Arms shall be available in lengths ranging from 3 inches with 450-lb minimum capacity to 20 inches with 250-lb minimum capacity. Top of arm shall be nominally 4 inches wide, and arm shall have slots along full length for cable ties.

L. Duct-Sealing Compound: Non-hardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F. Capable of withstanding temperature of 300 deg F without slump and adhering to clean surfaces of plastic ducts, metallic conduits, conduit coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals.

M. Fixed Manholes Ladders: Arranged for attachment to wall of manhole. Ladder and mounting brackets and braces shall be fabricated from hot-dip galvanized steel.

N. Cover Hooks: Heavy duty, designed for lifts 60 lbf and greater. Two required.

2.08 SOURCE QUALITY CONTROL

A. Test and inspect precast concrete utility structures according to ASTM C 1037.

B. Non-concrete Handhole and Pull-Box Prototype Test: Test prototypes of manholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by a independent testing agency.

2. Strength tests of complete boxes and covers shall be by either an independent testing agency or the manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.

3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.01 UNDERGROUND DUCT APPLICATION

A. Ducts for Electrical Cables Over 600 V: RNC, NEMA Type EPC-80-PVC, in concrete-encased duct bank, unless otherwise indicated. This includes Electric Utility Primary Duct Banks.

B. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type EPC-80 -PVC, in concrete-encased duct bank, unless otherwise indicated.

C. Underground Ducts for Telephone, Communications, or Data Utility Service Cables: RNC, NEMA Type EPC-80-PVC, installed in concrete-encased duct bank, unless otherwise indicated.

D. Wrap all RGS with 2 layers of Scotch wrap which will come in contact with concrete.

3.02 UNDERGROUND ENCLOSURE APPLICATION

A. Handholes and Boxes for 600 V and Less:

1. Units in Roadways and Other Deliberate Traffic Paths: Precast concrete.
AASHTO HB 17, H-20 structural load rating.

2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Non-deliberate Loading by Heavy Vehicles: Precast concrete, AASHTO HB 17, H-20 structural load rating.

3. Units in Sidewalk and Similar Applications with a Safety Factor for Non-deliberate Loading by Vehicles: Precast concrete, AASHTO HB 17, H-10 structural load rating.

4. Units Subject to Light-Duty Pedestrian Traffic only: Fiberglass-reinforced polyester resin structurally tested according to SCTE 77 with 3000-lbf vertical loading.

B. Manholes: Precast or cast-in-place concrete.

1. Units Located in Roadways and Other Deliberate Traffic Paths by Heavy or Medium Vehicles: H-20 structural load rating according to AASHTO HB 17.

2. Units Not Located in Deliberate Traffic Paths by Heavy or Medium Vehicles: H-10 load rating according to AASHTO HB 17.

3.03 EARTHWORK

A. Excavation and Backfill: Comply with Division 31 Section "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling is completed.

C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary top soiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Division 32 Sections "Turf and Grasses" and "Plants."

D. Cut and patch existing pavement in the path of underground ducts and utility structures according to Division 01 Section "Cutting and Patching."

3.04 DUCT INSTALLATION

A. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.

B. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48 inches, both horizontally and vertically, at other locations, unless otherwise indicated and 25ft horizontally for above 600v cables.

C. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.

D. Duct Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches o.c. for 5-inch ducts, and vary proportionately for other duct sizes.

1. Begin change from regular spacing to end-bell spacing 10 feet from the end bell without reducing duct line slope and without forming a trap in the line.

2. Direct-Buried Duct Banks: Install an expansion and deflection fitting in each conduit in the area of disturbed earth adjacent to manhole or handhole.

3. Grout end bells into structure walls from both sides to provide watertight entrances.

E. Building Wall Penetrations: Make a transition from underground duct to rigid steel conduit and RMC sweep 90 degree elbow at least 10 feet outside the building wall without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Division 26 Section "Common Work Results for Electrical."

F. Sealing: Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig hydrostatic pressure.

G. Pulling Cord: Install 100-lbf- test nylon cord in ducts, including spares.

H. Concrete-Encased Ducts: Support ducts on duct separators.

1. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts, with not more than 6 feet apart. Secure separators to earth and to ducts to prevent floating during concreting. Stagger separators approximately 6 inches between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.

2. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.

    a. Start at one end and finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written recommendations or use other specific measures to prevent expansion-contraction damage.

    b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch reinforcing rod dowels extending 18 inches into concrete on both sides of joint near corners of envelope.

3. Pouring Concrete: Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Use a plank to direct concrete down sides of bank assembly to trench bottom. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.

4. Reinforcement: Reinforce concrete-encased duct banks where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.

5. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.

6. Minimum Space between Ducts: 3 inches between ducts and exterior envelope wall, 2 inches between ducts for like services, and 4 inches (between power and signal ducts.

7. Depth: Install top of duct bank at least 36 inches below finished grade in areas not subject to deliberate traffic, and at least 48 inches below finished grade in deliberate traffic paths for vehicles, unless otherwise indicated.

8. Stub-Ups: Use manufactured duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Extend concrete encasement throughout the length of the elbow.

9. Stub-Ups: Use manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.

    a. Couple steel conduits to ducts with adapters designed for this purpose and encase coupling with 3 inches of concrete.

    b. Stub-Ups to Equipment: For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of base. Install insulated grounding bushings on terminations at equipment.

10. Warning Tape: Bury warning tape approximately 12 inches above all concrete-encased ducts and duct banks. Align tape parallel to and within 3 inches of the centerline of duct bank. Provide an additional warning tape for each 12-inch increment of duct-bank width over a nominal 18 inches. Space additional tapes 12 inches apart, horizontally.

I. Direct-Buried Duct Banks:

1. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.

2. Secure separators to earth and to ducts to prevent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6 inches between tiers.

3. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Division 31 Section "Earth Moving" for pipes less than 6 inches in nominal diameter.

4. Install backfill as specified in Division 31 Section "Earth Moving."

5. After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand-place backfill to 4 inches over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct

connections at end of run and complete backfilling with normal compaction as specified in Division 31 Section "Earth Moving."

6. Install ducts with a minimum of 3 inches between ducts for like services and 6 inches between power and signal ducts.

7. Depth: Install top of duct bank at least 36 inches below finished grade, unless otherwise indicated.

8. Set elevation of bottom of duct bank below the frost line.

9. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Encase elbows for stub-up ducts throughout the length of the elbow.

10. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.

    a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete.

    b. For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.

11. Warning Planks: Bury warning planks approximately 12 inches above direct-buried ducts and duct banks, placing them 24 inches o.c. Align planks along the width and along the centerline of duct bank. Provide an additional plank for each 12-inch increment of duct-bank width over a nominal 18 inches. Space additional planks 12 inches apart, horizontally.

J. Inspection: Prior to or during inspection by Authority Having Jurisdiction for approval and prior to beginning concrete pour, Engineer shall inspect underground duct installation for Engineer approval.

3.05 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

A. Precast Concrete Handhole and Manhole Installation:

1. Comply with ASTM C 891, unless otherwise indicated.

2. Install units level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.

3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

B. Elevations:

1. Manhole Roof: Install with rooftop at least 15 inches below finished grade.

2. Manhole Frame: In paved areas and traffic ways, set frames flush with finished grade. Set other manhole frames 1 inch above finished grade.

3. Handhole Covers: In paved areas and traffic ways, set surface flush with finished grade. Set covers of other handholes 1 inch above finished grade.

4. Where indicated, cast handhole cover frame integrally with handhole structure.

C. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.

D. Manhole Access: Circular opening in manhole roof; sized to match cover size.

1. Install chimney, constructed of precast concrete collars and rings to support frame and cover and to connect cover with manhole roof opening. Provide moisture-tight masonry joints and waterproof grouting for cast-iron frame to chimney.

E. Waterproofing: Apply waterproofing to exterior surfaces of manholes after concrete has cured at least three days. Waterproofing materials and installation are specified in Division 07 Section "Elastomeric Sheet Waterproofing." After ducts have been connected and grouted, and before backfilling, waterproof joints and connections and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.

F. Damp proofing: Apply damp proofing to exterior surfaces of manholes after concrete has cured at least three days. Damp proofing materials and installation are specified in Division 07 Section "Bituminous Damp proofing." After ducts have been connected and grouted, and before backfilling, damp proof joints and connections and touch up abrasions and scars. Damp proof exterior of manhole chimneys after mortar has cured at least three days.

G. Hardware: Install removable hardware, including pulling eyes, cable stanchions, and cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.

H. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inches for manholes and 2 inches for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.

I. Warning Sign: Install "Confined Space Hazard" warning sign on the inside surface of each manhole cover.

3.06 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of ducts, and seal joint between box and extension as recommended by the manufacturer.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas and traffic ways, set so cover surface will be flush with finished grade. Set covers of other handholes 1 inch above finished grade.

D. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.

E. Field-cut openings for ducts and conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

F. For enclosures installed in asphalt paving and subject to occasional, non-deliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth.

1. Concrete: 3000 psi, 28-day strength, complying with Division 03 Section "Cast-in-Place Concrete," with a troweled finish.

2. Dimensions: 10 inches wide by 12 inches deep.

3.07 GROUNDING

A. Ground underground ducts and utility structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."

3.08 FIELD QUALITY CONTROL

A. Perform the following tests and inspections and prepare test reports:

1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.

2. Pull aluminum or wood test mandrel through duct to prove joint integrity and test for out-of-round duct. Provide mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.

3. Test manhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Correct deficiencies and retest as specified above to demonstrate compliance.

3.09 TRENCHES:

A. Trenches shall be in as straight and direct a line as possible. Routes through unstable soil such as mud, shifting soils, or other hazards should be avoided. Underground conduit systems shall not be installed within 5 feet of any building foundation, swimming pool, etc., except for where service conduit merges to intercept the service equipment.

3.10 PVC INSTALLATION:

A. The ends of the conduit shall be plugged during construction to prevent the entrance of foreign matter.

B. All ends, joints and internal finish of the conduit shall be free of sharp edges or burrs which could damage the cable.

C. All buried joints shall be glued with cement as recommended by the conduit manufactures.

D. Any change in direction between lengths of straight rigid conduit greater than 5 degrees shall be made in electrical sweeps, or with a very gradual sweeping change of direction. Any single run of conduit will contain no more than two 90 degree sweeps. If the secondary runs of conduit are less than 150 feet in length then schedule 80, PVC sweeps are acceptable. For runs of conductor sized 500MCM and larger that exceed 150 feet in length, all sweeps shall be steel. For runs of conductor smaller than 500MCM size and that exceed 200 feet in length, all 90º sweeps shall be steel.

3.11 CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.

B. Clean internal surfaces of manholes, including sump. Remove foreign material.

END OF SECTION 26 05 43

THIS PAGE WAS LEFT BLANK INTENTIONALLY

26 05 53

IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Identification for raceways.
2. Identification of power and control cables.
3. Identification for conductors.
4. Underground-line warning tape.
5. Warning labels and signs.
6. Instruction signs.
7. Equipment identification labels.
8. Miscellaneous identification products.
9. Identification of Boxes, Junction Boxes and Pull Boxes
10. Identification of Switchboards, Motor Control Center, Panelboard, transformers, disconnecting means, Timer and etc.

1.03 SUBMITTALS

A. Product Data: For each electrical identification product indicated.

B. Samples: For each type of label and sign to illustrate size, colors, lettering style, mounting provisions riveted to the metal surface, and graphic features of identification products.

C. Identification Schedule: An index of nomenclature of electrical equipment and system components used in identification signs and labels.

1.04 QUALITY ASSURANCE

A. Comply with ANSI A13.1.

B. Comply with NFPA 70.

C. Comply with 29 CFR 1910.144 and 29 CFR 1910.145.

D. Comply with ANSI Z535.4 for safety signs and labels.

E. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.

1.05 COORDINATION

A. Coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual; and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.

B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

C. Coordinate installation of identifying devices with location of access panels and doors.

D. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.01 POWER RACEWAY IDENTIFICATION MATERIALS

A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway size.

B. Colors for Raceways Carrying Circuits at 600 V or Less:

1. Black letters on an orange field.

2. Legend: Indicate voltage and system or service type.

C. Colors for Raceways Carrying Circuits at More Than 600 V:

1. Black letters on an orange field.

2. Legend: "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch- high letters on 20-inch centers.

D. Self-Adhesive Vinyl Labels for Raceways Carrying Circuits at 600 V or Less: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

E. Snap-Around Labels for Raceways Carrying Circuits at 600 V or Less: Slit, pre-tensioned, flexible, preprinted, color-coded acrylic sleeve, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

F. Snap-Around, Color-Coding Bands for Raceways Carrying Circuits at 600 V or Less: Slit, pre-tensioned, flexible, solid-colored acrylic sleeve, 2 inches long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

G. Tape and Stencil for Raceways Carrying Circuits More Than 600 V: 4-inch-wide black stripes on 10-inch centers diagonally over orange background that extends full length of raceway or duct and is 12 inches wide. Stop stripes at legends.

H. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking cable tie fastener.

I. Write-On Tags: Polyester tag, 0.010 inch thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.

1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

2. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.02 ARMORED AND METAL-CLAD CABLE IDENTIFICATION MATERIALS

A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.

B. Colors for Raceways Carrying Circuits at 600 V and Less:

1. Black letters on an orange field.

2. Legend: Indicate voltage and system or service type.

C. Colors for Raceways Carrying Circuits at More Than 600 V:

1. Black letters on an orange field.

2. Legend: "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch- high letters on 20-inch centers.

D. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

A. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; 2 inches wide; compounded for outdoor use.

2.03 POWER AND CONTROL CABLE IDENTIFICATION MATERIALS

A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.

B. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

C. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking cable tie fastener.

D. Write-On Tags: Polyester tag, 0.010-inch-thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.

1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

2. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

E. Snap-Around Labels: Slit, pre-tensioned, flexible, preprinted, color-coded acrylic sleeve, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

A. Snap-Around, Color-Coding Bands: Slit, pre-tensioned, flexible, solid-colored acrylic sleeve, 2 inches long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

2.04 CONDUCTOR IDENTIFICATION MATERIALS

A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide.

B. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

C. Snap-Around Labels: Slit, pre-tensioned, flexible, preprinted, color-coded acrylic sleeve, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

D. Snap-Around, Color-Coding Bands: Slit, pre-tensioned, flexible, solid-colored acrylic sleeve, 2 inches long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

E. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

F. Write-On Tags: Polyester tag, 0.010-inch-thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.

1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

2. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

A. All conductors shall have the color of insulation for the entire length. Do not use electrical tape to identify the colors. This applies in all sizes.

2.05 FLOOR MARKING TAPE

A. 2-inch- wide, 5-mil pressure-sensitive vinyl tape, with black and white stripes and clear vinyl overlay.

2.06 UNDERGROUND-LINE WARNING TAPE

A. Tape:

1. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical and communications utility lines.

2. Printing on tape shall be permanent and shall not be damaged by burial operations.

3. Tape material and ink shall be chemically inert, and not subject to degrading when exposed to acids, alkalis, and other destructive substances commonly found in soils.

A. Color and Printing:

1. Comply with ANSI Z535.1 through ANSI Z535.5.

2. Inscriptions for Red-Colored Tapes: ELECTRIC LINE, HIGH VOLTAGE.

3. Inscriptions for Orange-Colored Tapes: TELEPHONE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE.

2.07 WARNING LABELS AND SIGNS

A. Comply with NFPA 70 and 29 CFR 1910.145.

B. Self-Adhesive Warning Labels: Factory-printed, multicolor, pressure-sensitive adhesive labels, configured for display on front cover, door, or other access to equipment unless otherwise indicated.

C. Baked-Enamel Warning Signs:

1. Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for application.

2. 1/4-inch grommets in corners for mounting.

3. Nominal size, 7 by 10 inches.

D. Warning label and sign shall include, but are not limited to, the following legends:

E. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."

1. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES."

2.08 EQUIPMENT IDENTIFICATION LABELS

A. Adhesive Film Label: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch. No adhesive is strictly prohibited.

B. Adhesive Film Label with Clear Protective Overlay: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch. Overlay shall provide a weatherproof and UV-resistant seal for label. No adhesive is strictly prohibited.

C. Punch or drilled riveted Engraved, Laminated Acrylic or Melamine Label: Adhesive backed, with white letters on a dark-gray background. Minimum letter height shall be 3/8 inch. No adhesive is strictly prohibited.

D. Engraved, Laminated Acrylic or Melamine Label: Punched or drilled for screw mounting. White letters on a dark-gray background. Minimum letter height shall be 3/8 inch. No adhesive is strictly prohibited.

E. Stenciled Legend: In non-fading, waterproof, black ink or paint. Minimum letter height shall be 1 inch.

F. Only use drilled/punched riveted label on equipment.

2.09 CABLE TIES

A. General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, Type 6/6 nylon.

1. Minimum Width: 3/16 inch.

2. Tensile Strength at 73 deg F, According to ASTM D 638: 12,000 psi.

3. Temperature Range: Minus 40 to plus 185 deg F.

4. Color: Black except where used for color-coding.

B. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, Type 6/6 nylon.

1. Minimum Width: 3/16 inch.

1. Tensile Strength at 73 deg F, According to ASTM D 638: 12,000 psi.

2. Temperature Range: Minus 40 to plus 185 deg F.

3. Color: Black.

C. Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one-piece, self-locking.

1. Minimum Width: 3/16 inch.

1. Tensile Strength at 73 deg F, According to ASTM D 638: 7000 psi.

2. UL 94 Flame Rating: 94V-0.

3. Temperature Range: Minus 50 to plus 284 deg F.

4. Color: Black.

2.10 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Paint: Comply with requirements in Division 09 painting Sections for paint materials and application requirements. Select paint system applicable for surface material and location (exterior or interior).

B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Verify identity of each item before installing identification products.

B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.

C. Apply identification devices to surfaces that require finish after completing finish work.

D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.

E. Attach signs and plastic labels that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.

F. System Identification Color-Coding Bands for Raceways and Cables: Each color-coding band shall completely encircle cable or conduit. Place adjacent bands of two-color markings in contact, side by side. Locate bands at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.

G. Aluminum Wraparound Marker Labels and Metal Tags: Secure tight to surface of conductor or cable at a location with high visibility and accessibility.

H. Cable Ties: For attaching tags. Use general-purpose type, except as listed below:

1. Outdoors: UV-stabilized nylon.

2. In Spaces Handling Environmental Air: Plenum rated.

I. Underground-Line Warning Tape: During backfilling of trenches install continuous underground-line warning tape directly above line at 6 to 8 inches (below finished grade. Use multiple tapes where width of multiple lines installed in a common trench exceeds 16 inches overall.

J. Painted Identification: Comply with requirements in Division 09 painting Sections for surface preparation and paint application.

3.02 IDENTIFICATION SCHEDULE

A. Identification of Electrical Systems

1. Identify all equipment and circuit breakers.

2. Identify all J-box covers with circuit numbers.

3. On all device wall plates, on inside of plate, indicate panel and circuit number feeding the device.

4. All electrical panels shall have type written panel schedule with room descriptions using actual room signage numbers.

5. Electrical systems shall be identified by painted junction boxes and covers with the following scheme:

a. Lighting system: Yellow

b. Emergency Power: Red

c. 120V Power: Blue

d. HVAC system power: Green

6. Electrical panel identification shall include the following:

a. Panel Name

b. Voltage

c. Amperage

d. General description such as: Lighting Area A or Power Area C. Refer to Drawings.

e. Appropriately colored for emergency.

f. Feeder panel designation must be clearly identified.

B. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits More Than 30 A, and 120 V to ground: Identify with self-adhesive vinyl label. Install labels at 10-foot maximum intervals.

C. Accessible Raceways and Cables within Buildings: Identify the covers of each junction and pull box of the following systems with self-adhesive vinyl labels with the wiring system legend and system voltage. System legends shall be as follows:

1. Emergency Power.

2. Power.

D. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and hand-holes, use color-coding conductor tape to identify the phase.

1. Color-Coding for Phase and Voltage Level Identification, 600 V or Less: Use colors listed below for ungrounded service, feeder, and branch-circuit conductors.

a. New Conductors: Insulation shall be fully and continuously colored. Phase taping is not acceptable.

b. Existing Conductors Re-terminated: Use Scotch #35 Vinyl Electrical Color-Coding Tape. No substitutions. Material to be 7-mil polyvinyl chloride (PVC), 3/4"-wide tape with UL-510 rating to 600 VAC. Field apply two full laps without offset at each start and finish, and with 3/8"-over-lap for all intermediate laps using 5 lb/in tension. Start tape no further than 1-1/4" from termination and provide minimum cover length of:

1) #2 AWG and smaller conductors: 6 inches.

2) #1/0 AWG and larger conductors: 8 inches.

c. Colors for 208/120-V Circuits:

1) Phase A: Black.

2) Phase B: Red.

3) Phase C: Blue.

4) Neutral: White

5) Ground: Green

d. Colors for 480/277-V Circuits:

1) Phase A: Brown.

2) Phase B: Purple

3) Phase C: Yellow.

4) Neutral: Gray/White

5) Ground: Green

E. Install instructional sign including the color code for grounded and ungrounded conductors using adhesive-film-type labels.

F. Conductors to Be Extended in the Future: Attach marker tape to conductors and list source.

G. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.

1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.

2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.

3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual.

H. Locations of Underground Lines: Identify with underground-line warning tape for power, lighting, communication, and control wiring and optical fiber cable.

1. Limit use of underground-line warning tape to direct-buried cables.

2. Install underground-line warning tape for both direct-buried cables and cables in raceway.

I. Workspace Indication: Install floor marking tape to show working clearances in the direction of access to live parts. Workspace shall be as required by NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

J. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Self-adhesive warning labels.

1. Comply with 29 CFR 1910.145.

2. Identify system voltage with black letters on an orange background.

3. Apply to exterior of door, cover, or other access.

4. For equipment with multiple power or control sources, apply to door or cover of equipment including, but not limited to, the following:

a. Power transfer switches.

b. Controls with external control power connections.

K. Operating Instruction Signs: Install instruction signs to facilitate proper operation and maintenance of electrical systems and items to which they connect. Install instruction signs with approved legend where instructions are needed for system or equipment operation.

L. Emergency Operating Instruction Signs: Install instruction signs with white legend on a red background with minimum 3/8-inch- high letters for emergency instructions at equipment used for power transfer.

M. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and the Operation and Maintenance Manual. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and racks of each system. Systems include power, lighting, control, communication, signal, monitoring, and alarm systems unless equipment is provided with its own identification.

1. Labeling Instructions:

    a. Indoor Equipment: Self-adhesive, engraved, laminated acrylic or melamine label. Unless otherwise indicated, provide a single line of text with 1/2-inch- high letters on 1-1/2-inch- high label; where two lines of text are required, use labels 2 inches high.

    b. Outdoor Equipment: Engraved, laminated acrylic or melamine label.

    c. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor.

    d. Unless provided with self-adhesive means of attachment, fasten labels with appropriate mechanical fasteners that do not change the NEMA or NRTL rating of the enclosure.

2. Equipment to Be Labeled: Use punched, drilled riveted label or identifications

    a. Panelboards: Typewritten hard thick card stock paper directory of circuits in the location provided by panelboard manufacturer. Panelboard identification shall be laminated acrylic or melamine label.

    b. Enclosures and electrical cabinets.

    c. Access doors and panels for concealed electrical items.

    d. Switchboards.

    e. Transformers: Label that includes tag designation shown on Drawings for the transformer, feeder, and panelboards or equipment supplied by the secondary.

    f. Substations.

    g. Emergency system boxes and enclosures.

    h. Motor-control centers.

i. Enclosed switches.

j. Enclosed circuit breakers.

k. Enclosed controllers.

l. Variable-speed controllers.

m. Push-button stations.

n. Power transfer equipment.

o. Contactors.

p. Remote-controlled switches, dimmer modules, and control devices.

q. Battery-inverter units.

r. Battery racks.

s. Power-generating units.

t. Monitoring and control equipment.

OVERCURRENT PROTECTIVE DEVICE COORDINATION AND ARC FLASH STUDY

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes computer-based, fault-current, overcurrent protective device coordination selective studies, and arc flash study. Protective devices shall be set based on results of the protective device coordination selective study.

1. Coordination of series-rated devices is permitted where indicated on Drawings.

2. Retain a qualified professional/engineering firm to assist in the development and implementation of the arc flash and protection coordination selective study.

1.03 SUBMITTALS

A. Product Data: For computer software program to be used for studies.

B. Product Certificates: For coordination-study and fault-current-study computer software programs, certifying compliance with IEEE 399.

C. Qualification Data: For coordination-selective study specialist.

D. Other Action Submittals: The following submittals shall be made after the approval process for system protective devices has been completed. Submittals may be in digital form.

1. Coordination- selective study input data, including completed computer program input data sheets.

2. Study and Equipment Evaluation Reports.

3. Coordination- Selective Study Report.

4. Electrical One-line diagram

1.04 QUALITY ASSURANCE

A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.

B. Coordination- Selective Study Specialist Qualifications: An entity experienced in the application of computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.

1. Professional engineer, licensed in the state where Project is located, shall be responsible for the study. All elements of the study shall be performed under the direct supervision, Fort Bend County representative.

C. Comply with IEEE 242 for short-circuit currents and coordination time intervals.

D. Comply with IEEE 399 for general study procedures.

E. The entity shall have an employee that is certified, train and skilled to perform this type of test and be able to interpret the curve and settings.

PART 2 - PRODUCTS

2.01 COMPUTER SOFTWARE DEVELOPERS

A. Available Computer Software Developers: Subject to compliance with requirements, companies offering computer software programs that may be used in the Work include, but are not limited to, the following:

B. Computer Software Developers: Subject to compliance with requirements, provide products by one of the following:

C. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

1. CGI CYME.

2. EDSA Micro Corporation.

3. ESA Inc.

4. Operation Technology, Inc.

5. SKM Systems Analysis, Inc.

2.02 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

A. Comply with IEEE 399.

B. Analytical features of fault-current-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.

1. Proceed with coordination selective study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.02 POWER SYSTEM DATA

A. Gather and tabulate the following input data to support coordination study:

1. Product Data for overcurrent protective devices specified in other Division 26 Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.

2. Impedance of utility service entrance.

3. Electrical Distribution System Diagram: In hard-copy and electronic-copy formats, showing the following:

a. Circuit-breaker and fuse-current ratings and types.

b. Relays and associated power and current transformer ratings and ratios.

c. Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.

d. Generator kilovolt amperes, size, voltage, and source impedance.

e. Cables: Indicate conduit material, sizes of conductors, conductor material, insulation, and length.

f. Busway ampacity and impedance.

g. Motor horsepower and code letter designation according to NEMA MG 1.

4. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram, showing the following:

a. Special load considerations, including starting inrush currents and frequent starting and stopping.

b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.

c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.

d. Generator thermal-damage curve.

e. Ratings, types, and settings of utility company's overcurrent protective devices.

f. Special overcurrent protective device settings or types stipulated by utility company.

g. Time-current-characteristic curves of devices indicated to be coordinated.

h. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.

i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.

j. Panelboards, switchboards, motor-control center ampacity, and interrupting rating in amperes rms symmetrical.

3.03 FAULT-CURRENT STUDY

A. Calculate the maximum available short-circuit current in amperes rms symmetrical at circuit-breaker positions of the electrical power distribution system. The calculation shall be for a current immediately after initiation and for a three-phase bolted short circuit at each of the following:

1. Switchgear and switchboard bus.

2. Medium-voltage controller.

3. Motor-control center.

4. Distribution panelboard.

5. Branch circuit panelboard.

B. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Include studies of system-switching configurations and alternate operations that could result in maximum fault conditions.

C. Calculate momentary and interrupting duties on the basis of maximum available fault current.

D. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with IEEE 141, IEEE 241 and IEEE 242.

1. Transformers:

a. ANSI C57.12.10.

b. ANSI C57.12.22.

c. ANSI C57.12.40.

d. IEEE C57.12.00.

e. IEEE C57.96.

2. Low-Voltage Circuit Breakers: IEEE 1015 and IEEE C37.20.1.

3. Low-Voltage Fuses: IEEE C37.46.

E. Study Report:

1. Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on electrical distribution system diagram.

2. Show interrupting (5-cycle) and time-delayed currents (6 cycles and above) on medium and high voltage breakers as needed to set relays and assess the sensitivity of overcurrent relays.

F. Equipment Evaluation Report:

1. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

2. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.

3. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

3.04 COORDINATION SELECTIVE STUDY

A. Perform coordination study using approved computer software program. Prepare a written report using results of fault-current study. Comply with IEEE 399.

1. Calculate the maximum and minimum 1/2-cycle short-circuit currents.

2. Calculate the maximum and minimum interrupting duty (5 cycles to 2 seconds) short-circuit currents.

3. Calculate the maximum and minimum ground-fault currents.

B. Comply with IEEE 141 recommendations for fault currents and time intervals.

C. Transformer Primary Overcurrent Protective Devices:

1. Device shall not operate in response to the following:

   a. Inrush current when first energized.

   b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.

   c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.

2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.

D. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

E. Coordination-Selective Study Report: Prepare a written report indicating the following results of coordination study:

1. Tabular Format of Settings Selected for Overcurrent Protective Devices:

   a. Device tag.

   b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.

   c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.

   d. Fuse-current rating and type.

   e. Ground-fault relay-pickup and time-delay settings.

2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:

   a. Device tag.

   b. Voltage and current ratio for curves.

   c. Three-phase and single-phase damage points for each transformer.

   d. No damage, melting, and clearing curves for fuses.

e. Cable damage curves.

f. Transformer inrush points.

g. Maximum fault-current cutoff point.

F. Completed data sheets for setting of overcurrent protective devices.

3.05 ARC FLASH STUDY

A. A detailed arc flash study shall be performed to determine potential arc flash incident energies, arc flash boundaries, shock hazard boundaries and proper personal protective equipment (PPE) for all energized electrical system equipment tasks for the electrical systems studied. The calculations shall comply with NFPA-70E 2009, and IEEE-1584. Bolted short circuit calculations used in the above standards shall comply with ANSI C37.010, C37.13, C37.5, IEEE-141, and IEEE-399. The purpose of this study is to determine arc flash hazards in conformance with NFPA-70E and to provide a comprehensive software model of the electrical distribution system, which provides integral work permits and arc flash calculations in compliance with NFPA 70E Articles 130.1 and 130.3 for all equipment in the facility. The software program used in this study shall comply with the above standards. No substitutions in calculation methods will be allowed.

B. The arc flash study shall determine the following results for each system mode of operation developed in Section 1.3E (Modeling). The results shall be provided in spreadsheet format for each mode and electrical system location to provide easy viewing and comparison. Worst-case arc flash energy levels shall be flagged and the spreadsheet comparison table shall be capable of providing its output directly to high quality vinyl label printers. The calculations shall, as a minimum, include a comparison of both 100% and 85% arcing currents for low voltage equipment for each electrical system configuration or operating mode, indicating worst-case arc flash hazards. The spreadsheet results shall include:

1. Equipment name and voltage

2. Upstream equipment device name and ANSI function, i.e. 51/50, etc.

3. Equipment type, i.e. switchgear, MCC, Panel, VFD, etc.

4. Equipment arc gap

5. Bolted and estimated arcing fault current at the fault point (equipment) in symmetrical amperes. The estimated arcing current should be based on the arcing current equations used.

6. Trip time, opening time, and total clearing time (total Arc time) of the protective device

7. Worst-case arc flash boundary for each bus/equipment in the model

8. Worst-case arc flash hazard incident energy in cal/cm^2 for each bus/equipment in the model

9. Worst-case personal protective equipment (PPE) for each bus/equipment in the model

10. Working distances for up to five different distances showing items 7, 8, and 9 for each distance

11. Indicate "Danger/Hazardous" areas where incident energy is greater than 40 cal/cm2 and provide recommendations to reduced arc flash energy levels for these areas

12. Flag results where 85% arcing current provided worst-case results

13. Each mode of operation shall include a detailed write-up indicating areas where incident energy calculations and PPE requirements are higher than calculated in the normal operating mode.

C. Contractor shall provide a detailed arc flash analysis report including as a minimum:

1. Introduction

2. Methodology

3. Information Sources

4. Assumptions including generic substitutions when data cannot be field verified. This type of assumptions shall be documented in the report.

5. Arc Flash Energy and other consideration for various System Modes of Operation (maintenance mode, bus-tie, co-gen on/off, etc.)

6. Arc Energy at 100% and reduced currents

7. IEEE 1584-2002 Considerations.

8. Overcurrent Protective Device Changes, Replacements or Setting Changes implemented in study to reduce arc flash hazard exposure.

9. Explanation of Data in Arc Flash Hazard Report Tables

10. NFPA 70E Information

    a. Shock Hazards with covers removed.

    b. Shock Hazard Approach Boundaries.

        1) Limited Approach Boundary

        2) Restricted Approach Boundary

        3) Prohibited Approach Boundary

    c. Arc Flash Hazard Boundaries

11. Results of Arc Flash Hazard Analysis for high voltage, medium voltage and low voltage systems, including:

a. Working distances.

b. Energy Levels

c. PPE Requirements

d. Recommendations to reduce arc flash hazard energy and exposure.

12. Arc Flash Hazard Report

13. 3 Hard Copies

a. 1 Electronic Copy in WORD or Excel format and PDF (5.0 or later)

b. 1 Electronic copy in latest version of SKM format or its native software

14. Electronic file for Power System Modeling Software as developed and utilized for this analysis.

D. Contractor shall provide print labels for all equipment in the system from the project study file. Assume two (2) labels per equipment/bus in your estimate using 4" x 6" labels. The labels shall be UV resistant vinyl labels (white with orange warning strip and black letters) conforming to ANSI-Z 535. The labels shall be printable directly from the power system software utilized for the study.

E. The software shall provide complete integration of the one-line, database, short circuit and PDC and Arc flash functions. Software using separate short circuit, PDC, TCC or arc flash programs is not allowed. Spreadsheet calculations are not allowed. The purpose of this section is to ensure that the arc flash hazard calculations comply with NFPA-70E and IEEE-1584, and that the calculations are programmed with necessary requirements to help eliminate possible errors in the arc flash calculations. The additional purpose is to establish a detailed software model of the compliance with the OSHA requirements and NFPA 70E mandates. This model will serve as an integral part of Fort Bend County safety program by providing integral work permits and arc flash calculations in compliance with NFPA-70E Article 130.1(A)(2) for each electrical equipment in the facility.

1. Arc flash calculations shall be performed with enhanced IEEE-1584 equations, which eliminate voltage discontinuities and the non-conservative/average results of the standard equations. The purpose of this requirement is to ensure that the calculated incident energies are closer to actual test results insuring a conservative calculation minimizing personnel risk.

2. Arc flash calculations shall be based on the fastest clearing upstream protective device protecting the equipment for single sources and the slowest upstream protective device for multiple sources. The calculations shall automatically compare all series and parallel upstream protective devices in the system to determine the fastest series device or a conservative parallel clearing time.

3. The arc flash calculations shall include arc flash boundary, incident energy, PPE requirements, and working distances.

4. The arc flash calculations shall include calculations for all operating modes to ensure the worse arc flash magnitude.

5. The arc flash calculations shall provide integral "Work Tasks" for the listed equipment types. The tasks shall be derived from 70E Table 130.7(C)(9)(a) and be specific to the equipment type. Listed equipment types shall include:

   a. Switchgear, Switchboards, Panelboards, MCC, VFD, UPS, ATS, Interrupting Switch, NEMA E2 Contactor, Conductor, Open Air for 100-200 volt equipment.

   b. Switchgear, Switchboards, Panelboards, MCC, VFD, UPS, ATS, Interrupting Switch, NEMA E2 Contactor, Conductor, Open Air for 200-1000 volt equipment.

   c. Switchgear, MCC, VFD, UPS, ATS, Interrupting Switch, NEMA E2 Contactor, Conductor, Open Air for 1.0-5.0 kV equipment.

   d. Switchgear, MCC, VFD, ATS, Interrupting Switch, NEMA E2 Contactor, Conductor, Open Air for 5.0-15.0 kV equipment.

   e. Interrupting Switch, Conductor, and Open Air for 138 kV equipment.

6. Work Tasks shall have a user-defined library that provides the following customizable features for each work task:

   a. Work Tasks for each specific equipment type and voltage range

   b. Working distance units English or Metric

   c. Work distance for each task

   d. V-rated gloves and tool requirements

   e. Job description and procedures

   f. Safe work practices description

   g. Hazard Risk Category (HRC) reduction - HRC reduction can only be used based on a documented risk assessment as an integral part of a safety program.

END OF SECTION 26 05 73

26 09 23

LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following lighting control devices:

1. Time switches.

2. Photoelectric switches.

3. Indoor occupancy sensors.

4. Lighting contactors.

5. Emergency shunt relays.

B. Related Sections include the following:

1. Division 26 Section "Wiring Devices" for wall-box dimmers, wall-switch occupancy sensors, and manual light switches.

1.03 DEFINITIONS

A. LED: Light-emitting diode.

B. PIR: Passive infrared.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show installation details for occupancy and light-level sensors.

1. Interconnection diagrams showing field-installed wiring.

2. Provide Settings requirements available from the Owner standpoint.

3. Provide the software that will support the lighting controllers.

4. Software must have the ability to detect outages or no power to a branch circuit and graphic indicators.

C. Field quality-control test reports.

D. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.

1.05 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.06 COORDINATION

A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.01 TIME SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Intermatic, Inc.

2. Leviton Mfg. Company Inc.

3. Lightolier Controls; a Genlyte Company.

4. Lithonia Lighting; Acuity Lighting Group, Inc.

5. Watt Stopper (The).

B. Electronic Time Switches: Electronic, solid-state programmable units with alphanumeric display; complying with UL 917.

C. Electromechanical-Dial Time Switches: Type complying with UL 917.

2.02 OUTDOOR PHOTOELECTRIC SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Intermatic, Inc.

2. Lithonia Lighting; Acuity Lighting Group, Inc.

3. Novitas, Inc.

4. TORK.

5. Watt Stopper (The).

2.03 INDOOR OCCUPANCY SENSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Hubbell Lighting.

2. Leviton Mfg. Company Inc.

3. Lithonia Lighting; Acuity Lighting Group, Inc.

4. Watt Stopper (The).

B. General Description: Wall- or ceiling-mounting, solid-state units with a separate relay unit.

1. Operation: Unless otherwise indicated, turn lights on when covered area is occupied and off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

2. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the relay unit.

3. Relay Unit: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V dc, 150-mA, Class 2 power source as defined by NFPA 70.

4. Mounting:

a. Sensor: Suitable for mounting in any position on a standard outlet box.

b. Relay: Externally mounted through a 1/2-inch knockout in a standard electrical enclosure.

c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.

5. Indicator: LED, to show when motion is being detected during testing and normal operation of the sensor.

6. Bypass Switch: Override the on function in case of sensor failure.

7. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc; keep lighting off when selected lighting level is present.

C. Dual-Technology Type: Ceiling mounting; detect occupancy by using a combination of PIR and ultrasonic detection methods in area of coverage. Particular technology or combination of technologies that controls on-off functions shall be selectable in the field by operating controls on unit.

1. Sensitivity Adjustment: Separate for each sensing technology.

2. Detector Sensitivity: Detect occurrences of 6-inch-minimum movement of any portion of a human body that presents a target of not less than 36 sq. in., and detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches/s.

3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. when mounted on a 96-inch-high ceiling.

2.04 OUTDOOR MOTION SENSORS (PIR)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

B. Basis-of-Design Product: Subject to compliance with requirements, provide comparable product by one of the following:

1. Bryant Electric; a Hubbell Company.

2. Hubbell Lighting.

3. Lithonia Lighting; Acuity Lighting Group, Inc.

4. Watt Stopper (The).

C. Performance Requirements: Suitable for operation in ambient temperatures ranging from minus 40 to plus 130 deg F, rated as rain-tight according to UL 773A.

1. Operation: Turn lights on when sensing infrared energy changes between background and moving body in area of coverage; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

2. Mounting:

    a. Sensor: Suitable for mounting in any position on a standard outdoor junction box.

    b. Relay: Internally mounted in a standard weatherproof electrical enclosure.

    c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.

3. Bypass Switch: Override the on function in case of sensor failure.

4. Automatic Light-Level Sensor: Adjustable from 1 to 20 fc; keep lighting off during daylight hours.

D. Detector Sensitivity: Detect occurrences of 6-inch-minimum movement of any portion of a human body that presents a target of not less than 36 sq. in.

E. Lighting Fixture Mounted Sensor: Suitable for switching 300 W of tungsten load at 120- or 277-V ac.

F. Individually Mounted Sensor: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the relay unit.

1. Relay Unit: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V dc, 150-mA, Class 2 power source as defined by NFPA 70.

2. Indicator: LED, to show when motion is being detected during testing and normal operation of the sensor.

2.05 LIGHTING CONTACTORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square D

2. ASCO Power Technologies, LP; a division of Emerson Electric Co.

3. Eaton Electrical Inc.; Cutler-Hammer Products.

4. GE.

5. TORK.

B. Description: Electrically operated and mechanically held, combination type with non-fusible switch complying with NEMA ICS 2 and UL 508.

1. Current Rating for Switching: Listing or rating consistent with type of load served, including tungsten filament, inductive, and high-inrush ballast (ballast with 15 percent or less total harmonic distortion of normal load current).

2. Fault Current Withstand Rating: Equal to or exceeding the available fault current at the point of installation.

3. Enclosure: Comply with NEMA 250.

4. Provide with control and pilot devices matching the NEMA type specified for the enclosure.

C. BAS Interface: Provide hardware interface to enable the BAS to monitor and control lighting contactors.

1. Monitoring: On-off status.

2. Control: On-off operation.

2.06 CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

B. Classes 2 and 3 Control Cable: Multi-conductor cable with stranded-copper conductors not smaller than No. 18 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

C. Class 1 Control Cable: Multi-conductor cable with stranded-copper conductors not smaller than No. 14 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.01 SENSOR INSTALLATION

A. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

3.02 CONTACTOR INSTALLATION

A. Mount electrically held lighting contactors with elastomeric isolator pads, to eliminate structure-borne vibration, unless contactors are installed in an enclosure with factory-installed vibration isolators.

3.03 WIRING INSTALLATION

A. Wiring Method: Comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be 1/2 inch.

B. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and non-power limited conductors according to conductor manufacturer's written instructions.

C. Size conductors according to lighting control device manufacturer's written instructions, unless otherwise indicated.

D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

E. All conductors shall be installed in an enclosed by a metal raceway.

3.04 IDENTIFICATION

A. Identify components and power and control wiring according to Division 26 Section "Identification for Electrical Systems."

1. Identify controlled circuits in lighting contactors.

2. Identify circuits or luminaries controlled by photoelectric and occupancy sensors at each sensor.

B. Label time switches and contactors with a unique designation.

3.05 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. After installing time switches and sensors, and after electrical circuitry has been energized, adjust and test for compliance with requirements.

2. Operational Test: Verify operation of each lighting control device and adjust time delays.

B. Lighting control devices that fail tests and inspections are defective work.

3.06 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting sensors to suit occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.07 DEMONSTRATION

A. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control system specified in Division 26 Section "Network Lighting Controls."

B. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain lighting control devices. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 26 09 23

26 11 00

FIRE STOPPING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Requirements of Division 26 "COMMON WORK RESULTS FOR ELECTRICAL" apply to this Section.

1.02 SECTION INCLUDES

A. Fireproof fire stopping materials.

1.03 SUBMITTALS: SUBMIT THE FOLLOWING IN ACCORDANCE WITH SECTION 260500.

A. Fireproof fire stopping materials.

B. Provide U.L. category and file numbers of products.

1.04 QUALITY ASSURANCE: COMPLY WITH THE FOLLOWING.

A. ASTM E814 (UL 1479) - Test Method of Fire Tests of Through-Penetration Fire stops.

B. NEC 300-21 and NEC 800-52(b).

C. Conform to applicable code for fire resistance ratings and surface burning characteristics.

D. Provide certificate of compliance from authority having jurisdiction indicating approval of combustibility.

1.05 SEQUENCING

A. Sequence work to permit fire stopping materials to be installed after adjacent and surrounding work is complete.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Flame-Safe FS500, FST600, FS900, FST900, or FSP1000.

B. Dow Corning 306548 Silicone RTV Foam.

C. 3M Fire Barrier Penetration Sealing Systems.

D. PENSIL 851, General Electric Company.

2.02 PERFORMANCE REQUIREMENTS

A. The requirements of this section shall be provided in addition to the requirements of Division 7.

B. Maintain required classification, fire, acoustic, and vapor barrier ratings for electrical installations penetrating walls, ceilings, and floors per ASTM E814 (UL 1479), NEC 300-21 and NEC 800-52(b).

1. Penetrations of classified area walls, ceiling and floors shall be sealed with the same material to maintain the integrity of area classification.

2. Penetrations of fire-rated walls, ceilings, and floors shall be sealed with a UL listed Through-Penetrations Fire-Stop System.

3. Penetrations of non-fire-rated walls, ceilings, and floors shall be filled and finished using the same finish material as the wall, ceiling, or floor.

4. Outlet box and lighting fixture installation in fire-rated walls, ceilings, and floors shall be in accordance with the UL Fire Resistance Directory.

C. Fire safety system shall not require de-rating the ampacity of electrical conductors.

D. Where mastic is used to seal the surface of the fire stop, the mastic shall be non-hardening.

E. Fire safety material shall not contract to allow transmission of smoke or water prior to exposure of a fire condition.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that openings are ready to receive the work of this section.

3.02 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter which may affect bond of fire stopping material.

B. Remove incompatible materials which affect bond.

3.03 APPLICATION

A. Apply primer and materials in accordance with manufacturer's instructions.

B. Apply fire stopping material in sufficient thickness to achieve rating to uniform density and texture.

C. Install material at walls or partition openings which contain penetrating sleeves, piping, ductwork, conduit, and other items requiring fire stopping.

D. Sleeves shall be of suitable length to accommodate fire stopping system used. Where conduit passes through a sleeve, the clearance around the conduit shall not be less than 1/2".

3.04 CLEANING

A. Clean adjacent surfaces of fire stopping materials.

3.05 PROTECTION OF FINISHED WORK

A. Protect adjacent surfaces from damage by material installation.

26 22 00

LOW-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 1000 kVA:

1. Harmonics Mitigating (Canceling) Transformers as indicated on Drawings:

a. Delta-to-ZigZag 0-degree phase shift secondary.

b. Wye-to-ZigZag 30-degree phase shift secondary.

1.03 SUBMITTALS

A. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer indicated.

B. Coordination Drawings: Provide coordination drawings as described in 26 05 00 paragraph 1.03(C).

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

D. Qualification Data: For testing agency.

E. Source quality-control test reports.

F. Field quality-control test reports.

G. Operation and Maintenance Data.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain each transformer type through one source from a single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers."

D. Harmonics Canceling Transformers: NEMA ST-1, TP-1, TP-2 and IEEE-519-1992 compliance.

E. Comply with United States Department of Energy (DOE), United States Code (USC) and Code of Federal Regulations (CFR)

1. 42 USC - Energy Conservation Program for Consumer Products Other Than Automobiles

2. 10 CFR 431 – Energy Efficiency Program for Certain Commercial and Industrial Equipment, Subpart K – Distribution Transformers

3. Appendix A to Subpart K of 10 CFR part 431 - Uniform Test Method for Measuring the Energy Consumption of Distribution Transformers

1.05 DELIVERY, STORAGE, AND HANDLING

A. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.

1.06 COORDINATION

A. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate installation of wall-mounting and structure-hanging supports with actual transformer provided.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. General Purpose Dry-Type: Subject to compliance with requirements, provide products by one of the following:

1. Square D / Schneider Electric

2. Siemens

1. Eaton / Cutler Hammer

B. General Purpose Dry-Type: Subject to compliance with requirements, provide products by one of the following:

1. Powersmiths T1000-30H

2. Power Quality International

3. Mirus

4.

2.02 GENERAL TRANSFORMER REQUIREMENTS

A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.

B. Cores: Grain-oriented, non-aging silicon steel.

C. Coils: Continuous windings without splices except for taps.

1. Internal Coil Connections: Brazed or pressure type.

2. Coil Material: Copper, unless indicated otherwise in Drawings.

3. Core and coil designs shall be low loss type with minimum efficiencies per NEMA TP1 and 10 CFR §431.196(a)(2) (DOE 2016 requirements) when operated at 35% of full load capacity. Efficiency shall be tested in accordance with NEMA TP2 and 10 CFR §431.193.

D. Enclosures: NEMA 2 or 3R rating as required, unless otherwise indicated on Drawings.

1. Provide hinged doors with infrared scanning window.

2. Provide surge protection device (SPD).

3. Provide compression lug kit for all terminations.

E. Efficiencies:

Single phase		Three Phase	
kVA	Efficiency	kVA	Efficiency
15	97.7%	15	97.89%
25	98.0%	30	98.23%
37.5	98.2%	45	98.40%
50	98.3%	75	98.60%
75	98.5%	112.5	98.74%
100	98.6%	150	98.83%
167	98.7%	225	98.94%
250	98.8%	300	99.02%
333	98.9%	500	99.14%
		750	99.23%
		1000	99.28%

2.03 HARMONIC MITIGATING TRANSFORMERS

A. Single Output (Secondary):

1. DZ0 – Delta Primary, Zig-Zag Secondary, 0° phase shift.

2. YZ30 – Wye Primary (ungrounded neutral), Zig-Zag Secondary, 30° phase shift.

B. Insulation and Varnish systems: 220 deg. C. Class R, Epoxy polyester impregnation, 130°C Temperature Rise in 40°C Ambient.

C. All terminals. Including those for changing taps, must be readily accessible. Windings shall be continuous with terminations brazed or welded. 10KV BIL.

D. Compatible with all types of linear and non-linear current and future loads.

E. Impedance: Between 3.0% and 5.0% at rated KVA.

F. Zero sequence Impedance/reactance less than 0.95% and 0.3% respectively.

G. Zero sequence currents not coupled into primary windings.

H. Voltage Taps: Two (2) 2.5% above and four (4) 2.5% below nominal primary voltage.

I. Provide dual electrostatic shield.

2.04 DISTRIBUTION TRANSFORMERS

A. Comply with NEMA ST 20, and list and label as complying with UL 1561.

B. Cores: One (1) leg per phase.

C. Enclosure: Ventilated, NEMA 250, Type 2.

1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.

D. Taps for Transformers Smaller than 3 kVA: None.

E. Taps for Transformers 7.5 to 10 kVA: Two (2) 5 percent taps below rated voltage.

F. Taps for Transformers 15 kVA and Larger: Two (2) 2.5 percent taps above and four (4) 2.5 percent taps below normal full capacity.

G. Insulation Class: Class R (220 deg C), UL-component-recognized insulation system with a maximum of 115 deg C rise above 40 deg C ambient temperature.

H. Energy Efficiency for Transformers Rated 15 kVA and Larger:

1. Complying with NEMA TP 1, Class 1 efficiency levels.

2. Tested according to NEMA TP 2.

I. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for non-sinusoidal load current-handling capability to the degree defined by designated K-factor.

1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor.

2. Indicate value of K-factor on transformer nameplate.

J. Wall Brackets: Manufacturer's standard brackets.

K. Fungus Proofing: Permanent fungicidal treatment for coil and core.

L. Low-Sound-Level Requirements: Minimum of 3 dBA less than NEMA ST 20 standard sound levels when factory tested according to IEEE C57.12.91.

M. Low-Sound-Level Requirements: Maximum sound levels, when factory tested, shall be in according to IEEE C57.12.91.

2.05 IDENTIFICATION DEVICES

A. Nameplates: Engraved, laminated-plastic or metal nameplate for each transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

2.06 SOURCE QUALITY CONTROL

A. Test and inspect transformers according to IEEE C57.12.91.

B. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project.

C. Testing will also include recording of the voltages on the primary and secondary including the Impedance used.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.

B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions. Working Clearance shall not be less than 4 feet in front of the front cover. Inform engineer if there is a potential clearance problem prior to rough-in.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

D. Verify that ground connections are in place and requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer. Install a ground copper bar for all grounding connections. Single lug grounding is not permissible.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

F. Grounding electrode conductor will be installed in conduit and connected with Blackburn clamps. A connection will be made to building steel and a new driven copper ground rod.

3.02 INSTALLATION

A. Install wall-mounting transformers level and plumb with wall brackets fabricated by transformer manufacturer. If ceiling mounting is utilized, a letter shall be obtained and approved by a structural engineer.

1. Brace wall-mounting transformers as specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems.

B. Construct concrete bases and anchor floor-mounting transformers according to manufacturer's written instructions.

C. Install ALL floor mounted transformers as indicated on 6” housekeeping pads 4” inches larger than transformer, complying with manufacturer's written instructions, applicable requirements of NEC, NESC, NEMA, ANSI and IEEE standards, and in accordance with recognized industry practices to ensure that products fulfill requirements. Provide NEC working clearance in front of transformers assuming they will require examination while energized.

D. Coordinate transformer installation work with electrical raceway and wire/cable work, as necessary for proper interface.

E. Install floor mounted units with bolts to equipment pad with neoprene/cork vibration mounts between transformer and pad. Comply with manufacturer's indicated installation method, if any.

F. Connect transformer units to electrical wiring system with flexible metal conduit or liquid tight flexible metal conduit. Comply with the requirements of other Division 16 sections.

G. Tighten electrical connectors and terminals, including screws and bolts, in accordance with equipment manufacturer's published torque tightening values for equipment connectors. Where manufacturer's torque requirements are not indicated, tighten connectors and terminals to comply with tightening torques specified in UL STD 486A. Record torques on all terminations.

H. Back off shipping bolts on internal vibration isolators.

I. Provide complementary 0° and 30° phase-shift in as equal capacities for each bus as possible to maximize harmonic mitigation.

3.03 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems." Install a ground copper bar to where all connections are made. Do not use single lugs. The GEC conductor shall be installed directly to XO terminal. Use grounding bushing.

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables." Carefully remove the wire insulation without damaging the copper wire strands and check all connections are to be tight.

3.04 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

B. Perform tests and inspections and prepare test reports.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

D. Remove and replace units that do not pass tests or inspections and retest as specified above.

E. Infrared (Baseline) Scanning: Two months after Substantial Completion, perform an infrared scan of transformer connections.

1. Use an infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.

1. Perform 2 follow-up infrared scans of transformers, one at 4 months and the other at 11 months after Substantial Completion.

2. Prepare a certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and scanning observations after remedial action.

F. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

G. Provide equipment grounding connections for power/distribution transformers, sizes per NEC. Tighten connections to comply with tightening torques specified in UL STD 486A to assure permanent and effective grounding.

H. Transformer Testing

1. Certified Test Reports in accordance with TP-1-2002 and TP-2.

1. Open Circuit transformer tests, for calculating percent zero-sequence impedances and reactance as follows:

   a. With the transformer's primary terminals open-circuited, make a low impedance connection between secondary Terminals X1, X2 and X3.

   b. Connect a variable 60HZ power source between Secondary Terminals X1, X2, X3 and X0, which includes precision revenue class voltage and current measurement instrumentation.

   c. Increase 60HZ voltage across Terminals X1, X2, X3 and Terminal X0 until >2/3 full-scale readings are obtained on the voltage and current meters. In no case can the current reading exceed the full load rating of the winding under test. The values may be lower since impedance and reactance are linear.

   d. Calculate impedance in Ohms based on the measured voltage and current values.

   e. Based on the measured voltage, as a percentage of the rated voltage of the windings, calculate percent zero-sequence impedance and reactance.

2. Closed Circuit Transformer Tests, for calculating transformer core and copper losses as follows:

   a. In accordance with e-Rated Transformer Corporation Standard Publications VAD1-2003 and VAD2- 2003.

   b. Measure Primary and Secondary voltage and current differences simultaneously, using ‘revenue class’ instrumentation and calculate excitation or no-load losses and impedances/load losses.

   c. Submit such reports as part of shop drawings submittals for each size typical transformers, based on tests done within a year or less time.

   d. Submit such reports for all the transformers for the project, prior to shipment.

3. Design, manufacturing and testing of these transformers, in compliance with most current NEMA, IEEE and Industry standards and practices.

4. Transformer Loss Calculations based on primary and secondary voltage and current differences measured simultaneously.

3.05 PROTECTION

A. Physically protect transformers against damage. All field-repairs to be performed by and approved by factory-authorized service representative at no added cost to Owner:

   1. Touch-up scratches and removed paint with original factory paint.

   2. Replace dented plates and panels.

3. Replace scratched, discolored, or otherwise damaged nameplate labels.

3.06 ADJUSTING

A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results. All test reports on transformers shall be compile to one database and this must be submitted to the Owner.

B. Connect buck-boost transformers to provide nameplate voltage of equipment being served, plus or minus 5 percent, at secondary terminals.

C. Output Settings Report: Prepare a written report recording output voltage and tap settings.

3.07 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION 26 22 00

26 24 16

PANELBOARDS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Distribution panelboards.

2. Lighting and appliance branch-circuit panelboards.

1.03 DEFINITIONS

A. SVR: Suppressed voltage rating.

B. SPD: Surge protective device (suppressor).

1.04 SUBMITTALS

A. Product Data: For each type of panelboard, switching and over-current protective device, surge suppression Protective device (SPD), accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

B. Coordination Drawings: Provide coordination drawings as described in 26 05 00 paragraph 1.03(C).

C. Shop Drawings: For each panelboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.

2. Detail enclosure types and details for types other than NEMA 250, Type 1.

3. Detail bus configuration, current, and voltage ratings.

4. Short-circuit current rating of panelboards and over-current protective devices.

5. Include evidence of NRTL listing for series rating of installed devices.

6. Detail features, characteristics, ratings, and factory settings of individual over-current protective devices and auxiliary components.

7. Include wiring diagrams for power, signal, and control wiring.

8. Include time-current coordination curves for each type and rating of over-current protective device included in panelboards. Submit on translucent log-log graft paper; include selectable ranges for each type of over-current protective device.

9. Fault current rating, brazing and bus rating

D. Qualification Data: For qualified testing agency.

E. Field Quality-Control Reports:

1. Test procedures used.

2. Test results that comply with requirements.

3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

F. Panelboard Schedules: For installation in panelboards.

G. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Manufacturer's written instructions for testing and adjusting over-current protective devices.

2. Time-current curves, including selectable ranges for each type of over-current protective device that allows adjustments.

1.05 QUALITY ASSURANCE

A. Source Limitations: Obtain panelboards, over-current protective devices, components, and accessories from single source from single manufacturer.

B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NEMA PB 1.

E. Comply with NFPA 70.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.

B. Handle and prepare panelboards for installation according to NEMA PB 1.

1.07 PROJECT CONDITIONS

A. Environmental Limitations:

1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

B. Service Conditions: NEMA PB 1, usual service conditions, as follows:

1. Ambient temperatures within limits specified.

2. Altitude not exceeding 6600 feet.

C. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

1. Notify Owner no fewer than two weeks days in advance of proposed interruption of electric service.

2. Comply with NFPA 70E.

1.08 COORDINATION

A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.09 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

1.10 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Keys: Two spares for each type of panelboard cabinet lock. All keys shall be turn-in to Owner.

2. Circuit Breakers Including GFCI and Ground Fault Equipment Protection (GFEP) Types: Two spares for each panelboard.

3. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

4. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS FOR PANELBOARDS

A. Fabricate and test panelboards according to IEEE 344 to withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

B. Enclosures: Flush- and surface-mounted cabinets, as indicated on Drawings:

1. Rated for environmental conditions at installed location.

    a. Indoor Dry and Clean Locations: NEMA 250, Type 1.

    b. Outdoor Locations: NEMA 250, Type 3R.

    c. Wash-Down Areas: NEMA 250, Type 4X stainless steel.

    d. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.

    e. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Non-corrosive Liquids: NEMA 250, Type 5.

2. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box.

3. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover.

4. Door in door Hinges: For ease of access to branch circuit wiring.

5. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.

6. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.

7. Finishes:

8. Panels and Trim: Steel and galvanized steel, factory finished immediately after cleaning and pre-treating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.

    a. Back Boxes: Same finish as panels and trim.

9. Directory Card: Inside panelboard door, mounted in metal frame with transparent protective cover.

C. Incoming Mains Location: Top and bottom.

D. Phase, Neutral, and Ground Buses:

1. Material: Hard-drawn Copper, 98 percent conductivity.

2. Coating: Electroplated with Tin to a minimum thickness of 30 micron.

3. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.

4. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.

5. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and UL listed as suitable for nonlinear loads.

6. Split Bus: Vertical buses divided into individual vertical sections.

E. Conductor Connectors: Suitable for use with conductor material and sizes.

1. Material: Hard-drawn copper, 98 percent conductivity.

2. Main and Neutral Lugs: Mechanical type.

3. Ground Lugs and Bus-Configured Terminators: Mechanical type.

4. Feed-Through Lugs: Mechanical type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.

5. Sub-feed (Double) Lugs: Mechanical type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.

6. Gutter-Tap Lugs: Mechanical type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.

7. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus.

F. Service Equipment Label: NRTL labeled for use as service equipment for panelboards or load centers with one or more main service disconnecting and over-current protective devices.

G. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

H. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals. Series-connected ratings are not acceptable.

2.02 DISTRIBUTION PANELBOARDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square D / Schneider Electric

2. Cutler-Hammer / Eaton

3. General Electric / ABB

4. Siemens

B. Panelboards: NEMA PB 1, power and feeder distribution type.

C. Doors: Secured with vault-type latch with tumbler lock; keyed alike.

1. For doors more than 36 inches high, provide two latches, keyed alike.

D. Mains: Circuit breaker.

E. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers.

F. Branch Over-current Protective Devices for Circuit-Breaker Frame Sizes Larger than 125 A: Bolt-on circuit breakers; plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.

G. Branch Over-current Protective Devices: Circuit Breaker.

H. Contactors in Main Bus: NEMA ICS 2, Class A, mechanically held, general-purpose controller, with same short-circuit interrupting rating as panelboard.

1. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.

2.03 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square D / Schneider Electric

2. Cutler-Hammer / Eaton

3. General Electric / ABB

4. Siemens

B. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.

C. Mains: Circuit breaker.

D. Branch Over-current Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.

E. Contactors in Main Bus: NEMA ICS 2, Class A, mechanically held, general-purpose controller, with same short-circuit interrupting rating as panelboard.

1. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.

F. Doors: Concealed hinges; secured with flush latch with tumbler lock; keyed alike.

G. Column-Type Panelboards: Narrow gutter extension, with cover, to overhead junction box equipped with ground and neutral terminal buses.

H. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals. Series-connected ratings are not acceptable.

2.04 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for over-current protective device test, inspection, maintenance, and operation.

B. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Receive, inspect, handle, and store panelboards according to NEMA PB 1.1.

B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.

C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install panelboards and accessories according to NEMA PB 1.1.

B. Equipment Mounting: Install panelboards on concrete bases, 4-inch nominal thickness.

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.

2. For panelboards, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

4. Install anchor bolts to elevations required for proper attachment to panelboards.

5. Attach panelboard to the vertical finished or structural surface behind the panelboard.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.

D. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

E. Mount top of trim 90 inches above finished floor unless otherwise indicated.

F. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box. Mount surface panelboards on 1-5/8 x 1-5/8 Unistrut not on wall surface.

G. Install over-current protective devices and controllers not already factory installed.

1. Set field-adjustable, circuit-breaker trip ranges.

H. Install filler plates in unused spaces.

I. Stub four 1-inch empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch empty conduits into raised floor space or below slab not on grade. All empty conduits shall be enclosed or sealed.

J. All conduits, junction boxes, pull boxes and entering and leaving shall be marked or label with circuit numbers.

K. Conductors inside the panelboards shall be install neat, order and workmanlike manner. Comply and refer to NEC Article 312.

L. Comply with NECA 1.

3.03 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Division 26 Section "Identification for Electrical Systems."

B. Create a directory to indicate installed circuit loads after balancing panelboard loads; incorporate Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.

C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

D. Device Nameplates: Label each branch circuit device in distribution panelboards with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

3.04 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Acceptance Testing Preparation:

1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.

2. Test continuity of each circuit.

D. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3. Perform the following infrared scan tests and inspections and prepare reports:

a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.

b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.

c. Instruments and Equipment:

1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

E. Panelboards will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection report, including a certified report that identifies panelboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.05 ADJUSTING

A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as indicated.

C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes.

1. Measure as directed during period of normal system loading.

2. Perform load-balancing circuit changes outside normal occupancy/working schedule of the facility and at time directed. Avoid disrupting critical 24-hour services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.

3. After circuit changes, recheck loads during normal load period. Record all load readings before and after changes and submit test records.

4. Tolerance: Difference exceeding 20 percent between phase loads, within a panelboard, is not acceptable. Rebalance and recheck as necessary to meet this minimum requirement.

3.06 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

B. Physically protect panelboards against damage. All field-repairs to be performed by and approved by factory-authorized service representative at no added cost to Owner:

1. Touch-up scratches and removed paint with original factory paint.

1. Replace dented plates and panels.

2. Repair or replace damaged or non-functional devices.

3. Replace scratched, discolored, or otherwise damaged nameplate or device identification labels.

3.1 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

C. Clean the outside and inside the switchboards free from dust.

26 27 13

ELECTRICITY METERING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes equipment for electricity metering by Owner.

1.03 DEFINITIONS

A. KY Pulse: Term used by the metering industry to describe a method of measuring consumption of electricity that is based on a relay opening and closing in response to the rotation of the disk in the meter.

B. PC: Personal computer.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For electricity-metering equipment.

1. Dimensioned plans and sections or elevation layouts.

2. Wiring Diagrams: For power, signal, and control wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features.

C. Field quality-control reports.

D. Operation and Maintenance Data. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Application and operating software documentation.

2. Software licenses.

3. Software service agreement.

4. Hard copies of manufacturer's operating specifications, design user's guides for software and hardware, and PDF files on CD-ROM of the hard-copy Submittal.

1.05 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Receive, store, and handle modular meter center according to NECA 400.

1.07 PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:

1. Notify Owner no fewer than two weeks in advance of proposed interruption of electrical service.

2. Do not proceed with interruption of electrical service without Owner's written permission.

1.08 COORDINATION

A. Electrical Service Connections: Coordinate with utility companies and components they furnish as follows:

1. Comply with requirements of utilities providing electrical power services.

2. Coordinate installation and connection of utilities and services, including provision for electricity-metering components.

1.09 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning with Substantial Completion, provide software support for two years.

B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software.

1. Provide 30 days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade his computer equipment if necessary.

PART 2 - PRODUCTS

2.01 EQUIPMENT FOR ELECTRICITY METERING BY OWNER

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square D / Schneider Electric
2. E-Mon
3. National Meter Industries
4. General Electric / ABB
5. Eaton

B. General Requirements for Owner's Meters:

1. Comply with UL 1244.
2. Meters used for billing shall have an accuracy of 1.0 percent of reading, complying with requirements in ANSI C12.20.
3. Enclosure: NEMA 250, Type 1 minimum, with hasp for padlocking or sealing.
4. Identification: Comply with requirements in Division 26 Section "Identification for Electrical Systems."
5. Memory Backup: Self-contained to maintain memory throughout power outages of 72 hours, minimum.
6. Sensors: Current-sensing type, with current or voltage output, selected for optimum range and accuracy for meters indicated for this application.
   a. Type: Split and solid core.
7. Current-Transformer Cabinet: Listed or recommended by metering equipment manufacturer for use with sensors indicated.
8. Building Automation System (BAS) Interface: One digital KY pulse to a user-definable increment of energy measurement. Match signal to BAS input and arrange to convey the instantaneous, integrated, demand level measured by meter to provide data for processing and possible programmed demand control action by destination system.

C. Kilowatt-hour Meter: Electronic three-phase meters, measuring electricity used.

1. Voltage and Phase Configuration: Meter shall be designed for use on circuits with voltage rating and phase configuration indicated for its application.
2. Display: LCD with characters not less than 0.25-inch-high, indicating accumulative kilowatt-hours and current kilowatt load. Retain accumulated kilowatt-hour in a nonvolatile memory, until reset.
3. Display: Digital electromechanical counter, indicating accumulative kilowatt-hours.

D. Kilowatt-hour/Demand Meter: Electronic three-phase meters, measuring electricity use and demand. Demand shall be integrated over a 15-minute interval.

1. Voltage and Phase Configuration: Meter shall be designed for use on circuits with voltage rating and phase configuration indicated for its application.

2. Display: LCD with characters not less than 0.25-inch-high, indicating accumulative kilowatt-hours, current time and date, current demand, and historic peak demand, and time and date of historic peak demand. Retain accumulated kilowatt-hour and historic peak demand in a nonvolatile memory, until reset.

E. Data Transmission Cable: Transmit KY pulse data over Class 1 control-circuit conductors in raceway. Comply with Division 26 Section "Control-Voltage Electrical Power Cables."

F. Software: PC-based, a product of meter manufacturer, suitable for calculation of utility cost allocation and billing.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Comply with equipment installation requirements in NECA 1.

B. Install meters furnished by utility company. Install raceways and equipment according to utility company's written requirements. Provide empty conduits for metering leads and extend grounding connections as required by utility company.

C. Install modular meter center according to NECA 400 switchboard installation requirements.

3.02 IDENTIFICATION

A. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

1. Series Combination Warning Label: Self-adhesive type, with text as required by NFPA 70.

2. Equipment Identification Labels: Adhesive film labels with clear protective overlay. For residential meters, provide an additional card holder suitable for typewritten card with occupant's name.

3.03 FIELD QUALITY CONTROL

A. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:

1. Connect a load of known kilowatt rating, 15 kW minimum, to a circuit supplied by metered feeder.

2. Turn off circuits supplied by metered feeder and secure them in off condition.

3. Run test load continuously for eight hours minimum, or longer, to obtain a measurable meter indication. Use test-load placement and setting that ensures continuous, safe operation.

4. Check and record meter reading at end of test period and compare with actual electricity used, based on test-load rating, duration of test, and sample measurements of supply voltage at test-load connection. Record test results.

C. Electricity metering will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

END OF SECTION 26 27 13

26 27 26

WIRING DEVICES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Receptacles, receptacles with integral GFCI, and associated device plates.
2. Twist-locking receptacles.
3. Receptacles with integral surge suppression units.
4. Hospital Grade
5. Wall-box motion sensors.
6. Isolated-ground receptacles.
7. Snap switches and wall-box dimmers.
8. Wall-switch and exterior occupancy sensors.
9. Communications outlets.
10. Pendant cord-connector devices.
11. Cord and plug sets.
12. Floor service outlets, poke-through assemblies, service poles, and multi-outlet assemblies.

1.03 DEFINITIONS

A. EMI: Electromagnetic interference.

B. GFCI: Ground-fault circuit interrupter.

C. Pigtail: Short lead used to connect a device to a branch-circuit conductor.

D. RFI: Radio-frequency interference.

E. SPD: Surge suppressor protective device.

F. UTP: Unshielded twisted pair.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: List of legends and description of materials and process used for pre-marking wall plates.

C. Samples: One for each type of device and wall plate specified, in each color specified.

D. Field quality-control test reports.

E. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing label warnings and instruction manuals that include labeling conditions.

1.05 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of wiring device and associated wall plate through one source from a single manufacturer. Insofar as they are available, obtain all wiring devices and associated wall plates from a single manufacturer and one source.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with NFPA 70.

1.06 COORDINATION

A. Receptacles for Owner-Furnished Equipment: Match plug configuration.

1. Cord and Plug Sets: Match equipment requirements.

1.07 EXTRA MATERIALS

A. Furnish extra materials described in subparagraphs below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Service/Power Poles: One for every 10, but no less than one.

2. Floor Service Outlet Assemblies: One for every 10 but no less than one.

3. Poke-Through, Fire-Rated Closure Plugs: One for every five floor service outlets installed, but no fewer than two.

4. TVSS Receptacles: One for every 10 of each type installed, but no fewer than two of each type.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers' Names: Shortened versions (shown in parentheses) of the following manufacturers' names are used in other Part 2 articles:

1. Pass & Seymour/Legrand

2. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).

3. Leviton Mfg. Company Inc. (Leviton).

2.02 STRAIGHT BLADE RECEPTACLES

A. Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pass & Seymour/Legrand ; 5381 (single), 5352 (duplex).

b. Hubbell; HBL5351 (single), CR5352 (duplex).

c. Leviton; 5891 (single), 5352 (duplex).

B. Tamper-Resistant Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pass & Seymour; 63H

b. Hubbell; HBL8300SG.

c. Leviton; 8300-SGG.

2. Description: Labeled to comply with NFPA 70, "Health Care Facilities" Article, "Pediatric Locations" Section.

2.03 GFCI RECEPTACLES

A. General Description: Straight blade, feed-through type. Comply with NEMA WD 1, NEMA WD 6, UL 498, and UL 943, Class A, and include indicator light that is lighted when device is tripped.

B. Duplex GFCI Convenience Receptacles, 125 V, 20 A:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pass & Seymour/Legrand; 2084.

2.04 TWIST-LOCKING RECEPTACLES

A. Single Receptacles: Comply with NEMA WD 1, NEMA WD 6 configuration and ratings as indicated on Drawings, and UL 498.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pass & Seymour/Legrand

b. Hubbell

c. Leviton

B. Isolated-Ground, Single Receptacles:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Hubbell

b. Leviton

c. Pass & Seymour/Legrand

2. Description: Comply with NEMA WD 1, NEMA WD 6 configuration L5-20R, and UL 498. Equipment grounding contacts shall be connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts.

2.05 PENDANT CORD-CONNECTOR DEVICES

A. Description: Matching, locking-type plug and receptacle body connector; NEMA WD 6 configurations L5-20P and L5-20R, heavy-duty grade.

1. Body: Nylon with screw-open cable-gripping jaws and provision for attaching external cable grip.

2. External Cable Grip: Woven wire-mesh type made of high-strength galvanized-steel wire strand, matched to cable diameter, and with attachment provision designed for corresponding connector.

2.06 CORD AND PLUG SETS

A. Description: Match voltage and current ratings and number of conductors to requirements of equipment being connected.

1. Cord: Rubber-insulated, stranded-copper conductors, with Type SOW-A jacket; with green-insulated grounding conductor and equipment-rating ampacity plus a minimum of 30 percent.

2. Plug: Nylon body and integral cable-clamping jaws. Match cord and receptacle type for connection.

2.07 SNAP SWITCHES

A. Comply with NEMA WD 1 and UL 20.

B. Switches, 120/277 V, 20 A:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pass & Seymour/Legrand; 20AC1 (single pole), 20AC2 (two pole), 20AC3 (three way), 20AC4 (four way).

b. Hubbell; CS1221 (single pole), CS1222 (two pole), CS1223 (three way), CS1224 (four way).

c. Leviton; 1221-2 (single pole), 1222-2 (two pole), 1223-2 (three way), 1224-2 (four way).

C. Pilot Light Switches, 20 A:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pass & Seymour/Legrand; PS20AC1-PLR for 120 V.

b. Hubbell; HPL1221PL for 120 V and 277 V.

c. Leviton; 1221-PLR for 120 V, 1221-7PLR for 277 V.

2. Description: Single pole, with neon-lighted handle, illuminated when switch is "ON."

D. Key-Operated Switches, 120/277 V, 20 A:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pass & Seymour/Legrand; PS20AC1-L.

b. Hubbell; HBL1221L.

c. Leviton; 1221-2L.

2. Description: Single pole, with factory-supplied key in lieu of switch handle.

E. Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A; for use with mechanically held lighting contactors.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pass & Seymour/Legrand; 1251.

b. Hubbell; HBL1557.

c. Leviton; 1257.

F. Key-Operated, Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A; for use with mechanically held lighting contactors, with factory-supplied key in lieu of switch handle.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pass & Seymour/Legrand; 1251L.

b. Hubbell; HBL1557L.

c. Leviton; 1257L.

2.08 WALL-BOX DIMMERS

A. Dimmer Switches: By same manufacturer of other devices to match dimming technology of connected light fixtures.

B. Control: Continuously adjustable slider; with single-pole or three-way switching. Comply with UL 1472.

2.09 OCCUPANCY SENSORS

A. Wall-Switch Sensors:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pass & Seymour/Legrand

b. Hubbell

c. Leviton

d. Watt Stopper

2. Description: Dual technology Passive-infrared type/Ultrasonic, 120/277 V, adjustable time delay up to 30 minutes, 180-degree field of view, with a minimum coverage area of 900 sq. ft.

B. Long-Range Wall-Switch Sensors:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Hubbell; ATD1600WRP.

b. Leviton; ODW12-MRW.

c. Watt Stopper (The); DT-200.

d. Pass & Seymour/Legrand

2. Description: Dual technology, with both passive-infrared- and ultrasonic-type sensing, 120/277 V, adjustable time delay up to 30 minutes, 110-degree field of view, and a minimum coverage area of 1200 sq. ft.

C. Wide-Range Wall-Switch Sensors:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Hubbell; ATP120HBRP.

b. Leviton; ODWHB-IRW.

c. Pass & Seymour; HS1001.

d. Watt Stopper (The); CX-100-3.

2. Description: Passive-infrared type, 120/277 V, adjustable time delay up to 30 minutes, 150-degree field of view, with a minimum coverage area of 1200 sq. ft.

D. Exterior Occupancy Sensors:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Leviton; PS200-10.

b. Watt Stopper (The); EW-100-120.

c. Pass & Seymour/Legrand

2. Description: Passive-infrared type, 120/277 V, weatherproof, adjustable time delay up to 15 minutes, 180-degree field of view, and 110-foot detection range. Minimum switch rating: 1000-W incandescent, 500-VA fluorescent.

2.10 COMMUNICATIONS OUTLETS

A. Telephone Outlet:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Cooper; 3560-6.

b. Leviton; 40649.

2. Description: Single RJ-45 jack for terminating 100-ohm, balanced, four-pair UTP; TIA/EIA-568-B.1; complying with Category 5e. Comply with UL 1863.

B. Combination TV and Telephone Outlet:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Cooper; 3562.

b. Leviton; 40595.

2. Description: Single RJ-45 jack for 100-ohm, balanced, four-pair UTP; TIA/EIA-568-B.1; complying with Category 5e; and one Type F coaxial cable connector.

2.11 WALL PLATES

A. Single and combination types to be 302/304 stainless steel.

B. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with type 3R weather-resistant thermoplastic with lockable cover.

2.12 FLOOR SERVICE FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Hubbell Incorporated; System One.

B. Type: Modular, flush-type, dual-service units suitable for wiring method used.

C. Compartments: Barrier separates power from voice and data communication cabling.

D. Service Plate: Rectangular, solid brass, coordinate finish with Architect prior to ordering.

E. Power Receptacle: NEMA WD 6 configuration 5-20R, gray finish, unless otherwise indicated.

F. Voice and Data Communication Outlet: Blank cover with bushed cable opening.

2.13 POKE-THROUGH ASSEMBLIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Hubbell Incorporated; System One.

B. Description: Factory-fabricated and -wired assembly of below-floor junction box with multi-channeled, through-floor raceway/fire-stop unit and detachable matching floor service outlet assembly.

1. Service Outlet Assembly: Pedestal type with services indicated.

2. Size: Selected to fit nominal 3-inch cored holes in floor and matched to floor thickness.

3. Fire Rating: Unit is listed and labeled for fire rating of floor-ceiling assembly.

4. Closure Plug: Arranged to close unused 3-inch cored openings and reestablish fire rating of floor.

5. Wiring Raceways and Compartments: For a minimum of four No. 12 AWG conductors and a minimum of four, 4-pair, Category 5e voice and data communication cables.

2.14 MULTIOUTLET ASSEMBLIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Hubbell Incorporated; Wiring Device-Kellems.

B. Components of Assemblies: Products from a single manufacturer designed for use as a complete, matching assembly of raceways and receptacles.

C. Raceway Material: Metal, with manufacturer's standard finish.

D. Wire: Minimum No. 12 AWG.

2.15 SERVICE POLES

A. Description: Factory-assembled and -wired units to extend power and voice and data communication from distribution wiring concealed in ceiling to devices or outlets in pole near floor.

1. Poles: Nominal 2.5-inch square cross section, with height adequate to extend from floor to at least 6 inches above ceiling, and with separate channels for power wiring and voice and data communication cabling.

2. Mounting: Ceiling trim flange with concealed bracing arranged for positive connection to ceiling supports; with pole foot and carpet pad attachment.

3. Finishes: Manufacturer's standard painted finish and trim combination.

4. Wiring: Sized for minimum of five No. 12 AWG power and ground conductors and a minimum of four, 4-pair, Category 3 or 5 voice and data communication cables.

5. Power Receptacles: Two duplex, 20-A, heavy-duty, NEMA WD 6 configuration 5-20R units.

6. Voice and Data Communication Outlets: Blank insert with bushed cable opening.

2.16 FINISHES

A. Color: Wiring device catalog numbers in Section Text do not designate device color.

1. Wiring Devices Connected to Normal Power System: Ivory, or as selected by Architect unless otherwise indicated or required by NFPA 70 or device listing.

2. Wiring Devices Connected to Emergency Power System: Red.

3. TVSS Devices: Blue.

4. Isolated-Ground Receptacles: Orange.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Comply with NECA 1, including the mounting heights listed in that standard, unless otherwise noted.

B. Coordination with Other Trades:

1. Take steps to insure that devices and their boxes are protected. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of the boxes. Cut holes need not to be more than 1/8” inch in all sides of the box.

2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.

3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.

4. Boxes and conduit shall be rigidly supported to the wall. Do not use spacer type supports.

5. Install wiring devices after all wall preparation, including painting, is complete.

6. Do not use extension ring in any applications.

C. Conductors:

1. Do not strip insulation from conductors until just before they are spliced or terminated on devices.

2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.

3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300.14, without pigtails. Multiple duplex receptacles shall be use pigtail and use the screw terminals to terminate the wire not the back of the receptacle outlet.

4. Conductors shall be identified with circuit number at the box.

5. Existing Conductors:
Cut back and pigtail or replace all damaged conductors.

a. Straighten conductors that remain and remove corrosion and foreign matter.

b. Pigtailing existing conductors is permitted provided the outlet box is large enough.

D. Device Installation:

1. Replace all devices that have been in temporary use during construction or that show signs that they were installed before building finishing operations were complete.

2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.

3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.

4. Connect devices to branch circuits using pigtails that are not less than 6 inches in length.

5. Use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, 2/3 to 3/4 of the way around terminal screw.

6. Use a torque screwdriver when a torque is recommended or required by the manufacturer.

7. When conductors larger than No. 12 AWG are installed on 20-A circuits, splice No. 12 AWG pigtails for device connections.

8. Tighten unused terminal screws on the device.

9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.

E. Receptacle Orientation:

1. Install ground pin of vertically mounted receptacles down, and on horizontally mounted receptacles to the right.

2. Install hospital-grade receptacles in patient-care areas with the ground pin or neutral blade at the top.

F. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.

G. Dimmers:

1. Install dimmers within terms of their listing.

2. Verify that dimmers used for fan speed control are listed for that application.

3. Install unshared neutral conductors on line and load side of dimmers according to manufacturers' device listing conditions in the written instructions.

H. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multi-gang wall plates.

I. Adjust locations of floor service outlets and service poles to suit arrangement of partitions and furnishings.

3.02 IDENTIFICATION

A. Comply with Division 26 Section "Identification for Electrical Systems."

1. Receptacles: Identify panelboard and circuit number from which served. Use hot, stamped or engraved machine printing with black-filled lettering on face of plate, and durable wire markers or tags inside outlet boxes.

2. Receptacles: Label or marked the cover with panel and circuit number back and front cover.

3.03 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

1. In healthcare facilities, prepare reports that comply with recommendations in NFPA 99.

2. Test Instruments: Use instruments that comply with UL 1436.

3. Test Instrument for Convenience Receptacles: Digital wiring analyzer with digital readout or illuminated LED indicators of measurement.

B. Tests for Convenience Receptacles:

1. Line Voltage: Acceptable range is 105 to 132 V.

2. Percent Voltage Drop under 15-A Load: A value of 6 percent or higher is not acceptable.

3. Ground Impedance: Values of up to 2 ohms are acceptable.

4. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.

5. Using the test plug, verify that the device and its outlet box are securely mounted.

6. The tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.

END OF SECTION 26 27 26

26 28 13

FUSES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Cartridge fuses rated 600-V ac and less for use in control circuits, enclosed switches, panelboards, switchboards, enclosed controllers, and motor-control centers.

2. Plug fuses rated 125-V ac and less for use in plug-fuse-type enclosed switches, fuse-holders, and panelboards.

3. Plug-fuse adapters for use in Edison-base, plug-fuse sockets.

4. Spare-fuse cabinets.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material, dimensions, descriptions of individual components, and finishes for spare-fuse cabinets. Include the following for each fuse type indicated:

1. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.

a. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.

b. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.

2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.

3. Current-limitation curves for fuses with current-limiting characteristics.

4. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.

5. Coordination charts and tables and related data.

6. Fuse sizes for elevator feeders and elevator disconnect switches.

B. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Ambient temperature adjustment information.

2. Current-limitation curves for fuses with current-limiting characteristics.

3. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.

4. Coordination charts and tables and related data.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain fuses, for use within a specific product or circuit, from single source from single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with NEMA FU 1 for cartridge fuses.

D. Comply with NFPA 70.

E. Comply with UL 248-11 for plug fuses.

1.05 COORDINATION

A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels.

1.06 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper Bussmann, Inc.

2. Littelfuse, Inc.

2.02 CARTRIDGE FUSES

A. Characteristics: NEMA FU 1, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.

2.03 PLUG FUSES

A. Characteristics: UL 248-11, nonrenewable plug fuses; 125-V ac.

2.04 PLUG-FUSE ADAPTERS

A. Characteristics: Adapters for using Type S, rejection-base plug fuses in Edison-base fuse-holders or sockets; ampere ratings matching fuse ratings; irremovable once installed.

2.05 SPARE-FUSE CABINET

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.

B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.

C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.

D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 FUSE APPLICATIONS

A. Cartridge Fuses:

1. Service Entrance: Class L, fast acting.

2. Feeders: Class L, fast acting

3. Motor Branch Circuits: Class RK1 and Class RK5, time delay.

4. Other Branch Circuits: Class J, fast acting.

5. Control Circuits: Class CC, fast acting.

3.03 INSTALLATION

A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.

B. Install plug-fuse adapters in Edison-base fuse-holders and sockets. Ensure that adapters are irremovable once installed.

C. Install spare-fuse cabinet(s).

3.04 IDENTIFICATION

A. Install labels complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems" and indicating fuse replacement information on inside door of each fused switch and adjacent to each fuse block, socket, and holder.

ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Fusible switches.
2. Non-fusible switches.
3. Receptacle switches.
4. Shunt trip switches.
5. Molded-case circuit breakers.
6. Enclosures.

1.03 DEFINITIONS

A. NC: Normally closed.

B. NO: Normally open.

C. SPDT: Single pole, double throw.

1.04 SUBMITTALS

A. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

1. Enclosure types and details for types other than NEMA 250, Type 1.
2. Current and voltage ratings.
3. Short-circuit current ratings (interrupting and withstand, as appropriate).
4. Detail features, characteristics, ratings, and factory settings of individual over-current protective devices, accessories, and auxiliary components.

5. Include time-current coordination curves (average melt) for each type and rating of over-current protective device; include selectable ranges for each type of over-current protective device.

B. Shop Drawings: For enclosed switches and circuit breakers. Include plans, elevations, sections, details, and attachments to other work.

1. Wiring Diagrams: For power, signal, and control wiring.

C. Qualification Data: For qualified testing agency.

D. Seismic Qualification Certificates: For enclosed switches and circuit breakers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

E. Field quality-control reports.

1. Test procedures used.

2. Test results that comply with requirements.

3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

F. Manufacturer's field service report.

G. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.

2. Time-current coordination curves (average melt) for each type and rating of over-current protective device; include selectable ranges for each type of over-current protective device.

1.05 QUALITY ASSURANCE

A. Source Limitations: Obtain enclosed switches and circuit breakers, over-current protective devices, components, and accessories, within same product category, from single source from single manufacturer.

B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NFPA 70.

1.06 COORDINATION

A. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

1.07 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

2. Fuse Pullers: Two for each size and type.

PART 2 - PRODUCTS

2.01 FUSIBLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square D / Schneider Electric

2. Cutler-Hammer / Eaton

3. General Electric / ABB

4. Siemens

B. Type HD, Heavy Duty, Six Pole, Single Throw, 600-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

C. Type HD, Heavy Duty, Double Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.

2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.

3. Isolated Ground Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.

4. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.

5. Auxiliary Contact Kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.

6. Hook stick Handle: Allows use of a hook stick to operate the handle.

7. Lugs: Mechanical type, suitable for number, size, and conductor material.

8. Service-Rated Switches: Labeled for use as service equipment.

9. Accessory Control Power Voltage: Remote mounted and powered; 120-V ac.

2.02 NONFUSIBLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square D / Schneider Electric

2. Cutler-Hammer / Eaton

3. General Electric / ABB

4. Siemens

B. Type HD, Heavy Duty, Single Throw, 240, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

C. Type HD, Heavy Duty, Six Pole, Single Throw, 240, 600-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Type HD, Heavy Duty, Double Throw, 240, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

E. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.

2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.

3. Isolated Ground Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.

4. Auxiliary Contact Kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.

5. Hook-stick Handle: Allows use of a hook-stick to operate the handle.

6. Lugs: Mechanical type, suitable for number, size, and conductor material.

7. Accessory Control Power Voltage: Remote mounted and powered; 120-V ac.

2.03 MOLDED-CASE CIRCUIT BREAKERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square D / Schneider Electric

2. Cutler-Hammer / Eaton

3. General Electric / ABB

4. Siemens

B. General Requirements: Comply with UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents.

C. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.

D. Adjustable, Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.

E. Electronic Trip Circuit Breakers: Field-replaceable rating plug, rms sensing, with the following field-adjustable settings:

1. Instantaneous trip.

2. Long- and short-time pickup levels.

3. Long- and short-time time adjustments.

4. Ground-fault pickup level, time delay, and I^2t response.

F. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller, and let-through ratings less than NEMA FU 1, RK-5.

G. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker and trip activation on fuse opening or on opening of fuse compartment door.

H. Ground-Fault, Circuit-Interrupter (GFCI) Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).

I. Ground-Fault, Equipment-Protection (GFEP) Circuit Breakers: With Class B ground-fault protection (30-mA trip).

J. Features and Accessories:

1. Standard frame sizes, trip ratings, and number of poles.

2. Lugs: Mechanical type, suitable for number, size, trip ratings, and conductor material.

3. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge lighting circuits.

4. Ground-Fault Protection: Comply with UL 1053; integrally mounted, self-powered type with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.

5. Communication Capability: Integral communication module with functions and features compatible with power monitoring and control system, specified in Division 26 Section "Electrical Power Monitoring and Control."

6. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.

7. Under-voltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.

8. Auxiliary Contacts: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.

9. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.

10. Electrical Operator: Provide remote control for on, off, and reset operations.

2.04 ENCLOSURES

A. Enclosed Switches and Circuit Breakers: NEMA AB 1, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.

1. Indoor, Dry and Clean Locations: NEMA 250, Type 1.

2. Outdoor Locations: NEMA 250, Type 3R.

3. Kitchen and Wash-Down Areas: NEMA 250, Type 4X, SS-304.

4. Other Wet or Damp, Indoor Locations: NEMA 250, Type 4X SS-304.

5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Non-corrosive Liquids: NEMA 250, Type 12.

6. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.

B. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

D. Install fuses in fusible devices.

E. Comply with NECA 1.

3.03 IDENTIFICATION

A. Comply with requirements in Division 26 Section "Identification for Electrical Systems."

1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.

2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.04 FIELD QUALITY CONTROL

A. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each enclosed switch and circuit breaker, component, connecting supply, feeder, and control circuit.

2. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3. Perform the following infrared scan tests and inspections and prepare reports:

a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each enclosed switch and circuit breaker. Remove front panels so joints and connections are accessible to portable scanner.

b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each enclosed switch and circuit breaker 11 months after date of Substantial Completion.

c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

D. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection report, including a certified report that identifies enclosed switches and circuit breakers and that describes scanning results. Include notation of deficiencies detected, remedial action taken and observations after remedial action.

3.05 ADJUSTING

A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

END OF SECTION 26 28 16

This page intentionally left blank.

26 29 13

ENCLOSED CONTROLLERS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes the following enclosed controllers rated 600V and less:

1. Full-voltage manual.

2. Full-voltage magnetic.

3. Reduced-voltage magnetic.

4. Reduced-voltage solid state.

5. Multi-speed.

B. Related Section:

1. Division 26 Section "Variable-Frequency Motor Controllers" for general-purpose, ac, adjustable-frequency, pulse-width-modulated controllers for use on variable torque loads in ranges up to 200HP.

1.03 DEFINITIONS

A. CPT: Control power transformer.

B. MCCB: Molded-case circuit breaker.

C. MCP: Motor circuit protector.

D. N.C.: Normally closed.

E. N.O.: Normally open.

F. OCPD: Over-current protective device.

G. SCR: Silicon-controlled rectifier.

1.04 SUBMITTALS

A. Product Data: For each type of enclosed controller. Include manufacturer's technical data on features, performance, electrical characteristics, ratings, and enclosure types and finishes.

B. Shop Drawings: For each enclosed controller. Include dimensioned plans, elevations, sections, details, and required clearances and service spaces around controller enclosures.

1. Show tabulations of the following:

a. Each installed unit's type and details.

b. Factory-installed devices.

c. Nameplate legends.

d. Short-circuit current rating of integrated unit.

e. Listed and labeled for integrated short-circuit current (withstand) rating of OCPDs in combination controllers by an NRTL acceptable to authorities having jurisdiction.

f. Features, characteristics, ratings, and factory settings of individual OCPDs in combination controllers.

2. Wiring Diagrams: For power, signal, and control wiring.

C. Qualification Data: For qualified testing agency.

D. Seismic Qualification Certificates: For enclosed controllers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

E. Field quality-control reports.

F. Operation and Maintenance Data: For enclosed controllers to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Routine maintenance requirements for enclosed controllers and installed components.

2. Manufacturer's written instructions for testing and adjusting circuit breaker and MCP trip settings.

3. Manufacturer's written instructions for setting field-adjustable overload relays.

4. Manufacturer's written instructions for testing, adjusting, and reprogramming reduced-voltage solid-state controllers.

G. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.

H. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor running overload protection suit actual motors to be protected.

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with NFPA 70.

D. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store enclosed controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

B. If stored in areas subject to weather, cover enclosed controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers.

1.07 PROJECT CONDITIONS

A. Interruption of Existing Electrical Systems: Do not interrupt electrical systems in facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:

1. Notify Owner no fewer than 10 days in advance of proposed interruption of electrical systems.

2. Indicate method of providing temporary utilities.

3. Do not proceed with interruption of electrical systems without Owner's written permission.

4. Comply with NFPA 70E.

1.08 COORDINATION

A. Coordinate layout and installation of enclosed controllers with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

C. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

1.09 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than 3 of each size and type.

2. Control Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than 2 of each size and type.

3. Indicating Lights: 2 of each type and color installed.

4. Auxiliary Contacts: Furnish 1 spare(s) for each size and type of magnetic controller installed.

5. Power Contacts: Furnish 3 spares for each size and type of magnetic contactor installed.

PART 2 - PRODUCTS

2.01 FULL-VOLTAGE CONTROLLERS

A. General Requirements for Full-Voltage Controllers: Comply with NEMA ICS 2, general purpose, Class A.

B. Motor-Starting Switches: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off or on.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Square D.

b. GE.

c. Cutler-Hammer.

d. Asco

2. Configuration: Non-Reversing.

3. Surface mounting.

4. Red pilot light.

C. Fractional Horsepower Manual Controllers: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following

a. Square D.

b. GE.

c. Cutler-Hammer.

d. Asco

2. Configuration: Non-reversing.

3. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, Class 10 tripping characteristics; heaters matched to nameplate full-load current of actual protected motor; external reset push button.

4. Surface mounting.

5. Not all manufacturers offer a green pilot light; pilot lights are not available in hazardous and some cast-type enclosures.

6. Red pilot light.

D. Magnetic Controllers: Full voltage, across the line, electrically held.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Square D.

b. GE.

c. Cutler-Hammer.

d. Asco

2. Configuration: Non-reversing.

3. Power Contacts: Totally enclosed, double-break, silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.

4. Control Circuits: 120 V ac; obtained from integral CPT, with primary and secondary fuses and sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

5. Solid-State Overload Relay:

   a. Switch or dial selectable for motor running overload protection.

   b. Sensors in each phase.

   c. Class 10/20 selectable tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

   d. Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.

   e. Analog communication module.

6. External overload reset push button.

E. Combination Magnetic Controller: Factory-assembled combination of magnetic controller, OCPD, and disconnecting means.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following

   a. Square D / Schneider Electric

   b. Cutler-Hammer / Eaton

   c. General Electric / ABB

   d. Siemens

2. MCP Disconnecting Means:

   a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

   b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

   c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.

   d. N.C. alarm contact that operates only when MCP has tripped.

   e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

3. MCCB Disconnecting Means:

    a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.

    b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.

    c. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

    d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.

    e. N.C. alarm contact that operates only when MCCB has tripped.

2.02 ENCLOSURES

A. Enclosed Controllers: NEMA ICS 6, to comply with environmental conditions at installed location.

1. Dry and Clean Indoor Locations: Type 1.

2. Outdoor Locations: Type 3R.

3. Kitchen and Wash-Down Areas: Type 4X, stainless steel.

4. Other Wet or Damp Indoor Locations: Type 4X-ss.

5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Non-corrosive Liquids: Type 12.

6. Hazardous Areas Indicated on Drawings: Type 9.

2.03 ACCESSORIES

A. General Requirements for Control Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.

1. Push Buttons, Pilot Lights, and Selector Switches: Heavy duty, oil-tight type.

B. N.C., N.O. auxiliary contact(s).

C. Control Relays: Auxiliary and adjustable solid-state time-delay relays.

D. Phase-Failure, Phase-Reversal, and Under-voltage and Over-voltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable under-voltage, over-voltage, and time-delay settings.

E. Breather and drain assemblies, to maintain interior pressure and release condensation in Type 4X enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

F. Space heaters, with N.C. auxiliary contacts, to mitigate condensation in Type 3R enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

G. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.

H. Cover gaskets for Type 1 enclosures.

I. Terminals for connecting power factor correction capacitors to the load side of overload relays.

J. Spare control wiring terminal blocks, quantity as indicated; unwired.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and surfaces to receive enclosed controllers, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Examine enclosed controllers before installation. Reject enclosed controllers that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Wall-Mounted Controllers: Install enclosed controllers on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."

B. Floor-Mounted Controllers: Install enclosed controllers on 4-inch nominal-thickness concrete base. Comply with requirements for concrete base specified in Division 03 Section.

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.

2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

4. Install anchor bolts to elevations required for proper attachment to supported equipment.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

D. Install fuses in each fusible-switch enclosed controller.

E. Install fuses in control circuits if not factory installed. Comply with requirements in Division 26 Section "Fuses."

F. Install heaters in thermal overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.

G. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.

H. Install power factor correction capacitors. Connect to the line/load side of overload relays. If connected to the load side of overload relays, adjust overload heater sizes to accommodate the reduced motor full-load currents.

I. Comply with NECA 1.

3.03 IDENTIFICATION

A. Identify enclosed controllers, components, and control wiring. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.

2. Label each enclosure with engraved nameplate.

3. Label each enclosure-mounted control and pilot device.

3.04 CONTROL WIRING INSTALLATION

A. Install wiring between enclosed controllers and remote devices. Comply with requirements in Division 26 Section "Control-Voltage Electrical Power Cables."

B. Bundle, train, and support wiring in enclosures. Use ‘Panduit’ where possible.

C. Connect selector switches and other automatic-control selection devices where applicable.

1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switch is in manual-control position.

2. Connect selector switches with enclosed-controller circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.05 FIELD QUALITY CONTROL

A. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each enclosed controller, component, connecting supply, feeder, and control circuit.

2. Test continuity of each circuit.

C. Tests and Inspections:

1. Inspect controllers, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.

2. Test insulation resistance for each enclosed-controller element, component, connecting motor supply, feeder, and control circuits.

3. Test continuity of each circuit.

4. Verify that voltages at controller locations are within plus or minus 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Owner before starting the motor(s).

5. Test each motor for proper phase rotation.

6. Perform each electrical test and visual and mechanical inspection stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

8. Perform the following infrared (thermo graphic) scan tests and inspections and prepare reports:

a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each multi-pole enclosed controller. Remove front panels so joints and connections are accessible to portable scanner.

b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each multi-pole enclosed controller 11 months after date of Substantial Completion.

c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

D. Enclosed controllers will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports including a certified report that identifies enclosed controllers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.06 ADJUSTING

A. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.

B. Adjust overload-relay heaters or settings if power factor correction capacitors are connected to the load side of the overload relays.

C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable instantaneous trip elements. Initially adjust to six times the motor nameplate full-load ampere ratings and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Engineer before increasing settings.

D. Set field-adjustable switches and program microprocessors for required start and stop sequences in reduced-voltage solid-state controllers.

3.07 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.

B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.08 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain enclosed controllers.

26 32 13

ENGINE GENERATORS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes packaged engine-generator sets for emergency power supply with the following features:

1. Gas engine.

2. Unit-mounted cooling system.

3. Unit-mounted and Remote-mounting control and monitoring.

4. Performance requirements for sensitive loads.

5. Outdoor enclosure.

B. Related Sections include the following:

1. Division 26 Section "Transfer Switches" for transfer switches including sensors and relays to initiate automatic-starting and -stopping signals for engine-generator sets.

1.03 DEFINITIONS

A. Retain abbreviation and terms that remain after this Section has been edited.

B. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.

C. LP: Liquid petroleum.

1.04 SUBMITTALS

A. Product Data: For each type of packaged engine generator indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. In addition, include the following:

1. Thermal damage curve for generator.

2. Time-current characteristic curves for generator protective device.

B. Coordination Drawings: Provide coordination drawings as described in 26 05 00 paragraph 1.03(C).

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Dimensioned outline plan and elevation drawings of engine-generator set and other components specified.

1. Design Calculations: Signed and sealed by a qualified professional engineer. Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

2. Vibration Isolation Base Details: Signed and sealed by a qualified professional engineer. Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include base weights.

3. Wiring Diagrams: Power, signal, and control wiring.

D. Manufacturer Seismic Qualification Certification: Submit certification that engine-generator set, batteries, battery racks, accessories, and components will withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

E. Qualification Data: For manufacturer.

F. Source quality-control test reports.

1. Certified summary of prototype-unit test report.

1. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.

2. Certified Summary of Performance Tests: Certify compliance with specified requirement to meet performance criteria for sensitive loads.

3. Report of factory test on units to be shipped for this Project, showing evidence of compliance with specified requirements.

4. Report of sound generation.

5. Report of exhaust emissions showing compliance with applicable regulations.

6. Certified Torsional Vibration Compatibility: Comply with NFPA 110.

G. Field quality-control test reports.

H. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current unit prices, and source of supply.

I. Warranty: Special warranty specified in this Section.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

1. Maintenance Proximity: Not more than four hours' normal travel time from Installer's place of business to Project site.

2. Engineering Responsibility: Preparation of data for vibration isolators and seismic restraints of engine skid mounts, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

B. Manufacturer Qualifications: A qualified manufacturer. Maintain, within 200 miles of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.

C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the International Electrical Testing Association or is a nationally recognized testing laboratory (NRTL), and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the International Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

D. Source Limitations: Obtain packaged generator sets and auxiliary components through one source from a single manufacturer.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

F. Comply with ASME B15.1.

G. Comply with NFPA 37.

H. Comply with NFPA 70.

I. Comply with NFPA 99.

J. Comply with NFPA 110 requirements for Level 1 emergency power supply system.

K. Comply with UL 2200.

L. Engine Exhaust Emissions: Comply with applicable state and local government requirements.

M. Noise Emission: Comply with applicable state and local government requirements for maximum noise level at adjacent property boundaries due to sound emitted by generator set including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.

1.06 PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:

1. Notify Owner no fewer than two days in advance of proposed interruption of electrical service.

2. Do not proceed with interruption of electrical service without Owner's written permission.

B. Environmental Conditions: Engine-generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:

1. Ambient Temperature: 5 to 40 deg C.

2. Relative Humidity: 0 to 95 percent.

3. Altitude: Sea level to 1000 feet.

2.02 COORDINATION

A. Coordinate size and location of concrete bases for package engine generators. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate size and location of roof curbs, equipment supports, and roof penetrations for remote radiators. These items are specified in Division 07 Section "Roof Accessories."

2.03 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of packaged engine generators and associated auxiliary components that fail in materials or workmanship within specified warranty period.

Warranty Period: 5 years from date of Substantial Completion.

2.04 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, provide 12 months' full maintenance by skilled employees of manufacturer's designated service organization. Include quarterly exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as required for proper operation. Provide parts and supplies same as those used in the manufacture and installation of original equipment.

2.05 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: One for every 10 of each type and rating, but no fewer than one of each.

2. Indicator Lamps: Two for every six of each type used, but no fewer than two of each.

3. Filters: One set each of lubricating oil, fuel, and combustion-air filters.

PART 3 - PRODUCTS

3.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, are limited to the following:

1. Cummins

2. Caterpillar

3. Kohler

3.02 ENGINE-GENERATOR SET

A. Factory-assembled and -tested, engine-generator set.

B. Mounting Frame: Maintain alignment of mounted components without depending on concrete foundation; and have lifting attachments.

1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and generator-set center of gravity.

C. Capacities and Characteristics:

1. Power Output Ratings: Nominal ratings as indicated.

1. Output Connections: Three-phase, four wire.

2. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.

3. Generators shall be designed with a 72 hour running capacity.

D. Generator-Set Performance:

1. Steady-State Voltage Operational Bandwidth: 3 percent of rated output voltage from no load to full load.

1. Transient Voltage Performance: Not more than 20 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within three seconds.

2. Steady-State Frequency Operational Bandwidth: 0.5 percent of rated frequency from no load to full load.

3. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.

4. Transient Frequency Performance: Less than 5 percent variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within five seconds.

5. Output Waveform: At no load, harmonic content measured line to line or line to neutral shall not exceed 5 percent total and 3 percent for single harmonics. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.

6. Sustained Short-Circuit Current: For a 3-phase, bolted short circuit at system output terminals, system shall supply a minimum of 250 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to generator system components.

7. Start Time: Comply with NFPA 110, Type 10, system requirements.

E. Generator-Set Performance for Sensitive Loads:

1. Oversizing generator compared with the rated power output of the engine is permissible to meet specified performance.

   a. Nameplate Data for Oversized Generator: Show ratings required by the Contract Documents rather than ratings that would normally be applied to generator size installed.

2. Steady-State Voltage Operational Bandwidth: 1 percent of rated output voltage from no load to full load.

3. Transient Voltage Performance: Not more than 10 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within 0.5 second.

4. Steady-State Frequency Operational Bandwidth: Plus or minus 0.25 percent of rated frequency from no load to full load.

5. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.

6. Transient Frequency Performance: Less than 2-Hz variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within three seconds.

7. Output Waveform: At no load, harmonic content measured line to neutral shall not exceed 2 percent total with no slot ripple. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.

8. Sustained Short-Circuit Current: For a 3-phase, bolted short circuit at system output terminals, system shall supply a minimum of 300 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to winding insulation or other generator system components.

9. Excitation System: Performance shall be unaffected by voltage distortion caused by nonlinear load.

   a. Provide permanent magnet excitation for power source to voltage regulator.

10. Start Time: Comply with NFPA 110, Type 10, system requirements.

3.03 ENGINE

A. Depending on NFPA 110 class and local codes, LP-gas standby may not be required for natural gas-fueled systems. Verify requirements with authorities having jurisdiction.

B. Fuel: Natural gas with automatic LP-gas standby.

C. Rated Engine Speed: 1800 rpm.

D. Maximum Piston Speed for Four-Cycle Engines: 2250 fpm.

E. Lubrication System: The following items are mounted on engine or skid:

1. Filter and Strainer: Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.

2. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.

3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.

F. Engine Fuel System:

1. Main Fuel Pump: Mounted on engine. Pump ensures adequate primary fuel flow under starting and load conditions.

1. Relief-Bypass Valve: Automatically regulates pressure in fuel line and returns excess fuel to source.

2. Dual Natural Gas with LP-Gas Backup (Vapor-Withdrawal) System:

a. Carburetor.

b. Secondary Gas Regulators: One for each fuel type.

c. Fuel-Shutoff Solenoid Valves: One for each fuel source.

d. Flexible Fuel Connectors: One for each fuel source.

G. Coolant Jacket Heater: Electric-immersion type, factory installed in coolant jacket system. Comply with NFPA 110 requirements for Level 1 equipment for heater capacity.

H. Governor: Adjustable isochronous, with speed sensing.

I. Cooling System: Closed loop, liquid cooled, with radiator factory mounted on engine-generator-set mounting frame and integral engine-driven coolant pump.

1. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.

1. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.

2. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.

3. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.

4. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.

   a. Rating: 50-psig maximum working pressure with coolant at 180 deg F, and non-collapsible under vacuum.

   b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.

J. Cooling System: Closed loop, liquid cooled, with remote radiator and integral engine-driven coolant pump.

1. Configuration: Vertical air discharge.

1. Radiator Core Tubes: Aluminum.

2. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.

3. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.

4. Fan: Driven by totally enclosed electric motor with sealed bearings.

5. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.

6. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.

K. Muffler/Silencer: Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

1. Minimum sound attenuation of 25 dB at 500 Hz.

1. Sound level measured at a distance of 10 feet from exhaust discharge after installation is complete shall be 85 dBA or less.

L. Air-Intake Filter: Standard-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.

M. Select first option in paragraph below for smaller engine-generator sets. Retain second option for units 175 kW and larger.

N. Starting System: 24-V electric, with negative ground.

1. Components: Sized so they will not be damaged during a full engine-cranking cycle with ambient temperature at maximum specified in Part 1 "Project Conditions" Article.

1. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.

2. Cranking Cycle: As required by NFPA 110 for system level specified.

3. Battery: Adequate capacity within ambient temperature range specified in Part 1 "Project Conditions" Article to provide specified cranking cycle at least twice without recharging.

4. Battery Cable: Size as recommended by engine manufacturer for cable length indicated. Include required interconnecting conductors and connection accessories.

5. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Thermostatically controlled heater shall be arranged to maintain battery above 10 deg C regardless of external ambient temperature within range specified in Part 1 "Project Conditions" Article. Include accessories required to support and fasten batteries in place.

6. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.

7. Battery Charger: Current-limiting, automatic-equalizing and float-charging type. Unit shall comply with UL 1236 and include the following features:

   a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.

   b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from minus 40 deg C to plus 60 deg C to prevent overcharging at high temperatures and undercharging at low temperatures.

   c. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.

   d. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.

   e. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.

   f. Enclosure and Mounting: NEMA 250, Type 1, wall-mounted cabinet.

3.04 CONTROL AND MONITORING

A. This Article specifies the subsystem that monitors, protects, and controls the engine generator. See Editing Instruction No. 8 in the Evaluations.

B. Retain first paragraph below for automatically starting systems; retain second paragraph for manually starting systems.

C. Automatic Starting System Sequence of Operation: When mode-selector switch on the control and monitoring panel is in the automatic position, remote-control contacts in one or more separate automatic transfer switches initiate starting and stopping of generator set. When mode-selector switch is switched to the on position, generator set starts. The off position of same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down generator set.

D. Manual Starting System Sequence of Operation: Switching on-off switch on the generator control panel to the on position starts generator set. The off position of same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down generator set.

E. Retain one of three paragraphs below to describe control and monitoring unit configuration. Coordinate retained paragraph with Drawings. Retain first paragraph unless special requirements justify significant extra cost of one of the other two configurations. See Evaluations.

F. Configuration: Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common control and monitoring panel mounted on the generator set. Mounting method shall isolate the control panel from generator-set vibration.

G. Configuration: Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common wall-mounted control and monitoring panel.

H. Configuration: Operating and safety indications, protective devices, basic system controls, engine gages, instrument transformers, generator disconnect switch or circuit breaker, and other indicated components shall be grouped in a combination control and power panel. Control and monitoring section of panel shall be isolated from power sections by steel barriers. Panel features shall include the following:

1. Wall-Mounting Cabinet Construction: Rigid, self-supporting steel unit complying with NEMA ICS 6. Power bus shall be copper. Bus, bus supports, control wiring, and temperature rise shall comply with UL 891.

2. Switchboard Construction: Freestanding unit complying with Division 26 Section "Switchboards."

3. Switchgear Construction: Freestanding unit complying with Division 26 Section "Low-Voltage Switchgear."

4. Current and Potential Transformers: Instrument accuracy class.

5. Indicating and Protective Devices and Controls: As required by NFPA 110 for Level 1 system, and the following:

AC voltmeter.

6. AC ammeter.

7. AC frequency meter.

8. DC voltmeter (alternator battery charging).

9. Engine-coolant temperature gage.

10. Engine lubricating-oil pressure gage.

11. Running-time meter.

12. Ammeter-voltmeter, phase-selector switch(es).

13. Generator-voltage adjusting rheostat.

14. Fuel tank derangement alarm.

15. Fuel tank high-level shutdown of fuel supply alarm.

16. Generator overload.

I. Indicating and Protective Devices and Controls:

1. AC voltmeter.

1. AC ammeter.

2. AC frequency meter.

3. DC voltmeter (alternator battery charging).

4. Engine-coolant temperature gage.

5. Engine lubricating-oil pressure gage.

6. Running-time meter.

7. Ammeter-voltmeter, phase-selector switch(es).

8. Generator-voltage adjusting rheostat.

9. Coordinate five subparagraphs below with Drawings. See Evaluations for typical local and remote alarm indications and shutdowns.

10. Start-stop switch.

11. Overspeed shutdown device.

12. Coolant high-temperature shutdown device.

13. Coolant low-level shutdown device.

14. Oil low-pressure shutdown device.

15. Two subparagraphs below are optional devices.

16. Fuel tank derangement alarm.

17. Fuel tank high-level shutdown of fuel supply alarm.

18. Generator overload.

J. Supporting Items: Include sensors, transducers, terminals, relays, and other devices and include wiring required to support specified items. Locate sensors and other supporting items on engine or generator, unless otherwise indicated.

K. Connection to Data Link: A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals. Data system connections to terminals are covered in Division 26 Section "Electrical Power Monitoring and Control."

L. Common Remote Audible Alarm: Comply with NFPA 110 requirements for Level 1 systems. Include necessary contacts and terminals in control and monitoring panel.

1. Overcrank shutdown.

1. Coolant low-temperature alarm.

2. Control switch not in auto position.

3. Battery-charger malfunction alarm.

4. Battery low-voltage alarm.

M. Common Remote Audible Alarm: Signal the occurrence of any events listed below without differentiating between event types. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset.

1. Engine high-temperature shutdown.

1. Lube-oil, low-pressure shutdown.

2. Overspeed shutdown.

3. Remote emergency-stop shutdown.

4. Engine high-temperature pre-alarm.

5. Lube-oil, low-pressure pre-alarm.

6. Fuel tank, low-fuel level.

7. Low coolant level.

N. Remote Alarm Annunciator: Comply with NFPA 99. An LED labeled with proper alarm conditions shall identify each alarm event and a common audible signal shall sound for each alarm condition. Silencing switch in face of panel shall silence signal without altering visual indication. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset. Cabinet and faceplate are surface- or flush-mounting type to suit mounting conditions indicated.

O. Remote Emergency-Stop Switch: Flush; wall mounted, unless otherwise indicated; and labeled. Push button shall be protected from accidental operation.

3.05 GENERATOR OVERCURRENT AND FAULT PROTECTION

A. Generator Circuit Breaker: Insulated-case, electronic-trip type; 100 percent rated; complying with UL 489.

1. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.

1. Trip Settings: Selected to coordinate with generator thermal damage curve.

2. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.

3. Mounting: Adjacent to or integrated with control and monitoring panel.

B. Generator Disconnect Switch: Molded-case type, 100 percent rated.

1. Rating: Matched to generator output rating.

1. Shunt Trip: Connected to trip switch when signaled by generator protector or by other protective devices.

C. Generator Protector: Microprocessor-based unit shall continuously monitor current level in each phase of generator output, integrate generator heating effect over time, and predict when thermal damage of alternator will occur. When signaled by generator protector or other generator-set protective devices, a shunt-trip device in the generator disconnect switch shall open the switch to disconnect the generator from load circuits. Protector shall perform the following functions:

1. Initiates a generator overload alarm when generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds. Indication for this alarm is integrated with other generator-set malfunction alarms.

1. Under single or three-phase fault conditions, regulates generator to 300 percent of rated full-load current for up to 10 seconds.

2. As overcurrent heating effect on the generator approaches the thermal damage point of the unit, protector switches the excitation system off, opens the generator disconnect device, and shuts down the generator set.

3. Senses clearing of a fault by other overcurrent devices and controls recovery of rated voltage to avoid overshoot.

D. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.

3.06 GENERATOR, EXCITER, AND VOLTAGE REGULATOR

A. Comply with NEMA MG 1.

B. Drive: Generator shaft shall be directly connected to engine shaft. Exciter shall be rotated integrally with generator rotor.

C. Electrical Insulation: Class H or Class F.

D. Stator-Winding Leads: Brought out to terminal box to permit future reconnection for other voltages if required.

E. Construction shall prevent mechanical, electrical, and thermal damage due to vibration, overspeed up to 125 percent of rating, and heat during operation at 110 percent of rated capacity.

F. Enclosure: Drip proof.

G. Delete first paragraph below if instrument transformers are housed in control and power panel.

H. Instrument Transformers: Mounted within generator enclosure.

I. Voltage Regulator: Solid-state type, separate from exciter, providing performance as specified.

1. Adjusting rheostat on control and monitoring panel shall provide plus or minus 5 percent adjustment of output-voltage operating band.

J. Strip Heater: Thermostatically controlled unit arranged to maintain stator windings above dew point.

K. Windings: Two-thirds pitch stator winding and fully linked amortisseur winding.

L. Subtransient Reactance: 12 percent, maximum.

3.07 OUTDOOR GENERATOR-SET ENCLOSURE

A. Description: Level II sound resistant, Vandal-resistant, weatherproof steel housing, wind resistant up to 139 mph. Multiple panels shall be lockable and provide adequate access to components requiring maintenance. Panels shall be removable by one person without tools. Instruments and control shall be mounted within enclosure.

B. Description: Prefabricated or pre-engineered walk-in enclosure with the following features:

1. Construction: Galvanized-steel, metal-clad, integral structural-steel-framed building erected on concrete foundation.

2. Structural Design and Anchorage: Comply with ASCE 7 for wind loads.

3. Space Heater: Thermostatically controlled and sized to prevent condensation.

4. Louvers: Equipped with bird screen and filter arranged to permit air circulation when engine is not running while excluding exterior dust, birds, and rodents.

5. Hinged Doors: With padlocking provisions.

6. Ventilation: Louvers equipped with bird screen and filter arranged to permit air circulation while excluding exterior dust, birds, and rodents.

7. Thermal Insulation: Manufacturer's standard materials and thickness selected in coordination with space heater to maintain winter interior temperature within operating limits required by engine-generator-set components.

8. Muffler Location: Within enclosure.

C. Engine Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for 2 hours with ambient temperature at top of range specified in system service conditions.

1. Louvers: Fixed-engine, cooling-air inlet and discharge. Storm-proof and drainable louvers prevent entry of rain and snow.

1. Automatic Dampers: At engine cooling-air inlet and discharge. Dampers shall be closed to reduce enclosure heat loss in cold weather when unit is not operating.

D. Interior Lights with Switch: Factory-wired, vaporproof-type fixtures within housing; arranged to illuminate controls and accessible interior. Arrange for external electrical connection.

1. AC lighting system and connection point for operation when remote source is available.

1. DC lighting system for operation when remote source and generator are both unavailable.

E. Convenience Outlets: Factory wired, GFCI. Arrange for external electrical connection.

3.08 MOTORS

A. General requirements for motors are specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

2. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in Division 26 Sections.

3.09 VIBRATION ISOLATION DEVICES

A. Elastomeric Isolator Pads: Oil- and water-resistant elastomer or natural rubber, arranged in single or multiple layers, molded with a nonslip pattern and galvanized-steel baseplates of sufficient stiffness for uniform loading over pad area, and factory cut to sizes that match requirements of supported equipment.

1. Material: Standard neoprene.

B. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic restraint.

1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to wind loads or if weight is removed; factory-drilled baseplate bonded to 1/4-inch thick, elastomeric isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.

1. Outside Spring Diameter: Not less than 80 percent of compressed height of the spring at rated load.

2. Minimum Additional Travel: 50 percent of required deflection at rated load.

3. Lateral Stiffness: More than 80 percent of rated vertical stiffness.

4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

3.10 FINISHES

A. Indoor and Outdoor Enclosures and Components: Manufacturer's standard finish over corrosion-resistant pretreatment and compatible primer.

3.11 SOURCE QUALITY CONTROL

A. Prototype Testing: Factory test engine-generator set using same engine model, constructed of identical or equivalent components and equipped with identical or equivalent accessories.

1. Tests: Comply with NFPA 110, Level 1 Energy Converters and with IEEE 115.

B. Project-Specific Equipment Tests: Before shipment, factory test engine-generator set and other system components and accessories manufactured specifically for this Project. Perform tests at rated load and power factor. Include the following tests:

1. Test components and accessories furnished with installed unit that are not identical to those on tested prototype to demonstrate compatibility and reliability.

1. Full load run.

2. Maximum power.

3. Voltage regulation.

4. Transient and steady-state governing.

5. Single-step load pickup.

6. Safety shutdown.

7. Provide 14 days' advance notice of tests and opportunity for observation of tests by Owner's representative.

8. Report factory test results within 10 days of completion of test.

PART 4 - EXECUTION

4.01 EXAMINATION

A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine-generator performance.

B. Examine roughing-in of piping systems and electrical connections. Verify actual locations of connections before packaged engine-generator installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

4.02 INSTALLATION

A. Comply with packaged engine-generator manufacturers' written installation and alignment instructions and with NFPA 110.

B. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.

C. Install packaged engine generator with restrained spring isolators having a minimum deflection of 1 inch on 4-inch high concrete base. Secure sets to anchor bolts installed in concrete bases. Concrete base construction is specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

D. Install Schedule 40, black steel piping with welded joints and connect to engine muffler. Install thimble at wall. Piping shall be same diameter as muffler outlet. Flexible connectors and steel piping materials and installation requirements are specified in Division 23 Section "Hydronic Piping."

1. Install condensate drain piping to muffler drain outlet full size of drain connection with a shutoff valve, stainless-steel flexible connector, and Schedule 40, black steel pipe with welded joints. Flexible connectors and piping materials and installation requirements are specified in Division 23 Section "Hydronic Piping."

E. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

F. The location of the emergency power generator shall be away from fresh air intakes and other areas where fumes may enter the building.

4.03 CONNECTIONS

A. Piping installation requirements are specified in Division 23 Sections. Drawings indicate general arrangement of piping and specialties.

B. Connect fuel, cooling-system, and exhaust-system piping adjacent to packaged engine generator to allow service and maintenance.

C. Connect engine exhaust pipe to engine with flexible connector.

D. Connect fuel piping to engines with a gate valve and union and flexible connector.

1. Natural-gas piping, valves, and specialties for gas distribution are specified in Division 23 Section "Facility Natural-Gas Piping."

2. LP-gas piping, valves, and specialties for gas piping are specified in Division 23 Section "Facility Liquefied-Petroleum Gas Piping."

E. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

F. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

G. The following equipment shall be connected to the generator: fire alarm system, PA system, security system, kitchen freezers and coolers, gym light fixtures, energy management system, server room, A/C for server room, select administrative office receptacles, elevators, auditorium egress lighting, emergency lights, and select light fixtures. One 110v double duplex receptacle and one overhead light in each mechanical room, electrical room, and data closet shall be connected to the generator

4.04 IDENTIFICATION

A. Identify system components according to Division 23 Section "Identification for HVAC Piping and Equipment" and Division 26 Section "Identification for Electrical Systems."

4.05 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

C. Perform tests and inspections and prepare test reports.

D. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

E. Tests and Inspections:

1. Perform tests recommended by manufacturer and each electrical test and visual and mechanical inspection for "AC Generators and for Emergency Systems" specified in NETA Acceptance Testing Specification. Certify compliance with test parameters.

2. NFPA 110 Acceptance Tests: Perform tests required by NFPA 110 that are additional to those specified here including, but not limited to, single-step full-load pickup test.

3. Battery Tests: Equalize charging of battery cells according to manufacturer's written instructions. Record individual cell voltages.

a. Measure charging voltage and voltages between available battery terminals for full-charging and float-charging conditions. Check electrolyte level and specific gravity under both conditions.

b. Test for contact integrity of all connectors. Perform an integrity load test and a capacity load test for the battery.

c. Verify acceptance of charge for each element of the battery after discharge.

4. Verify that measurements are within manufacturer's specifications.

5. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.

6. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine-generator system before and during system operation. Check for air, exhaust, and fluid leaks.

7. Exhaust-System Back-Pressure Test: Use a manometer with a scale exceeding 40-inch wg. Connect to exhaust line close to engine exhaust manifold. Verify that back pressure at full-rated load is within manufacturer's written allowable limits for the engine.

8. Exhaust Emissions Test: Comply with applicable government test criteria.

9. Voltage and Frequency Transient Stability Tests: Use recording oscilloscope to measure voltage and frequency transients for 50 and 100 percent step-load increases and decreases and verify that performance is as specified.

10. Harmonic-Content Tests: Measure harmonic content of output voltage under 25 percent and at 100 percent of rated linear load. Verify that harmonic content is within specified limits.

11. Noise Level Tests: Measure A-weighted level of noise emanating from generator-set installation, including engine exhaust and cooling-air intake and discharge, at four locations on the property line, and compare measured levels with required values.

F. Coordinate tests with tests for transfer switches and run them concurrently.

G. Test instruments shall have been calibrated within the last 12 months, traceable to standards of NIST, and adequate for making positive observation of test results. Make calibration records available for examination on request.

H. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

I. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

J. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

K. Remove and replace malfunctioning units and retest as specified above.

L. Retest: Correct deficiencies identified by tests and observations and retest until specified requirements are met.

M. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations. Attach a label or tag to each tested component indicating satisfactory completion of tests.

N. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each power wiring termination and each bus connection. Remove all access panels so terminations and connections are accessible to portable scanner.

1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan 11 months after date of Substantial Completion.

1. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

2. Record of Infrared Scanning: Prepare a certified report that identifies terminations and connections checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

4.06 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain packaged engine generators. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 26 32 13

26 36 00

TRANSFER SWITCHES

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes transfer switches rated 600 V and less, including the following:

1. Automatic transfer switches.

2. Bypass/isolation switches.

3. Remote annunciation systems.

B. Related Sections include the following:

1. Division 21 Section "Electric-Drive, Centrifugal Fire Pumps" for automatic transfer switches for fire pumps.

2. Division 21 Section "Electric-Drive, Vertical-Turbine Fire Pumps" for automatic transfer switches for fire pumps.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, weights, operating characteristics, furnished specialties, and accessories.

B. Coordination Drawings: Provide coordination drawings as described in 26 05 00 paragraph 1.03(C).

C. Shop Drawings: Dimensioned plans, elevations, sections, and details showing minimum clearances, conductor entry provisions, gutter space, installed features and devices, and material lists for each switch specified.

1. Single-Line Diagram: Show connections between transfer switch, bypass/isolation switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.

2. Retain paragraph and subparagraphs below if required by seismic criteria applicable to Project. Coordinate with Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

3. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

4. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Qualification Data: For manufacturer.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Features and operating sequences, both automatic and manual.

2. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Maintain a service center capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

C. Source Limitations: Obtain automatic transfer switches through one source from a single manufacturer.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Comply with NEMA ICS 1.

F. Comply with NFPA 70.

G. Comply with NFPA 99.

H. Comply with NFPA 110.

I. Comply with UL 1008 unless requirements of these Specifications are stricter.

1.05 PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service:

1. Notify Owner no fewer than two days in advance of proposed interruption of electrical service.

2. Do not proceed with interruption of electrical service without Owner's written permission.

1.06 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Transfer Switches Using Molded-Case Switches or Circuit Breakers:

a. ASCO

b. Caterpillar

c. Cummins Power Generation

d. Kohler

2.02 GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

A. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.

B. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.

1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.

C. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.

D. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.

E. Electrical Operation: Accomplish by a non-fused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.

F. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.

1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.

2. Switch Action: Double throw; mechanically held in both directions.

3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.

G. Neutral Switching. Where four-pole switches are indicated, provide overlapping neutral contacts.

H. Neutral Terminal: Solid and fully rated, unless otherwise indicated.

I. Oversize Neutral: Ampacity and switch rating of neutral path through units indicated for oversize neutral shall be double the nominal rating of circuit in which switch is installed.

J. Heater: Equip switches exposed to outdoor temperatures and humidity, and other units indicated, with an internal heater. Provide thermostat within enclosure to control heater.

K. Battery Charger: For generator starting batteries.

1. Float type rated 10 A.

2. Ammeter to display charging current.

3. Fused ac inputs and dc outputs.

L. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.

M. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at terminations. Color-coding and wire and cable tape markers are specified in Division 26 Section "Identification for Electrical Systems."

1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.

2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.

3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.

N. Enclosures: General-purpose NEMA 250, Type 1, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

2.03 AUTOMATIC TRANSFER SWITCHES

A. Comply with Level 1 equipment according to NFPA 110.

B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate position stops during normal functioning, unless otherwise indicated.

C. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.

D. Manual Switch Operation: Unloaded. Control circuit automatically disconnects from electrical operator during manual operation.

E. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.

F. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.

G. Transfer Switches Based on Molded-Case-Switch Components: Comply with NEMA AB 1, UL 489, and UL 869A.

H. Automatic Closed-Transition Transfer Switches: Include the following functions and characteristics:

1. Fully automatic make-before-break operation.

2. Load transfer without interruption, through momentary interconnection of both power sources not exceeding 100 ms.

3. Initiation of No-Interruption Transfer: Controlled by in-phase monitor and sensors confirming both sources are present and acceptable.

a. Initiation occurs without active control of generator.

b. Controls ensure that closed-transition load transfer closure occurs only when the 2 sources are within plus or minus 5 electrical degrees maximum, and plus or minus 5 percent maximum voltage difference.

4. Failure of power source serving load initiates automatic break-before-make transfer.

I. In-Phase Monitor: Factory-wired, internal relay controls transfer so it occurs only when the two sources are synchronized in phase. Relay compares phase relationship and frequency difference between normal and emergency sources and initiates transfer when both sources are within 15 electrical degrees, and only if transfer can be completed within 60 electrical degrees. Transfer is initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage.

J. Motor Disconnect and Timing Relay: Controls designate starters so they disconnect motors before transfer and reconnect them selectively at an adjustable time interval after transfer. Control connection to motor starters is through wiring external to automatic transfer switch. Time delay for reconnecting individual motor loads is adjustable between 1 and 60 seconds, and settings are as indicated. Relay contacts handling motor-control circuit inrush and seal currents are rated for actual currents to be encountered.

K. Programmed Neutral Switch Position: Switch operator has a programmed neutral position arranged to provide a midpoint between the two working switch positions, with an intentional, time-controlled pause at midpoint during transfer. Pause is adjustable from 0.5 to 30 seconds minimum and factory set for 0.5 second, unless otherwise indicated. Time delay occurs for both transfer directions. Pause is disabled unless both sources are live.

L. Automatic Transfer-Switch Features:

1. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.

2. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.

3. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.

4. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.

5. Test Switch: Simulate normal-source failure.

6. Switch-Position Pilot Lights: Indicate source to which load is connected.

7. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.

a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."

b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."

8. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.

9. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.

10. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum.

11. Engine Shutdown Contacts: Instantaneous; shall initiate shutdown sequence at remote engine-generator controls after retransfer of load to normal source.

12. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal source.

13. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:

a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.

b. Push-button programming control with digital display of settings.

c. Integral battery operation of time switch when normal control power is not available.

2.04 REMOTE ANNUNCIATOR SYSTEM

A. Functional Description: Remote annunciator panel shall annunciate conditions for indicated transfer switches. Annunciation shall include the following:

1. Sources available, as defined by actual pickup and dropout settings of transfer-switch controls.

2. Switch position.

3. Switch in test mode.

4. Failure of communication link.

B. Annunciator Panel: LED-lamp type with audible signal and silencing switch.

1. Indicating Lights: Grouped for each transfer switch monitored.

2. Label each group, indicating transfer switch it monitors, location of switch, and identity of load it serves.

3. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.

4. Lamp Test: Push-to-test or lamp-test switch on front panel.

2.05 SOURCE QUALITY CONTROL

A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details. See Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

B. Floor-Mounting Switch: Anchor to floor by bolting.

1. Concrete Bases: 4 inches high, reinforced, with chamfered edges. Extend base no more than 4 inches in all directions beyond the maximum dimensions of switch, unless otherwise indicated or unless required for seismic support. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."

C. Annunciator and Control Panel Mounting: Flush in wall, unless otherwise indicated.

D. Identify components according to Division 26 Section "Identification for Electrical Systems."

E. Set field-adjustable intervals and delays, relays, and engine exerciser clock.

3.02 CONNECTIONS

A. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to Owner if necessary to accommodate required wiring.

B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.03 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform tests and inspections and prepare test reports.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

C. Perform tests and inspections and prepare test reports.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installation, including connections, and to assist in testing.

2. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.

3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

4. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.

Check for electrical continuity of circuits and for short circuits.

a. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.

b. Verify that manual transfer warnings are properly placed.

c. Perform manual transfer operation.

5. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.

a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.

b. Simulate loss of phase-to-ground voltage for each phase of normal source.

c. Verify time-delay settings.

d. Verify pickup and dropout voltages by data readout or inspection of control settings.

e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.

f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.

g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.

6. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.

Verify grounding connections and locations and ratings of sensors.

D. Testing Agency's Tests and Inspections:

1. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.

2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

a. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.

Check for electrical continuity of circuits and for short circuits.

b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.

c. Verify that manual transfer warnings are properly placed.

d. Perform manual transfer operation.

3. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.

a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.

b. Simulate loss of phase-to-ground voltage for each phase of normal source.

c. Verify time-delay settings.

d. Verify pickup and dropout voltages by data readout or inspection of control settings.

e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.

f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.

g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.

4. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.

Verify grounding connections and locations and ratings of sensors.

E. Coordinate tests with tests of generator and run them concurrently.

F. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.

G. Remove and replace malfunctioning units and retest as specified above.

H. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.

1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.

2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain transfer switches and related equipment as specified below. Refer to Division 01 Section "Demonstration and Training."

B. Coordinate this training with that for generator equipment.

END OF SECTION 26 36 00

26 41 13

LIGHTNING PROTECTION FOR STRUCTURES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes lightning protection for structures.

1.03 SUBMITTALS

A. Shop Drawings: For air terminals and mounting accessories.

1. Layout of the lightning protection system, along with details of the components to be used in the installation.

2. Include indications for use of raceway, data on how concealment requirements will be met, and calculations required by NFPA 780 for bonding of grounded and isolated metal bodies.

B. Qualification Data: For qualified Installer and manufacturer. Include data on listing or certification by UL.

C. Certification, signed by Contractor, that roof adhesive is approved by manufacturer of roofing material.

D. Field quality-control reports.

E. The qualified installer must provide a system which measures no more than 2 ohms resistance.

F. Comply with recommendations in NFPA 780, Annex D, "Inspection and Maintenance of Lightning Protection Systems," for maintenance of the lightning protection system.

G. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features, including the following:

1. Ground rods.

2. Ground loop conductor.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Certified by UL as a Master Installer/Designer, trained and approved for installation of units required for this Project.

B. System Certificate:

1. UL Master Label.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 780, "Definitions" Article.

1.05 COORDINATION

A. Coordinate installation of lightning protection with installation of other building systems and components, including electrical wiring, supporting structures and building materials, metal bodies requiring bonding to lightning protection components, and building finishes.

B. Coordinate installation of air terminals attached to roof systems with roofing manufacturer and Installer.

1. Flashings of through-roof assemblies shall comply with roofing manufacturers' specifications.

PART 2 - PRODUCTS

2.01 LIGHTNING PROTECTION SYSTEM COMPONENTS

A. Comply with UL 96 and NFPA 780.

B. Roof-Mounted Air Terminals: NFPA 780, Class I copper.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following:

a. Advanced Lightning Technology

b. Bonded Lightning Protection Systems

c. Thompson Lightning Protection

2. Air Terminals More than 24 Inches Long: With brace attached to the terminal at not less than half the height of the terminal.

3. Single-Membrane, Roof-Mounted Air Terminals: Designed specifically for single-membrane roof system materials. Comply with requirements in Division 07 roofing Sections.

C. Main and Bonding Conductors: #2/0 Copper

D. Ground Loop Conductor: #2/0 Copper

1. Ground Rods: Copper-clad steel; 3/4 inch in diameter by 10 feet long.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install lightning protection components and systems according to UL 96A and NFPA 780.

B. Install conductors with direct paths from air terminals to ground connections. Avoid sharp bends.

C. Conceal the following conductors:

1. System conductors.

2. Down conductors.

3. Interior conductors.

D. Cable Connections: Use crimped or bolted connections for all conductor splices and connections between conductors and other components. Use exothermic-welded connections in underground portions of the system.

E. Cable Connections: Use exothermic-welded connections for all conductor splices and connections between conductors and other components.

F. Bond extremities of vertical metal bodies exceeding 60 feet in length to lightning protection components.

G. Ground Loop: Install ground-level, potential equalization #2/0 copper conductor and extend around the perimeter of structure.

1. Bury ground ring not less than 24 inches from building foundation.

2. Bond ground terminals to the ground loop.

3. Bond grounded building systems to the ground loop conductor within 12 feet of grade level.

H. Bond lightning protection components with intermediate-level interconnection loop conductors to grounded metal bodies of building at 60-foot intervals.

3.02 CORROSION PROTECTION

A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.

B. Use conductors with protective coatings where conditions cause deterioration or corrosion of conductors.

3.03 FIELD QUALITY CONTROL

A. Notify Architect at least 48 hours in advance of inspection before concealing lightning protection components.

B. UL Inspection: Meet requirements to obtain a UL Master Label for system.

C. LPI System Inspection: Meet requirements to obtain an LPI System Certificate.

D. Provide and record and submit the testing reports once installation has been completed and certified.

END OF SECTION 26 41 13

26 43 13

SURGE PROTECTION FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes field-mounted SPD’s for low-voltage (120 to 600 V) power distribution and control equipment.

B. Related Sections:

1. Division 26 Section "Switchboards" for factory-installed SPD’s.

2. Division 26 Section "Panelboards" for factory-installed SPD’s.

3. Division 26 Section "Wiring Devices" for devices with integral SPD’s.

1.03 DEFINITIONS

A. ATS: Acceptance Testing Specifications.

B. SVR: Suppressed voltage rating.

C. SPD: Surge Protective Device(s), both singular and plural.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, operating weights, electrical characteristics, furnished specialties, and accessories.

B. Qualification Data: For qualified testing agency- (NRTL) National Recognized Testing Laboratory

C. Product Certificates: For SPD devices, from manufacturer.

D. Field quality-control reports.

E. Operation and Maintenance Data: For SPD devices to include in emergency, operation, and maintenance manuals.

F. Warranties: Sample of special warranties.

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA or the equipment manufacturer to supervise on-site testing.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency, and marked for intended location and application.

C. Comply with IEEE C62.41.2 and test devices according to IEEE C62.45.

D. Comply with UL 1283 and UL 1449 (current edition).

E. The SPD installation complies with NFPA 70.

1.06 PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:

1. Notify Owner no fewer than four days in advance of proposed electrical service interruptions.

2. Do not proceed with interruption of electrical service without Owner's written permission.

1.07 COORDINATION

A. Coordinate location of field-mounted SPD devices to allow adequate clearances for maintenance.

B. Coordinate SPD devices with Division 26 Section "Electrical Power Monitoring and Control."

1.08 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of surge suppressors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five (5) years from date of Substantial Completion.

1.09 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Where equipment design uses replaceable protection modules: One (1) of each size and type installed.

PART 2 - PRODUCTS

2.01 SERVICE ENTRANCE SUPPRESSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square D.

2. GE.

3. Eaton/ Cutler-Hammer.

4. Liebert

5. Current Technology Inc.; Danaher Power Solutions.

6. Leviton

B. Surge Protection Devices:

1. Comply with UL 1449 (current edition).

2. Modular design.

3. Fuses, rated at 200-kA interrupting capacity.

4. Fabrication using bolted compression lugs for internal wiring.

5. Integral disconnect switch or circuit breaker.

6. Redundant suppression circuits.

7. Arrangement with copper bus bars and for bolted connections to phase buses, neutral bus, and ground bus.

8. Arrangement with wire connections to phase buses, neutral bus, and ground bus.

9. LED indicator lights for power and protection status.

10. Audible alarm, with silencing switch, to indicate when protection has failed.

11. Form-C contacts rated at 1 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

12. Six-digit transient-event counter set to totalize transient surges.

C. Surge Current Capacity – The minimum surge current capacity the device is capable of withstanding shall be as shown in the following table:

Minimum surge current capacity based on ANSI / IEEE C62.41 location category			
Category	Application	Per Phase	Per Mode
C	Service Entrance Locations (Switchboards, Switchgear, MCC, Main Entrance)	250 kA	125 kA
B	High Exposure Roof Top Locations (Distribution Panelboards)	160 kA	80 kA
A	Branch Locations (Panelboards, MCCs, Busway)	120 kA	60 kA

D. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V and 208Y/120 V, 3-phase, 4-wire circuits shall be as follows:

1. Line to Neutral:1200 V for 480Y/277 V, 700 V for 208Y/120 V.
2. Line to Ground: 2000 V for 480Y/277 V, 1200 V for 208Y/120 V.
3. Neutral to Ground: 1200 V for 480Y/277 V, 700 V for 208Y/120 V.

2.02 PANELBOARD SUPPRESSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Square D.
2. GE.
3. Eaton/ Cutler Hammer.
4. Advanced Protection Technologies Inc. (APT).
5. Current Technology Inc.

B. Surge Protection Devices:

1. Non-modular.
2. LED indicator lights for power and protection status.
3. Audible alarm, with silencing switch, to indicate when protection has failed.
4. Form-C contacts rated at 1 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

C. Surge Current Capacity – The minimum surge current capacity the device is capable of withstanding shall be as shown in the following table:

Minimum surge current capacity based on ANSI / IEEE C62.41 location category			
Category	Application	Per Phase	Per Mode
C	Service Entrance Locations (Switchboards, Switchgear, MCC, Main Entrance)	250 kA	125 kA
B	High Exposure Roof Top Locations (Distribution Panelboards)	160 kA	80 kA
A	Branch Locations (Panelboards, MCCs, Busway)	120 kA	60 kA

D. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V, 208Y/120 V, 3-phase, 4-wire circuits shall be as follows:

1. Line to Neutral: 1200 V for 480Y/277 V, 700 V for 208Y/120 V.

2. Line to Ground: 2000 V for 480Y/277 V, 1200 V for 208Y/120 V.

3. Neutral to Ground: 1200 V for 480Y/277 V, 700 V for 208Y/120 V.

2.03 ENCLOSURES

A. Indoor Enclosures: NEMA 250 Type 1.

B. Outdoor Enclosures: NEMA 250 Type 3R.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install SPD devices at service entrance on load side, with ground lead bonded to service entrance ground.

B. Install SPD devices for panelboards and auxiliary panels with conductors or buses between suppressor and points of attachment as short and straight as possible. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground at the SPD. Ground only at NEC required locations.

1. Provide manufacturer’s approved circuit breaker as applicable as a dedicated disconnecting means for SPD unless otherwise indicated.

3.02 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

1. Verify that electrical wiring installation complies with manufacturer's written installation requirements.

B. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS, "Surge Arresters, Low-Voltage Surge Protection Devices" Section. Certify compliance with test parameters.

2. After installing SPD devices but before electrical circuitry has been energized, test for compliance with requirements.

3. Complete startup checks according to manufacturer's written instructions.

C. SPD device will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.03 STARTUP SERVICE

A. Do not energize or connect service entrance equipment, panelboards, control terminals or data terminals to their sources until SPD devices are installed and connected.

B. Do not perform insulation resistance tests of the distribution wiring equipment with the SPD installed. Disconnect before conducting insulation resistance tests and reconnect immediately after the testing is over.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to train. Owner's maintenance personnel to maintain SPD devices.

END OF SECTION 26 43 13

INTERIOR LIGHTING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Interior lighting fixtures and drivers.

2. Emergency lighting units.

3. Exit signs LED lighted

4. Lighting fixture supports.

B. Related Sections include the following:

1. Division 26 Section "Lighting Control Devices" for automatic control of lighting, including time switches, photoelectric relays, occupancy sensors, and multiple lighting relays and contactors.

2. Division 26 Section "Wiring Devices" for manual wall-box dimmers for incandescent lamps.

3. Division 26 Section "Theatrical Lighting" for theatrical lighting fixtures and their controls.

C. Submittals:

1. Provide cut-sheets and summary all types of fixtures for review.

1.03 DEFINITIONS

A. BF: Ballast factor.

B. CRI: Color-rendering index.

C. CU: Coefficient of utilization.

D. LER: Luminaire efficacy rating.

E. Luminaire: Complete lighting fixture, including ballast housing if provided.

F. RCR: Room cavity ratio.

G. LED Light Emitted Diode

1.04 SUBMITTALS

A. Product Data: For each type of lighting fixture, arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:

1. Physical description of lighting fixture including dimensions.

2. Emergency lighting units including battery and charger.

3. Ballast.

4. Energy-efficiency data.

5. Air and Thermal Performance Data: For air-handling lighting fixtures. Furnish data required in "Submittals" Article in Division 23 Section "Diffusers, Registers, and Grilles."

6. Sound Performance Data: For air-handling lighting fixtures. Indicate sound power level and sound transmission class in test reports certified according to standards specified in Division 23 Section "Diffusers, Registers, and Grilles."

7. Life, output, and energy-efficiency data for lamps.

8. Photometric data, in IESNA format, based on laboratory tests of each lighting fixture type, outfitted with lamps, ballasts, and accessories identical to those indicated for the lighting fixture as applied in this Project.

a. For indicated fixtures, photometric data shall be certified by a qualified independent testing agency. Photometric data for remaining fixtures shall be certified by the manufacturer.

b. Photometric data shall be certified by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program (NVLAP) for Energy Efficient Lighting Products.

B. Shop Drawings: Show details of nonstandard or custom lighting fixtures. Indicate dimensions, weights, methods of field assembly, components, features, and accessories.

1. Wiring Diagrams: Power and control wiring.

C. Samples for Verification: Interior lighting fixtures designated for sample submission in Interior Lighting Fixture Schedule. Each sample shall include the following:

1. Lamps: Specified units installed.

2. Accessories: Cords and plugs.

D. Product Certificates: For each type of ballast for bi-level and dimmer-controlled fixtures, signed by product manufacturer.

E. Qualification Data: For agencies providing photometric data for lighting fixtures.

F. Field quality-control test reports.

G. Operation and Maintenance Data: For lighting equipment and fixtures to include in emergency, operation, and maintenance manuals.

H. Warranties: Special warranties specified in this Section.

1.05 QUALITY ASSURANCE

A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.

B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Comply with NFPA 70.

E. FMG Compliance: Lighting fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FMG.

F. Mockups: Provide interior lighting fixtures for room or module mock-ups, complete with power and control connections.

1. Obtain Architect's approval of fixtures for mockups before starting installations.

2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

3. Approved fixtures in mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 COORDINATION

A. Coordinate layout and installation of lighting fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire-suppression system, and partition assemblies.

1.07 WARRANTY

A. Special Warranty for Emergency Lighting Batteries: Manufacturer's standard form in which manufacturer of battery-powered emergency lighting unit agrees to repair or replace components of rechargeable batteries that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Emergency Lighting Unit Batteries: 5 years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining nine years.

2. Warranty Period for Emergency Fluorescent Ballast Batteries: 5 years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining six years.

B. Special Warranty for Ballasts: Manufacturer's standard form in which ballast manufacturer agrees to repair or replace ballasts that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Electronic Ballasts: Five years from date of Substantial Completion.

2. Warranty Period for Electromagnetic Ballasts: Three years from date of Substantial Completion.

C. Special Warranty for T5 and T8 Fluorescent Lamps: Manufacturer's standard form, made out to Owner and signed by lamp manufacturer agreeing to replace lamps that fail in materials or workmanship, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

1. Warranty Period: Two (2) year(s) from date of Substantial Completion.

1.08 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Lamps: 10 for every 100 of each type and rating installed. Furnish at least one of each type.

2. Plastic Diffusers and Lenses: 1 for every 100 of each type and rating installed. Furnish at least one of each type.

3. Battery and Charger Data: One for each emergency lighting unit.

4. Ballasts: 1 for every 100 of each type and rating installed. Furnish at least one of each type.

5. Globes and Guards: 1 for every 20 of each type and rating installed. Furnish at least one of each type.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

B. In Interior Lighting Fixture Schedule where titles below are column or row headings that introduce lists, the following requirements apply to product selection:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.

C. Luminaires, Acceptable Manufacturers:

1.

2. Philips

3. Hubbell

4. Kenall

5. Lithonia

6. Cooper

2.02 LIGHTING FIXTURES AND COMPONENTS, GENERAL REQUIREMENTS

A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.

B. Incandescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5A.

C. Fluorescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.

D. Metal Parts: Free of burrs and sharp corners and edges.

E. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.

F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit re-lamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during re-lamping and when secured in operating position.

G. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:

1. White Surfaces: 85 percent.

2. Specular Surfaces: 83 percent.

3. Diffusing Specular Surfaces: 75 percent.

4. Laminated Silver Metalized Film: 90 percent.

H. Plastic Diffusers, Covers, and Globes:

1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

a. Lens Thickness: At least 0.125 inch minimum unless different thickness is indicated.

b. UV stabilized.

2. Glass: Annealed crystal glass, unless otherwise indicated.

I. Electromagnetic-Interference Filters: Factory installed to suppress conducted electromagnetic-interference as required by MIL-STD-461E. Fabricate lighting fixtures, indicated to require a filter, with one filter per ballast.

J. Air-Handling Fluorescent Fixtures: For use with plenum ceiling for air return and heat extraction and for attaching an air-diffuser-boot assembly specified in Division 23 Section "Diffusers, Registers, and Grilles."

1. Air Supply Units: Slots in one or both side trims join with air-diffuser-boot assemblies.

2. Heat Removal Units: Air path leads through lamp cavity.

3. Combination Heat Removal and Air Supply Unit: Heat is removed through lamp cavity at both ends of the fixture door with air supply same as for air supply units.

4. Dampers: Operable from outside fixture for control of return-air volume.

5. Static Fixture: Air supply slots are blanked off, and fixture appearance matches active units.

2.03 BALLASTS FOR LINEAR FLUORESCENT LAMPS

A. Electronic Ballasts: Comply with ANSI C82.11; instant-start type, unless otherwise indicated, and designed for type and quantity of lamps served. Ballasts shall be designed for full light output unless dimmer or bi-level control is indicated.

1. Sound Rating: A.

2. Total Harmonic Distortion Rating: Less than 10 percent.

3. Transient Voltage Protection: IEEE C62.41, Category A or better.

4. Operating Frequency: 20 kHz or higher.

5. Lamp Current Crest Factor: 1.7 or less.

6. BF: 0.88 or higher.

7. Power Factor: 0.95 or higher.

8. Parallel Lamp Circuits: Multiple lamp ballasts shall comply with ANSI C 82.11 and shall be connected to maintain full light output on surviving lamps if one or more lamps fail.

B. Electronic Programmed-Start Ballasts for T5 Lamps: Comply with ANSI C82.11 and the following:

1. Lamp end-of-life detection and shutdown circuit for T5 diameter lamps.

2. Automatic lamp starting after lamp replacement.

3. Sound Rating: A.

4. Total Harmonic Distortion Rating: Less than 20 percent.

5. Transient Voltage Protection: IEEE C62.41, Category A or better.

6. Operating Frequency: 20 kHz or higher.

7. Lamp Current Crest Factor: 1.7 or less.

8. BF: 0.95 or higher, unless otherwise indicated.

9. Power Factor: 0.95 or higher.

C. Electromagnetic Ballasts: Comply with ANSI C82.1; energy saving, high-power factor, Class P, and having automatic-reset thermal protection.

1. Ballast Manufacturer Certification: Indicated by label.

D. Ballasts for Low-Temperature Environments:

1. Temperatures 0 Deg F and Higher: Electronic or electromagnetic type rated for 0 deg F starting and operating temperature with indicated lamp types.

E. Ballasts for Low Electromagnetic-Interference Environments: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for consumer equipment.

F. Ballasts for Dimmer-Controlled Lighting Fixtures: Electronic type.

1. Dimming Range: 100 to 5 percent of rated lamp lumens.

2. Ballast Input Watts: Can be reduced to 20 percent of normal.

3. Compatibility: Certified by manufacturer for use with specific dimming control system and lamp type indicated.

G. Ballasts for Bi-Level Controlled Lighting Fixtures: Electronic type.

1. Operating Modes: Ballast circuit and leads provide for remote control of the light output of the associated lamp between high- and low-level and off.

a. High-Level Operation: 100 percent of rated lamp lumens.

b. Low-Level Operation: 30 percent of rated lamp lumens.

2. Ballast shall provide equal current to each lamp in each operating mode.

3. Compatibility: Certified by manufacturer for use with specific bi-level control system and lamp type indicated.

2.04 BALLASTS FOR COMPACT FLUORESCENT LAMPS

A. Description: Electronic programmed rapid-start type, complying with ANSI C 82.11, designed for type and quantity of lamps indicated. Ballast shall be designed for full light output unless dimmer or bi-level control is indicated:

1. Lamp end-of-life detection and shutdown circuit.

2. Automatic lamp starting after lamp replacement.

3. Sound Rating: A.

4. Total Harmonic Distortion Rating: Less than 20 percent.

5. Transient Voltage Protection: IEEE C62.41, Category A or better.

6. Operating Frequency: 20 kHz or higher.

7. Lamp Current Crest Factor: 1.7 or less.

8. BF: 0.95 or higher, unless otherwise indicated.

9. Power Factor: 0.95 or higher.

10. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for non-consumer equipment.

11. Ballast Case Temperature: 75 deg C, maximum.

B. Ballasts for Dimmer-Controlled Lighting Fixtures: Electronic type.

1. Dimming Range: 100 to 5 percent of rated lamp lumens.

2. Ballast Input Watts: Can be reduced to 20 percent of normal.

3. Compatibility: Certified by manufacturer for use with specific dimming control system and lamp type indicated.

2.05 EMERGENCY FLUORESCENT POWER UNIT

A. Internal Type: Self-contained, modular, battery-inverter unit, factory mounted within lighting fixture body and compatible with ballast. Comply with UL 924.

1. Emergency Connection: Operate 1 fluorescent lamp(s) continuously at an output of 1100 lumens each. Connect un-switched circuit to battery-inverter unit and switched circuit to fixture ballast.

2. Night-Light Connection: Operate one fluorescent lamp continuously.

3. Test Push Button and Indicator Light: Visible and accessible without opening fixture or entering ceiling space.

a. Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.

b. Indicator Light: LED indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

4. Battery: Sealed, maintenance-free, nickel-cadmium type.

5. Charger: Fully automatic, solid-state, constant-current type with sealed power transfer relay.

6. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.

7. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

2.06 BALLASTS FOR HID LAMPS

A. Electromagnetic Ballast for Metal-Halide Lamps: Comply with ANSI C82.4 and UL 1029. Include the following features, unless otherwise indicated:

1. Ballast Circuit: Constant-wattage autotransformer or regulating high-power-factor type.

2. Minimum Starting Temperature: Minus 22 deg F for single-lamp ballasts.

3. Normal Ambient Operating Temperature: 104 deg F.

4. Open-circuit operation that will not reduce average life.

5. Low-Noise Ballasts: Manufacturers' standard epoxy-encapsulated models designed to minimize audible fixture noise.

B. Electronic Ballast for Metal-Halide Lamps: Include the following features unless otherwise indicated:

1. Lamp end-of-life detection and shutdown circuit.

2. Sound Rating: A.

3. Total Harmonic Distortion Rating: Less than 15 percent.

4. Transient Voltage Protection: IEEE C62.41, Category A or better.

5. Lamp Current Crest Factor: 1.5 or less.

6. Power Factor: .90 or higher.

7. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for non-consumer equipment.

8. Protection: Class P thermal cutout.

9. Retain subparagraph and associated subparagraphs below for bi-level ballasts.

10. Bi-Level Dimming Ballast: Ballast circuit and leads provide for remote control of the light output of the associated fixture between high- and low-level and off.

    a. High-Level Operation: 100 percent of rated lamp lumens.

    b. Low-Level Operation: 35 percent of rated lamp lumens.

    c. Compatibility: Certified by ballast manufacturer for use with specific bi-level control system and lamp type indicated. Certified by lamp manufacturer that ballast operating modes are free from negative effect on lamp life and color-rendering capability.

11. Continuous Dimming Ballast: Dimming range shall be from 100 to 35 percent of rated lamp lumens without flicker.

    a. Ballast Input Watts: Reduced to a maximum of 50 percent of normal at lowest dimming setting.

    b. Compatibility: Certified by manufacturer for use with specific dimming control system and lamp type indicated. Certified by lamp manufacturer that ballast operating modes are free from negative effect on lamp life and color-rendering capability.

C. Auxiliary Instant-On Quartz System: Factory-installed feature automatically switches quartz lamp on when fixture is initially energized and when power outages occur. System automatically turns quartz lamp off when HID lamp reaches approximately 60 percent light output.

D. High-Pressure Sodium Ballasts: Electromagnetic type, with solid-state igniter/starter. Igniter-starter shall have an average life in pulsing mode of 10,000 hours at an igniter/starter-case temperature of 90 deg C.

1. Instant Re-strike Device: Integral with ballast, or solid-state potted module, factory installed within fixture and compatible with lamps, ballasts, and mogul sockets up to 150 W.

a. Re-strike Range: 105- to 130-V ac.

b. Maximum Voltage: 250-V peak or 150-V ac RMS.

2. Minimum Starting Temperature: Minus 40 deg F.

3. Open-circuit operation shall not reduce average lamp life.

2.07 EXIT SIGNS LED LIGHTED

A. Description: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.

B. Internally Lighted Signs:

1. Lamps for AC Operation: Fluorescent, 2 for each fixture, 20,000 hours of rated lamp life.

2. Lamps for AC Operation: LEDs, 70,000 hours minimum rated lamp life.

3. Self-Powered Exit Signs (Battery Type): Integral automatic charger in a self-contained power pack.

a. Battery: Sealed, maintenance-free, nickel-cadmium type.

b. Charger: Fully automatic, solid-state type with sealed transfer relay.

c. Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.

d. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.

e. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

f. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.

g. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

4. Master/Remote Sign Configurations:

a. Master Unit: Comply with requirements above for self-powered exit signs, and provide additional capacity in LED power supply for power connection to remote unit.

b. Remote Unit: Comply with requirements above for self-powered exit signs, except omit power supply, battery and test features. Arrange to receive full power requirements from master unit. Connect for testing concurrently with master unit as a unified system.

2.08 EMERGENCY LIGHTING UNITS

A. Description: Self-contained units complying with UL 924.

1. Battery: Sealed, maintenance-free, lead-acid type.

2. Charger: Fully automatic, solid-state type with sealed transfer relay.

3. Operation: Relay automatically turns lamp on when power supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.

4. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.

5. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

6. Wire Guard: Heavy-chrome-plated wire guard protects lamp heads or fixtures.

7. Integral Time-Delay Relay: Holds unit on for fixed interval of 5 minutes when power is restored after an outage.

8. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.

9. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

2.09 LIGHTING FIXTURE SUPPORT COMPONENTS

A. Comply with Division 26 Section "Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.

B. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.

C. Twin-Stem Hangers: Two, 1/2-inch steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.

D. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated steel, 12 gage.

E. Wires for Humid Spaces: ASTM A 580/A 580M, Composition 302 or 304, annealed stainless steel, 12 gage.

F. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.

G. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Lighting fixtures: Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.

B. Support for Lighting Fixtures in or on Grid-Type Suspended Ceilings: Use grid as a support element.

1. Install a minimum of four ceiling support system rods or wires for each fixture. Locate not more than 6 inches from lighting fixture corners.

2. Support Clips: Fasten to lighting fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.

3. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4-inch metal channels spanning and secured to ceiling tees.

4. Install at least four independent support rod or wire from BUILDING structure to a tab on lighting fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.

C. Suspended Lighting Fixture Support:

1. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.

2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.

3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end.

D. Air-Handling Lighting Fixtures: Install with dampers closed and ready for adjustment.

E. Adjust aim-able lighting fixtures to provide required light intensities.

F. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.02 FIELD QUALITY CONTROL

A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.

B. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

3.03 CLEANING

A. Clean the diffuser or lenses before installing to the fixture.

END OF SECTION 26 51 00

26 90 20

ELECTRICAL CONTROLS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Requirements of Division 26 "COMMON WORK RESULTS FOR ELECTRICAL" apply to this Section.

1.02 SECTION INCLUDES

A. Cabinets.

B. Relays/Contactors.

C. Photo cells.

D. Time clocks.

E. Power supplies.

F. Terminal blocks.

G. Plastic wiring troughs.

H. Miscellaneous.

1.03 SUBMITTALS: SUBMIT THE FOLLOWING IN ACCORDANCE WITH SECTION 260500.

A. Shop Drawings: Provide complete point to point wiring diagrams inside low voltage panels and from panels to control/switching sources. Provide shop drawings indicating all conduit sizes and locations required for switching system.

B. Product Data: Provide for each device specified. Indicate coil and contact ratings, dimensions, cabinets and accessory items.

C. Provide category and UL file number for products.

D. Warranties.

E. Submittals for this section shall be signed by the subcontractor responsible for Division 13 controls, also.

PART 2 - PRODUCTS

2.01 CABINETS

A. Factory mount relays, time clocks, power supplies, terminal blocks, wiring troughs and accessories in a NEMA 1 cabinet conforming to Section 260533 RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS by a UL 508 listed manufacturer unless otherwise directed.

B. Contactors/relays shall be individually identified with name tags. All wiring within cabinets shall be pre wired through plastic wiring troughs and brought to terminal blocks for field connections. Wires at terminal blocks and contactors/relays shall be identified by contactor/relay and pole number.

C. Low voltage control wiring shall conform to Section 260519 LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES 600V wires and cables.

D. Provide 1/4" minimum spacing between non-power limited wiring and power limited wiring.

E. Cabinet and components shall be suitable for installation and operation in an unconditioned space.

F. Relay cabinet power shall be 120 volts or as otherwise indicated.

G. Cabinets shall be lockable, keyed alike. Furnish two (2) keys for each cabinet.

H. Provide wire bending space, clearances, construction, etc. in accordance with NEC-312.

2.02 RELAYS/CONTACTORS

A. Provide mechanically held SPST Class A150 contacts of required number, voltage, and current rating conforming to NEMA ICS 2 and UL 508 "industrial control equipment." Contacts shall be fully field convertible from N.O. to N.C.

1. Magnetic Control Relay: Class A300.

2. Time Delay Relay: Class A600.

B. Control coil shall be Class 2 power limited with solid state control accessories as required.

C. Line and low voltage terminals shall be screw type.

D. Relays shall be ASCO 917 with 47, 48 or 49 Series control modules as required or equal by General Electric, Square D, Westinghouse/Cutler-Hammer, Siemens/ITE

2.03 PHOTO CELLS

A. Photocell switch manufactured to NEMA ICS 2 and UL 773A "Non-industrial Photoelectric Switches for Lighting Control."

B. Provide voltage, NEMA rating, contact rating and contact configuration as required.

C. Sensitivity two (2) footcandles to 50 footcandles, adjustable.

D. Provide photo cells manufactured by Intermatic, Dayton, Paragon or Tork.

2.04 TIME CLOCKS

A. Provide 24 hour clock timer manufactured to NEMA ICS 2 and UL 917 "Clock Operated Switches" with two (2) astronomic time setting and 12 hour spring wound reserve power carry over.

B. Manufacturers: Intermatic, Dayton, Paragon, Tork.

2.05 POWER SUPPLY

A. Provide low voltage power supply in conformance with NEC Article 725 Class 2 and UL 1585 "Class 2 and Class 3 Transformers."

B. Provide transformer size, primary, secondary fusing and accessories as required.

C. Manufacturers: General Electric, Square D, Westinghouse, Dormeyer, White Rodgers.

2.06 TERMINAL BLOCKS

A. Conform to NEMA ICS 4 and UL 486A "Wire Connectors and Soldering Lugs for use with Copper Conductors."

B. Provide phenolic, channel mount, screw type terminals.

C. Manufacturers: General Electric, Square D, Westinghouse, Cutler/Hammer, Buchanan, Allen-Bradley, Entrelec, Pass & Seymour/Legrand, Thomas and Betts, Marathon, Ilsco.

D. Provide UL listed copper ground terminal.

2.07 PLASTIC WIRING TROUGHS

A. Provide open slot vinyl wiring duct with snap on cover conforming to NEMA ICS 6 of width and height as required.

B. Manufacturers: Gould Shawmut, Panduit, Rob Roy, Tyton, Electrovert, Pass & Seymour/Legrand, Leviton.

2.08 MISCELLANEOUS

A. Provide miscellaneous items (diodes, solid state relays, logic chips, fuse holders, etc.) as required for a complete operating system.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Furnish all labor, materials, tools, equipment, and services for interface with HVAC controls, lighting controls, and other control systems as indicated and required by contract documents. Relays, conduit, wiring and accessories required shall be provided and installed.

B. Completely coordinate with work of all other trades.

C. Although such work is not specifically indicated, furnish and install all supplementary or miscellaneous items, appurtenances and devices incidental to or necessary for a sound, secure and complete installation.

D. Mount control panels where indicated on drawings and provide proper NEC working clearance assuming panel will require examination while energized.

E. Use manufacturer's recommended cable size for length of run and relays served.

F. Provide conduit and wire between control panels, power panels, relays and low voltage switches as required to achieve the sequence of operation indicated.

G. Inside relay cabinets, provide 1/4" minimum spacing between non-power limited wiring and power limited wiring. Otherwise, power limited wiring shall be in separate enclosures from non-power limited wiring.

3.02 DEMONSTRATION

A. Provide system demonstration under provisions of contract closeout.

END OF SECTION 26 90 20

26 95 00

FIELD ELECTRICAL TESTING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Requirements of Division 26 "COMMON WORK RESULTS FOR ELECTRICAL" apply to this Section.

1.02 SECTION INCLUDES

A. Testing by Installing Contractor

B. Testing by Independent Certified Testing Contractor

C. All testing shall be witness with the Owner, Commissioning Agent, Engineer or Architect.

1.03 SUBMITTALS: SUBMIT THE FOLLOWING IN ACCORDANCE WITH SECTION 260500.

A. Contractor shall submit experience and certified of testing firm and individuals who will be performing and evaluating tests before any tests are done.

B. Contractor shall submit in writing at least 24 hours in advance notification of the occurrence of any test described in this section.

C. Contractor shall record all test data and submit three (3) copies for review. In addition to the test data, each record shall include; date of test, ambient temperature, climate conditions, instruments used, names of test personnel and witnesses and identification of items tested.

D. The testing firm shall maintain a written record of all tests and, upon completion of project, shall assemble and certify a final test report.

1.04 QUALITY ASSURANCE: COMPLY WITH THE FOLLOWING.

A. All tests shall be done in accordance with all applicable codes and standards.

B. Qualifications of Testing Firm:

1. The testing firm shall be an independent testing organization which can function as an unbiased testing authority, professionally independent of the manufacturers, suppliers, and installers of equipment or systems evaluated by the testing firm.

2. The testing firm shall be regularly engaged in the testing of electrical equipment devices, installations, and systems.

3. The testing firm shall meet OSHA criteria for accreditation of testing laboratories, Title 29, or be a Full Member company of the International Electrical Testing Association (IETA).

4. The testing firm shall utilize engineers and technicians who are regularly employed by the firm for testing services.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 DIVISION OF RESPONSIBILITY

A. All tests indicate in this specification section shall be done by the testing firm except the installing contractor shall be responsible for the following:

1. The contractor shall perform routine insulation-resistance, continuity, and rotation tests for all distribution and utilization equipment prior to and in addition to tests performed by the testing firm specified herein.

2. 120 Volt General Purpose Receptacles: All 120 volt general purpose receptacles shall be tested for correct connection using a Hubbell Catalog #5200 or equal receptacle tester.

3. 120 Volt Ground Fault Circuit, Interrupter (GFCI) Receptacles: All 120 volt GFCI receptacles shall be tested for correct connection and rating using Hubbell Catalog #GFT-2G with a range of 2 to 7 milliamps.

4. Enclosed (Disconnect) Switches: Subsequently to completion of installation of electrical disconnect switches, energize circuits and demonstrate capability and compliance with requirements. Except as otherwise indicated, do not test switches by operating them under load. However, demonstrate switch operation through six opening/closing cycles with circuit unloaded. Open each switch enclosure for inspection of interior, mechanical and electrical connections, fuse installation, and for verification of type and rating of fuses installed. Correct deficiencies then retest to demonstrate compliance. Remove and replace defective units with new units and retest.

5. Light Switching: Verify proper connection and operation of switches for lighting fixtures.

6. Lighting Contactors: Demonstrate proper operation of lighting contactors for all items indicated in Division 16.

7. Balancing Loads: After Substantial Completion, but not more than two months after Final Acceptance, conduct load-balancing measurements on panelboards and circuit changes as follows:

   a. Perform measurements during period of normal working load as advised by the Owner.

   b. Perform load-balancing circuit changes outside the normal occupancy/working schedule of the facility. Make special arrangements with Owner to avoid disrupting critical 24-hour services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.

   c. Recheck loads after circuit changes during normal load period. Record all load readings before and after changes and submit test records.

d. Tolerance: Difference between phase loads exceeding 20 percent at any one panelboard is not acceptable. Rebalance and recheck as required to meet this minimum requirement.

B. The Contractor shall supply a suitable and stable source of electrical power to each test site. The testing firm shall specify the specific power requirements.

C. The Contractor shall notify the testing firm when equipment becomes available for acceptance tests. Work shall be coordinated to expedite project scheduling.

D. Any system, material, or workmanship which is found defective on the basis of acceptance tests shall be reported to the Owner/Engineer's representative replaced or repaired by the Contractor at no cost to the Owner, and retested.

E. An electrical system will not be accepted until tested in its entirety and results reported to the Owner.

3.02 TESTING FIRM

A. The testing firm shall test the following equipment as indicated in each section:

1. 600V Wire and Cables

2. Grounding and Bonding.

3. Dry Type Transformers.

4. Enclosed Motor Controllers

5. Motor Control Center

6. Panelboards

7. Switchboards/Switchgear

3.03 INFRARED BASELINE SCANNING

A. Provide scanning for Switchboards, Transformers, MCC's, Panelboards, Generator connection points, Copper Busses, Circuit Breakers, Terminations and Transfer Switches.

B. After Substantial Completion, but not more than two (2) months after Final Acceptance, perform an infrared IR scan in Section 26-95-00 Part 3, 3.2 of each panelboard, switchboard and pad mounted transformer. Remove fronts to make joints and connections accessible to a portable scanner.

C. Instrument: Use an approved infrared IR scanning device designed to measure temperature or detect significant deviations from normal values. Provide calibration record for device used.

D. Record of Infrared IR Scanning: Prepare a certified report identifying panelboards checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

END OF SECTION 26 95 00

SECTION 270000
COMMUNICATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Project overview for the Fort Bend County Information Technology Building and Data Center.
2. Telecommunication Project Management requirements and Quality Assurance Requirements.
3. Telecommunication Documentation requirements.
4. Structured Cabling System testing requirements.
5. Except as modified in this section, General Conditions, Supplementary Conditions, applicable provisions of Division 1, General Requirements, and other provisions and requirements of the contract documents apply to work of Division 27 – Technology Infrastructure.
6. Each section included in Division 27 – Technology Infrastructure incorporates this section by reference and is incomplete without the provisions stated herein.
7. Coordinate work included in other Divisions, which affect the work in this Division

B. Project Overview:

1. Technology Overview
   a) The Telecommunications System for this project will be comprised of several components including the structured cabling system (SCS). These components, as well as other related components, will be discussed individually in the following sections.
   b) The related components of the telecommunication system include grounding / bonding, MEP requirements, architectural requirements, as well as interfacing with other systems such as security and building automation.
   c) The telecommunications system design will be based on the Telecommunications Industries Association (TIA) standards as well as Building Industry Consulting Services, Inc. (BICSI) standards. In addition, the design will comply with Ft Bend County IT standards.
   d) All communications installation shall follow ANSI/TIA and BICSI recommendations and standards.

C. Cable Infrastructure

1. The telecommunications cabling infrastructure will consist of backbone cables, horizontal cables, connectors, raceways and other items as listed below.
2. Backbone Cables:

a) The Telecommunication Backbone System will consist of singlemode fiber optic cable. Singlemode fiber will be used to connect the IT Building to the existing Emergency Operations Center (EOC) as part of a different project.

D. Cable Terminations:

1. Fiber Optic Cables:
   a) All fiber connectors will be LC-type. The 2RU shelves terminate up to 144 strands of fiber using duplex LC fusion-splice connectors. All pigtail, fan out kits and tight buffer slack shall be housed in slack cassettes within. Mechanical splices are not permitted.
2. Horizontal Cables:
   a) All horizontal cabling on this project will be Cat 6 rated, minimum. This project will utilize a VoIP voice system. Therefore, all cables will be considered data cables and terminate in patch panels in the designated IDF/MDF Rooms. Two (2) Cat 6A cables will be installed to each wireless access points (WAP).
3. Horizontal Cable Terminations:
   a) The SCS will utilize Cat 6 or Cat 6A rated patch panels. The patch panels will include 110-style terminations on the rear and RJ-45 ports on the front with space for unique labels to identify each port. All Cat 6A cables will terminate on Cat 6A patch panels and all Cat 6 cables will terminate on cat 6 rated patch panels installed in the equipment racks.
4. Cable Testing:
   a) All backbone fiber optic cables will be tested with power meter and OTDR testing following industry guidelines. All horizontal copper cables will be tested for permanent link test and component test.
5. Cable Warranty:
   a) The SCS will have a minimum warranty of 15+ years which is standard industry practice for high performance cable systems that are installed in compliance with technology guidelines for the performance standards, materials and installation.

E. Cabling Infrastructure Pathways

1. All horizontal and backbone cable routes shall be installed in conduit or cabletray only. Cable hangars will not be allowed. All backbone cable pathway from the MDF to an IDF supporting the IT operations will be installed in redundant pathways.
2. The cabletray for this facility will be wire mesh tray under raised access floors and cable tray in the main corridor spaces. Conduit will route from work area outlet to accessible ceiling. Conduits shall be bonded to the cable tray using compression connectors with bonding fitting and #6 AWG green insolated wire. Conduits shall be no less than 1", however sized appropriately to maintain industry standard fill ratios (40% fill ratio minimum).
3. Conduits shall not extend more than 100 feet in any one continuous run without a pull-box. Communication conduits shall not exceed a total of 180-degrees bend radius without installation of a pull box. Pull box sizing shall be based on conduit sizes and fill ratios. Conduits should enter and exit pull boxes on opposite ends of the box. Pull boxes should not be utilized as 90-degree bends.

4. All conduits shall be marked to identify the type of communications pathway. Markings to occur every 10 feet. Method on how conduits will be identified shall be submitted by the contractor to the Engineer or to Ft Bend for approval. In addition to conduit type markings, each conduit entering an MDF or IDF Room must have a destination label if other than the corridor cabletray system.
5. Conduits shall be EMT or Rigid steel conduit. No plastic or plastic-based materials can be used for interior pathways. Underground pathways will utilize schedule 40 PVC and will be concrete-encased. All communication conduits shall utilize compression fittings, reamed and threaded bushings installed.

Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 General Requirements Specification Sections, apply to this Section.

1.3 SUBMITTALS

A. Follow Section 013300 – Submittal Procedures and the following:

B. All submittals must contain a table of contents listing all products to be reviewed. All cutsheets must indicate the model number specified by highlighting or arrow or some other method that provides a clear distinction on which model number is chosen.

C. Proposed cable data must be submitted for all copper, fiber, cabinets, cabletrays, grounding and termination equipment. Submitted data shall include, as a minimum:

1. Manufacturer's name.
2. Manufacturer's part numbers, picture, and specifications.
3. Equipment cut sheet.

D. Contractor qualifications: Furnish evidence of meeting the requirements for contractor qualifications specified in this section.

E. Shop drawings indicating the intended cable layout and pulling plan prior to beginning cable pulling.

F. Cable inventory data must be submitted for all copper, fiber, and termination equipment. The contractor is required to submit this data upon initial installation of the new cable plant, prior to the activation of any circuits. The contractor shall maintain an updated cable inventory database of the new cable plant throughout the remaining project duration which shall include the circuit activation data. The contractor shall submit the final active cable inventory at the project close-out. Submit data electronically on data diskettes in "Microsoft Excel 2007" format, listing products furnished, including:

1. Manufacturer's name.
2. Manufacturer's part numbers.
3. Cable numbers utilizing the cable numbering standard.
4. Location and riser assignments.
5. This requirement applies to copper cable, fiber optic cable, and all termination equipment.

G. Record Drawings: Follow Section 017700 – Closeout Procedures, with the exception that a preliminary deliverable will be required as defined above. Furnish CAD drawings of completed work including cable numbers.

1.4 DEFINITIONS AND ABBREVIATIONS

A. Provide: Where the word "provide" is used, the word is understood to mean, "the Contractor shall furnish and install" the equipment, tests, inspections, etc. referenced.

B. Related Work: The sections referenced under the article RELATED SECTIONS are understood to include provisions which directly affect the work being specified in the section where the RELATED SECTIONS article occurs.

C. Concealed: Where the word "concealed" is used in conjunction with raceways, equipment and the like, the word is understood to mean hidden from sight as in chases, furred spaces or suspended ceilings.

D. Exposed: Where the word "exposed" is used, the word is understood to mean open to view.

E. American Wire Gauge – AWG

F. Asynchronous Transfer Mode - ATM

G. Gigabits Per Second – Gbps

H. Main Cross Connect – MC

I. Megabits Per Second - Mbps

J. Polyvinyl Chloride - PVC

K. Structured Cabling System - SCS

L. Telecommunications Room – TR

M. Telecommunication Closet - TC

N. Multimode Fiber Optic Cable – MMF

O. Single-mode Fiber Optic Cable – SMF

P. Intermediate Distribution Frame – IDF

Q. Main Distribution Frame – MDF

R. Not in Contract – NIC

S. Unless Otherwise Noted – UON

T. Refer to: - RE:

Z. Optical Fiber – OF

1.5 ADDITIONAL REQUIREMENTS

A. Integration: Responsibility for overall telecommunications system integration and coordination of work among trades, subcontractors, and suppliers shall rest with Contractor named in construction contract issued by Owner's Representative. Work covered by this division of specifications shall be coordinated with related work indicated on drawings or specified elsewhere under project specifications. Work related to telecommunications system shall be performed under direct supervision of telecommunications system installer in a manner approved by product manufacturer.

B. Coordination of work: Contractor shall be responsible for coordination of work among project specification divisions and contractor/subcontractors involved in this project. This coordination of Work Includes following instructions provided the Construction Manager or General Contractor if project is managed by such. See section 270000 for additional information.

C. General compliance requirements: Provide a complete and operable system in compliance with project drawings, specifications, referenced standards, applicable building codes, and Authority Having Jurisdiction (AHJ) requirements. Scope of this contract includes planning, design, materials, equipment, labor, configuration, programming, testing, startup and commissioning services, and documentation costs for complete and operable system that meets all requirements indicated on drawings or contained in specifications. Comply with all contract documents, specifications, drawings, manufacturer's instructions, and Owner and AHJ requirements. In case of conflict among applicable documents or standards, contractor shall notify owner's representative in writing of apparent conflict, and then comply with most stringent requirements unless otherwise directed in writing from owner's representative. Work Includes all items required for complete system whether or not identified in specification or drawings.

D. Information about general construction and architectural features and finishes shall be derived from structural and architectural drawings and specifications only.

E. Items referred to in singular number in Contract Documents shall be provided in quantities necessary to complete work.

F. Work related to telecommunications system shall be installed by an SCS manufacturers authorized or certified trained installer and supervised an SCS manufacturers authorized or certified SCS Engineer. Owner reserves the right to review and approves any personnel assigned to this project in a supervisory or managerial role.

G. SCS contractor shall have had at least 10 years of comparable experience with telecommunications projects. As part of the proposal, SCS installer shall submit at least three (3) comparable Project reference descriptions with reference contacts. Comparable projects shall equal or exceed size and complexity of work on drawings.

H. Complete and usable work: Refer to and comply with requirements in section 27 00 00 outlined below.

1.6 RELATED DOCUMENTS AND DRAWINGS

A. General: The project drawings and general conditions of Contract shall apply to this section.

B. Drawings are generally diagrammatic and are intended to encompass a system that will not interfere with the structural and architectural design of the building. Coordinate the work to avoid interferences between conduit, equipment, architectural and structural work.

C. Coordinate with architectural features, trim and millwork details, and install equipment in cabinets or other special areas as directed by A/E.

D. Drawings are based on equipment specified as the ‘basis of design’. Make adjustments, modifications or changes required, due to use of other equipment, at no additional compensation.

E. Coordination: Coordinate with work specified in other sections and divisions of specifications.

F. Reference: Codes and standards as referenced in Section 27 00 00 may define additional specifications or requirements not specifically called out within this division. However, contractor shall adhere to most stringent requirements as defined herein, or as defined by reference within section 270000.

G. Architectural and Engineering specifications may have additional conditions or requirements that affect the work defined by this division of specifications. Contractor shall be responsible for the coordination of all conditions and other trade requirements that may impact schedule, scope of work, work progress, or other factors that may affect the overall ability for contractor to execute the requirements of this division of specifications.

1.7 CODES AND STANDARDS

A. General: All work, including but not limited to: cabling, pathways, support structures, wiring, equipment, installation and workmanship shall comply with the latest editions of the requirements of the Authority Having Jurisdiction (AHJ), National Electrical Code, National Electrical Safety Code, all applicable local rules and regulations, equipment manufacturer's instructions, and the National Electrical Contractor's Association (NECA) Standard of

Installation. In case of discrepancy or disagreement between the documents noted above, the Contractor shall satisfy the most stringent requirements.

B. Other sections of this document contain References to Codes and Standards that are applicable to the section.

1.9 DEFINITIONS

A. Access Floor - A floor system that has removable floor panels.

B. Building Backbone Cabling – Cabling used to connect Floor Distributors (FD) or other local collection points to the Building Distributor (BD). Building backbone cabling typically carries aggregate traffic and, as such, impacts multiple network devices and users. Building backbone cabling may include either fiber optic or copper cabling or both.

C. Building Distributor (BD) – Termination point from which all building backbone cabling emanates and interconnection point for the network backbone. Commonly referred to as BDF in Americas, Main Comms Room in EMEA and Communication Room, IT Lab or IT Room in AsiaPac. Referred to as BD in international and European industry standards and Intermediate Cross-connect (IC) in American industry standards. There is one BD for each building and it feeds all FD's in the same building. The BD should be located so that all FD's served are within 300 cable meters (984 cable feet). All BD's are linked to the

D. Campus Backbone Cabling – Cabling used to connect Building Distributors (BD) or other key network segments to the Campus Distributor (CD). With rare exceptions, campus backbone cabling carries aggregate traffic and typically impacts entire buildings worth of network devices and users and, as such, link redundancy with diverse routing is highly recommended. Campus backbone cabling almost exclusively consists of fiber optic cabling. Copper cabling may be used in short-distance (< 90m) applications. In such cases, lightning protection will usually be required by code.

E. Campus Distributor (CD) – Termination point from which all campus backbone cabling emanates and highest-level interconnection point for the network backbone. Commonly referred to as NOC in Americas and Main Comms Room in EMEA. Referred to as CD in international and European industry standards and Main Cross-connect (MC) in American industry standards. On smaller campuses, there is one CD for the campus. On larger campuses there might be several CD's with each CD serving several buildings. Besides linking to each of the BD's it serves, the CD is also the network interconnection point for data center links and links to service providers.

F. Category 3 (Cat 3) – A category of transmission performance, defined in TIA standards, that specifies electrical properties up to 10 MHz. Cat 3 is the minimum performance grade permissible and is used typically for analog voice distribution.

G. Category 5e (Cat 5e) / Class D – A category/class of transmission performance that specifies electrical properties up to 155.5 MHz. Capable of supporting copper-based, four-pair Gigabit Ethernet (IEEE 802.3ab 1000BASE-T) applications. Category 5e is defined in TIA 568B.2 standard. Class D is defined in the ISO 11801 standard.

H. Category 6 (Cat 6) / Class E – A category/class of transmission performance that specifies electrical properties up to 250 MHz. Refer to the TIA 568B family of standards for more information on Category 6 and ISO/IEC 11801 for more information on Class E requirements. Also refer to CENELEC EN50173.

I. Category 6A (Cat 6) / Class EA– A category/class of transmission performance that specifies electrical properties up to 500 MHz and capable of supporting data applications operating at

10Gbps. Refer to the TIA 568B family of standards for more information on Category 6 and ISO/IEC 11801 for more information on Class EA requirements.

J. Certification – The testing and documentation of the transmission performance (e.g., Category 5e / Class D) of a permanent link or channel, based on sweep frequency (where applicable) testing of numerous parameters with results compared to a range of acceptable values. This project requires 100% certification (with documentation) of all permanent link cabling at the time of installation. Channel certification is optional and is the responsibility of the group using the channel.

K. Channel – The entire physical pathway between active equipment ports, inclusive of all patch cords, patch panels, jacks and cabling segments.

L. Class C – A category of transmission performance, defined in ISO and EN standards, that specifies electrical properties up to 16 MHz

M. Conduit - A raceway of circular cross-section.

N. Entrance Facility (EF) – Termination point of service provider cables that have entered the building and location of service demarcation point (MPOE) and interconnection point to the network. Commonly referred to as Telco Room in Americas, POP Room in EMEA and Building Entrance in AsiaPac. Referred to as Building Entrance Facility in international and European industry standards and Entrance Facility (EF) in American industry standards. The EF is linked to the CD, where present, or to the BD.

O. Floor Distributor (FD) – Termination point for horizontal cabling and interconnection point for network access. Commonly referred to as IDF in Americas and AsiaPac and as Sub Comms Room in EMEA. Referred to as Floor Distributor (FD) in international and European industry standards and Horizontal Cross-connect (HC) - FD quantities and locations are determined by building size and geometry so that all points served are within 90 cable meters (295 cable feet) of an FD. The FD feeds all Telecommunications Outlets (TO’s) in its service zone. All FD’s in a building are linked to the building’s Building Distributor (BD) via backbone cabling.

P. Horizontal Cabling – Cabling used to connect individual work area outlets to local Floor Distributors (FD) or other collection points. Unlike backbone cabling, horizontal cabling does not typically carry aggregate traffic and, as such, impacts only single network devices or users. In buildings, horizontal cabling almost exclusively consists of copper cabling. Fiber optic cabling may be used where situations dictate but, unlike horizontal copper cabling, horizontal fiber optic cabling is not installed in advance as default building facilities. At this writing, horizontal copper cabling in many networks is capable of supporting Gigabit (1Gb/s) Ethernet applications as well as other applications of similar bandwidth.

Q. Permanent Link – A stationary cabling segment, consisting of the permanently installed cable and the permanently affixed jack at both ends (typically at the outlet faceplate and closet patch panel, or on a patch panel on both ends). The concept is based on the assumption that, while patch cords might be disconnected or moved over time, the permanent cable and jacks will not be disturbed, and the electrical characteristics of the permanent link will remain unaltered.

R. Plenum - A space within the building designed for the movement of environmental air; i.e., a space above a suspended ceiling or below an access floor.

S. Raceway - Any channel designed for holding wires or cables; i.e. conduit, electrical metal tubing, busways, wireways, ventilated flexible cableway.

T. Spine – also called a backbone, the main communications cables in an IDF.

1.10 CONTRACT DRAWINGS

A. Drawings are generally diagrammatic and are intended to encompass a system that will not interfere with the structural and architectural design of the building. Coordinate the work to avoid interferences between conduit, equipment, architectural and structural work.

B. Coordinate with architectural features, trim and millwork details, and install equipment in cabinets or other special areas as directed by A/E.

C. Drawings are based on equipment specified as the 'basis of design'. Make adjustments, modifications or changes required, due to use of other equipment, at no additional compensation.

1.11 PROJECT DRAWINGS

A. General Drawing Specifications: Detail and elevation drawings shall be D size (24" x 36") with a minimum scale of 1/4" = 1'0" or larger. ER, TR and other enlarged detail floor plan drawings shall be D size (24" x 36") with a minimum scale of 1/4" = 1'0" or larger. Building composite floor plan drawings shall be D size (24" x 36") with a minimum scale of 1/8" = 1' 0".

B. Building composite floor plans: Provide building floor plans showing outlet locations and jack configuration, types of jacks, run distance for each jack cable, and cable routing/locations. Identify TO's that, according to location and available pathway systems, require cable length greater than allowed by standards. Recommend alternatives for Owners Representative's consideration.

C. Telecommunications space plans/elevations: Include enlarged floor plans of TRs indicating layout of equipment and devices, including receptacles and grounding provisions. Submit detailed plan views and elevations of telecommunications spaces showing racks, termination blocks, and cable paths.

D. Logical Drawings: Provide logical riser or schematic drawings for all systems. Include schematic symbol key.

1.12 SUBSTITUTIONS

A. Substitution requests: Substitution requests will be considered only if submitted to Owner's Representative not less than 7 working days prior to project bid date. Acceptance or rejection of proposed substitution is at Owner's Representatives sole discretion. No exceptions. Requests for substitutions shall be considered not approved unless approval is issued in writing by Owner's Representative.

B. Rejection: For equipment, cabling, wiring, materials, and all other products indicated or specified as no substitutions or no alternates, Owner does not expect nor desire requests for substitutions and alternate products other than those specified. Owner reserves right for Owner's Representative to reject proposed substitution requests and submissions of alternates without review or justification.

1.13 PRE-INSTALLATION MEETING

A. General: After award, convene a pre-installation meeting at least 14 calendar days prior to commencing SCS and related work. The meeting must be scheduled at least 14 days in advance. Require attendance of parties directly affecting work of this section, including other trades and utilities if necessary. Review conditions of operations, procedures and coordination with related work.

B. Agenda: Comply with following agenda specifications:

1. Tour, inspect, and discuss building conditions relating to telecommunications system cabling and equipment, coordination with Telephone Utility Company, Owner's telecommunications system requirements, and coordination with existing conditions and other work in contract.
2. Review exact location of each item within building construction, casework, and fixtures, and their requirements.
3. Review required submittals, both completed and yet to be completed.
4. Review drawings and specifications.
5. Review proposed equipment, cabling, and related work.
6. Review and finalize construction schedule related to telecommunications system and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.
7. Review required inspections and testing.
8. Review cable routing and support provisions.

1.14 SAFETY

A. The contractor shall follow the safety procedures.

B. The contractors shall be responsible for training all personnel under their employ in areas concerning safe work habits and construction safety. The contractor shall continually inform personnel on hazards particular to this project and update the information as the project progresses.

1.15 QUALITY ASSURANCE

A. Follow Part 3 EXECUTION of Specifications:

1. Section 01
2. Section 263353: Telecommunications Uninterruptible Power Supply (UPS)
3. Section 270000: Communications
4. Section 270526: Telecommunication Grounding and Bonding
5. Section 270528: Interior Communications Pathways
6. Section 270543: Exterior Communication Pathways
7. Section 270553: Identification and Labeling of Communication Infrastructure
8. Section 271100: Communication Room Fittings
9. Section 271300: Backbone and Riser Media Infrastructure
10. Section 271500: Horizontal Media Infrastructure
11. Section 272100: Data Communication Network Equipment
12. Section 280500: Electronic Safety and Security
13. Section 281300: Access Control System (ACS)
14. Section 282300: Digital Video Surveillance System (DVSS)

B. Follow Section 014000 – Quality Requirements and the following.

C. Perform work in accordance with the latest editions, revisions, amendments or supplements of applicable statutes, ordinances, codes or regulations of Federal, State and Local Authorities having jurisdiction in effect on the date bids are received. .

D. Where approval standards have been established by OSHA, Underwriter's Laboratories, ASME, AGA, AMCA, ANSI, ARI, NFPA 70, State Fire Insurance Regulatory Body, and FM, these standards shall be followed whether or not indicated on the Contract Drawings and Specifications. Include the cost of all work required to comply with the requirements of these authorities in the original proposal. Comply with ANSI C2 where applicable.

E. Comply in every way with the requirements of local laws and ordinances, the National Board of Fire Underwriters, and the National Electrical Code. Anything in the plans or specifications that does not strictly comply with the above laws, ordinances, and rules must be referred to the attention of the Engineer for a decision before proceeding. No change in the plans or specifications shall be made without full consent in writing of the Engineer.

F. Monitor and maintain quality control over manufacturers, suppliers, subcontractors, work force, site conditions, products, and services to ensure Work is of specified quality.

G. All communications work shall be performed under the direct on-site supervision of a Building Industry Consulting Service International, Inc. (BICSI) Certified Registered Communications Distribution Designer (RCDD). Submit resumes and RCDD registration to the Architect as proof. Paperwork must be approved by the Architect in writing prior to construction. The RCDD must be at the job site during construction. The RCDD shall be present during all cable testing, pulling and termination procedures.

H. Provide all materials, equipment, and installation in compliance with the latest applicable standards from ANSI, FCC, ASTM, TIA, IEEE, NEC, NFPA, NEMA, REA, and UL.

I. Requirements in reference specifications and standards are minimum for all equipment, material and work. In instances where capacities, size or other features of equipment, devices or materials exceed these minimums, meet listed or shown capacities.

J. Resolve any code violation discovered in contract documents with the A/E prior to award of the contract. After award of the contract, make any correction or addition necessary for compliance with applicable codes at no additional compensation.

1. Arrange with local and state authorities and utility companies for permits, fees and service connections, verifying locations and arrangement, and pay all charges including inspections.

K. Contractor Qualifications:

1. Must be a certified and currently registered company capable of issuing a numbered registration certificate for the entire cable system from the installed cable/connector manufacturer. Certification must be in effect throughout the duration of the communication system installation, testing, documentation and acceptance.
2. Must be supervised on-site by a BICSI RCDD. Must demonstrate knowledge and compliance with all BICSI, ANSI, TIA, UL, NEBS and NEC standards and codes.
3. All members of the installation team must be certified by the manufacturer as having completed the necessary training to complete their part of the installation. Resumes of the entire team should be provided along with documentation of completed training courses.
4. The Installation Supplier shall demonstrate that they have a documented program for qualifying an installer on specific work activities and systems related to the skill level requirements indicated in this section.
5. The Installation Supplier shall use the installers years of experience in a specific system(s)/environment(s) and their demonstrated ability to perform work operations/job functions associated with equipment installation or removal activities and formal education in a related accredited curriculum in assigning skill levels.
6. In this section a "certificate of completion" from a training facility or "appropriate curriculum" are considered specific training for a piece of equipment or a procedure. The Installation Supplier shall have documented records for each installer identifying training successfully completed. As a minimum, the following training: AC/DC theory, equipment grounding, generic central office installation, BICSI installation training, power fundamentals, safety, required federal state and local standards and OSHA requirements are recommended subjects.
7. Five (5) years experience in the installation of fiber optic cables, including splicing, terminating and testing. Testing on fiber optic cable shall include single and multimode.
8. Three (3) years experience in the installation of Category 3 and Category 5 or greater Unshielded Twisted Pair copper cables for voice and data distribution systems, including splicing, terminating and testing. Testing on Category 3 and Category 5 copper cable shall include complete verification with TIA cable standards.
9. Five (5) references for project of equivalent scope, type and complexity of work completed within the last five (5) years. The Contractor shall submit as proof, supporting documents and the names, addresses and telephone numbers of the operating personnel who can be contacted regarding the installation system.

L. All components shall be produced by manufacturers who have been regularly engaged in the production of telecommunications cabling components of the types to be installed in this project for a period of five years.

M. All data contractor installation personnel must be BICSI Certified Installer Level I or higher. The onsite supervisor of the data contractor must be a BICSI Certified Technician. The data contractor must have on staff a BICSI Certified RCDD. All certifications must be current. Proof of certification must be presented at the pre-installation meeting.

N. Assure that the "as installed" system is correct and complete per construction documents: including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.

O. Owner/Architect/Engineer retains the right to access and inspect all work during the entire duration of the project and any items that do not adhere to the standards, reference, contract, bid, or project documents will be corrected immediately at the expense of the contractor.

P. UL Compliance: Provide products that are UL-classified and labeled.

Q. Verification: The Owner will maintain inspection personnel on the job site. It is incumbent upon the Contractor to verify that the installation and material used has been inspected before it is enclosed within building features, or otherwise hidden from view. The Contractor shall bear costs associated with uncovering or exposing installations or features that have not been inspected.

R. Equipment Qualifications: The Contractor is to use equipment and rigs designed for pulling, placement and termination of multipair copper cable; including reel trucks, mechanical mules, sheaves, shoes, anchors etc., and equipment for drilling masonry, installing anchors, etc., to install support and cable management hardware.

S. Materials and equipment:

1. Equipment shall be rated for continuous operation under the ambient environmental temperature, humidity, and vibration conditions encountered at the installed location. The equipment shall meet the following requirements:
    a) Interior controlled environment: 60 to 100 degrees F dry bulb and 20 to 90 percent relative humidity, non-condensing.
    b) Interior uncontrolled environment: 0 to 130 degrees F dry bulb and 10 to 95 percent relative humidity, non-condensing.
    c) Exterior environments: Minus 30 degrees to 130 degrees F dry bulb, and 10 to 100 percent relative humidity, condensing.
    d) Hazardous environment: All system components located in areas where fire or explosion hazards may exist because of flammable gas or vapors, flammable liquids, combustible dust, or ignitable fibers or flyings, shall be rated and installed according to Chapter 5 of the NFPA 70 and as shown.

T. Standard products:

1. Equipment and materials shall be standard products of a manufacturer regularly engaged in the manufacture of telecommunications cabling products and shall be the manufacturer’s latest standard design in satisfactory use for at least one year prior to bid opening.
    a) Items of the same classification shall be identical. This requirement includes equipment, modules, assemblies, parts, and components.

U. Perform work in accordance with the latest editions, revisions, amendments or supplements of applicable statutes, ordinances, codes or regulations of Federal, State and Local Authorities having jurisdiction in effect on the date bids are received.

V. Where approval standards have been established by OSHA, Underwriter's Laboratories, ASME, AGA, AMCA, ANSI, ARI, NFPA 70, State Fire Insurance Regulatory Body, and FM, these standards shall be followed whether or not indicated on the Contract Drawings and Specifications. Include the cost of all work required to comply with the requirements of these authorities in the original proposal. Comply with ANSI C2 where applicable.

W. Comply in every way with the requirements of local laws and ordinances, the National Board of Fire Underwriters, and the National Electrical Code. Anything in the plans or specifications that does not strictly comply with the above laws, ordinances, and rules must be referred to the attention of the Engineer for a decision before proceeding. No change in the plans or specifications shall be made without full consent in writing of the Engineer.

X. Monitor and maintain quality control over manufacturers, suppliers, subcontractors, work force, site conditions, products, and services to ensure Work is of specified quality.

Y. All communications work shall be performed under the direct on-site supervision of a Building Industry Consulting Service International, Inc. (BICSI) Certified Registered Communications Distribution Designer (RCDD). Submit resumes and RCDD registration to the Architect as proof. Paperwork must be approved by the Architect in writing prior to construction. The RCDD must be at the job site during construction. The RCDD shall be present during all cable testing, pulling and termination procedures.

Z. Provide all materials, equipment, and installation in compliance with the latest applicable standards from ANSI, FCC, ASTM, TIA, IEEE, NEC, NFPA, NEMA, REA, and UL.

AA. Requirements in reference specifications and standards are minimum for all equipment, material and work. In instances where capacities, size or other features of equipment, devices or materials exceed these minimums, meet listed or shown capacities.

BB. Resolve any code violation discovered in contract documents with the A/E prior to award of the contract. After award of the contract, make any correction or addition necessary for compliance with applicable codes at no additional compensation.

CC. Arrange with local and state authorities and utility companies for permits, fees and service connections, verifying locations and arrangement, and pay all charges including inspections.

DD. Client retains the right to inspect all work during the entire duration of the project and any items that do not adhere to the reference, contract, bid, or project documents will be corrected immediately at the expense of the contractor.

EE. Tests for Insulated Cable: Pass vertical tray flame test following IEEE 383-2.5.

1.16 MATERIALS AND WORKMANSHIP

A. Provide new materials and equipment of a domestic manufacturer by those regularly engaged in the production and manufacture of specified materials and equipment. Where Underwriter's Laboratories or other agency has established standards for materials, provide materials, which are listed and labeled accordingly. The commercially standard items of equipment and the specific names mentioned herein are intended to identify standards of quality and performance necessary for the proper functioning of the work.

B. Perform work by workmen skilled in the trade required for the work. Install all materials and equipment to present a neat appearance when completed and in accordance with the approved recommendations of the manufacturer and the best practices of the trade and in conformance with the Contract Documents.

C. Provide all labor, materials, apparatus, and appliances essential to the complete functioning of the systems described or indicated herein, or which may be reasonably implied as essential whether mentioned in the Contract Documents or not.

D. In cases of doubt as to the Work intended or in the event of need for explanation thereof, make written request for supplementary instructions to A/E.

E. Since manufacturing methods vary, reasonable minor variations are expected; however, performance and material requirements are the minimum standards acceptable. The right to judge the quality of equipment that deviates from the Contract Documents remains solely with A/E.

F. Exterior and interior raceway systems may be installed by a licensed electrical contractor.

G. Cable terminations and testing shall be performed only by the channel solution manufacturers Certified Contractor.

H. If a part number shown in this document has been discontinued or is no longer in production, then the manufacturer's replacement part number shall be used. If there is no replacement part number, then the contractor shall notify the engineer in writing requesting instructions for an approval replacement part number.

1.17 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Follow the manufacturer's directions completely in the delivery, storage, and handling of equipment and materials.

B. Store equipment in a clean, dry place, protected from other construction. While stored, maintain factory wrappings or tightly cover and protect equipment against dirt, water, construction debris, chemical, physical or weather damage, traffic and theft.

C. Adequately brace and package equipment to prevent breakage and distortion while in transit.

1.18 OPERATING INSTRUCTIONS

A. Provide the services of competent representatives of the manufacturer capable of certifying that the equipment is installed according to the manufacturer's recommendations, is operating properly, and to instruct the Owner's operating personnel during start-up and operating tests of the complete telecommunication system. Prove the operation of equipment to the satisfaction of A/E. Give at least seven days' notice to A/E prior to beginning equipment start-up.

B. Certify that these services have been performed by including a properly executed invoice for these services or a letter from the manufacturer.

C. Perform all tests outlined in Division 27.

1.19 SERVICE

A. Remove all excess material and debris. Place all telecommunication systems in complete working order before request for final review. Broom clean all areas.

B. Clean and polish all fixtures, equipment, and materials thoroughly, and return to "as new" condition.

1.20 PROJECT RECORD DOCUMENTS

A. Comply with Section 017700 - Closeout Procedures and the following.

B. Maintain a set of prints of the Contract Documents at the job site for the purpose of recording the final size, location and interrelation of all work under this Division in accordance with Section 017839 – Project Record Documents. Mark-up this set of drawings as the job progresses to indicate "as-built" location of all equipment, including concealed conduit, equipment and the like.

C. Clearly and accurately delineate the work by dimensions on the record drawings as installed, with equipment locations identified by at least two dimensions to permanent structures.

D. The final record drawings shall be marked "AS-BUILT," and signed and dated by a certified representative of the Contractor.

E. At the conclusion of project, provide certified "AS-BUILT" drawings which shall consist of the following:

1. All drawings shall be provided on disk in a form compatible with the agreed upon revision of AutoCad and Revit. A complete set of project plans will be provided to the Contractor on disk. The Contractor will modify the drawings by placing the cable information on a separate layer. All of the requested drawings will be placed on these plans so that all cable routes are to scale and provide accurate information for use in the future when changes are made and the exact location of cables are required to avoid service interruptions.
2. A complete diagram of all terminations in the Telecommunications Closets.
3. A complete diagram of all copper and fiber, interior and inter-building cables.
4. A complete diagram of all cable tray, conduits and conduit sleeves.

5. A complete diagram of all manholes including section views detailing which cable is in which manhole duct

F. In addition to the AS-BUILT drawings, documentation of the cable plant shall be furnished as noted below:

1. All cable inventory data documentation will be submitted in designated Microsoft Excel 2007 format or later.
2. Documentation on horizontal cable will include cable number and length of cable.
3. Documentation on riser cable and interbuilding cable will include cable number, source and destination, type of cable, length of cable and number of pairs or fibers.
4. Complete cross connect documentation is required. This information will include detailed documentation of all four pairs of each horizontal cable and every pair of all copper riser and inter-building cable and every fiber of fiber optic cable.
5. Submit cable test results following this Section.
6. Submit warranty information following this Section.

1.21 FINAL REVIEW

A. Comply with Section 017700 – Closeout Procedures and the following.

B. Prior to requesting final payment, submit final approved operation and maintenance manuals including approved submittals, test reports and "AS-BUILT" drawings. Delivery of operation and maintenance manuals is a condition of final acceptance.

1.22 SUBMITTALS

A. All submittals for installation, substitutions, or modifications shall be made to the Owner for approval prior to start of work.

B. The Design Consultant and Owner must both approve all product data prior to procurement for all Telecommunications and Security equipment referenced in Division 26, 27, and 28.

C. Other City Departments may have specific needs in addition to the specification listed within. It is the design consultant responsibility to ensure other City departments get a chance to review the Division 26, 27, and 28 specifications referenced in this specification.

D. Requirements: Provide Shop Drawings and Equipment Submittals for all equipment shown on drawing or as specified herein. In addition, provide the following information complete, and in the manner described herein:

E. Shop Drawings: Indicate dimensions, reinforcement, size and locations of openings, and accessory locations for precast manholes.

F. Product Data: Submit for all products.

G. Manufacturer's Installation Instructions: Submit application conditions and limitations of use stipulated by Product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, and installation of Product.

H. The Contractor shall submit a cable pulling plan for all fiber optic and multipair copper cables with a pair count of 25 pairs or greater, that includes, but is not limited to, the following:

1. Each cable run and route.
2. Date and duration of the pull.
3. Pulling methodology and equipment setups.
4. Pulling tension calculations for each pull in the run.
5. Safety issues and precautions to be taken.

I. Qualifications: Demonstrate compliance with requirements of above Paragraph 1.13.B, Contractor Qualifications.

J. Submit Technical Implementation Plans in accordance with all pertinent specifications.

K. Submit manufacturer’s technical data for each product provided.

L. Submit technical and operations manuals.

M. Manuals shall describe function, operation, and programmable parameters for each card and port for each device to be installed. Manuals shall include required maintenance to be performed.

N. Manuals shall be suitable for the training of future personnel by the Client, and for use as a reference by Operations personnel in performing work assignments.

O. As-built documentation. Notes shall be kept during initial installation and shall be made a permanent part of the installation manual pages as required.

P. For each active device installed, provide a printed configuration including a printout of the device as displayed on the network management system. Printed configuration parameters for each port on the device shall accompany the written report.

Q. Other information in support of the design, fabrication, and installation of the system.

R. An implementation schedule listing dates for required equipment installations for approval by the Design Consultant and Owner representative. The dates of equipment installation shall be in accordance with dates for installation of the various special systems and users. It is incumbent upon the implementers to include the dates for special system and user installations into the schedule.

S. Installation and Operations Manual (IOM) consisting of approved product data sheets, manufacture installation manuals, manufacturer operator manuals, start-up and shut-down procedures, troubleshooting guide, as-built drawings in AutoCAD format (printed 11x17, and electronic in native format), equipment schedules with part number, serial number, warranty expiration dates, certificates of warranty’s, contact information for installer and manufacturer. Neatly bind all information with index and tabs. The IOM shall be submitted and approved prior to final payment.

1.23 WARRANTY

A. A twenty-five (25) year Extended Product Warranty and System Assurance Warranty for this Structured Cabling system shall be provided.

1. Extended Product Warranty
   a) The Extended Product Warranty shall ensure against product defects, that all approved cabling components exceed the specifications of TIA 568, latest edition, and ISO/IEC IS 11801, exceed the attenuation and NEXT requirements of TIA TSB 67 and ISO/IEC IS 11801 for cabling links/channels, that the installation will exceed the loss and bandwidth requirements of TIA TSB 67 and ISO/IEC IS 11801 for fiber links/channels, for a twenty-five (25) year period. The warranty shall apply to all passive SCS components.
2. System Assurance
   a) The System Assurance shall cover the failure of the wiring system to support the application which it was designed to support, as well as additional application(s) introduced in the future by recognized standards or user forums that use the TIA 568, latest edition, or ISO/IEC IS 11801 component and link/channel specifications for cabling, for a twenty-five (25) year period.
3. Extended Product Warranty
   a) The Extended Product Warranty and the System Assurance shall cover the replacement or repair of defective product(s) and labor for the replacement or repair of such defective product(s).
4. Special Warranty
   a) The work of this section shall include a special warranty for a minimum of five (5) years signed by either the manufacturer of the materials herein and their authorized installer, or by the fabricator and their installer, without monetary limitation, agreeing to repair or replace components that fail in materials or workmanship within specified warranty period.
   b) System Certification
   c) Upon successful completion of the installation and subsequent inspection, the customer shall be provided with a numbered certificate, from the manufacturing company, registering the installation.

1.24 COMPLETENESS OF WORK

A. Complete and usable work: The contractor is responsible for providing complete and usable work according to contract documents. All materials and equipment shall be provided with all accessories and additional work required for field conditions, as well as additional work and accessories required for complete, usable, and fully functional construction and systems, even if not explicitly specified or indicated. Telecommunications system in this Contract shall be provided as complete and operable systems in full compliance with requirements on drawings and specification requirements. Drawings are diagrammatic and specifications are performance-based, and Contractor shall provide all work required to comply with drawings and specifications, even if not explicitly indicated or specified. Contractor shall be responsible for coordinating installation of electrical systems with all field conditions and work of other trades. Minimum clearances and work required for compliance with NFPA 70, *National Electrical Code*® (*NEC*®), and manufacturer's instructions shall be provided. Comply with additional requirements indicated for access and clearances. Contractor shall verify all field conditions and dimensions that affect selection and provision of materials and equipment, and shall provide any disassembly, reassembly, relocation, demolition, cutting and patching required to provide work specified or indicated, including relocation and reinstallation of existing wiring and equipment. Contractor shall protect from damage resulting from Contractor's operations existing facility, equipment, and wiring. Extra charges for completion and contract time extension will not be allowed because of field conditions or additional work required for complete and usable construction and systems. Comply with additional requirements indicated for access and clearances.

1. Drawings and specifications form complementary requirements; provide work specified and not shown, and work shown and not specified as though explicitly required by both. Except where explicitly modified by a specific notation to contrary, it shall be understood that indication or description of any item, in drawings or specifications or both, carries with it instruction to furnish and install item, provided complete.
2. Terms: As used in this specification, provide means furnish and install. Furnish means "to purchase and deliver to project site complete with every necessary appurtenance and support," and install means "to unload at delivery point at site and perform every operation necessary to establish secure mounting and correct operation at proper location in project."
3. Authority approvals: Give notices, file plans, obtain permits and licenses, pay fees, and obtain necessary approvals from authorities that have jurisdiction as required to perform work according to all legal requirements and with Specifications, Drawings, Addenda and Change Orders, all of which are part of Contract Documents.
4. Supplementary items: Provide supplementary or miscellaneous items, appurtenances, devices and materials necessary for a sound, secure and complete installation. Examine project drawings and other Sections of specifications for requirements that affect work of this section. Completely coordinate work of this section with work of other Sections and provide a complete and fully functional installation. Refer to all other drawings and other specifications sections that indicate types of construction in which work shall be installed and work of other sections with which work of this section must be coordinated
5. Quantities: Items referred to in singular number in Contract Documents shall be provided in quantities necessary to complete work.

1.25 SAFETY

A. The contractor shall follow the safety procedures.

1. The contractors shall be responsible for training all personnel under their employ in areas concerning safe work habits and construction safety. The contractor shall continually inform personnel on hazards particular to this project and update the information as the project progresses.

1.26 PROJECT / SITE CONDITIONS

A. Site Visitation: Visit the site of the proposed construction to thoroughly become familiar with all details of the work and working conditions, verify all dimensions in the field, and advise A/E of any discrepancy before performing any work.

B. Space Requirements:

1. Consider space limitations imposed by contiguous work in selection and location of equipment and material. Do not provide equipment or material that is not suitable in this respect.
2. Make changes in equipment location of up to 5 feet, to allow for field conditions prior to actual installation, at no additional compensation, as directed by A/E.
3. Install all equipment requiring service so that it is easily accessible.
4. Compare the equipment sizes with the space allotted for installation before installation and make written notice of possible conflict. Disassemble large equipment to permit installation through normal room openings when required. Should written notice not be made in a timely manner, make adjustments and modifications necessary without additional compensation.
5. Timely place all equipment too large to fit through finished openings, stairways, etc.

C. Cutting and Patching

1. Comply with Division 01 – Cutting and Patching.
2. Submit a written request to A/E in advance of cutting or alterations.
3. Execute cutting and demolition by methods, which will prevent damages to other work and will provide proper surfaces to receive installation of repairs.
4. Restore work which has been cut or removed; install new products complying with specified products, functions, tolerances and finishes as stated in the contract documents. Provide heavy chrome-plated or nickel-plated escutcheon plates of approved pattern for penetrations of finished surface. Approved escutcheon plates are B&C No. 10 with concealed hinges.
5. Fit work airtight to conduit, sleeves and other penetrations through surfaces. For fire-rated penetrations, provide in accordance with UL 1479 and ASTM E-814 assemblies utilizing products and materials equal to the rating of all surfaces penetrated.

D. Outages: All outages to existing on-line systems shall be coordinated and approved in writing by the owner prior to outage.

E. The contractor may have to perform some work after hours such as new cable pulls through active manhole systems, outage of existing services and such.

F. The contractor shall provide and install all cross-connect cabling, connectors, coupling panels. Couplers and any other materials necessary for a complete system installation when working in existing areas to extend active circuits.

G. Field verification: Carefully verify location, use and status of all material, equipment, and utilities that are specified, indicated, or deemed necessary for removal. Verify that all materials, equipment, and utilities to be removed are completely inactive and will not be required or in use after completion of project. Replace with equivalent any material, equipment and utilities that were removed by Contractor that are required to be left in place.

H. Existing utilities: As applicable, do not interrupt utilities serving facilities occupied by Owner or others unless permitted under following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify owner in writing at least 14 days in advance of proposed utility interruptions. Do not proceed with utility interruptions without Owner's written permission.
2. Equipment installation:
   a) Determine suitable path for moving unit substation into place; consider Project conditions.
   b) Verify clearance requirements and locate equipment to meet installation tolerances.

1.1 REVISE LOCATIONS AND ELEVATIONS FROM THOSE INDICATED TO THOSE REQUIRED TO SUIT PROJECT. IDENTIFICATION

A. Labeling

1. Label all backbone, horizontal and ground cables, innerducts, fiber strands, patch panels, patch panel termination positions, distribution frames, jacks, and cover plates.
2. Wire and fiber labels shall be white vinyl adhesive tape with black lettering. Text shall be typed with minimum 12 point font.
3. All wire labels should fully wrap the cable jacket and have repetitive lettering.
4. Label shall be attached to each copper cable at each end and in all boxes.
5. Provide front adhesive label for individual patch panel positions. Label patch panels consecutively from bottom to top. Label shall be typed with minimum font size of 12 point.
6. Label shall be attached to fiber cable at each end and to each individual fiber at each end prior to termination.
7. Cable labels shall be placed in the following locations: on jack face plates, on cable inside back boxes, junction boxes, access points, and manholes/handholds, on cable above the terminations in the IDF and MDF, on patch panels, and every 50 feet when not in conduit.
8. Provide conduit labels. Locate conduit labels at each end of conduit. The label shall be permanently affixed to the conduit at the conduit bushing and/or terminator and shall include the conduit destination.

B. Nameplates

1. Nameplates: Provide engraved three-layer laminated plastic nameplates with white letters on a black background.
2. Provide nameplates for the following:
   a. Equipment Racks and cabinets.
   b. Telecommunication Grounding Busbars.
   c. Equipment enclosures.
3. Nameplate font shall be minimum 24 point, bold, all caps.

C. Telecommunications Administration

1. Coverplate labels shall be typed with minimum font size of 12 point.
2. Labeling and color coding shall follow the following standards:

a. Label Codes

1) MDF SCS Labeling

IDF13–R2–F5-XX Y

(a) Letter if using same outlet box (A, B, C, D)
(b) Pull No. to Outlet Box
(c) Rack Termination Shelf Position ID
(d) Rack ID
(e) IDF Room Name

D. Color Codes

1. Voice Outlets: Color shall match coverplate color (White).
2. Data Outlets: Provide blue jack.
3. Security Outlet: Provide red jack.
4. Blanks: Color shall match coverplate color.

E. Cable Jacket Colors

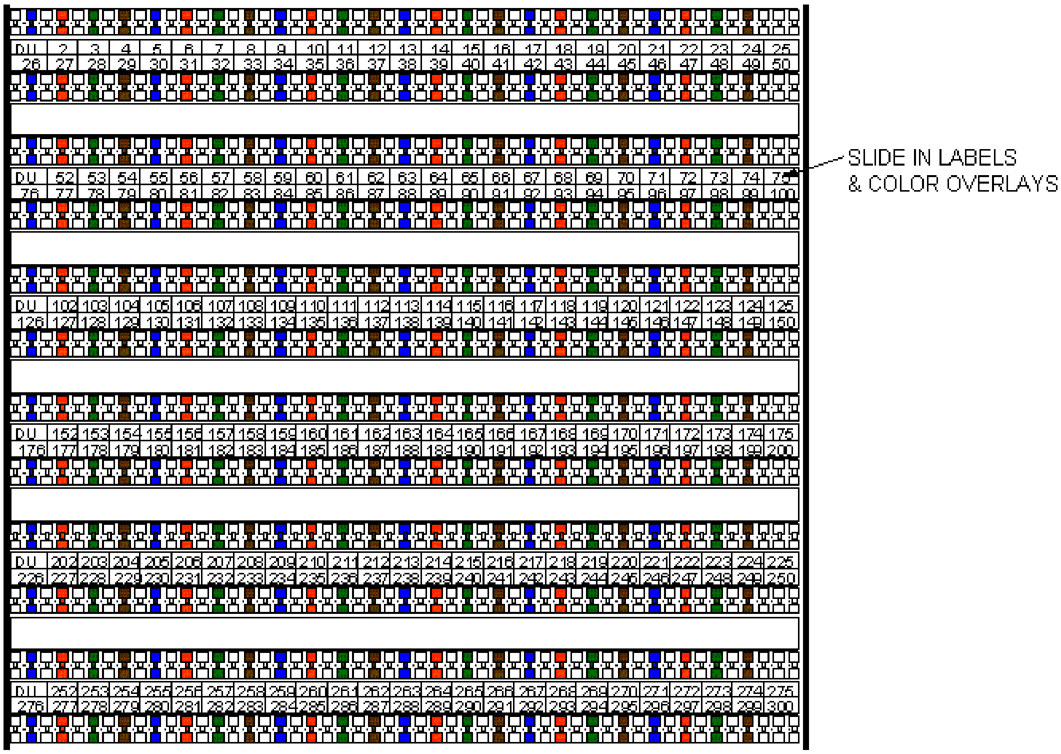
1. Voice cables: Provide yellow jacket.
2. Data cables: Provide blue jacket.
3. Singlemode fiber optic cable and associated patch cord: Provide yellow jacket.
4. Multimode fiber optic cable and associated patch cord: Provide orange jacket.
5. Laser Optimized 50 micron multimode fiber optic cable and patch cords: Provide aqua jacket.
6. Security Cables: Provide red jacket.
7. Surveillance Cables: Provide green jacket
8. Audio/Visual Cables: Refer to Audio Visual Specifications.

F. Copper Cable 110 Wiring Blocks: Floor-standing frames and wall or cabinet-mounted 110 wiring blocks, 100- or 300- pair.

1. Wire punched down on 110 wiring block shall be labeled on 110 wiring blocks as individual pairs.
2. Label 110 wiring block pair count using Excel spreadsheet template, along with color transparent plastic strip (EFM) for color-coding.
3. Voice and data 110 wiring block labels will be distinguished by the following acronyms: Data Frame Example: Voice Frame Example:

   DT = Data Campus Cable VT = Voice Campus
   Cable DM = Data Backbone Cable VM = Voice Backbone
   Cable DL= Data Network Cable VP = Voice ISDN
   Power Cable DU = Data Horizontal Cable VU = Voice
   Horizontal Cable
4. Skip 25th position on each strip of 110 wiring block when wiring 4-pair cable.

5. Provide floor-standing frame labels assuming twelve 300-pair 110 wiring blocks. Group of blocks are to be designated as backbone cables, power cables, network cables, and horizontal voice or data cables.
6. Install nameplate on each floor-standing frame.
7.
8. Label network equipment 110 wiring blocks with equipment number, slot, and port number.
9. Insert EFM color-coded plastic slides over 110 block labels.



G. Lightguide Interconnection Unit (LIU)

1. Attach nameplate to door of LIU. LIU label shall have building number, IDF number, and numeric sequence.
2. List cable(s) and room number on LIU along with LIU name.
3. Provide continuous numbering sequence for individual fibers. Number individual fiber strands in LIU from 1 through 24, for cables with 24 fiber strands or less.
4. Use multiple LIUs for cables with greater than 24 fiber strands, and label sequentially according to number of fiber strands.

H. Telecommunication Cabinet: Floor-standing cabinet and wall-mounted cabinet.

1. Floor-standing cabinet nameplate shall have building number, color designation for classification of network, IDF number, and sequential character.
2. Center label at top of front door of cabinet.

I. Lightguide Termination Shelf

1. Label cable designation(s) on outside door of termination shelf.
2. Single shelf may hold more than one campus, backbone or horizontal cable. Do not split a single cable between shelves. Start numbering sequence from 1 within the shelf, and continue to last fiber strand within that cable, for cable larger than 4 fibers.
3. Label each individual coupler on coupler plate with appropriate sequential number for terminating shelves.
4. Each shelf shall contain either single-mode or multi-mode, not both.
5. Install multiple shelves for cables greater than 72 optical fibers. Label sequentially according to number of optical fibers.
6. Label 4-fiber user cables according to number of couplers in the shelf.

J. Optical Data Telecommunication Outlet:

1. Follow Section 1.16C for labeling scheme.
2. Attach label to outlet cover for appropriate outlet.

K. Telecommunication Outlet: Voice/Data

1. Follow Section 1.14C for labeling scheme.
2. Attach label with preassigned numeric value to outlet cover for appropriate outlet.

L. Backbone Conduit Pullbox: Install nameplate to cover of pullbox

M. Conduit: Label conduits with appropriate color-coded tape.

1. Install tie wrap label tag on each conduit end point that terminates in IDF, MDF, or stubbed through floor, ceiling or wall without pullbox.
2. Use only typed permanent black smear-proof lettering, in block type letters with clear, legible letters.
3. Match label information to information in nearest J-Box label that conduit leads to.
4. Provide all conduits greater than 1” with a label which includes the TO/FROM destination. Label to be located on each end of conduit and at 100’ intervals. Label shall be white with black letters. Face label downward where visible and clear from below. Label to consists of the following font sizes:
5. 1.25” – 2”conduit: ¼” Block letters with max 2 rows of text
6. 2.25’ – 3” conduit: ½” Block letters with max 2 rows of text
7. Over 3” conduit: ¾” Block letters with max 2 rows of text

N. Flexible Innerduct:

1. Every fabric multi-celled innerduct shall have a brass or plastic tag that contains the origin and destination of each end. Locate tags at each end and in every pullbox, handhole or manhole along pathway. The tags must be securely fastened. Label example: 1. RR21 to Server RM. 2. SR01W to RR03W

1.2 TESTING COPPER AND FIBER OPTICS

A. Copper Cable Testing:

1. General Requirements
   b. Every cabling link in the installation shall be tested for:
      1) Wire Map
      2) Length
      3)
      4) Insertion Loss
      5) NEXT Loss
      6) PS NEXT Loss
      7) ACR-F Loss
      8) PS ACR-F Loss
      9) Return Loss
      10) Propagation Delay
      11) Delay Skew
      12) in accordance with the field test specifications defined in ANSI/TIA-568, latest edition, “Commercial Balanced Twisted-Pair Telecommunications Cabling and Components Standard”, latest edition. This document will be referred to as the “Category 6 Standard.”
   b. In addition to testing the “In-link” performance parameters detailed in A.1 above, Alien Crosstalk testing or “Between-link’ testing shall be carried out in accordance with Annex A of the TIA TSB-155-A Document. Alien crosstalk testing includes the PS ANEXT and PS AACR-F (Power sum alien attenuation-to-crosstalk ratio from the far end) performance parameters as well as Alien Crosstalk Margin Computation (ACMC). The TIA TSB-155-A Document refers to the link-under-test for Alien Crosstalk as the disturbed link.
   c. ACMC shall meet or exceed the limits defined in Annex D of the TIA TSB-155-A Document.
      1) Selection of disturbed links: 1% of the links in the cabling installation or 5 links, whichever is more, with the highest insertion loss in the installation shall be selected as disturbed links.
      2) Selection of disturber links. Select all of the links that are in the same cable bundle or the most consistently positioned relative to the disturbed link as disturbing links.
   d. When the ACMC has reached 5 dB for the longest length links, further alien crosstalk testing can be discontinued when the number of measured disturbed links is at least 3.
   e. The installed twisted-pair horizontal links shall be tested from the IDF in the telecommunications room to the telecommunication wall outlet in the work area for compliance with the “Permanent Link” performance specification as defined in the Category 6 Standard.
   f. One hundred percent of the installed cabling links must pass the requirements of the Category 6 Standard mentioned in A.1 above and as further detailed in Section B. Any failing link must be diagnosed and corrected. The corrective action shall be followed with a new test to prove that the corrected link meets the performance

requirements. The final and passing result of the tests for all links shall be provided in the test results documentation in accordance with Section C below.

g. Trained technicians who have successfully attended an appropriate training program and have obtained a certificate as proof thereof shall execute the tests. Appropriate training programs include but are not limited to installation certification programs provided by BICSI or the ACP (Association of Cabling Professionals).

h. The test equipment (tester) shall comply with the accuracy requirements for level III field testers as defined in ANSI/TIA-1152. The tester including the appropriate interface adapter must meet the specified accuracy requirements. The accuracy requirements for the permanent link test configuration (baseline accuracy plus adapter contribution) are specified in Table 3 of ANSI/TIA-1152 (Table 3 in this

i.

j. TIA document also specifies the accuracy requirements for the Channel configuration).

k. The RJ45 test plug shall fall within the values specified in ANSI/TIA-568, latest edition, Annex C for NEXT, FEXT and Return Loss.

l. The tester shall be within the calibration period recommended by the vendor in order to achieve the vendor-specified measurement accuracy.

m. The tester interface adapters must be of high quality and the cable shall not show any twisting or kinking resulting from coiling and storing of the tester interface adapters. In order to deliver optimum accuracy, preference is given to a permanent link interface adapter for the tester that can be calibrated to extend the reference plane of the Return Loss measurement to the permanent link interface. The contractor shall provide proof that the interface has been calibrated within the period recommended by the vendor. To ensure that normal handling on the job does not cause measurable Return Loss change, the adapter cord cable shall not be of twisted-pair construction.

n. The Pass or Fail condition for the link-under-test is determined by the results of the required individual tests (detailed in Section 4.2.2 of ANSI/TIA-1152). Any Fail result yields a Fail for the link-under-test. In order to achieve an overall Pass condition, the results for each individual test parameter must Pass.

o. A Pass or Fail result for each parameter is determined by comparing the measured values with the specified test limits for that parameter. The test result of a parameter shall be marked with an asterisk (*) when the result is closer to the test limit than the accuracy of the field tester. The field tester manufacturer must provide documentation as an aid to interpret results marked with asterisks. To which extent '*' results shall determine approval or disapproval of the element under test shall be defined in the relevant detail specification, or agreed on as a part of a contractual specification.

p. A representative of the owner shall be invited to witness field testing. The representative shall be notified of the start date of the testing phase five business days before testing commences.

q. A representative of the owner will select a random sample of 5% of the installed links. The representative (or his authorized delegate) shall test these randomly selected links and the results are to be stored in accordance with the prescriptions in Section I.C. The results obtained shall be compared to the data provided by the installation contractor. If more than 2% of the sample results differ in terms of the pass/fail determination, the installation contractor under supervision of the end-user representative shall repeat 100% testing and the cost shall be borne by the installation contractor.

2. Performance Test Parameters
   a. The test parameters are defined in the Category 6 Standard. The test of each link shall contain all of the following parameters as detailed below. In order to pass the test, all measurements (at each frequency in the range from 1 MHz through 250 MHz) must meet or exceed the limit value determined in the above-mentioned standard. Additional tests shall be performed from 250 MHz to 500 MHz and must meet or exceed the limit valve determined by the cable or connector manufacturer.
      1) Wire Map
         a) Shall report Pass if the wiring of each wire-pair from end to end is determined to be correct.

      2) Length
         a) The field tester shall be capable of measuring length of all pairs of a basic link or channel based on the propagation delay measurement and the average value for NVP (1). The physical length of the link shall be calculated using the pair with the shortest electrical delay. This length figure shall be reported and shall be used for making the Pass/Fail decision. The Pass/Fail criteria are based on the maximum length allowed for the Permanent Link configuration (90 meters – 295 feet) plus 10% to allow for the variation and uncertainty of NVP.
      3) Insertion Loss (Attenuation)
         a) Insertion Loss is a measure of signal loss in the permanent link or channel. The term "Attenuation" has been used to designate "Insertion Loss." Insertion Loss shall be tested from 1 MHz through 250 MHz and 250 MHz to 500 MHz in maximum step size of 1 MHz. It is preferred to measure insertion loss at the same frequency intervals as NEXT Loss in order to provide a more accurate calculation of the Attenuation-to-Crosstalk ratio (ACR) parameter. Minimum test results documentation (summary results): Identify the worst wire pair (1 of 4 possible). The test results for the worst wire pair must show the highest attenuation value measured (worst case), the frequency at which this worst case value occurs, and the test limit value at this frequency.
      4) NEXT Loss
         a) Pair-to-pair near-end crosstalk loss (abbreviated as NEXT Loss) shall be tested for each wire pair combination from each end of the link (a total of 12 pair combinations). This parameter is to be measured from 1 through 250 MHz and 250 MHz to 500 MHz. NEXT Loss measures the crosstalk disturbance on a wire pair at the end from which the disturbance signal is transmitted (near-end) on the disturbing pair. The maximum step size for NEXT Loss measurements shall not exceed the maximum step size defined in the Category 6 Standard. Minimum test results documentation (summary results): Identify the wire pair combination that exhibits the worst case NEXT margin (2) and the wire pair combination that exhibits the worst value of NEXT (worst case). NEXT is to be measured from each end of the link-under-test. These wire pair combinations must be identified for the tests performed from

each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.

Table 1 – Maximum frequency step size as define in ANSI/TIA-1152

Frequency Range (MHz)	Maximum Step size (MHz)
1 – 31.25	0.15
31.26 – 100	0.25
100 – 250	0.50
250 – 500	1.00
1 – 31.25	0.15

5) PS NEXT Loss

a) Power Sum NEXT Loss shall be evaluated and reported for each wire pair from both ends of the link under-test (a total of eight results). PS NEXT Loss captures the combined near-end crosstalk effect (statistical) on a wire pair when all other pairs actively transmit signals. Like NEXT this test parameter must be evaluated from 1 through 250 MHz and 250 MHz to 500 MHz and the step size may not exceed the maximum step size defined in the Category 6 Standard. Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst-case margin and the wire pair that exhibits the worst value for PS NEXT. These wire pairs must be identified for the tests performed from each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.

6) ACR-F Loss, pair-to-pair

a) Attenuation Crosstalk Ratio Far-end is calculated from the pair-to-pair FEXT Loss. It shall be measured for each wire-pair combination from both ends of the link under-test. FEXT Loss measures the crosstalk disturbance on a wire pair at the opposite end (far-end) from which the transmitter emits the disturbing signal on the disturbing pair. FEXT is measured to compute ACR-F Loss that must be evaluated and reported in the test results. ACR-F measures the relative strength of the far-end crosstalk disturbance relative to the attenuated signal that arrives at the end of the link. This test yields 24 wire pair combinations. ACR-F is to be measured from 1 through 250 MHz and 250 MHz to 500 MHz and the maximum step size for FEXT Loss measurements shall not exceed the maximum step size defined in the standard. Minimum test results documentation (summary results): Identify the wire pair combination that exhibits the worst-case margin and the wire pair combination that exhibits the worst value for ACR-F. These wire pairs must be identified for the tests performed from each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.

7) PS ACR-F Loss
   a) Power Sum Attenuation Crosstalk Ratio Far-end is a calculated parameter that combines the effect of the FEXT disturbance from three wire pairs on the fourth one. This test yields eight wire-pair combinations. Each wire-pair is evaluated from 1 through 250 MHz and 250 MHz to 500 MHz in frequency increments that do not exceed the maximum step size defined in the standard. Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst pair combinations must be identified for the tests performed from each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.
8) Return Loss.

   a) Return Loss (RL) measures the total energy reflected on each wire pair. Return Loss is to be measured from both ends of the link-under-test for each wire pair. This parameter is also to be measured form 1 through 250 MHz in frequency increments that do not exceed the maximum step size defined in the Category 6,.Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst-case margin and the wire pair that exhibits the worst value for Return Loss. These wire pairs must be identified for the tests performed from each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.
9) Propagation Delay
   a) Propagation delay is the time required for the signal to travel fromone of the link to the other. This measurement is to be performed for each of the four wire pairs. Minimum test results documentation (summary results): Identify the wire pair with the worst-case propagation delay. The report shall include the propagation delay value measured as well as the test limit value.
10) Delay Skew [as defined in the Category 6 Standard; Section 6.2.19].
   a) This parameter shows the difference in propagation delay between the four wire pairs. The pair with the shortest propagation delay is the reference pair with a delay skew value of zero. Minimum test results documentation (summary results): Identify the wire pair with the worst-case propagation delay (the longest propagation delay). The report shall include the delay skew value measured as well as the test limit value.
11) PS ANEXT
   a) Pair-to-pair Alien NEXT (ANEXT) contributions is measured by applying the stimulus signal at the near end to one wire pair of a disturbing link and measuring the coupled signal at the near end of a wire pair in a disturbed link. This process is repeated for every wire pair in a disturbing link. The PS ANEXT for each wire pair in a disturbed link is obtained by the power sum addition of all the pair-to-pair ANEXT results to that wire pair from all wire pairs in disturbing links. All the links that are bundles with the disturbed link need to be

included as disturbing links. In addition, links that are terminated in adjacent positions in a patch panel or interconnect panel may also need to be included as disturbing links in this test.

b) Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst-case margin and the wire pair that exhibits the worst value for PS ANEXT. These wire pairs must be identified for the tests performed from each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.

12) PS AACR-F

a) The pair-to-pair Alien Far End crosstalk (AFEXT) contributions is measured by applying the signal at the near end to one wire pair of a disturbing channel or permanent link and measuring the coupled signal at the far end of a wire pair in a disturbed channel or permanent link.

This process is repeated for every wire pair in a disturbing link and for all links in close proximity. A normalization, which is dependent on the relative length of disturbing and disturbed link, is applied to each pair-to-pair alien FEXT measurement. Then the PS Alien Attenuation- to-Crosstalk Ratio from the Far end (PS AACR-F) for each wire pair in a disturbed channel or permanent link is obtained by the power sum addition of all the normalized pair-to-pair far end alien crosstalk results to that wire pair from all wire pairs in disturbing links in close proximity.

b) Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst-case margin and the wire pair that exhibits the worst value for PS AACR-F. if the link or channel connects two patch panels (data center), these wire pairs must be identified for the tests performed from both ends. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.

3. Test Result Documentation

a. The test results/measurements shall be transferred into a Windows™-based database utility that allows for the maintenance, inspection and archiving of these test records. A guarantee must be made that the measurement results are transferred to the PC unaltered, i.e., “as saved in the tester” at the end of each test and that these results cannot be modified at a later time.

b. The database for the completed job shall be stored and delivered on CD- ROM or DVD including the software tools required to view, inspect, and print any selection of test reports.

c. A paper copy of the test results shall be provided that lists all the links that have been tested with the following summary information

1) The identification of the link in accordance with the naming convention defined in the overall system documentation

2) The overall Pass/Fail evaluation of the link-under-test including the NEXT Headroom (overall worst case) number

3) The date and time the test results were saved in the memory of the tester.
4) General Information to be provided in the electronic data base with the test results information for each link:
   a) The identification of the customer site as specified by the end-user
   b) The identification of the link in accordance with the naming convention defined in the overall system documentation
   c) The overall Pass/Fail evaluation of the link-under-test
   d) The name of the test limit selected to execute the stored test results
   e) The cable type and the value of NVP used for length calculations
   f) The date and time the test results were saved in the memory of the tester
   g) The brand name, model and serial number of the tester
   h) The identification of the tester interface
   i) The revision of the tester software and the revision of the test limits database in the tester

d. The test results information must contain information on each of the required test parameters that are listed in Section B and as further detailed below under paragraph C5.

e. In-link (In-Channel) detailed test results. The detailed test results data to be provided in the electronic database for must contain the following information:
1) For each of the frequency-dependent test parameters, the value measured at every frequency during the test is stored. The PC-resident database program must be able to process the stored results to display and print a color graph of the measured parameters. The PC-resident software must also provide a summary numeric format in which some critical information is provided numerically as defined by the summary results (minimum numeric test results documentation) as outlined above for each of the test parameters.
   a) Length: Identify the wire-pair with the shortest electrical length, the value of the length rounded to the nearest 0.1 m (1) and the test limit value
   b) Propagation delay: Identify the pair with the shortest propagation delay, the value measured in nanoseconds (ns) and the test limit value
   c) Delay Skew: Identify the pair with the largest value for delay skew, the value calculated in nanoseconds (ns) and the test limit value
   d) Insertion Loss (Attenuation): Minimum test results documentation as explained in Section B for the worst pair
   e) Return Loss: Minimum test results documentation as explained in Section B for the worst pair as measured from each end of the link
   f) NEXT, ACR-F: Minimum test results documentation as explained in Section B for the worst pair combination as measured from each end of the link
   g) PS NEXT and PS ACR-F: Minimum test results documentation as explained in Section B for the worst pair as measured from each end of the link.
2) Between-Link (Between-Channel) Test Results Data. A test report shall be provided for each disturbed link included in the Alien Crosstalk sample test. This test report must contain:

a) PS ANEXT results at each frequency (See Table 1) for each wire pair in a victim link as well as the PS ANEXT results for the average of these four wire pairs. The worst case margin and the worst values shall be provided for each wire pair and the average of the four wire pairs. PS ANEXT shall be measured and tested from the end of the link or channel where all cables are terminated at a distribution panel. In case the cabling runs from panel to panel (data center) where the worst case PS ANEXT margin is less than 2 dB, the PS ANEXT test results for each disturbed link shall be collected and saved from both ends (both panels) of the disturbed link.

b) PS AACR-F results at each frequency tested (See Table 1) for each wire pair in a disturbed link as well as the PS AACR-F results for the average of the four wire pairs. The worst case margin and the worst values shall be provided for each wire pair and the average of the four wire pairs. PS AACRF only needs to be measured and tested from one end of the link or channel. Connect the main DTX-1800 unit (measurement of PS AACR-F disturbance) to the disturbed link or

c)

d) channel at the end where all cabling links are terminated at a distribution panel. Select End 1 in the AxTalk Analyzer Software.

e) ACMC or alien crosstalk margin computation is used to further characterize the alien crosstalk coupling between channels. The alien crosstalk margin computation is used in the event that the PS ANEXT/PS AACR-F limits are not met. If the ACMC passes, then the user shall ignore any PS ANEXT/PS AACR-F failures. The alien crosstalk margin computation ensures the total combined PS AFEXT and PS ANEXT coupled into a channel is limited in order to maintain the 10GBASE-T minimum signal to noise ratio. The alien crosstalk margin is specified for each of the individual 4-pairs as well as the average "across the 4-pairs". It is unique to the TSB-155-A Document and does NOT apply to Category 6A links.

B. Fiber Testing

1. Optical Fiber Cable Testing w/ OTDR
   a. The Contractor shall test all fiber optic cable prior to the installation of the cable. The Contractor shall assume all liability for the replacement of the cable should it be found defective at a later date.
   b. All fiber testing shall be performed on all fibers in the completed end to end system. Testing shall consist of a bidirectional end to end OTDR trace performed per TIA 455-61. The system loss measurements shall be provided at 850 and 1300 nanometers for multimode fibers and 1310 and 1550 nano-meters for single mode fibers.
   c. Fiber links shall have a maximum loss of:
   d. (allowable cable loss per km)(km of fiber in link) + (.4dB)(number of mated connectors) + (.2db)(number of splices) = maximum allowable loss
   e. Loss numbers for the installed link shall be calculated by taking the sum of the bidirectional measurements and dividing that sum by two.

f. Any link not meeting the requirements of the standard shall be brought into compliance by the contractor, at no charge to the Owner.

g. Documentation shall be provided in both hard copy and 3 1/2 inch diskette to the point of contact.

2. Optical Fiber Cable Testing w/ Power Meter
   a. Multimode Horizontal Link Segments should be tested in one direction at the 850-nm or 1300-nm wavelength.
   b. Multimode Backbone and Composite Link Segments should be tested in one direction at both 850-nm and 1300-nm wavelengths.
   c. Singlemode Horizontal Link Segments should be tested in one direction at the 1310-nm or 1550-nm wavelength.
   d. Singlemode Backbone and Composite Link Segments should be tested in one direction at both 1310-nm and 1550-nm wavelengths.
   e. Note: The minor attenuation differences due to test direction are on par with the accuracy and repeatability of the test method. Therefore, testing in only one direction is warranted. Horizontal Link Segments are limited to 90 meters. Therefore, attenuation differences caused by wavelength are insignificant, and as a result, single wavelength testing is sufficient.
3. In compliance with TIA-526-14A “Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant” and TIA-526-7 “Measurement of Optical Power
4. Loss of Installed Single-Mode Fiber Cable Plant”, the following information should be recorded during the test procedure:
   a. Names of personnel conducting the test.
   b. Type of test equipment used (manufacturer, model, serial number).
   c. Date test is being performed.
   d. Optical source wavelength, spectral width, and for multimode, the coupled power ratio (CPR).
   e. Fiber identification.
   f. End point locations.
   g. Test direction.
   h. Reference power measurement (when not using a power meter with a Relative Power Measurement Mode).
   i. Measured attenuation of the link segment.
   j. Acceptable link attenuation.

      Note: Horizontal Link Segments are limited to 90 meters, therefore, the acceptable link attenuation can be based on the longest installed link without introducing a significant error.
5. Acceptable Attenuation Values
   a. The general attenuation equation for any link segment is as follows: Acceptable Link Attn. = Cable Attn. + Connection Attn. + Splice Attn. + CPR Adj.

      Note: A connection is defined as the joint made by mating two fibers terminated with remateable connectors (e.g. LC).
   b. Multimode Attenuation Coefficients
      1) Cable Attn. = Cable Length (km) □ (3.40 dB/km@850nm or 1.3 dB/km@1300nm)
      2) Connection Attn. (Fiber ST or SC connectors) = (Mated Connections □ 0.4 dB)
      3) Connection Attn. (LC connectors) = (Mated Connections □ 0.2 dB)

4) Splice Attn. (CSL or Fusion) = Splices □ 0.30 dB
5) CPR Adj. = See table below

Multimode Light Source CPR Adjustment					
	Cat-1	Cat-2	Cat-3	Cat-4	Cat-5
Links with ST or SC Connections	+ 0.50	0.00	□ 0.25	□ 0.50	□ 0.75
Links with LC Connections	+ 0.25	0.00	□ 0.10	□ 0.20	□ 0.30

c. Coupled Power Ratio Measurement

1) Note: The Coupled Power Ratio of a light source is a measure of the modal power distribution launched into a multimode fiber. A light source that launches a higher percentage of its power into the higher order modes of a multimode fiber produces a more over-filled condition and is classified as a lower category than a light source that launches more of its power into just the lower order modes producing an under-filled condition. Under- filled conditions result in lower link attenuation, while over-filled conditions produce higher attenuation. Therefore, adjusting the acceptable

link attenuation equation to compensate for a light source's launch characteristics increases the accuracy of the test procedure.

d. Procedure:

1) CPR Test Jumper-1 shall be multimode, 1 - 5 meters long with connectors compatible with the light source and power meter and have the same fiber construction as the link segment being tested.
2) CPR Test Jumper-2 shall be singlemode, 1 - 5 meters long with connectors compatible with the light source and power meter.
3) Clean the test jumper connectors and the test coupling per manufacturer's instructions.
4) Follow the test equipment manufacturer's initial adjustment instructions.
5) Connect multimode test jumper-1 between the light source and the power meter. Avoid placing bends in the jumper that are less than 100 mm (4 inches) in diameter. See Figure 1.

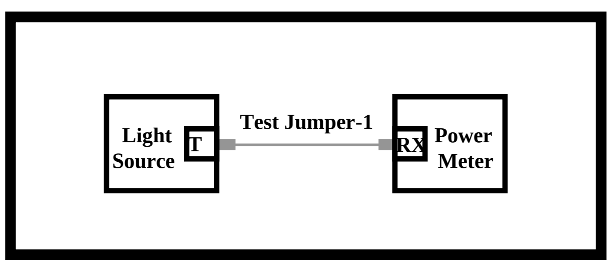


Figure 1

6) If the power meter has a Relative Power Measurement Mode, select it. If it does not, record the Reference Power Measurement (Pref). Note: If the meter can display power levels in dBm, select this unit of measurement to simplify subsequent calculations.

7) Disconnect test jumper-1 from the power meter. Do NOT disconnect the test jumper from the light source.

8) Connect jumper-2 between the power meter and test jumper-1 using the test coupling. The singlemode jumper should include a high order mode filter. This can be accomplished by wrapping the jumper three times around a 30 mm (1.2 inches) diameter mandrel. See Figure 2.

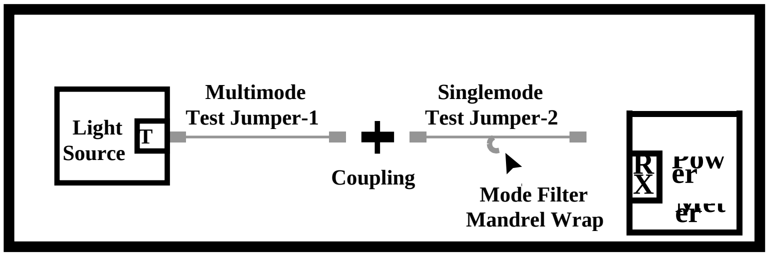

Figure 2

a) Record the Power Measurement (P_{sum}). If the power meter is in Relative Power Measurement Mode, the meter reading represents the CPR value. If the meter does not have a Relative Power Measurement Mode, perform the following calculation:

If P_{sum} and P_{ref} are in the same logarithmic units (dBm, dBu, etc): CPR (dB) = | P_{sum} □ P_{ref} |

If P_{sum} and P_{ref} are in watts:

CPR (dB) = | 10 □ $\log_{10}$ [P_{sum}/P_{ref}] |

1.27 DELIVERY STORAGE AND HANDLING

A. General: Contractor shall be responsible for the deliveries, storing and handling of all materials relative to the SCS systems, including materials supplied by others that are part of the SCS installation contract. Material shall be stored and protected according to manufacturer's instructions. Contractor shall be responsible for the security of all material during installation. For all material provided by contractor, or delivered to contractor on site, contractor assumes full responsibility and liability for any material shortages, damage or loss due to storage and handling methods.

1.28 PERMITS AND INSPECTIONS

A. General: All telecommunications systems shall meet or exceed the latest requirements of all national, state, county, municipal, and other authorities exercising jurisdiction over the telecommunications systems and the Project.

B. Contractor shall obtain and pay for all licenses, permits, and inspection fees required by local agencies and/or other agencies having jurisdiction.

C. Contractor agrees to furnish any additional labor or material required to comply with all local and other agencies having jurisdiction at no additional cost.

D. Contractor shall obtain certificates of inspection and approval from all authorities having jurisdiction, and forward copies of same to Owner's Representative prior to request for Project acceptance inspections, final completion inspections, substantial completion inspections, and acceptance testing/demonstrations.

E. All required permits and inspection certificates shall be made available at the completion of the telecommunications system installation and commissioning.

F. Any portion of the telecommunications work which is not subject to the requirements of an electric code published by a specific AHJ shall be governed by the National Electrical Code and other applicable sections of the National Fire Code, as published by the National Fire Protection Association (NFPA).

G. Installation procedures, methods and conditions shall comply with the latest requirements of the Federal Occupational Safety and Health Administration (OSHA).

1.29 - EXAMINATION

A. General: Prior to submitting a proposal, Contractor shall examine site, review Project drawings and specifications, and determine exact extent of work required. Contractor shall include in their proposals all materials, labor, and equipment required to complete required work indicated. Work that is necessary to obtain complete and usable Project as specified herein shall be included in Contractor's proposal, even if not indicated or specified.

B. Bidders' questions: Should bidders have questions as to intent of drawings and specifications, quality of materials to be used, and work to be performed, questions shall be submitted in writing to Owner's Representative in manner dictated by Owner's Representative. All answers and clarifications to drawings and specifications will be issued in writing.

C. Extra payment will not be allowed for claims for due to unfamiliarity with work to be performed by other trades, existing conditions at job site, local or state laws and codes, and alterations due to field conditions.

1.30 - ADDITIONAL COSTS

A. General: Project acceptance inspections, final completion inspections, substantial completion inspections, and acceptance testing/demonstrations shall be conducted after verification of system operation and completeness by Contractor.

B. Inspections and testing: For Project acceptance inspections, final completion inspections, substantial completion inspections, and/or testing/demonstrations that require more than one site visit by Owner's Representative or Architect/Engineer to verify Project compliance for same material or equipment, Owner reserves right to obtain compensation from Contractor to defray cost of additional site visits that result from Project construction or testing deficiencies/incompleteness, incorrect information, or non-compliance with Project provisions. Owner's Representative will notify Contractor of hourly rates and travel expenses for additional site visits and will issue an invoice to Contractor for additional site visits. Payment of additional site visit costs by Contractor is required within 30 days of invoicing. Owner reserves right to deduct additional costs defined herein that are indicated on past due invoices from Project amount due Contractor.

C. Exclusions: Contractor shall not be eligible for extensions of Project schedule or additional charges resulting from additional site visits that result from Project construction or testing deficiencies/incompleteness, incorrect information, or non-compliance with Project provisions.

PART 2 – PRODUCTS

2.1 NOT USED

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

A. General: Sequence, coordinate, and integrate various elements of telecommunications system, materials, and equipment. Comply with following requirements as a minimum.

B. Coordinate systems, equipment, and materials installation with other building components.

C. Verify all dimensions by field measurements.

D. Arrange for chases, slots, and openings in other building components during progress of construction, to allow for wiring, cabling, and equipment installations.

E. Coordinate installation of required supporting devices and sleeves to be set in poured-in-place concrete and other structural components, as they are constructed.

F. Sequence, coordinate, and integrate installations of materials and equipment for efficient flow of Work. Give particular attention to large equipment requiring positioning prior to closing in building.

G. Where mounting heights are not detailed or dimensioned, install systems, materials, and equipment to provide maximum headroom and access for service and maintenance as possible.

H. Coordinate connection of materials, equipment, and systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service.

I. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings, to greatest extent possible. Conform to arrangements indicated by Contract Documents, recognizing that portions of Work are shown only in diagrammatic form. In case of conflict among individual system requirements, request direction in writing from Owner's Representative.

J. Install systems, materials, and equipment level and plumb, parallel and perpendicular to other building systems and components, where installed in both exposed and un-exposed spaces.

K. Install cabling, wiring, and equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations.

L. Provide access panel or doors where units are concealed behind finished surfaces.

M. Install systems, materials, and equipment giving right-of-way priority to systems required to be installed at a specified slope.

N. Comply with all requirements and work indicated on drawings.

O. Avoid interference with structure and with work or other trades, preserving adequate headroom and clearing doors and passageways to satisfaction of Owner and according to code requirements.

P. Install equipment and cabling/wiring so as to properly distribute equipment loads on building structural members provided for equipment support under other Sections. Roof-mounted equipment shall be installed and supported on structural steel or roof curbs as appropriate.

Q. Provide suspended platforms, strap hangers, brackets, shelves, stands or legs as necessary for floor, wall and ceiling mounting of equipment as required.

R. Provide steel supports and hardware for proper installation of hangers, anchors, guides, and other support hardware.

S. Obtain and analyze catalog data, weights, and other pertinent data required for proper coordination of equipment support provisions and installation.

T. Structural steel and hardware shall conform to ASTM standard specifications. Use of steel and hardware shall conform to requirements of AISC Code of Practice: Section Five.

U. Verify site conditions and dimensions of equipment to ensure access for proper installation of equipment without disassembly that would void warranty.

3.2 EQUIPMENT INSTALLATION

A. General: Install equipment according to manufacturer's written instructions. Install equipment level and plumb. Install wiring and cabling between equipment and all related devices.

B. Mounting: If neither the Owner's Instructions nor the individual section call out the required hardware mounting, use the following.

1. For equipment at walls, bolt units to wall or mount on structural steel channel strut bolted to wall.
2. For equipment not at walls, provide freestanding racks fabricated of structural steel members and slotted structural steel channel strut.
3. Use feet consisting of 0.25 inch thick steel plates, 6 square inches, bolted to floor.
4. Use feet for welded attachment of vertical posts not over 3 feet on center.
5. Connect posts with horizontal U channel steel strut and bolt control equipment to channels.

C. Cleaning: Remove paint splatters and other spots, dirt, and debris. Touch up scratches and mars of finish to match original finish. Clean devices internally using methods and materials as recommended by manufacturer.

D. Connections: Tighten wiring connectors, terminals, bus joints, and mountings, to include lugs, screws and bolts according to equipment manufacturer's published torque tightening values for equipment connectors. In absence of published connection or terminal torque values, comply with torque values specified in UL 486A and UL 486B.

3.3 CUTTING AND PATCHING ADDITIONAL REQUIREMENTS.

A. General: Perform cutting and patching according to contract general requirements above in section 18 C. In addition, following requirements apply:

1. Perform cutting, fitting, and patching of electrical equipment and materials required to uncover existing infrastructure in order to provide access for correction of improperly installed existing or new Work.
2. Remove and replace defective Work.
3. Remove and replace Work not conforming to requirements of Contract Documents.
4. Remove samples of installed Work as specified for testing.
5. Install equipment and materials in existing structures.

B. Demolition and removal: Cut, remove, and legally dispose of selected equipment, components, and materials as indicated, including but not limited to removal of material, equipment, devices, and other items indicated to be removed and items made obsolete by new Work. Provide and maintain temporary partitions or dust barriers adequate to prevent spread of dust and dirt to adjacent areas.

C. Protection of work: Protect structure, furnishings, finishes, and adjacent materials not indicated or scheduled to be removed. During cutting and patching operations, protect adjacent installations. Patch finished surfaces and building components using new materials specified for original installation and experienced Installers.

3.4 PENETRATIONS AND SLEEVES

A. General: Coordinate work with other sections. SCS Installation Contractor shall be responsible for the provision of cabling sleeves and conduits unless specifically provided by the Electrical Contractor. SCS Installation Contractor shall coordinate with Electrical Contractor to determine exact requirements.

B. When required, set sleeves in forms before concrete is poured. Provide core drilling as necessary if walls are poured or otherwise constructed without sleeves and wall penetration is required. Do not penetrate structural members. Provide sleeves and packing materials at all penetrations of foundations, walls, slabs (except on-grade), partitions, and floors. Sleeves shall meet requirements of pertinent specifications. Lay out penetration and sleeve openings in advance, to permit provision in work. Set sleeves and conduit in forms before concrete is poured. Provide remedial work where sleeves and conduits are omitted or improperly placed.

C. Sleeve fill: Sleeves that penetrate outside walls, basement slabs, footings, and beams shall be waterproof.

1. Fill slots, sleeves and other openings in floors or walls if not used.
2. Fill spaces in openings after installation of conduit or cable.
3. Fill for floor penetrations shall prevent passage of water, smoke, fire, and fumes.
4. Fill shall be fire resistant in fire floors and walls, and shall prevent passage of air, smoke and fumes. See section 27 05 32 - Firestopping for Telecommunications Systems.
5. Sleeves through floors shall be watertight and shall extend 2 inches above floor surface.
6. Where raceways passing through openings are exposed in finished rooms, finishes of filling materials shall match and be flush with adjoining floor, ceiling, and wall finishes.

D. Conduit sleeves:

1. Annular space between conduit and sleeve shall be at least 1/4 inch.
2. Sleeves shall not be provided for slabs-on-grade unless specified or indicated otherwise.
3. For sleeves through rated fire walls and smoke partitions, comply with requirements for firestopping. See section 27 05 32 - Firestopping for Telecommunications Systems.

E. Supports: Do not support piping risers or conduit on sleeves.

F. Future use: Identify unused sleeves and slots for future installation.

3.5 CORE DRILLING

A. General: Core drilling shall be avoided where possible. Where core drilling is unavoidable, locate all required openings prior to coring.

B. Coordinate openings with other trades and utilities and prevent damage to structural reinforcement.

C. Thoroughly investigate existing conditions in vicinity of required opening prior to coring.

D. Set sleeves prior to installation of structure for passage of pipes, conduit, ducts, etc. Protect all areas from damage.

3.6 CLEANING

A. Contractor is responsible for cleanup of debris on a daily basis. Cost of cleanup is the responsibility of the Contractor.

B. During progress of work, remove equipment and unused material. Put building and premises in neat and clean condition. Perform cleaning and washing required to provide acceptable appearance and operation of equipment to satisfaction of Owner's Representative.

C. After completion of Project, clean exterior surface of all equipment, including concrete residue, dirt, and paint residue. Final cleaning shall be performed prior to Project acceptance by Owner's Representative.

3.7 ACCESS AND ACCESS PANELS

A. General: Provide access to materials and equipment that require inspection, replacement, repair or service. Provide access panels and/or doors as required to allow service of all equipment components. Provide access panels where items installed require access and are concealed in floor, wall, furred space or above ceiling. Ceilings consisting of lay-in or removable splined tiles do not require access panels. Locations of equipment requiring access shall be noted on record drawings. Access panels shall have same fire rating classification as surface penetrated.

B. Coordination: Coordinate and prepare a location, size, and function schedule of access panels required to fully service equipment and deliver to Owner.

C. Construction: Panels shall be at least 12 inches by 12 inches and located to provide optimum access to equipment for maintenance and servicing. Verify access panel locations and construction with Owner's Representative.

3.8 STARTUP AND OPERATIONAL TESTING

A. General: Owner maintains right to have access to entire project site to prepare facility for occupancy and operation. Completion of startup and field testing shall be accomplished as a prerequisite for substantial completion. Operate and maintain systems and equipment until final acceptance by Owner. All guarantees and warranties shall not begin until final acceptance of systems and equipment by Owner. Acceptance requires, at a minimum, complete systems startup and testing.

3.9 SPECIAL RESPONSIBILITIES AND INFORMATION

A. Coordination of information: Cooperate and coordinate with work of other sections in executing work of this section. Perform work such that progress of entire project, including work of other sections, shall not be interfered with or delayed. Provide information as requested on items furnished under this section, which shall be installed under other sections. Obtain detailed installation information from manufacturers of equipment provided under this section.

B. Information gathering: Obtain final rough-in dimensions or other information as needed for complete installation of items furnished under other sections or by Owner. Keep fully informed as to shape, size and position of openings required for material or equipment to be provided under this and other sections. Give full information so that openings required by work of this section may be coordinated with other work and other openings and may be provided for in advance. In case of failure to provide sufficient information in proper time, provide cutting and patching or have same done, at no expense to Owner.

C. Housekeeping pads: Provide information as requested as to sizes, number and locations of concrete housekeeping pads necessary for floor mounted equipment

D. Maintenance of equipment and systems: Maintain equipment and systems until Final Acceptance. Ensure adequate protection of equipment and material during delivery, storage, installation and shutdown and during delays pending final test of systems and equipment because of seasonal conditions.

E. Use of premises: Use of premises shall be restricted as directed by Owner's Representative and as required below:

F. Cleaning and rubbish removal: Remove and dispose of dirt and debris and keep premises clean. During progress of work, remove equipment and unused material. Put building and premises in neat and clean condition and do cleaning and washing required to provide acceptable appearance and operation of equipment, to satisfaction of Owner's Representative.

G. Rubbish Removal: Provide for the removal from the site of all spoils, debris, boxes, packaging, crates, and trash generated from the work.

H. Storage: Store materials maintaining an orderly, clean appearance. If stored on site in open or unprotected areas, all equipment and material shall be kept off ground by means of pallets or racks and covered with tarpaulins.

I. Protection of fireproofing:

1. Clips, hangers, clamps, supports and other attachments to surfaces to be fireproofed shall be installed, if possible, prior to start of spray fire proofing work.
2. Conduits and other items that would interfere with proper application of fireproofing shall be installed after completion of spray fire proofing work.
3. Patching and repairing of fireproofing due to cutting or damaging to fireproofing during course of work specified under this section shall be performed by installer of fireproofing and paid for by section responsible for damage and shall not constitute grounds for an extra to Owner.

J. Temporary utilities: Refer to contract general requirements regarding requirements.

K. Movement of materials: Unload materials and equipment delivered to site. Pay costs for rigging, hoisting, lowering and moving equipment on and around site, in building or on roof.

3.10 DIVISION OF WORK

A. Contractor holding contract with Owner is responsible for coordinating work of all subcontractors to provide a complete and usable Project complying with contract provisions of Project documents.

B. Failure to coordinate work by subcontractors and suppliers will not be considered justification for additional compensation or extension of schedule.

END of SECTION 270000

SECTION 270526
TELECOMMUNICATION GROUNDING AND BONDING

PART 1 - GENERAL

1.1 PROJECT SCOPE SUMMARY

A. This Section specifies the requirements for the Communications Grounding and Bonding..

1.2 REFERENCES

A. Related Sections:

1. Section 01
2. Section 263353: Telecommunications Uninterruptible Power Supply (UPS)
3. Section 270000: Communications
4. Section 270526: Telecommunication Grounding and Bonding
5. Section 270528: Interior Communications Pathways
6. Section 270543: Exterior Communication Pathways
7. Section 270553: Identification and Labeling of Communication Infrastructure
8. Section 271100: Communication Room Fittings
9. Section 271300: Backbone and Riser Media Infrastructure
10. Section 271500: Horizontal Media Infrastructure
11. Section 272100: Data Communication Network Equipment
12. Section 280500: Electronic Safety and Security
13. Section 281300: Access Control System (ACS)
14. Section 282300: Digital Video Surveillance System (DVSS)

1.3 REFERENCES AND STANDARDS

Section 270000 in its entirety shall be included as part of this specification.

1.4 DEFINITIONS AND ABBREVIATIONS

A. Section 270000

B. TMGB - Telecommunications Main Grounding Busbar: The dedicated extension of the building grounding electrode system for the telecommunications infrastructure. The central attachment point for the TBB's and equipment typically located in the MDF, also known as the Main Cross-connect (MC).

C. TGB - Telecommunications Grounding Busbar: The grounding connection point for telecommunications systems and equipment in the area typically served by a Telecommunications Room other than the MDF.

D. TBB - Telecommunications Bonding Backbone: A bonding conductor that interconnects telecommunications main grounding busbar (TMGB) to the telecommunications grounding busbar (TGB).

E. BCT - Bonding Conductor for Telecommunications that bonds the TMGB to the electrical power ground.

F. GE - Grounding Equalizer: A conductor that interconnects elements of telecommunications grounding infrastructure.

G. Exothermic Weld: A method of permanently bonding two metals together by controlled heat reaction resulting in a molecular bond.

1.5 SUMMARY

A. Telecommunications Main Grounding Bus Bar Connection to the Electrical Ground must be an exothermic weld. When making exothermic welds, wire brush or file the point of contact to a bare metal surface. Use exothermic welding cartridges and molds in accordance with the manufacturer's recommendations. After welds have been made and cooled, brush slag from the weld area and thoroughly cleaned the joint area. Notify the Resident Engineer prior to backfilling any ground connections.

B. Provide ground lug for each 19” rack. Racks shall be grounded to wall mounted ground bus bar using #6 AWG stranded, green jacketed, insulated copper conductor. Furnish all required bonding material and hardware, and bond to building grounding electrode subsystem TMGB in MC. If crimp connectors are used to bond the #6 AWG wire, follow NEC bonding procedures/specifications.

C. Ground all telecommunication hardware such as cable ladder, conduit, equipment racks, protection units and shielded cabling with #6AWG ground wire.

D. An inert dielectric material shall separate dissimilar metals apt to corrode through electrolysis under the environmental operating conditions specified.

E. Telecommunications Grounding Bus Bars and grounding wires connecting to main building grounding electrode system provided by Electrical Contractor.

PART 2 - PRODUCTS

2.1 TELECOMMUNICATIONS BUSBARS

A. Material: Copper, 1/4” thick (aluminum not permitted).

B. Pre-drilled

1. 3/8" Diameter.
2. Hole spacing per ANSI Joint Standard J-STD-607-A.
3. Hole pattern shall accommodate two-hole lugs.

C. Busbars shall be listed by a nationally recognized testing laboratory.

D. Telecommunications Main Grounding Busbar (TMGB)

1. Chatsworth #10622-020 ground busbar with Chatsworth #10622-000 busbar insulators or equivalent, 20"x4" minimum.

E. Telecommunications Grounding Busbar (TGB)

1. Chatsworth #10622-012 ground busbar with Chatsworth #10622-000 busbar insulators or equivalent, 12"x4" minimum.

2.2 GROUNDING JOINTS/SPLICES

A. Grounding conductor joints/splices shall be mechanical type, copper alloy, with a minimum of two bolts and a separate section for each conductor equal to Burndy "QPX", OZ/Gedney "XTP" or "PMX" or Penn-Union "VX" or copper compression type with two (2) indents equal to Burndy, T&B or Blackburn.

B. Grounding conductor terminations (lugs) shall be single barrel, mechanical screw type, copper alloy with machined contact surfaces equal to OZ type "SL", T&B, or Burndy or copper compression type with two (2) indents equal to Burndy, T&B or Blackburn.

2.3 BONDING CONDUCTORS

A. Material: Stranded copper (aluminum not permitted).

B. Cable Tray Bonding Conductor: Green #8 AWG insulated bonding jumper (12" max) with appropriate lugs or manufactured braided copper grounding jumper equal to B-Line #CAM-GJ, T&B #BD12, OZ/Gedney type "FB" or Mono-Systems.

C. Equipment Frame Bonding Conductor; Panduit #TRGK672 Telecommunications Rack Grounding Kit.

D. Bonding Conductor (BC): Green insulated copper bonding conductor, size as required by NEC.

E. The BC shall be, as a minimum, the same size as the TBB.

F. Telecommunications Bonding Backbone (TBB): Green insulated copper conductor, minimum size of No. 6 AWG.

G. The TBB shall be sized as indicated on drawings. Where not indicated size at 2 kcmil per linear foot of conductor length up to a maximum size of 3/0 AWG. Insulation shall meet fire ratings of its pathway.

Table 1	
Sizing of the TBB	
TBB length (ft)	TBB Size (AWG)
Less than 13	6
14-20	4
21-26	3
27-33	2
34-41	1
42-52	1/0
53-66	2/0
Greater than 66	3/0

H. Exothermic Connector Manufacturers:

1. Erico Products (Cadweld)
2. Burndy Corporation (Therm-O-Weld)
3. OZ Gedney
4. Owner approved equal

PART 3 - EXECUTION

3.1 EXAMINATION

A. Install products in accordance with manufacturer’s instructions.

B. Provide the required elements and associated hardware necessary to provide a complete Telecommunications Grounding Infrastructure as specified.

C. TMGB

1. Locate the TMGB at 7’ AFF fastened to the plywood backboard near the outside plant entrance conduits in the “MDF”.
2. TMGB shall be installed so that the BC for telecommunications is as short and straight as possible.
3. Conductor shall be installed in continuous 1 conduit.

D. TGB

1. Locate the TGB at 7' AFF fastened to the plywood backboard near the copper riser termination in each "IDF".
2. TGB shall be installed so that the TBB for telecommunications is as short and straight as possible.

E. TBB

1. Install non insulated copper grounding conductor in 1" conduit TMGB to each TGB.

F. Grounding Conductor Joints/Splices

1. Install mechanical type, copper alloy, with a minimum of two bolts and a separate section for each conductor or copper compression type with two (2) indents.
2. Install manufactured insulating cover or heavy tape insulation over joints/splices.

G. Grounding Conductor Joints/Splices

1. Install Green #8 AWG bonding jumper (12" max) with appropriate lugs at each cable tray joint or install manufactured braided copper grounding jumper equal to B-Line #CAM-GJ, T&B #BD12, OZ/Gedney type "FB" or Mono-Systems.
2. Install Green #8 AWG grounding conductor with appropriate lugs from side of cable tray down to TMGB or TGB. Drill and tap side of cable tray (for appropriate size bolt, 1/4" x 20 min.), making sure that bolt does not extend into wire management part of tray.

H. Grounding of Equipment Frame

1. Install manufactured insulating cover or heavy tape insulation over joints/splices.

I. ANSI J-STD-607-A, Commercial Building. Grounding/Bounding Requirements-Joint Standard for Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications, 2002*.

J. Follow IEEE 1100, IEEE Recommended Practice for Powering and Grounding Sensitive Electronic Equipment.

K. Follow NEC, NFPA 780.

L. Bonding connections should be made by using:

1. Double crimp connectors only for all horizontal runs (cabinets trays etc.). Use listed hardware that has been laboratory tested. For double crimp connectors use 2-hole type connector.
2. Exothermic welding (per NEC) within the ground electrode system, for parts of a grounding system that are subject to corrosion or that must carry high currents reliably, or for locations that require minimum maintenance. Exothermic weld to be

used on the Telecommunications Bonding Backbone (TBB) conductor for all connections.

3.2 QUALITY CONTROL

A. Inspect grounding and bonding system connections and conductors for proper installation and tightness.

3.3 DOCUMENTATION

A. Provide documentation of actual locations of grounding electrodes, busbars and backbone grounding conductors.

END OF SECTION 270526

SECTION 270528
INTERIOR COMMUNICATIONS PATHWAYS

PART 1 - GENERAL

1.1 SUMMARY

A. This section includes specifications for the installation of interior communications pathways.

B. Related Documents: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division - 1 Specification Sections, apply to the work of this Section.

C. Interior Communication Pathways are defined to include, but are not limited to inner duct, conduit, pull boxes, cable hooks, cable trays, supports, accessories, associated hardware and fire stopping materials.

1.2 REFERENCES

Section 270000 in its entirety shall be included as part of this specification.

A. Related Sections:

1. Section 01
2. Section 263353: Telecommunications Uninterruptible Power Supply (UPS)
3. Section 270000: Communications
4. Section 270526: Telecommunication Grounding and Bonding
5. Section 270528: Interior Communications Pathways
6. Section 270543: Exterior Communication Pathways
7. Section 270553: Identification and Labeling of Communication Infrastructure
8. Section 271100: Communication Room Fittings
9. Section 271300: Backbone and Riser Media Infrastructure
10. Section 271500: Horizontal Media Infrastructure
11. Section 272100: Data Communication Network Equipment
12. Section 280500: Electronic Safety and Security
13. Section 281300: Access Control System (ACS)
14. Section 282300: Digital Video Surveillance System (DVSS)

B. Conflicts:

1. Between referenced requirements: Comply with the one establishing the more stringent requirements.

2. Between reference requirements and contract documents: Comply with the one establishing the more stringent requirements.

1.3 QUALITY ASSURANCE

A. Verify conduit, raceway, cable tray, and cable hook runs do not interfere with existing or new systems within each facility.

B. Fire stopping: Manufacturer trained and approved installer to perform fire stopping work who has specialized in the installation of work similar to that required for this project.

C. Communication Pathway minimum Clearances:

1. Motors or transformers: 4 feet
2. Power cables and conduits: 12 inches parallel, 3 inches crossover
3. Fluorescent lights: 5 inches
4. Above ceiling tiles: 3 inches
5. Access above cable tray: 12 inches
6. Hot Flues, Steam pipes, Hot water pipes and other hot surfaces: at least 6”

D. Furnish products of latest proven design, new and in current production. Do not use obsolete components or out-of-production products.

E. Assure that the "as installed" system is correctly and completely documented including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.

F. All installed materials and accessories shall be new from the manufacturer. No used components will be accepted by the customer.

G. All Documentation submittals shall be reviewed by the supervising RCDD and stamped prior to submittal.

H. Contractor Qualifications:

1. The Contractor shall submit references and other related evidence of installation experience for a period of three years prior to the issue date of this Specification.
2. ALL work shall be supervised on-site by a BICSI RCDD. Must demonstrate knowledge and compliance with all BICSI, ANSI/TIA, UL, and NEC standards and codes. Contractor shall submit proof of RCDD designation.

I. The customer retains the right to have access and inspect all work during the entire duration of the project and any items that do not adhere to the standards, reference, contract, bid, or project documents will be corrected immediately at NO cost to OWNER.

PART 2 - PRODUCTS

2.1 GENERAL

A. Where conduit, pull boxes, cable tray and other raceway sizes are not specifically shown on contract drawings. All communication pathways shall be sized in accordance with the requirements of BICSI and the NEC.

B. All raceways shall be rigid metal conduit. Raceways installed in stud walls or above suspended ceilings shall be Electrical Metallic Tubing.

C. All backbone and riser conduits installed shall be populated with MaxCell flexible innerduct. Cable fill ratio not to exceed 40%.

2.2 INTERIOR COMMUNICATIONS CONDUIT

A. MANUFACTURES:

1. Allied
2. Triangle
3. Wheatland
4. Owner approved equal

B. Rigid Steel Conduit shall pass all bending, ductility, and thickness of zinc coating in ANSI C80.1 and UL 6. Conduit shall be galvanized have threaded end with 1” minimum size and 4” maximum size. Fittings shall be cast iron or alloy steel, threaded and galvanized.

C. Intermediate Metal Conduit (IMC) shall be manufactured in accordance with UL 1242. Conduit shall be low carbon, hot-dipped galvanized inside and out, with threaded ends, 1” minimum size, and 4-inch maximum size. Fittings shall be cast iron or alloy steel, threaded and galvanized.

D. Electrical Metallic Tubing (EMT) shall be manufactured in accordance with UL 797 and ANSI C80.3. EMT shall be high-strength, zinc-coated, 1-inch minimum size. EMT may be used for sizes greater than 2" where physically protected. EMT shall not be utilized for service entrance conductors. Fittings shall be of same finish and material as tubing. Fittings shall be compression type with insulated throat.

E. Expansion Joint Fittings: OZ type AX or Appleton type XJB, watertight, permitting two-way movement up to 4 inches, equipped with bonding jumpers around or through each fitting.

F. Thruwall Sealing Fittings: Type WSK by O-Z Gedney Company.

G. Fire-Seal Fittings: Type CFSI by O-Z Gedney Company.

H. Sealing Material for Sealing Fittings: Chico X Fiberdam, and Chico A sealing compound, or Chico A-P interpak by Crouse-Hinds or Apelco sealing cement and fiber filler by Appleton.

I. Insulated Bushings: Type B or SBT, as applicable, by O-Z Gedney or series B1900, series BU500 or series TC700, as applicable, by Steel City.

J. Provide a measured pull tape in each empty conduit, empty innerduct for backbone and riser pathways.

K. Provide a pull string for all horizontal conduits with a minimum pulling tension of 200 pounds.

L. Thread lubricant/sealant shall be Crouse-Hinds type STL or T & B Kopr-Shield except, when required on joints for heat producing elements such as lighting fixtures; it shall be Crouse-Hinds type HTL.

M. PVC Conduit shall not be used in intercommunication pathways. Except when encased in concrete.

2.3 FLEXIBLE MULTI-CELL INNERDUCT

A. Manufacturers:

1. MaxCell
2. Or Owner approved equivalent

B. Flexible Innerduct

1. Flexible innerduct is the OWNER standard for multi-path applications within conduit.
2. All riser/backbone fiber shall be installed in flexible innerduct.
3. Flexible Innerduct shall be UL Listed with Flame Propagation compliant with UL 2024A.
4. All flexible innerduct shall be installed per manufacture requirements.
5. Only manufacturer’s fittings, transition adapters, terminators, accessories, and installation kits shall be used.
6. All flexible innerduct will be populated with a measured pull tape.
7. All interior flexible innerduct shall be plenum rated.
8. Flexible innerduct shall only be used when installed in conduit and shall consist of a different color for the Maxcell.

9.

MaxCell 4” 3 Cell

2.4 INNERDUCT

A. Manufacturers:

1. Carlon
2. Pyramid
3. Or OWNER approved equivalent

B. Innerduct

1. All fiber placed in cable tray shall be installed in corrugated innerduct.
2. One-inch corrugated non-metallic innerduct.

3. Innerduct shall be UL Listed with Flame Propagation compliant with UL 2024.
4. Only manufacturer's fittings, transition adapters, terminators, and fixed bends shall be used.
5. All empty innerducts will be populated with a measured pull tape.
6. Where more than one innerduct is routed in a conduit, each innerduct shall consist of a different color from end to end (ex. Orange, Blue, Black, and White). Do not couple innerducts of different colors without OWNER approval.
7. All interior innerduct shall be plenum rated, unless installed in conduit.

2.5 CABLE TRAYS

A. Subject to compliance with requirements, provide products by one of the following:

1. Cooper B-Line, Inc.
2. Cope, T. J., Inc.; a subsidiary of Allied Tube & Conduit.
3. GS Metals Corp.; GLOBETRAY Products.
4. MONO-SYSTEMS, Inc.
5. PW Industries

B. Cable Trays

1. Except as otherwise indicated, provide metal cable trays, of types, classes and sizes indicated; with splice plates, bolts, nuts and washers for connecting units. Construct units with rounded edges and smooth surfaces; in compliance with applicable standards; and with the following additional construction features.
2. Materials and Finish: Material and finish specifications for each tray type are as follows:
   a. Aluminum: Straight section and fitting side rails and rungs shall be extruded from Aluminum Association Alloy 6063. All fabricated parts shall be made from Aluminum Association Alloy 5052.
   b. Pre-galvanized Steel: Straight sections, fitting side rails, rungs, and covers shall be made from steel meeting the minimum mechanical properties in accordance with ASTM A653 SS.
   c. Hot-dip Galvanized Steel: Straight section and fitting side rails and rungs shall be made from steel meeting the minimum mechanical properties of ASTM A1011 SS, Grade 33 for 14 gauge and heavier, ASTM A1008, Grade 33, Type 2 for 16 gauge and lighter, and shall be hot-dip galvanized after fabrication in accordance with ASTM A123. All covers and splice plates must also be hot-dip galvanized after fabrication; mill galvanized covers are not acceptable for hot-dipped galvanized cable tray.
   d. Stainless Steel: Straight section and fitting side rails and rungs shall be made of AISI Type 304 or Type 316 stainless steel. Transverse members (rungs) or corrugated bottoms shall be welded to the side rails with Type 316 stainless steel welding wire.

2.6 TYPE OF TRAY SYSTEMS

A. Ladder type trays shall consist of two longitudinal members (side rails) with transverse members (rungs) welded to the side rails. Rungs shall be spaced 6 or 12 inches on center. Rungs shall have a minimum cable-bearing surface of 7/8 inch with radiused edges. No portion of the rungs shall protrude below the bottom plane of the side rails. Each rung must be capable of supporting the maximum cable load, with a safety factor of 1.5 and pass all tests in accordance with NEMA VE-1, section 5.4.

B. Ventilated trough type trays shall consist of two longitudinal members (side rails) with a corrugated bottom welded to the side rails. The peaks of the corrugated bottom shall have a minimum flat cable-bearing surface of 2-3/4 inches and shall be spaced 6 inches on center. To provide ventilation in the tray, the valleys of the corrugated bottom shall have 2-1/4 inch by 4 inch rectangular holes punched along the width of the bottom.

C. All tray sizes and types shall have a minimum of 2 inch usable load depth.

D. All straight sections shall be supplied in standard 10 foot length, except where shorter lengths are permitted to facilitate tray assembly lengths as shown on drawings.3000

E. Tray widths shall be 12, 18, 24, or 36 inches as indicated on the drawings.

F. All fittings must have a minimum radius of 12, 24, 36 or 48 inches as indicated on the drawings.

G. Splice plates shall be the bolted type made as indicated below for each tray type. The resistance of fixed splice connections between adjacent sections of tray shall not exceed .00033 ohms. Splice plate construction shall be such that a splice may be located anywhere within the support span without diminishing rated loading capacity of the cable tray.

1. Aluminum Tray - Splice plates shall be made of 6063-T6 aluminum, using four square neck carriage bolts and serrated flange locknuts. Hardware shall be zinc plated in accordance with ASTM B633, SC1.
2. Steel (including Pre-galvanized and Hot-dip galvanized) - Splice plates shall be manufactured of high strength steel, meeting the minimum mechanical properties of ASTM A1011 HSLAS, Grade 50, Class 1. Hardware shall be zinc plated in accordance with ASTM B633 SC1 for pre-galvanized cable trays, or Chromium Zinc in accordance with ASTM F-1136-88 for hot-dip galvanized cable trays.

H. Cable Tray Support shall be placed so that the support spans do not exceed maximum span indicated on drawings or by the manufacturer. Supports shall be Trapeze style support. Cable trays installed adjacent to walls shall be supported on wall mounted brackets as specified by the manufacturer.

I. Trapeze hangers shall be supported by 3/8 inch (minimum) diameter all thread rods.

J. Accessories shall be furnished as required to protect, support, and install a cable tray system. Accessories shall consist of but are not limited to; section splice plates, expansion plates, blind-end plates, specially designed ladder dropouts, barriers, etc.

K. All cable tray components and accessories will be from the same manufacturer. Parts from different manufacturer will not be intermixed.

2.7 WIRE BASKET CABLE TRAY

A. General

1. Provide tray of sufficient size and load rating to support the cabling per the National Electrical Code (current edition) requirements for cable fill.
2. Tray must be UL listed for use as an equipment ground conductor.
3. All cabletray and accessories shall be from the same manufacturer.

B. Use in Data Center and Office Space.

C. Tray widths shall be 12, 18, 24, or 36 inches as indicated on the drawings.

1. Provide steel (ASTM A510) mesh cable tray with black powder coat finish.
2. All cuts and turns must be made using manufacturers recommended process and tools.
3. All cuts must be smooth. There shall be no sharp edges or mesh steel on any portion of the tray.
4. Provide tray with solid bottom insert for full length of tray. Insert size to match tray size and be of the same manufacturer. Leave gap in solid bottom insert panels where cables will drop out of tray to termination location.
5. Install waterfall inserts (same color as cabletray) at all cable drop-out locations.
6. Maintain load capacities per the cable tray manufacturers' recommendations.
7. Provide tray size as shown on the contract documents. All sizes shown are nominal interior dimensions. All tray sizes and types shall have a minimum of 4 inch usable load depth unless otherwise noted on the contract drawings.
8. Ground tray as recommended by the manufacturer. Remove tray finish at ground connectors if required to provide UL Listed ground. Use manufacturer's recommended quantity of splices to connect sections and at places where tray is cut.
9. Splice plates shall be the bolted type made as indicated below for each tray type. The resistance of fixed splice connections between adjacent sections of tray shall not exceed 00033 ohms. Splice plate construction shall be such that a splice may be located anywhere within the support span without diminishing rated loading capacity of the cable tray.
10. Use manufacturers recommended materials and installation methods. Use only radius turns. Where interior bend is 90 degrees due to nature of mesh tray, provide additional manufacturer components as required to maintain a smooth radius (radius shield, cable rollers, etc).

B. Products

1. CPI's GlobalTrac Wire Mesh Cable Tray System
2. Include required accessories for a complete cable runway inside Data Center and Office Spaces.

2.8 CABLE LADDER

A. Use in MDF and IDF

B. Specifications

1. UL Classified for suitability (as an equipment grounding conductor only)
2. Minimum 12" wide
3. Support at 5' intervals
4. Install at 7' AFF
5. Secure to equipment racks with approved hardware
6. Crossmembers at 9" intervals
7. 10-foot sections
8. Bond to TMGB/TGB as required with a #6 AWG bonding conductor

C. Products

1. Universal Cable Runway Section
2. Chatworth 1275-X12 or OWNER approved equal
3. Include required accessories for a complete cable runway inside MDF and IDF

2.9 CABLE HOOK SYSTEMS

A. Cable hooks shall have a flat bottom and provide a minimum of 1-5/8 inch cable bearing surface.

B. Cable hooks shall have 90-degree radiused edges to prevent damage while installing cables.

C. Cable hooks shall be designed so the mounting hardware is recessed to prevent cable damage.

D. Cable hooks shall have a cable latch retainer to provide containment of cables within the hook. The retainer shall be removable and reusable.

E. Cable hooks shall be factory assembled for direct attachment to walls, hanger rods, beam flanges, purlins, strut, floor posts, etc. to meet job conditions.

F. Cable hooks for non-corrosive areas shall be pre-galvanized steel, ASTM A653. Where additional strength is required, cable hooks shall be spring steel with a zinc-plated finish, ASTM B633, SC3.

G. Cable hooks for corrosive areas shall be stainless steel, AISI Type 304.

H. All Cable Hook shall be supported with minimum ¼" all thread with the appropriate fasteners.

2.10 FIRESTOPPING MATERIALS

A. Manufacturers:

1. Johns Manyille
2. Hilti
3. 3M

B. Description:

1. Performance requirements: Provide firestopping systems that are produced and installed to resist spread of fire according to requirement indicated, resist passage of smoke and other gases, and maintain fire resistance rating of assembly.
   a. F- Rated Systems: in accordance with ASTM E 814
   b. T- Rated Systems: in accordance with ASTM E 814
2. Fire stopping flame spread performance requirements: Provide products with flame-spread ratings of less than 25 and smoke development ratings of less than 50 as determined in accordance with ASTM E 84.
3. Fire Stopping UL performance requirements: Provide products with UL ratings specified for assembly indicated as determined in accordance with UL listings.

2.11 JUNCTION BOXES/PULL BOXES

A. All pull boxes shall be constructed with a minimum of 14-gauge galvanized steel with an ANSI 61 grey polyester powder finish inside and out over phosphatized surfaces or galvanizes steel unless otherwise specified.

B. All pull boxes shall have flat, removable covers fastened with plated steel screws with unique keyhole screw slots in the cover to permit removal of the cover without extracting screws unless otherwise specified.

1. All removable box covers shall be connected to box with a safety strap or chain.

C. All pull boxes shall provide the appropriate provisioning for grounding.

D. All pull boxes shall be NEMA Type 1 and sized according to the table below unless otherwise specified.

Maximum Trade Size of Conduit (inches)	Minimum Box Size (inches)			For Each Additional Conduit Increase Width (Inches)
	Width	Length	Depth	
1	4	16	3	2
1.25	6	20	3	3
1.5	8	27	4	4
2	8	36	4	5
2.5	10	42	5	6
3	12	48	5	6
3.5	12	54	6	6
4	15	60	8	8

2.12 CONDUIT PULL LINE

A. Description

1. Minimum pulling tension greater than 200 lb (900 N).
2. Ready-to-use cable pull line,
3. Use directly from the container.
4. Resists tangling when dispensing.
5. Rot and mildew resistant.
6. Handy reusable plastic dispenser pail with handle keeps the line dry.
7. Greenlee 430 or approved equivalent.

PART 3 - EXECUTION

3.1 GENERAL

A. Raceways shall be mechanically and electrically connected to all boxes and fittings and shall be properly grounded per NEC.

B. The routing and location of all conduits, cable tray, cable hooks and other raceways shall be coordinated with other trades prior to and during building construction to avoid delays and conflicts.

C. Where raceways pass through walls, partitions and floors, seal penetrations to provide a neat installation that will maintain the integrity of the waterproofing or fireproofing, as applicable, of the structure. Coordinate installation requirements with roofing installer where conduits pass through the roof.

D. All Raceways shall be run at least 6-inches from hot flues, steam pipes, hot water pipes and other hot surfaces.

E. All raceways entering a building from underground shall be sealed to prevent water, moisture, gas, or any other foreign matter from entering the building. Service conduits shall be sealed in accordance with NEC 230-8.

F. Contractor's on-site RCDD supervisor shall review, approve and stamp all shop drawings, coordination drawings and records drawings.

G. Do NOT route communication pathways under HVAC condensing units.

H. Expansion Fittings:

1. Raceways shall be provided with expansion fitting where necessary to compensate for thermal expansion and contraction.
2. Use expansion-deflection fittings on conduit crossing structural expansion joints and on exposed conduit funs where necessary. Provide bonding jumpers across fittings in metal raceways systems

3.2 CONDUIT INSTALLATION

A. Conduit shall be installed with threaded fittings and couplings.

B. All metallic couplings, connectors and fittings shall be malleable iron or steel and finished with zinc plating or by galvanizing.

C. All conduits shall be plugged immediately upon installation to prevent the entrance of construction dirt and debris. All conduits shall be swabbed and cleaned before wires are pulled.

D. All open conduits must be provided with a pull rope with a minimum pull tension of 200+ pounds.

E. Expansion fittings shall be utilized in all cases where conduits pass through building expansion joints. Fittings shall be of an approved weatherproof telescopic type permitting a movement of up to four inches and shall be provided with approved bonding jumpers around or through the fitting.

F. Connection of Conduit to pull / junction Boxes and Enclosures:

1. Connection to NEMA 1 type boxes and enclosures:
   a. Rigid conduit: Install insulated bushings and double locknuts.
   b. EMT: Install compression box connectors with insulated throats.
2. Connection to NEMA 3R, 4, 4X, and 12 type boxes: Install insulated bushings and sealing locknuts or hubs.

3. When conduits enter floor mounted enclosures from below and there is no sheet metal to which to attach; install grounding bushings on the conduit. Bond bushings to ground bus using a conductor the same size as required for an equipment grounding conductor sized for the given circuit.
4. Install sealing bushing within all conduits which have entered a building from outside, whether from above or below grade.

G. Each Conduit route shall be installed with the least amount bends as possible. No section of conduit shall be longer than 30m (100 ft) or contain more than two 90 degrees bends (offset is considered to be a 90 degree bend) between pull points, pull boxes or reverse bends.

H. The inside radius of bends in conduit shall be:

1. 6 times the internal diameter for 2-inches or less.
2. 10 times the internal diameter for greater than 2-inches.

I. A measured pull tape shall be placed in all installed conduit.

J. Any single conduit run extending from a Telecommunication Room (TR) shall not serve more than one outlets.

K. All communications conduits shall be identified with color coded orange tape marked "Communications" every 50 feet. Tag conduit termination points (to include J-box locations) with the origination and destination location.

L. Conduit shall be reamed to eliminate sharp edges and terminated with an insulated bushing.

M. Conduit protruding through the floor shall be terminated at a minimum of 3 inches above the floor surface.

N. All stubbed conduit ends shall be provided with a ground bushing.

O. All conduit penetrations shall be provided with the proper conduit sleeves.

1. Sleeves shall extend three inches AFF or four inches below finished ceiling, with a bushing.
2. Sleeves shall be installed in the communications room floor or ceiling a minimum of two to four inches on center from the wall.
3. Conduit floor sleeves shall be spaced to allow space for ground bushing and insulated bushing for cable protection.
4. Shall be installed in a single tier or row from left to right horizontally. If two tiers or rows are required the conduits shall be staggered minimum of 2 inches between tiers.
5. Cable support anchors shall be installed 18 to 24 inches above the sleeves.

P. All cable (horizontal, riser or backbone) wall or ceiling penetrations shall be provided with the proper conduit sleeves.

1. Sleeves shall extend three inches AFF or four inches below finished ceiling, with a bushing.
2. Sleeves shall be installed in the floor or ceiling a minimum of two to four inches on center from the wall.
3. Sleeves shall be installed in the walls at a minimum of two inches extended on each side of the wall.
4. Cable floor, ceiling and wall sleeves shall be spaced to allow space for ground bushing and insulated bushing for cable protection.
5. Shall be installed in a single tier or row from left to right horizontally.
6. If two tiers or rows are required the conduits shall be staggered minimum of 2 inches between tiers.
7. Cable support anchors shall be installed 18 to 24 inches above the sleeves.

Q. All conduit and cabinet entrances shall be sealed with an approved, re-enter able sealant material to prevent ingress of water, dust or other foreign materials.

R. Conduit shall not be embedded in the required fire protective covering of a structural member that is to be individually encased in accordance with BOCA.

S. Install all exposed conduit parallel or perpendicular to lines of existing construction and grouped together where possible, without interfering with use of premises or working areas. Prevent safety hazards and interference with operating and maintenance procedures.

T. Conduit Sizing and supports:

1. Support conduit 2 inches and larger at 10 feet on center maximum, and conduit 1½ inch and smaller at eight feet on center maximum.
2. Fasten 1½ inch and smaller conduit to concrete, masonry or steel with either one-hole malleable iron conduit straps, or "Korn" clamps, or U-bolts; for larger diameters, use two-hole straps. Use "clamp backs" for strapping conduits to planar surfaces.
3. Multiple runs shall be supported on channel adequately secured to walls or hung from structure above with conduits fastened to channel with clamps designed for the purpose.
4. Cable fill rates shall not exceed 40 percent of the cross-sectional area of the installed conduit unless greater fill is approved by Engineer. Contractor shall submit request for approval for installing cables with greater than 40 percent conduit fill. Request will be approved on a case-by-case basis.

U. Horizontal Conduit Routes:

1. Horizontal (station) conduit is defined as the conduit run between the communications outlet and the cable tray or communications room as indicated on Drawings.

2. Each horizontal conduit run shall be a one-inch metallic conduit and shall be home run from each communications outlet box to the equipment room, terminating equipment or cable tray, as indicated in Drawings.
3. Each route shall be installed with the least amount of conduit bends. Each single horizontal conduit run shall be provided with a junction or pull box every 30m (100 ft) or contain more than two 90 degrees bends (offset is considered to be a 90 degree bend).
4. Each dual horizontal conduit run shall be provided with a junction or pull box every 30m (100 ft) or contain more than two 90 degrees bends (offset is considered to be a 90 degree bend). The quantity of conduits entering the junction or pull box shall equal the number of conduits exiting the junction or pull box.
5. Each terminating (outlet end) conduit connection shall be provided with the proper connecting insulated bushing or fitting.
6. Each originating end (communications room end) shall be provided with the proper connecting insulated ground bushing and properly bonded to ground.

V. Horizontal conduit entrance in communications rooms – wall entry

1. Horizontal conduits shall enter the communications room wall 12 to 18 inches above the top of the cable tray. Maintain cable bend radius with supporting device as required.
2. Conduit wall stubs shall be spaced in increments equal to the conduit outside diameter (OD) from each other.
3. All conduit wall stubs shall be extended to the terminating equipment, electronics, or cable tray, as noted in Drawings.
4. Conduit crossovers are not permitted.

W. Horizontal conduit entrance in communications rooms – ceiling entry

1. Horizontal conduits shall enter or be extended from the equipment room ceiling 12 to 18 inches above the top of the cable tray.
2. Ceiling conduit stubs shall be spaced in increments equal to the conduit OD from each other.
3. All ceiling conduit stubs shall be extended to the terminating equipment, electronics, or cable tray, as noted in Drawings.
4. Conduit crossovers are not permitted.

X. Horizontal conduit entrance in communications rooms – floor entry

1. Horizontal conduits shall enter the communications room floor two inches to four inches on center from the wall and shall be stubbed 3 inches AFF.
2. Conduit floor stubs shall be spaced in increments equal to the conduit OD from each other.
3. Conduit crossovers are not permitted.
4. Provide vertical ladder rack or d-hooks properly secured to wall to transverse cable to cable tray over-head.

Y. Horizontal conduit to cable tray

1. Non-communications conduit shall NOT be attached to the cable tray in any fashion.
2. Conduit terminating end shall be attached to cable tray side rail with "conduit-to-cable tray" clamps. No other form of attachment shall be permitted.
3. Top or bottom cable tray conduit feeds and attachments are not permitted.

Z. Horizontal Junction/Outlet Boxes

1. Each horizontal conduit shall be terminated into an outlet box.
2. Each outlet box shall be a deep four-inch square junction box with a minimum of two one-inch knockouts on each of the sides.
3. Each conduit home run shall be provided with a deep 4-inch square junction box (w/cover) at 100-foot intervals and six inches above each ceiling and wall intersection.

AA. Riser conduit entrance in communications rooms – wall entry

1. Riser conduits shall enter the communications room wall a minimum of 24 inches above the top of the cable tray.
2. Conduit wall stubs shall be spaced in increments to equal the conduit OD from each other.
3. Riser conduits shall be installed in a single tier or row from left to right horizontally.
   a. If two tiers or rows are required, the conduits shall be staggered between tiers.
   b. No more than two tiers or rows are permitted.
4. All conduit wall stubs shall be extended to and over the cable tray to access cable tray pathway.
5. All riser conduit stubs shall be provided with the proper universal drop-out/ waterfall cable exit runway, which shall be supported by and mounted to channel strut.
6. Conduit crossovers are not permitted.

BB. Riser conduit entrance in communications rooms – floor entry

1. Riser conduits shall enter the communications room floor two inches to four inches on center from the wall and shall stub up six inches AFF.
2. Conduit floor stubs shall be spaced in increments to equal the conduit OD from each other.
3. Riser conduits shall be installed in a single tier or row from left to right horizontally.
   a. If two tiers or rows are required, the conduits shall be staggered between tiers.
   b. No more than two tiers or rows are permitted.
4. Exiting cable shall be extended to the bottom of the cable tray and be provided with cable support anchors and secured with supporting hardware every six inches above the conduit bushings.

5. Conduit floor stubs shall be extended 2 to 4 inches from wall on center and 3 inches above AFF.
6. The riser cable shall be extended in the cable tray to the terminating equipment, as noted in the Drawings.
7. Conduit crossovers are not permitted.

3.3 CABLE TRAY INSTALLATION

A. Cable tray shall be supported as follows:

1. Where tray is suspended above equipment cabinets it shall be supported by a Trapeze type hanger and per manufacture instructions. In all other applications, the tray shall be supported by uni-strut trapeze type hangers affixed to the structure above via minimum 3/8-inch threaded rod.
2. Threaded rod shall be fitted with a 6-inch long tube where it resides in cable tray to protect cables.
3. Minimum of 12 inches of vertical clearance above all cable tray.

B. Installation shall be in accordance with equipment manufacturer's instructions, and with recognized industry practices to ensure that cable tray equipment comply with requirements of NEC and applicable portions of NFPA 70B. Reference NEMA-VE2 for general cable tray installation guidelines.

C. Provide sufficient space encompassing cable trays to permit access for installing and maintaining cables.

D. Cable tray fitting supports shall be located such that they meet the strength requirements of straight sections. Install fitting supports per NEMA VE-2 guidelines, or in accordance with manufacturer's instructions.

E. A support must be place within 24 inches on each side of a connection or fitting.

F. Maintain a minimum of 12 inches of clearance above cable tray for cable installation. Maintain a minimum of 3 inches between ceiling tile and cable tray support.

G. Cable tray installation will be completed in one continuous run with no separations between sections.

H. Vertical cable or ladder racks shall be used to route cable up and down the wall.

I. Dropout/Water Fall of the same make and size of the cable tray shall be used to route cables in or out of the tray.

J. Matted “T” and elbows shall be used of the same make and size for all interchanges and directional changes

3.4 JUNCTION BOX/PULL BOX INSTALLATION

A. Pull boxes shall be installed in sections of conduit every 100 feet in length, that contain more than two 90-degree bends, or that contain bends that are 180 degrees or more in the aggregate.

B. A pull box shall NOT be used in lieu of a conduit bends.

C. All pull boxes shall be installed in an easily accessible location with unobstructed entry to the pull box access panel.

D. Pull boxes shall be supported on all four corners in such a manner that the pull box is not supported by the cable running through or conduit attached to the pull box.

E. Horizontal Junction/Outlet Boxes

1. Each horizontal conduit shall be terminated into an outlet box.
2. Each outlet box shall be a deep four-inch square junction box with a minimum of two one-inch knockouts on bottom and each of the sides.
3. Each conduit home run shall be provided with a deep 4-inch square junction box (w/cover) at 100-foot intervals and six inches above each ceiling and wall intersection.

3.5 CABLE HOOK INSTALLATION

A. Installation and configuration shall conform to the requirements of the ANSI/TIA Standards 568A & 569, NFPA 70 (National Electrical Code), and applicable local codes.

B. Cable hooks shall be capable of supporting a minimum of 30 pounds with a safety factor of 3.

C. Cable Hook spacing maximum 5 feet on center.

D. Maintain maximum cable sag between cable hooks of 12 inches.

E. Cable shall not touch ceiling tile or light fixtures. Provide minimum 3” vertical separation above ceiling tiles.

F. Do not fill cable hook greater than manufactures recommended guidelines, maximum 40% fill.

3.6 FIRESTOPPING MATERIAL INSTALLATION

A. Comply with manufacturer’s product data, including product technical bulletins, product catalog installation instruction, and product carton instruction for installation.

B. Verify substrate conditions are acceptable for product installation in accordance with manufacturer’s instructions.

C. Install fire stopping to comply with performance requirements specified herein.

1. Install fire stopping to comply with listed fire rated assemblies in accordance with ASTM and UL requirements
2. Installer shall be trained and approved by the manufacturer

D. Protect installed products from damage during construction operations until final completion.

E. Inspection: Code official or building inspectors to review proper installation using manufacturer guidelines.

END OF SECTION 270528

SECTION 270543
EXTERIOR COMMUNICATIONS PATHWAY

PART 1 - GENERAL

1.1 PROJECT SCOPE SUMMARY

A. Subject to the General and Special Conditions, this section shall specify underground ducts, and utility holes designated as maintenance holes, and hand holes.

B. Section Includes:

1. Rigid steel conduit.
2. Plastic conduit.
3. Plastic duct.
4. Utility holes, maintenance holes (MH), hand holes (HH)
5. Underground duct markers.

C. Division 31 – Trenching & Backfilling: Execution requirements for trenching, backfill and compaction required by this section.

1.2 REFERENCES

Section 270000 in its entirety shall be included as part of this specification.

A. Related Sections:

1. Section 01
2. Section 270000: Communications
3. Section 270526: Telecommunication Grounding and Bonding
4. Section 270528: Interior Communications Pathways
5. Section 270543: Exterior Communication Pathways
6. Section 270553: Testing Administration Identification
7. Section 271100: Communication Room Fittings
8. Section 271300: Backbone and Riser Media Infrastructure
9. Section 271500: Horizontal Media Infrastructure
10. Section 272100: Data Communication Network Equipment
11. Section 274100: Audio Video System
12. Section 280500: Electronic Safety and Security
13. Section 281300: Access Control System (ACS)
14. Section 282300: Digital Video Surveillance System (DVSS)

1.3 DESCRIPTION

A. Interconnected system of encased conduits, ducts, MH, and HH to distribute medium-voltage power, low-voltage power, data communications, and video.

B. Conduit and duct routing and utility hole locations are shown in approximate locations unless dimensions are indicated. Field route and locate to complete duct bank system.

C. Underground Ducts:

1. Medium-voltage: Use rigid plastic underground conduit.
2. Low-voltage: Use rigid plastic underground conduit.
3. Data communication: Use rigid plastic underground conduit.

D. Above ground conduit shall be rigid, hot-dipped galvanized steel manufactured according to UL and ANSI No. C80.1, threaded before galvanizing. Install according to NEC and AISI Handbook for Steel Electrical Raceways.

E. Conduit size shall be as indicated on the Drawings.

1.4 COORDINATION

A. Refer to General or Special Conditions.

B. Refer to Division 26, Electrical Work

C. Coordinate Work with existing underground utilities and structures.

1.5 QUALITY ASSURANCE

A. Verify duct banks do not interfere with existing or new underground facilities.

B. Assure that the "as installed" system is correct and complete per construction documents: including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.

C. Owner/Architect/Engineer retains the right to access and inspect all work during the entire duration of the project and any items that do not adhere to the standards, reference, contract, bid, or project documents will be corrected immediately at the expense of the contractor.

D. UL Compliance: Provide products that are UL-classified and labeled.

PART 2 - PRODUCTS

2.1 RIGID STEEL CONDUIT

A. Rigid Steel Conduit: ANSI C80.1.

B. Fittings: NEMA FB 1, steel.

2.2 PLASTIC CONDUIT AND DUCTS

A. Rigid Plastic Conduit: NEMA TC 2, Schedule 40 PVC, with fittings and conduit bodies to NEMA TC 3.

2.3 MAINTENANCE HOLE (MH)

A. Nominal Inside Dimensions : 3'H x 3'W x 3'L

1. Oldcastle polymer 3636 or approved equal.

B. Maintenance Hole shall include the following:

1. Description: Pre-cast concrete utility hole with standard duct entrance configuration or multi-knockout panels.
2. Minimum ANSI Tier 22 rating
3. Furnish cover marked "COMM" for communications.
4. Repair chipped knockouts with grout.
5. Seal all unused knockouts and spare ducts with duct plugs
6. Segmented Thin Wall Knockouts
7. Flush Solid Cover
8. Penta Head Bolt
9. Penta Coil Thread Bolt
10. Captive Bolt Retainer
11. EMS Marker (E)
12. Mouseholes/Knockouts
13. Rack Mount
14. Cable Racks/Cable Arms
15. Unistrut
16. Pulling Eye - 1,000 lb and 3,000 lb
17. Ground Buss (F)
18. Dividers
19. Racking Provision
20. Lid Gaskets*
21. Solid Bottom
22. Custom Marking Plate (Polymer)

2.4 HAND HOLE (HH)

A. Nominal Inside Dimensions: 2'x3'x3'

1. Oldcastle polymer 2436-36 or approved equal.

B. Handhole Hole shall include the following:

1. Description: Pre-cast concrete utility hole with standard duct entrance configuration or multi-knockout panels.
2. Minimum ANSI Tier 22 rating
3. Furnish cover marked “COMM” for communications.
4. Repair chipped knockouts with grout.
5. Seal all unused knockouts and spare ducts with duct plugs
6. Segmented Thin Wall Knockouts
7. Flush Solid Cover
8. Penta Head Bolt
9. Penta Coil Thread Bolt
10. Captive Bolt Retainer
11. EMS Marker (E)
12. Mouseholes/Knockouts
13. Rack Mount
14. Cable Racks/Cable Arms
15. Unistrut
16. Pulling Eye - 1,000 lb and 3,000 lb

2.5 UNDERGROUND DUCT MARKERS

A. Underground Warning Tape: 4-inch wide detectable plastic tape (6 mil thickness min.) with warning label stating, “CAUTION: BURIED COMMUNICATIONS LINE.”

1. Follow NESC411E, and NEC300.50
2. Metallic tape or metallic strip for above ground detection
3. Orange tape for Communications line

2.6 MANUFACTURERS

A. Conduit Measuring Tape:

1. Neptco
2. Greenlee
3. Garvin Industries

B. Caution Tape:

1. Reef Industries
2. Repnet
3. Panduit

C. Maintenance/Hand Hole Covers

1. Oldcastle
2. Locke Solutions
3. Neehan Foundry
4. Dabico Inc.
5. Inland Foundry

2.7 FLEXIBLE MULTI-CELL INNERDUCT

A. Manufacturers:

1. MaxCell
2. Or HCCS approved equivalent

B. Flexible Innerduct

1. Flexible innerduct is the HCCS standard for multi-path applications within conduit.
2. All riser/backbone fiber shall be installed in flexible innerduct.
3. Flexible Innerduct shall be UL Listed with Flame Propagation compliant with UL 2024A.
4. All flexible innerduct shall be installed per manufacture requirements.
5. Only manufacturer's fittings, transition adapters, terminators, accessories, and installation kits shall be used.
6. All flexible innerduct will be populated with a measured pull tape.
7. All interior flexible innerduct shall be plenum rated.
8. Flexible innerduct shall only be used when installed in conduit and shall consist of a different color for the Maxcell.

C. MaxCell 4” 3 Cell

Min Conduit ID	Suggested Product	Max # of Packs	Max # of Cables	Maximum Cable Diameter per Cell	Rec. Pull Length*	Max Pull Length*
3"	MaxCell 4" 3 Cell	1	3	1.34"	1500'	2000'
4"	MaxCell 4" 3 Cell	2	6	1.34"	1500'	2500"
5"	MaxCell 4" 3 Cell	3	9	1.34"	1500'	2500'
6"	MaxCell 4" 3 Cell	4	12	1.34"	1500'	2500'

*Use of Optical Fiber Nonconductive Riser (OFNR) cable may result in reduced pulling lengths

D. MaxCell 3” 3 Cell

Min Conduit ID	Suggested Product	Max # of Packs	Max # of Cables	Maximum Cable Diameter per Cell	Rec. Pull Length*	Max Pull Length*
3"	MaxCell 3" 3 Cell	2	6	1.03"	1200'	2000'
4"	MaxCell 3" 3 Cell	3	9	1.03"	1500'	2500"
5"	MaxCell 3" 3 Cell	4	12	1.03"	1500'	2500'
6"	MaxCell 3" 3 Cell	5	15	1.03"	1500'	2500'

*Use of Optical Fiber Nonconductive Riser (OFNR) cable may result in reduced pulling lengths

MaxCell 2” 3 Cell

Min Conduit ID	Suggested Product	Max # of Packs	Max # of Cables	Maximum Cable Diameter per Cell	Rec. Pull Length*	Max Pull Length*
2"	MaxCell 2" 3 Cell	1	3	.70"	800'	1500'

*Use of Optical Fiber Nonconductive Riser (OFNR) cable may result in reduced pulling lengths

2.8 INNERDUCT

A. Manufacturers:

1. Carlon
2. Pyramid
3. Or HCCS approved equivalent

B. Innerduct

1. All fiber placed in cable tray shall be installed in corrugated innerduct.
2. One-inch corrugated non-metallic innerduct.
3. Innerduct shall be UL Listed with Flame Propagation compliant with UL 2024.
4. Only manufacturer's fittings, transition adapters, terminators, and fixed bends shall be used.
5. All empty innerduct will be populated with a measured pull tape.
6. Where more than one innerduct is routed in a conduit, each innerduct shall consist of a different color from end to end (ex. Orange, Blue, Black, and White). Do not couple innerduct of different colors without HCCS approval.
7. All interior innerduct shall be plenum rated, unless installed in conduit.

2.9 CONDUIT PULL LINE

A. Description

1. Minimum pulling tension greater than 200 lb (900 N).
2. Ready-to-use cable pull line,
3. Use directly from the container.
4. Resists tangling when dispensing.
5. Rot and mildew resistant.
6. Handy reusable plastic dispenser pail with handle keeps the line dry.
7. Greenlee 430 or approved equivalent.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Refer to General Conditions regarding verification of existing conditions before starting work.

B. Verify routing and termination locations of duct bank prior to excavation for rough-in.

C. Verify locations of utility holes prior to excavating for installation.

3.2 PREPARATION

A. Verify materials are on site in proper condition and of sufficient quantity.

B. Minimum electrical/communications underground cable separation:

1. 12 inches

C. Before encasement, verify ducts are free of debris and properly installed in support and spacer system, are properly fitted together and hold-down hardware is properly installed.

3.3 INSTALLATION

A. Install all work following drawings, manufacturer's instructions and approved submittal data.

B. Install watertight penetrations through foundation, HH and MH walls. Wherever a hand hole is used to simply pass through, the conduit entrances and exits will be situated at opposite ends of the hand hole instead of 90 degree angles.

C. Provide reinforcement at the point where ductbanks enter manhole or building walls as required to sustain shear forces that may be exerted on the ductbank by soil settlement or heaving.

D. Reinforcement may consist of PVC-coated or tape-wrapped galvanized rigid steel (GRS) or heavy-wall fiberglass-reinforced (FRE) conduits 10 feet out from the inside face of the manhole, tunnel, or building wall.

E. Specify end bells manufactured of GRS or heavy-wall fiberglass at the points of penetration/termination.

F. Assemble duct banks with non-magnetic saddles, spacers and separators. Position separators for 2-inch minimum concrete separation between outer surfaces of adjacent ducts.

1. Make uniform required bends with a minimum of a 24 inch radius for conduits less than 3 inch diameter, and a 48 inch radius for conduits 3 inches and larger.
2. Maintain vertical or horizontal separations of 12 inches of well-packed topsoil from any electrical service conduit run parallel to Communications conduits.

G. Extend below grade conduits to 4 inches above the finished floor inside a building.

H. Duct shall be encased in concrete (3500 PSI @ 28 days) unless noted otherwise.

I. Install conduit and duct with minimum slope of 4 inches per 100 feet (0.33 percent). Slope conduit and duct toward manholes and away from building entrances.

J. Cut conduit and duct square using saw or pipe cutter; de-burr cut ends.

K. Insert conduit and duct to shoulder of fittings; fasten securely.

L. Join nonmetallic conduit and duct using adhesive as recommended by manufacturer.

M. Wipe nonmetallic conduit and duct dry and clean before joining. Apply full even coat of adhesive to entire area inserted in fitting. Allow joint to cure for 20 minutes, minimum.

N. Install no more than equivalent of three 90-degree bends between pull points for electrical conduits and two (2) 90-degree bends for communications conduits.

O. Install fittings to accommodate expansion and deflection.

P. Terminate conduit and duct at manhole entries using end bell.

Q. Stagger conduit and duct joints vertically in concrete encasement six (6) inches minimum.

R. Use suitable separators and chairs installed not greater than 4 feet on centers. Secure separators and chairs to trench bottom prior to concrete pour.

S. Band conduits and ducts together before backfilling or placing concrete.

T. Securely anchor conduit and duct to prevent movement during concrete placement.

U. Place concrete in accordance with Section 03 3000.

V. Install ducts with minimum 3 inch concrete cover at bottom, top, and sides.

W. Reinforcing steel:

X. Reinforcing steel shall have a minimum yield strength of 60,000 psi for No. 4 bars and smaller, and 60,000 psi for No. 5 bars and larger.

Y. The reinforcing steel shall run parallel in the underground duct bank with one No. 4 (0.5 inch diameter) bar at each corner of the duct bank, lapped 24 diameters at splices.

Z. Install two No. 4 steel reinforcing bars in top of bank under paved areas.

AA. Connect to manhole wall using dowels.

BB. Provide suitable pull string in each empty duct except sleeves and nipples.

CC. Swab duct. Use suitable caps to protect installed duct against entrance of dirt and moisture.

DD. Backfill trenches in accordance with Division 31.

EE. Interface installation of underground duct markers with backfilling specified in Division 31.

3.4 PRE-CAST UTILITY HOLE

A. All pull boxes, hand-holes, man-holes, and utility holes shall be dedicated for either electrical or communications. Under no circumstances shall electrical cables and communication__ cables be installed in the same box.

B. Install and seal precast sections in accordance with ASTM C891.

C. Install utility holes plumb.

D. Size hand-hole in accordance with NEC unless noted otherwise on drawings.

E. Backfill utility hole excavation

END OF SECTION 270543

SECTION 270553
TESTING ADMINISTRATION, IDENTIFICATION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. This Section includes the following:

1. Testing requirements for the telecommunications structured cabling system, identification and administration.

1.2 RELATED SECTIONS

A. Related Sections:

1. Section 01
2. Section 263353: Telecommunications Uninterruptible Power Supply (UPS)
3. Section 270000: Communications
4. Section 270526: Telecommunication Grounding and Bonding
5. Section 270528: Interior Communications Pathways
6. Section 270543: Exterior Communication Pathways
7. Section 270553: Identification and Labeling of Communication Infrastructure
8. Section 271100: Communication Room Fittings
9. Section 271300: Backbone and Riser Media Infrastructure
10. Section 271500: Horizontal Media Infrastructure
11. Section 272100: Data Communication Network Equipment
12. Section 280500: Electronic Safety and Security
13. Section 281300: Access Control System (ACS)
14. Section 282300: Digital Video Surveillance System (DVSS)

1.3 REFERENCES

Section 270000 in its entirety shall be included as part of this specification.

1.4 QUALITY ASSURANCE

A. Procedures: Provide the following, prior to beginning Work.

1. Written, detailed procedures including techniques for securing, protecting, and dressing transitions from OF and unshielded twisted pair (UTP) cable to conductor to connector.
2. Written, detailed termination procedures for OF and UTP conductors.

PART 2 - PRODUCTS

2.1 NOT USED

PART 3 - EXECUTION

3.1 TESTING PREPARATION

A. Furnish proposed test procedures, recording forms, list of personnel and test equipment for Architect review.

B. Follow recommended procedures for testing as published by test equipment manufacturer.

3.2 TESTING COPPER AND FIBER OPTICS

A. Manufacturer's Testing

1. Copper Cable testing
   a. All copper testing shall be based on a channel performance test.
   b. Testing of all copper wiring shall be performed prior to system cutover. 100 percent of the horizontal and riser wiring pairs shall be tested for opens, shorts, polarity reversals, transposition and presence of AC voltage. Voice and data horizontal wiring pairs shall be tested from the telecommunications outlet to the TC. The Category 3 riser cable runs shall be tested for conformance to the specifications of TIA 568B Category.
   c. All voice and data Category 6 test results are to be documented on a HITS approved testing sheet, along with Category 6 tester generated test results sheets. All testing must include confirmation of continuity and proper pair terminations and that pairs are free of shorts, crosses, opens and polarity reversals.
   d. The Category 6 cable runs shall be tested for conformance to the specifications of TIA 568B Category 6. Testing shall be done with a TIA TSB-67 UL Certified Level 2 test set at a minimum. Near end crosstalk measurements shall be done at both the information outlet and the cross connect. Both ends shall pass TSB-67 requirements. Any pairs not meeting the requirements of the standard shall be brought into compliance by the contractor at no charge to the City. Complete end to end test results must be submitted to the City.
   e. Line Mapping (End-to-End Connectivity). Check 4-pair wiring for proper wiring configuration, open conductors, shorted conductors, crossed pairs, and reversed pairs.

f. Loop Resistance (DC-Steady State). Connect OHM meter across one end of cable pair with shoring terminator across the other end of cable pair.
   a) Measure steady-state DC resistance and compare to cable manufacturer's standard values.
   b) Values greater than allowed resistance are considered to have failed, and values smaller than allowed resistance are considered to have passed.
   c) Attenuation: Transmit several signals at increasing frequencies across each conductor.
   d) Measure signal loss in units of decibels (dB).
   e) Test frequencies and permitted dB loss values at each test frequencies.
   f) Loss values are specified in TIA 568B for Category 6, UTP cable (pending).

g. Cable Length: Record cable length from either length markings on cable jacket, or from hand-held multi-function test equipment incorporating time-domain reflectometer (TDR) circuitry.

h. Capacitance: Test each twisted pair with capacitance meter.
   a) Test opposite end of twisted pair for open circuit.
   b) Pass test results must yield capacitance within 2 percent of cable manufacturer's specification.

i. Near-End Crosstalk (NEXT): Measure both outlet and distribution end of link.
   a) Worst pair of cable with near-end crosstalk must be measured in dB.
   b) Test frequencies and permitted worst pair dB crosstalk values at each test frequencies are specified in TIA 568B for Category X, UTP cable (pending).
   c) Repair or replace, and retest failed cables until passing results are achieved.
   d) At a minimum, an Owner inspector or their designated representative shall randomly perform unannounced, on-site reviews during the installation. In addition, this person shall perform a final inspection and a complete review of the test results before the installation is accepted.

2. Optical Fiber Cable Testing w/ OTDR

   a) The Contractor shall test all lightguide cable prior to the installation of the cable. The Contractor shall assume all liability for the replacement of the cable should it be found defective at a later date.

   b) All fiber testing shall be performed on all fibers in the completed end to end system. Testing shall consist of a bidirectional end to end OTDR trace performed per TIA 455-61. The system loss measurements shall be provided at 850 and 1310 nanometers for multimode fibers and 1310 and 1550 for single mode fibers.

   c) Optical Loss Test Set (OLTS) testing shall be conducted for all installed multimode fibers to measure end-to-end attenuation, and installed length. Testing for multimode fiber shall be conducted bi-directionally at 850 nm and 1300 nm. Certified test records of all OLTS test results shall be provided as documentation and will become part of the "as-built" record.

   d) Fiber links shall have a maximum loss of: (allowable cable loss per km)(km of fiber in link) + (.4dB)(number of mated connectors) = maximum allowable loss

   e) Loss numbers for the installed link shall be calculated by taking the sum of the bidirectional measurements and dividing that sum by two.

f) Any link not meeting the requirements of the standard shall be brought into compliance by the contractor, at no charge to the City.

g) Documentation shall be provided in both hard copy and Compact Disk (CD) to the point of contact.

3. Optical Fiber Cable Testing w/ Power Meter

a) Multimode Horizontal Link Segments should be tested in one direction at the 850-nm or 1300-nm wavelength.

b) Multimode Backbone and Composite Link Segments should be tested in one direction at both 850-nm and 1300-nm wavelengths.

c) Singlemode Horizontal Link Segments should be tested in one direction at the 1310-nm or 1550-nm wavelength.

d) Singlemode Backbone and Composite Link Segments should be tested in one direction at both 1310-nm and 1550-nm wavelengths.

e) Note: The minor attenuation differences due to test direction are on par with the accuracy and repeatability of the test method. Therefore, testing in only one direction is warranted. Horizontal Link Segments are limited to 90 meters. Therefore, attenuation differences caused by wavelength are insignificant, and as a result, single wavelength testing is sufficient.

4. In compliance with TIA-526-14A "Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant" and TIA-526-7 "Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant", the following information should be recorded during the test procedure:

a) Names of personnel conducting the test.

b) Type of test equipment used (manufacturer, model, serial number).

c) Date test is being performed.

d) Optical source wavelength, spectral width, and for multimode, the coupled power ratio (CPR).

e) Fiber identification.

f) End point locations.

g) Test direction.

h) Reference power measurement (when not using a power meter with a Relative Power Measurement Mode).

i) Measured attenuation of the link segment.

j) Acceptable link attenuation.

k) Note: Horizontal Link Segments are limited to 90 meters, therefore, the acceptable link attenuation can be based on the longest installed link without introducing a significant error.

5. Acceptable Attenuation Values

a) The general attenuation equation for any link segment is as follows:

b) Acceptable Link Attn. = Cable Attn. + Connection Attn. + Splice Attn. + CPR Adj.

c) Note: A connection is defined as the joint made by mating two fibers terminated with remateable connectors (e.g. ST, SC, SFF).

d) 62.5 µm Multimode Attenuation Coefficients

Cable Attn. = Cable Length (km) × (3.40 dB/km@850nm or 1.00 dB/km@1300nm)
Connection Attn. (ST or SC connectors) = (Mated Connections × 0.4 dB)
Connection Attn. (SFF connectors) = (Mated Connections × 0.14 dB)
Splice Attn. (CSL or Fusion) = Splices × 0.30 dB

e) CPR Adj. = See table below

MULTIMODE LIGHT SOURCE CPR ADJUSTMENT					
	CAT-1	CAT-2	CAT-3	CAT-4	CAT-5
LINKS WITH ST OR SC CONNECTIONS	+ 0.50	0.00	– 0.25	– 0.50	– 0.75
LINKS WITH LC CONNECTIONS	+ 0.25	0.00	– 0.10	– 0.20	– 0.30

f) Coupled Power Ratio Measurement.

Note: The Coupled Power Ratio of a light source is a measure of the modal power distribution launched into a multimode fiber. A light source that launches a higher percentage of its power into the higher order modes of a multimode fiber produces a more over-filled condition and is classified as a lower category than a light source that launches more of its power into just the lower order modes producing an under-filled condition. Under-filled conditions result in lower link attenuation, while over-filled conditions produce higher attenuation. Therefore, adjusting the acceptable link attenuation equation to compensate for a light source's launch characteristics increases the accuracy of the test procedure.

6. Procedure:

a) CPR Test Jumper-1 shall be multimode, 1 - 5 meters long with connectors compatible with the light source and power meter and have the same fiber construction as the link segment being tested.

b) CPR Test Jumper-2 shall be singlemode, 1 - 5 meters long with connectors compatible with the light source and power meter.

c) Clean the test jumper connectors and the test coupling per manufacturer's instructions.

d) Follow the test equipment manufacturer's initial adjustment instructions.

e) Connect multimode test jumper-1 between the light source and the power meter. Avoid placing bends in the jumper that are less than 100 mm (4 inches) in diameter. See Figure 1.

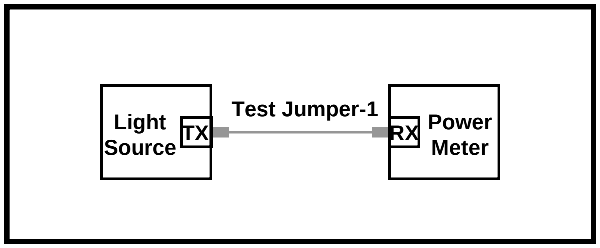

Figure 1

f) If the power meter has a Relative Power Measurement Mode, select it. If it does not, record the Reference Power Measurement (Pref). Note: If the meter can display power levels in dBm, select this unit of measurement to simplify subsequent calculations.

g) Disconnect test jumper-1 from the power meter. Do NOT disconnect the test jumper from the light source.

h) Connect jumper-2 between the power meter and test jumper-1 using the test coupling. The singlemode jumper should include a high order mode filter. This can be accomplished by wrapping the jumper three times around a 30 mm (1.2 inches) diameter mandrel. See Figure 2.

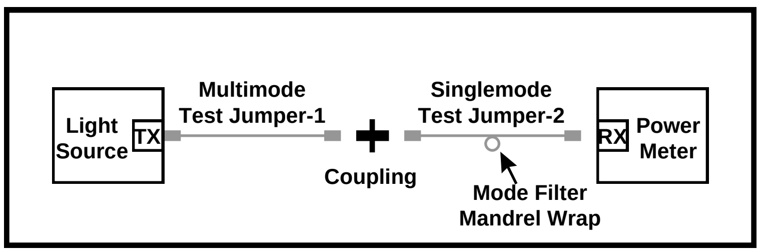

Figure 2

i) Record the Power Measurement (Psum). If the power meter is in Relative Power Measurement Mode, the meter reading represents the CPR value. If the meter does not have a Relative Power Measurement Mode, perform the following calculation:
If Psum and Pref are in the same logarithmic units (dBm, dBu, etc):
CPR (dB) = | Psum – Pref |
If Psum and Pref are in watts:
CPR (dB) = | 10 × log10 [Psum/Pref] |

3.3 IDENTIFICATION

A. Labeling

1. Label all cable, fiber strands, patch panels, patch panel termination positions, distribution frames, jacks, and cover plates.

2. Wire and fiber labels shall be clear vinyl with acrylic adhesive tape. Text shall be typed with minimum 8 point font.
3. Distribution cabinet labels shall follow Section 16195 - Electrical Identification.
4. All other labels shall be white polyester with acrylic adhesive tape. Text shall be typed with minimum 10 point font.
5. Label shall be attached to each copper cable at each end.
6. Label all conduit stubs.
7. Label all conduits and innerducts passing through IDF Rooms.
8. Provide front adhesive label for individual patch panel positions. Label patch panels consecutively from bottom to top. Label shall be typed with minimum font size of 8 point.
9. Label shall be attached to fiber cable at each end and to each individual fiber at each end prior to termination.
10. Cable labels shall be placed in the following locations: on jack face plates, on cable inside back boxes, junction boxes, access points, and manholes/handholds, on cable above the terminations in the IDF and MDF, on patch panels, and every 50 feet when not in conduit. Conduits shall be labeled “communications” every 50 feet and at the origination and destination.

B. Nameplates

1. Nameplates: Provide engraved three-layer laminated plastic nameplates with white letters on a black background.
2. Provide nameplates for the following:
   a) Equipment Racks and cabinets.
   b) Telephone Backboards.
   c) Telecommunication Grounding Busbars.

C. Labeling Schema

1. Submit labeling plan for approval prior to installation.
2. Reference “T” Series drawings for labeling schema example.

D. Color Codes

1. Voice Outlets: Color shall match cover plate color.
2. Data Outlets: Provide red for Cat 5E, provide green jack for CAT 6.
3. Blanks: Color shall match cover plate color.

E. Cable Jacket Colors

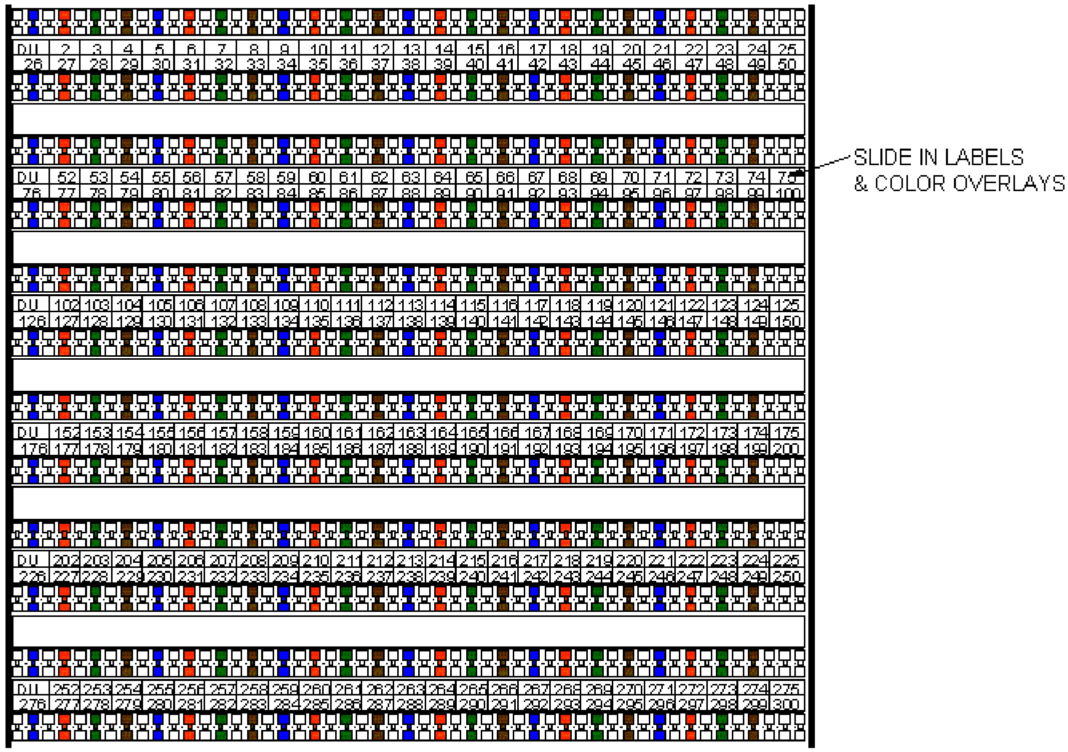
1. Voice cables: Provide white jacket.
2. Data cables: Provide blue jacket.
3. Singlemode fiber optic cable: Provide yellow jacket.
4. Multimode fiber optic cable: Provide orange jacket.

F. Copper Cable 110 Wiring Blocks: Floor-standing frames and wall or cabinet-mounted 110 wiring blocks, 100- or 300- pair.

1. Wire punched down on 110 wiring block shall be labeled on 110 wiring blocks as individual pairs.
2. Label 110 wiring block pair count using Excel spreadsheet template, along with color transparent plastic strip (EFM) for color-coding.
3. Voice and data 110 wiring block labels will be distinguished by the following acronyms:

Data Frame Example:	Voice Frame Example:
DT = Data Campus Cable	VT = Voice Campus Cable
DM = Data Backbone Cable	VM = Voice Backbone Cable
DL= Data Network Cable	VP = Voice ISDN Power Cable
DU = Data Horizontal Cable	VU = Voice Horizontal Cable

4. Skip 25th position on each strip of 110 wiring block when wiring 4-pair cable.
5. Provide floor-standing frame labels assuming twelve 300-pair 110 wiring blocks. Group of blocks are to be designated as backbone cables, power cables, network cables, and horizontal voice or data cables.
6. Install nameplate on each floor-standing frame.
7. Label network equipment 110 wiring blocks with equipment number, slot, and port number.
8. Insert EFM color-coded plastic slides over 110 block labels.



G. Lightguide Interconnection Unit (LIU)

1. Attach engraved label to door of LIU. LIU label shall have building number, IDF number, and numeric sequence.
2. List cable(s) and room number on LIU along with LIU name.
3. Provide continuous numbering sequence for individual fibers. Number individual fiber strands in LIU from 1 through 24, for cables with 24 fiber strands or less.
4. Use multiple LIUs for cables with greater than 24 fiber strands, and label sequentially according to number of fiber strands.

H. Telecommunication Cabinet: Floor-standing cabinet and wall-mounted cabinet.

1. Floor-standing cabinet label shall have building number, color designation for classification of network, IDF number, and sequential character.
2. Center label at top of front door of cabinet.

I. Lightguide Termination Shelf

1. Label cable designation(s) on outside door of termination shelf.

2. Single shelf may hold more than one campus, backbone or horizontal cable. Do not split a single cable between shelves. Start numbering sequence from 1 within the shelf, and continue to last fiber strand within that cable, for cable larger than 4 fibers.
3. Label each individual coupler on coupler plate with appropriate sequential number for terminating shelves.
4. Each shelf shall contain either single-mode or multi-mode, not both.
5. Install multiple shelves for cables greater than 72 optical fibers. Label sequentially according to number of optical fibers.
6. Label 4-fiber user cables according to number of couplers in the shelf.

J. Optical Data Telecommunication Outlet:

1. Follow Section 3.3D for labeling scheme.
2. Attach label to outlet cover for appropriate outlet.

K. Telecommunication Outlet: Voice/Data

1. Follow Section 3.3D for labeling scheme.
2. Attach label with preassigned numeric value to outlet cover for appropriate outlet.

L. Backbone Conduit Pullbox: Install engraved plastic label to cover of pullbox.

M. Conduit: Label conduits with appropriate color-coded tape.

1. Install tie wrap label tag on each conduit end point that terminates in IDF, MDF, or stubbed through floor, ceiling or wall without pullbox.
2. Hand-letter with permanent black ink, in block type letters with clear, legible letters.
3. Match label information to information in nearest J-Box label that conduit leads to.

3.4 ADMINISTRATION

A. Upon completion of the installation, Contractor will prepare as built documentation of the entire SCS. This documentation should include:

1. Drawings

a) All drawings shall be provided on disk in a form compatible with AutoCAD 2010. A complete set of project plans will be provided to the Contractor on disk. The Contractor will modify the drawings by placing the cable information on a separate layer. All of the requested drawings will be placed on these plans so that all cable routes are to scale and provide accurate information for use in the future when changes are made and the exact location of cables are required to avoid service interruptions.

b) A complete diagram of all terminations in the Telecommunication Rooms and Closets

c) A complete diagram of all copper, fiber, and coax riser cable.

d) A complete diagram of all copper, fiber, and coax inter-building cable.

e) Floor plans showing exact cable routings with each outlet clearly marked with cable number.

f) A complete diagram of all cable tray, conduits and conduit sleeves.

2. Documentation

a) All cable inventory data documentation will be submitted in designated Microsoft Excel 2010format.

b) Documentation on horizontal cable will include cable number and length of cable.

c) Documentation on riser cable and interbuilding cable will include cable number, source and destination, type of cable, length of cable and number of pairs or fibers.

d) Complete cross connect documentation is required. This information will include detailed documentation of all four pairs of each horizontal cable and every pair of all copper riser and inter-building cable and every fiber of fiber optic cable.

3. Final Reports - Category 6 UTP Cables and Optical Fiber: Final reports which confirm that cabling has been tested per shall be delivered within two weeks after completion of installation.

a) Submit one hard copy and one diskette copy of final reports to A/E and provide one hard copy of cabling charts only in each IDF/MDF.

b) Each report shall include the following:

c) Completed outlet test forms bound in 3-ring notebook by order of room number for each IDF divided by Tenant.

d) Copies of UTP and optical test equipment calibration/certification certificates.

e) Copies of training certificates for test personnel.

f) Written statement ensuring UTP and optical fiber performance of the entire installation for minimum period of 20 years from the day of acceptance.

END OF SECTION 270553

SECTION 271100
COMMUNICATIONS CABINETS AND EQUIPMENT ROOMS

PART 1 - GENERAL

1.1 PROJECT SCOPE SUMMARY

A. Subject to the General and Special Conditions, this section shall specify Communications Cabinets and Equipment Rooms

B. Section Includes:

1. Requirements for new Communication Equipment Rooms and IDF Enclosures
2. Materials and installation of telecommunications equipment in Intermediate Distribution Rooms (IDF's).
3. Install equipment as described in Statement of Work in its entirety.
4. Drawings shall delineate locations and types of equipment in IDF's including rack frame and cabinet locations.
5. Raceway and cabling routing shown on Drawings are not intended to show all support or mounting hardware, or raceway bends, kicks, offsets, and couplings.

1.2 DESCRIPTION

A. This Section specifies the requirements for the Communications Equipment Room Fittings for FBC.

1. The new communications service entrance facility will be located in the first floor MDFs in the buildings. IDFs will be located on the first floor, ground floors of each building. Refer to the Telecom riser diagram for details. The minimum number of 4-inch sleeves that must be used is based on the total feet that the sleeves support.
   a) Up to 25,000 square feet = two 4-inch sleeves
   b) 25,000 square feet to 50,000 square feet = three 4-inch sleeves
   c) 50,000 to 100,000 square feet = four 4-inch sleeves
   d) 100,000 to 300,000 square feet = five to eight 4-inch sleeves

2. Space for new outside plant copper and fiber cable and terminating hardware will be provided in the MDF. The new MDF and IDFs will be located on each floor in the three new buildings as indicated on the T drawings.

3. Minimum size MDF based on the size of the area it's serving.
   a) Minimum = 16'x 10'
   b) Reference drawings for dimensions.

4. Minimum size IDF based on the size of the area it's serving.
   a) 5000 square feet or less = 10'x 8'
   b) 5000-8000 square feet = 10'x 10'

c) 8000-10000 square feet = 10'x 12'
d) Reference drawings for dimensions.

5. Environmental
a) 24/7 environmental controls - 18 °C to 24 °C (64 °F to 75 °F). The humidity range shall be 30% to 55% relative humidity.
b) Ceiling height a minimum of 9 ft. above finished floor (AFF).
c) No false ceilings.
d) Lighting in MDF / IDF, must have a uniform intensity of 70 Foot Candles when measured 30 inches from the finished floor on all sides of equipment racks
e) All light fixtures must be mounted a minimum of 8 feet, 6 inches above the finished floor.
f) Dedicated Telecom Room power panels fed from UPS distribution, if available.
g) Minimum electrical in IDF:
1) A minimum of two dedicated 120Vor 208V AC electrical outlets on separate 20 or 30-ampere rated branch circuits per rack installed.
2) Each circuit should have appropriate twist lock receptable (L5-20, L5-30, L6-20, L6-30)
3) Separate duplex 120V AC convenience outlets with NEMA 5-20R (for tools, test sets, vacuums, etc.) installed at least 18 inches above the finished floor at 6-foot intervals around perimeter walls.
4)
h) ¾ "void-free" exterior grade AC plywood on each wall, 8 ft high, painted on all sides with at least two coats of light gray fire-retardant paint.
i) Fire suppression systems.
j) A floor rating greater than 4.8 kPa (100 lbf/ft2) distributed loading.
k) A floor rating greater than 8.8 kilonewton (kN) (2000 lbf) concentrated loading.
l) Fully-opening, secured, lockable doors that are at least 4 ft wide and 6.7 ft [80 in]) tall.
m) A Telecommunications Main Grounding Bus Bar (TMGB) in the MDF and Telecommunications Grounding Bus Bar (TGB) in the IDF and a Bonding Conductor for Telecommunications (BCT) that bonds the TMGB to the electrical power ground compliant with ANSI J STD-607 A Standards.
n) Equipment racks and overhead basket tray system as indicated on the T Drawings.

1.3 REFERENCES

Section 270000 in its entirety shall be included as part of this specification.

A. Related Sections:
1. Section 01
2. Section 270000: Communications
3. Section 270526: Telecommunication Grounding and Bonding
4. Section 270528: Interior Communications Pathways
5. Section 270543: Exterior Communication Pathways

6. Section 270553: Testing Administration Identification
7. Section 271100: Communication Room Fittings
8. Section 271300: Backbone and Riser Media Infrastructure
9. Section 271500: Horizontal Media Infrastructure
10. Section 272100: Data Communication Network Equipment
11. Section 274100: Audio Video System
12. Section 280500: Electronic Safety and Security
13. Section 281300: Access Control System (ACS)
14. Section 282300: Digital Video Surveillance System (DVSS)

1.4 COORDINATION

A. Refer to General or Special Conditions.

B. Refer to Division 26, Electrical Work

1.5 QUALITY ASSURANCE

A. Assure that the "as installed" system is correct and complete per construction documents: including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.

B. Owner/Architect/Engineer retains the right to access and inspect all work during the entire duration of the project and any items that do not adhere to the standards, reference, contract, bid, or project documents will be corrected immediately at the expense of the contractor.

C. UL Compliance: Provide products that are UL-classified and labeled.

D. Follow Section 17080 and the following:

E. Material and installation shall meet requirements of NFPA 70.

F. Material, when applicable, shall be approved by a Nationally Recognized Testing Laboratory (NRTL).

G. Monitor and maintain quality control over manufacturers, suppliers, subcontractors, work force, site conditions, products, and services to ensure Work is of specified quality.

H. Workmanship: Install material and equipment in neat and workmanlike manner, in accordance with NEC Section 800-6. Specified requirements represent minimum acceptable quality for Work. Comply with industry standards except when more stringent requirements are specified herein, and tolerances indicate higher standards or more precise workmanship.

I. All communications work shall be performed under the direct on-site supervision of a Building Industry Consulting Service International, Inc. (BICSI) Certified Registered Communications Distribution Designer (RCDD). Submit resumes and RCDD registration to the Architect as proof. Paperwork must be approved by the Architect in writing prior to construction. The RCDD must be at the job site during construction. The RCDD shall be present during all cable testing, pulling and termination procedures.

J. Provide all materials, equipment, and installation in compliance with the latest applicable standards from ANSI, FCC, ASTM, EIA/TIA, IEEE, NEC, NFPA, NEMA, REA, and UL.

K. Installer Qualifications:

1. Knowledge of BICSI installation standards.
2. Knowledge of NEC standards.
3. Knowledge of EIA/TIA standards.
4. Five (5) years experience in the installation of fiber optic cables, including splicing, terminating and testing. Testing on fiber optic cable shall include single and multimode.
5. Three (3) years experience in the installation of Category 3 and Category 5 Unshielded Twisted Pair copper cables for voice and data distribution systems, including splicing, terminating and testing. Testing on Category 3 and Category 5 copper cable shall include complete verification with EIA/TIA cable standards.
6. Ten (10) references for project of equivalent scope, type and complexity of work completed within the last five (5) years. The Contractor shall submit as proof, supporting documents and the names, addresses and telephone numbers of the operating personnel who can be contacted regarding the installation system.
7. Must be a certified installer of the termination equipment manufacturer.

L. Install products only by qualified technicians certified by manufacturers.

M. Provide all electronic equipment with the UL label when applicable.

N. Comply in every way with the requirements of local laws and ordinances, the National Board of Fire Underwriters, and the National Electrical Code. Anything in the plans or specifications that does not strictly comply with the above laws, ordinances, and rules must be referred to the attention of the Engineer for a decision before proceeding. No change in the plans or specifications shall be made without full consent in writing of the Engineer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Provide equipment necessary to handle, transport, and deliver materials, including EFM, from storage site to work area.

B. Store components in original wrappings, and protect from dirt, weather and construction work traffic.

C. Thoroughly inspect materials for damage before taking custody.

1.7 WARRANTY

A. If items supplied as part of Project have warranties longer than one year from date of final acceptance, Contractor shall supply longer warranty.

PART 2 - PRODUCTS

2.1 RELAY RACKS

A. Approved Manufacturers:

1. Chatsworth

B. Performance:

1. Constructed of painted aluminum
2. 84" in height
3. Black finish
4. Supplied with #6 AWG ground lug kit
5. Supplied with spare screws (minimum 50)
6. Mounting holes shall be drilled and tapped each side at 5/8"-5/8"-1/2" patterns compatible with EIA 1-1/4"-5/8" alternating patterns.
7. Include base flanges with mounting holes securing the rack to the floor. Each mounting hole must be at least 5/8" in diameter.

C. Where the rack is to be mounted to VCT flooring or bare concrete, an insulating pad must be used, and care must be taken that anchors, used to secure the rack to the floor, do not come in contact with any reinforcing steel embedded in the concrete slab.

D. Requirements

1. For 2 post racks – a minimum of 6-inch wide vertical wire management will be used.
2. For 4 post racks – a minimum of 8-inch wide vertical wire management will be used.
3. For 2 and 4 post racks, 4U horizontal wire management will be used unless otherwise specified.
4. For wall mount racks – 2U horizontal wire management will be used unless otherwise specified.

E. PDU Power Strips:

1. Include with each Relay Rack
   a) Horizontal PDU: QTY (2) CPI EA-6275-CE, basic PDU, Nema L5-30P input, (12) Nema 5-20R outlets.
      1) Include Redundancy Pack which includes 2 PDUs in Black and Glacier White for easy identification of the primary and secondary unit.

2.2 CABLE MANAGEMENT

A. Approved Manufacturers:

1. Chatsworth CPI
2. Panduit

B. Vertical Cable Management:

1. Double-sided cable routing
2. 6" or wider depending upon application requirements
3. Lockable latching sections with protective edge guards

4. Space slots at 1 RU intervals
5. Black finish
6. Horizontal management shall be 2X number of 48 port Cat6 flat patch panels 568B
7. All UTP data cables must be terminated on 24 or 48 fixed-port high-density Cat 5e patch panels (no 96 port) which are to mount on wall racks, in a free-standing equipment rack, or an enclosed data cabinet.

C. Horizontal Cable Management:

1. Capable of attachment to a 19" rack
2. 2 U, maximum 4" deep
3. Heavy-duty aluminum rings with rounded edges
4. Incorporate cable routing guides and supports on rear panel
5. Black finish

2.3 CABLE TRAY

1. Use in Data Center, MDF and IDF
2. Specifications
   a) UL Classified for suitability (as an equipment grounding conductor only)
   b) Minimum 16" wide; 4" height
   c) Support at 5' intervals
   d) Install at 8' AFF
   e) Secure to equipment racks and ceiling with approved hardware
   f) 10-foot sections
   g) Include all accessories for transitions and cable dropouts for every cabinet and rack, 2 per cabinet/rack.
   h) Painted black powder coat
   i) Bond to TMGB/TGB as required with a #6 AWG bonding conductor
3. Products
   a) Globaltrac Wire Mesh Cable Tray
   b) Chatworth 84821-716 or approved equal
   c) Include required accessories for a complete cable runway inside Datacenter, MDF and IDF

2.4 FIBER RUNNER

A. Specifications:

1. The 4x4 routing system shall be a system of channel, fittings, and brackets designed to segregate, route, and protect fiber optic and high performance copper cabling.
2. Channel and fittings shall be assembled using pre-assembled couplers.
3. A selection of spillout options shall be available that easily attach using the vertical tee.
4. Fittings maintain a minimum 2" bend radius to protect against signal loss due to excessive cable bends.

5. Available system colors shall be yellow and black. A full complement of brackets shall be available for attaching system components to ladder rack, threaded rod, auxiliary framing, strut, equipment racks, cabinets, and raised floor pedestals.

B. Approved Manufacturers:

1. Panduit Fiber Runner 4x4 Routing System
2. Comscope FiberGuide

2.5 TELEPHONE BACKBOARDS

A. All telephone backboards shall be minimum 8’ x 4’ x ¾” fire treated plywood unless noted otherwise.

B. Paint all backboards with a minimum of 2 coats of fire-retardant paint on all sides and edges.

C. For all new IDF or MDF Rooms, provide all walls with 8’ high x ¾” plywood backboard covering full length or as noted on the contract documents.

D. Paint plywood backboard white.

2.6 FREESTANDING VERTICAL EQUIPMENT CABINETS

A. Manufacturer: Chatsworth ZetaFrame cabinets or submitted and owner-approved equivalent.

B. General

1. The work covered here consists of the furnishing of all necessary labor, supervision, materials, accessories, parts, equipment, and services to provide and install a complete freestanding equipment cabinet.
2. The standard freestanding equipment cabinets are defined to include, but not limited to, cabinet frames, cabinet front and rear doors, top and side panels.
3. All internal cabinetry hardware shall be 19-inch rack mountable.
4. Provide and install freestanding vertical cabinets, with hinge placement as indicated in the Drawings.
5. Provide vertical and horizontal wire management for all cabinets

C. PDU Power Strips:

1. Include with each Data Center Server Cabinets
   a) Vertical PDU: QTY (2) CPI EA-6026-CE, switched pro eConnect vertical PDU, L21-30P input, (18) C13 + (6) C19 + (3) 5-20 outlets, 8.6KW.
      1) Include Redundancy Pack includes which 2 PDUs in Black and Glacier White for easy identification of the primary and secondary unit.
   b) Horizontal PDU: QTY (2) CPI 12816-706, basic PDU, Nema 5-20P input, (8) Nema 5-20R outlets.

D. Data Center Server Cabinet:

1. Cabinets shall be fully assembled by the manufacturer with the components listed below.
    a) Chatsworth 45RU; 800mm W; 1200mm D; Zetaframe
        1) Doors: single perforated front/double perforated rear
        2) Top Panel: brush sealed
        3) Side Panel: (2) 2-piece side panels
        4) Bottom Panel: solid
        5) Thermal Management:
            a) air dam kit
            b) cabinet to floor seals kit
        6) Color: black
        7) Shipping: standard pallet, fully assembled at factory
        8) Snap-In Filler Pannels: include fully populated with cabinet
        9) Cable Management:
            a) (4) Short finger vertical cable manager with hinged cover
            b) (2) 4.5" wide cable lashing panel
        10) Power Management: (2) full height PDU brackets
        11) Installation products:
            a) leveling feet adjustment tool
            b) click-nut hardware kit, cage nuts, M6 screws, 25 pack, zinc.
        12) Air Detector Installed
    b) RFID Electronic Lock Kit:
        1) Factory installed on front door of each cabinet.
        2) Integration with existing access control system to use same access cards.
        3) 3 door sensors, 2 wiring harnesses, 2 mechanical override keys
        4) CPI 14668-001
    c) PDU Power Strips:
    d) Vertical PDU: QTY (2) CPI EA-6026-CE, switched pro eConnect vertical PDU, L21-30P input, (18) C13 + (6) C19 + (3) 5-20 outlets, 8.6KW.
        1) Include Redundancy Pack includes which 2 PDUs in Black and Glacier White for easy identification of the primary and secondary unit.
    e) Horizontal PDU: QTY (2) CPI EA-6275-CE, basic PDU, Nema L5-30P input, (12) Nema 5-20R outlets.
        1) Include Redundancy Pack which includes 2 PDUs in Black and Glacier White for easy identification of the primary and secondary unit.
2. Copper Patch Panels: All Server cabinets to have (2) 24 patch panels installed. See Specification 271500
3. Grounding Bus Bar:
    a) Provide Rack-Mounted Ground Bar. See Specification 270526

E. Grounding

1. Provide grounding in accordance with the TIA/EIA-607 guidelines.
2. Provide a grounding busbar at each MDF and IDF Room. The busbar shall be a minimum 4"w x 24"L (MDF), 4"w x 12"L (IDF) x ¼" thick copper with stand-off insulators.

3. A telecommunications backbone bonding conductor (TBB) shall be routed from the Telephone main grounding busbar (TMGB) to the farthest IDF Room telecommunications grounding busbar (TGB). The bonding conductor shall be a minimum 2/0 AWG solid copper insulated conductor. The TBB shall be bonded at each end.
4. Each IDF Room TGB shall be bonded to the building steel or building ground with a #6 AWG conductor (larger conductor is over fifty feet).
5. All backbone cabling with metallic sheath shall be bonded at each sheath opening.
6. Grounding and bonding conductors shall be #6 AWG. They shall be routed with a minimum number of bends. The bends shall be sweeping.
7. Make all bonding connection with listed bolts, crimp jumper pressure connector, clamps, or lugs with a similar metal to prevent oxidation. Dissimilar metals may be used with matching gel. Exothermic welding may be used.
8. Ground and bond all equipment racks.
9. Ground cable tray with bonded jumper on both ends. Cable tray sections shall be bonded in accordance with manufacture's guidelines. Keep bonding jumper on one side of the tray throughout.

PART 3 - EXECUTION

3.1 GENERAL

A. Telecommunications rooms are generally considered a zone serving facility. These rooms may be equipped with fiber and copper cables, wall mounted termination blocks/patch panels, rack mounted copper and fiber patch panel terminations, vertical and horizontal cable management systems and equipment racks. Cable Contractor shall provide proper identifications/labeling scheme for all structured cabling components installed in these rooms.

B. Follow manufacturer's recommended installation and termination practices.

C. Cabling within racks and enclosures: provide adequate length of cabling. Train conductors to termination terminal points that follow manufacturer's installation procedures for maintaining cable performance specifications. Provide lacing/mounting bars to restrain cables, to prevent straining connections, and to stop bending cables to smaller radii than minimums recommended by manufacturer.

D. Equipment Racks: Provide 19" wide x 7'-0" tall racks with number of vertical rack sections as required to allow space for termination of all fiber and data/voice cabling plus mounting space for multi-port concentrators (Hub/Switches) required to cross-connect all data jacks.

E. Locate/space racks and enclosures (cabinet) according to EIA/TIA guidelines for front and around access.

F. Vertical wire management: double-sided vertical rack cabling sections shall be a minimum width of 6 inches or wider. Reference T. Drawings

G. Entrance: Arrange and coordinate locations of distribution frames, patch panels, cross-connections (furnished by others) in communication rooms and racks to optimize space requirements of any service provider requirements, telephone system and LAN equipment.

H. Provide cable runway in equipment room above all racks and up to cross-connects/runway/conduits/sleeve's entering room from corridors. Form a complete runway system by ringing the room and connecting all hardware installations. Route the cables within the room by taking the longest available path through the perimeter cable tray. Attach grounding lugs to each rack/cable raceway, conduit, etc. Refer to 'T' drawings for details.

I. The MDF contains cross-connect facilities for terminating cables and for connecting the horizontal and riser segments and telecommunications equipment. The MDF may also support other building information systems such as CATV, alarms, security, audio, and other telecommunications systems.

J. Coordinate runway locations with lighting, air-handling systems, and fire extinguishing systems so that fully loaded trays will not obstruct or impede their operation. In the United States, NEC Article 392 provides requirements for cable trays.

K. Provide horizontal cable runways. Equip each 19” rack with overhead ladder style cable runway installed between the wall and horizontal/equipment racks. Refer to COMMUNICATIONS “T” drawings for proposed locations and sizing of each runway.

L. Securely attach to wall studs with support brackets (and racks if applicable), in accordance with manufacturers written instructions.

M. Provide ground lug for each 19” rack. Racks shall be grounded to wall mounted ground bus bar using #6 AWG stranded, green jacketed, insulated copper conductor. Furnish all required bonding material and hardware, and bond to building grounding electrode subsystem TMGB in MDF. If crimp connectors are used to bond the #6 AWG wire, follow NEC bonding procedures/specifications.

N. An inert dielectric material shall separate dissimilar metals apt to corrode through electrolysis under the environmental operating conditions specified.

3.2 EXAMINATION

A. Verify conduit, raceways, boxes, fittings and bodies are properly installed as specified in Division 16.

B. Verify grounding and bonding following Section 270526 and this section.

C. Verify supporting devices are properly installed following Section 270526.

D. Verify conduit has a minimum 1-inch diameter for Category 6 home runs.

E. Verify 4 inch or 6 inch conduits are used for building entrance cables or cables going between closets or buildings.

F. Verify liquid-carrying pipes are not installed in or above voice and data system equipment rooms.

G. All electrical circuits used for the connection of technology equipment should be dedicated single fused 208/120 volt 20 or 30 amp circuit. These outlets should be served from dedicated panels within the nearest electrical room. All of these outlets should be on an emergency backup power system to provide continuous uninterrupted power to the equipment.

H. All 120-volt circuits should be clearly marked and dedicated for technology.

I. All telecommunications rooms, MDF's and IDF's should not be located adjacent to any space that contains sources of Electromagnetic Interference (EMI). Transformers shall not be placed in any telecommunications closet and should be located at least 4 feet away from any communication cable or termination equipment.

J. All protected telecommunication terminations require bonding, grounding and a Busbar.

K. Flooring in Telecommunication Rooms shall be anti-static vinyl tile with vinyl baseboard as specified in Division 09.

L. Telecommunication rooms will have open ceilings at a minimum height of 9' with all exposed concrete sealed to prevent dust.

3.3 PREPARATION

A. Heating, ventilation, and air conditioning sensors and control equipment must maintain the room temperature between 64° F and 75° F. Humidity must be 30% to 55%.

3.4 INSTALLATION

A. General

1. Install work following drawings, manufacturer's instructions and approved submittal data. The number of cables per run, outlet configuration and other pertinent data will be included on the drawings.
2. All installation shall be done in conformance with TIA/EIA 568B and BICSI standards. The Contractor shall ensure that the maximum pulling tensions of the specified distribution cables are not exceeded and cable bends maintain the proper radius during the placement of the facilities. Failure to follow the appropriate guidelines will require the Contractor to provide in a timely fashion the additional material and labor necessary to properly rectify the situation. This shall also apply to any and all damages sustained to the cables by the Contractor during the implementation.
3. The Structured Cabling System (SCS) installation should meet all applicable national and local codes pertaining to low voltage cable system installations.
4. The contractor will adhere to the installation schedule of the general contractor and should attend all construction meetings scheduled by the general contractor.
5. The contractor will be responsible for the cross connection of the horizontal cable runs to the backbone cable system. The connection to voice and data systems will be performed by the vendors installing and/or maintaining those systems.
6. All components of the cabling system shall be installed in a neat, workmanlike manner. Wiring color codes will be strictly observed and terminations shall be uniform throughout the installation. All cables shall be neatly dressed at the termination points. Final installation shall be subject to the Engineer's approval.

7. Any cable placed in space used as an air return or in any way connected with air-handling plenums or building ventilation shall be low-smoke, fire retarding cable, and must comply with the NEC 725, 760, and 800. No cabling shall be placed in plenums without written approval from the City Engineer.
8. All vertical cables shall be affixed to a permanent structure at each floor in accordance with industry standards to avoid cable pull back.
9. All conduit and cabinet entrances shall be sealed with an approved, re-enterable sealant material to prevent ingress of water, dust, or other foreign materials.
10. The Contractor shall conceal all horizontal distribution wiring within conduit provided in the walls. If it becomes necessary to use an alternative method, the Contractor shall obtain approval from the Owner prior to the use of the alternate method.
11. Install work following drawings, manufacturer's instructions, and approved submittal data.
12. The installation shall meet all applicable national and local codes pertaining to low voltage cable system installations.
13. The contractor will provide service loops (slack) for cables terminating in the main equipment room or the telecommunications closets. A 6- foot service loop will be provided above the access ceiling or cable trays unless specified otherwise. This will allow for future changes or expansion with having to install new cables.
14. The installation will include coordination, testing and problem resolution with the system vendors.
15. Provide any necessary screws, anchors, clamps, tie wraps, distribution rings, miscellaneous grounding and support hardware, etc., necessary to facilitate the installation of the cable plant system.
16. Furnish any special installation equipment or tools necessary to properly complete the installation.
17. Failure to follow the appropriate guidelines may require the installer to provide additional material and labor necessary to properly rectify the situation. This shall also apply to any and all damages sustained to the cables by the installer during the implementation.
18. Plug conduits where cabling has been installed in the main equipment room, backbone and other cable entrance locations with re-enterable duct seal of flame retardant putty.
19. All wiring, materials, and equipment must be listed and labeled by a nationally recognized testing laboratory. Original Equipment Manufacturer (OEM) documentation must be provided to the Owner, which certifies performance characteristics which meet EIA/TIA 568 Standards.
20. All techniques and fixtures must result in ease of maintenance and ready access to all components for testing measurements. No self tapping screws shall be used. All parts shall be made of corrosion resistant material, such as plastic, anodized aluminum or brass.
21. All materials used in installation shall be resistant to fungus growth and moisture deterioration. Dissimilar metals apt to corrode through electrolysis under the environmental operating conditions specified shall be separated by an inert dielectric material.
22. Provide firestop at all fire rated penetrations.

23. Field coordinate exact feeder, tie and riser backbone cabling pathways with other trades prior to construction. All existing pathways shown are suggested routes for the contractor to use as a guideline. The contractor is required to coordinate the exact pathway. In any case where the communication pathway must be removed and re-routed due to conflicts with other trades which were not previously coordinated with all building trades, the contractor is responsible for all costs associated with the removal and relocation.
24. Provide reducer brackets in all 23" cabinets and/or racks full length of rack for installation of 19" equipment.
25. Provide bushings on all conduit ends.

B. DATA RACK RELAY

1. Bolt rack to floor.
2. Mount racks end to end in single continuous row with vertical wire managers located full length of rack between each end and on each row end.
3. Provide horizontal wire managers as follows:
   a) Front/Rear: Between each 24 port copper patch panel.
   b) Front: Between each 24 port network switch.
   c) Locate plug strips in racks with electronics.

C. Horizontal Cable Routing and Support

1. The cable shall be routed un-exposed above the ceiling with 12" of clear space above route whenever possible.
2. Conduit runs shall not exceed two 90-degree bends or 100 feet without a pull box.
3. All conduit located in the ceiling shall protrude 2 inches into the closet. Provide bushing on conduit end. Label all conduit ends and cables inside or passing through MDF and IDF Rooms.

D. Grounding Voice and Data Systems

1. Provide an approved ground at all newly installed distribution frames and protector locations using proper bonding to any existing facility. Ensure ground continuity by properly bonding all appropriate cabling, closures, cabinets, service boxes, and framework. All grounds shall consist of minimum #6 AWG copper wire and shall be supplied from the Telecommunications Main Grounding Busbar or a Telecommunications Grounding Busbar.
2. Bond metallic conduits at one end to proper ground.
3. Provide maximum 1ohm resistance at 0.05 volts at each ground bar.
4. Ground electronic components, equipment cabinets and racks, cable racks and cable trays.
5. Provide ground lead for copper cable in multiples of 25 or more.
6. For overall-shielded cable, bond shield to proper grounding sources at one end. Do not loop ground leads or share with conduit ground leads.

3.5 CLEANING

A. Clean rooms after each installation phase of the Project so that construction debris or installation debris are removed continuously as the Project progresses and new equipment being installed is not contaminated from existing construction dust or debris.

B. Provide final cleaning of room, cabinets, and equipment prior to inspection by Engineer.

END OF SECTION 271100

SECTION 271300
BACKBONE AND RISER MEDIA INFRASTRUCTURE

PART 1 - GENERAL

1.1 SUMMARY

A. Subject to the General and Special Conditions, this section shall specify.

B. Section Includes:

1. This Section includes all the backbone cable specifications for the installation of a Structured Cabling System (SCS) for the purpose of supporting voice and data communications.

C. Some items in this specification may not be required. Determine type and quantity from drawings.

D. The contractor shall install 24 strand single-mode fiber from the MDF to each IDF refer to the Telecom Drawings for details. The contractor shall install 25 pair category 3 copper riser from the MDF to each IDF. All backbone cables interconnecting separate buildings shall utilize fiber optic cable of type single mode Fiber (SMF), OS2 type. HITS may approve multimode (MMF) OM3 type fiber optic cable between buildings on a case-by-case basis. Fiber optic backbone cables should consist of a minimum of 12 strands per span or the number of required strands plus 50%, whichever is greater.

E. Work covered by this Section shall consist of furnishing labor, equipment, supplies, materials, and testing, unless otherwise specified, in performing the following operations recognized as necessary for the installation, termination, and labeling of copper backbone infrastructure as described on the Drawings and/or required by these Specifications.

F. Approved cable manufacturers are Corning Cable and Comscope for Backbone and Riser cable.

G. There shall be no proprietary connectivity parts, each cable manufacturer shall use connectivity parts associated with their respective “partners”. All connectivity be in a nonproprietary “keystone” style footprint. Jacket color shall be black for copper backbone, and blue for copper horizontal cable. Single mode fiber shall be yellow and multimode 50 micron shall be aqua.

14. Section 282300: Digital Video Surveillance System (DVSS)

1.3 SUBMITTALS

A. Follow Section 013300 – Submittal Procedures, Section 270500 - Common Work Results for Communications, and the following:

B. Copper Cable and Patch Cords - Submit data on cable including:
1. Manufacturers name.
2. Manufacturers model and part numbers.
3. Cable numbers.
4. Cable specifications including quantity of pairs, material, insulation, performance, attenuation, NEXT, diameter, conductor size, jacket, weight and color.
5. Provide length for patch cords.
6. Provide connector type for patch cords.

C. Fiber Cable and Patch Cords - Submit data on cable including:
1. Manufacturers name.
2. Manufacturers model and part numbers.
3. Cable numbers.
4. Cable specifications including quantity of fibers, material, insulation, jacket, wavelength, attenuation, diameter, bend radius, core, cladding, coating, buffering, weight and color.
5. Provide length for patch cords.
6. Provide connector type for patch cords.

D. Devices - Submit data on fiber connectors,
1. Manufacturers name.
2. Manufacturers model and part numbers.
3. Drawing of each device.

E. Connecting Hardware - Submit data on fiber patch panels and copper termination panels.

1. Manufacturers name.
2. Manufacturers model and part numbers.
3. Equipment specifications including quantity of ports, material, dimensions, mounting, terminating devices and color.

F. Splicing and Terminations - Submit data including:

1. Splicing and terminating tools, materials and method.

1.4 COORDINATION

A. Refer to General or Special Conditions.

B. Refer to Division 26, Electrical Work

1.5 QUALITY ASSURANCE

A. All data contractor installation personnel must be BICSI Certified Installer Level I or higher. The onsite supervisor of the data contractor must be a BICSI Certified Technician. The data contractor must have on staff a BICSI Certified RCDD. All certifications must be current. Proof of certification must be presented at the pre-installation meeting.

B. Assure that the "as installed" system is correct and complete per construction documents: including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.

C. Owner/Architect/Engineer retains the right to access and inspect all work during the entire duration of the project and any items that do not adhere to the standards, reference, contract, bid, or project documents will be corrected immediately at the expense of the contractor.

D. UL Compliance: Provide products that are UL-classified and labeled.

E. Verification: The Owner will maintain inspection personnel on the job site. It is incumbent upon the Contractor to verify that the installation and material used has been inspected before it is enclosed within building features, or otherwise hidden from view. The

Contractor shall bear costs associated with uncovering or exposing installations or features that have not been inspected.

F. Equipment Qualifications: The Contractor is to use equipment and rigs designed for pulling, placement and termination of multipair copper cable; including reel trucks, mechanical mules, sheaves, shoes, anchors etc., and equipment for drilling masonry, installing anchors, etc., to install support and cable management hardware.

G. Backbone Cable Testing

1. Complete end-to-end test results for all copper UTP and fiber optic lines installed is required.
2. All fiber optic cable must be visually inspected and optically tested on the reel upon delivery to the installation site. Using an Optical Time Domain Reflectometer (OTDR), an access jumper with like fiber, a pigtail, and a mechanical splice, all fibers shall be tested for continuity and attenuation. Testing for continuity and attenuation on the reel must confirm factory specifications to ensure that the fiber optic cable was not damaged during shipment. The test results must match the results of the factory-attached tag on the reel, or the fiber shall not be used. Reel data sheet must be provided showing test results.
3. End to end (bi-directional) test measurements shall be provided for singlemode and multimode fibers (2 wavelengths per test is required). Test results must be submitted for review as part of the installation inspection requirements. Test results shall be in paper form and electronic form and must contain the names and signatures of the technicians performing the tests.
4. Testing shall be performed on 100% of the fibers in the completed end-to- end system. ANSI/TIA/EIA-568-A, Annex H, provides the technical criteria and formulae to be used in fiber optic testing. Note however, that all fiber must be tested, rated and guaranteed for Ethernet Giga speed 1000B-X performance. Additionally, all fiber optic cable links must pass all installation and performance tests both recommended and mandated by the cable manufacturer.
5. 100% of all pairs in backbone copper cables shall be tested for continuity and wire-map.

H. FORMAT

1. Test Results must be submitted in 2 formats. First, must be original file(s) downloaded from tester. Second, the file must be cohesively placed in Excel format with the following fields: ER/TR RM # / RM # of drop / Port # / all relevant test information in as many fields as necessary and delivered in electronic format.
2. Care with reference to above format criteria, should be taken when recording the information in the tester, proper consistency with port identification is required.
3. As Built drawings must be submitted with dwg file extensions.

I. DELIVERY, STORAGE, AND HANDLING

J. Provide equipment necessary to handle, transport, and deliver materials, including EFM, from storage site to work area.

K. Store components in original wrappings, and protect from dirt, weather and construction work traffic.

L. Thoroughly inspect materials for damage before taking custody.

1.6 WARRANTY

A. If items supplied as part of Project have warranties longer than one year from date of final acceptance, Contractor shall supply longer warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Copper Cable – Backbone:
1. Belden
2. General Cable
3. Berk-Tek
4. Commscope Systimax/Uniprise Solution
5. Mohawk/CDT

B. Fiber Cable:
1. Commscope Systimax/Uniprise Solution
2. Corning

C. Copper Connectors – UTP:
1. Belden
2. Commscope Systimax/Uniprise Solution
3. Leviton
4. Hubbell
5. Panduit

D. Fiber Connectors:
1. Commscope Systimax/Uniprise Solution
2. Corning

2.2 COPPER WIRE AND CABLES

A. 100 Ohm UTP Wire – General:

1. 24 AWG thermoplastic insulated solid conductors formed into individually twisted pairs and enclosed by a thermoplastic jacket.
2. Diameter: 0.048" maximum for insulated conductor; 0.25" maximum for 4pr UTP cable.
3. Breaking Strength: 90 lb minimum.
4. Bending Radius: Minimum 1" at -20C without jacket or insulation cracking.
5. DC Resistance: Maximum 9.38 ohms at 328 feet and 20 Celsius.
6. DC Resistance Unbalance: The resistance unbalance between the two conductors of any pair shall not exceed 5% when measured at a temperature of 20 Celsius.
7. Capacitance Unbalance: The capacitance unbalance to ground at 1 khz of any pair shall not exceed 330 pF per 328 feet at 20 degrees Celsius.
8. Propagation Delay: The propagation delay of any pair should not exceed 5.7 ns/m at 10 MHz.
9. Propogation Delay Skew shall not exceed 15ns/100m at 10 MHz.
10. Insulation: The copper cable insulation shall be comprised of fluorinated ethylene propylene (FEP).

B. Backbone 100 Ohm UTP - Backbone refers to cables greater than 4 pairs used in backbone distribution. The cable shall conform to the above 100 Ohm UTP Wire Standards and the following:
1. Color Code: Shall follow the industry standard color code composed of 10 distinctive colors to identify 25 pairs (refer to ANSI/ICEA S-80-576 for colors).
2. Core Assembly: When cable sizes larger than 25 pairs are required, the core shall be assembled in units of up to 25 pairs. Each unit shall be identified by a color coded binder. Binder color code integrity shall be maintained whenever cables are spliced.
3. Dielectric Strength: The insulation between each conductor and the core shield shall be capable of withstanding a minimum DC potential of 5KV for 3 seconds.
4. The interior cable shall be provided with a drain wire.
5. Performance: The cable shall meet cat 6 performance requirements for greater than 4 thru 50PR counts and shall meet Cat 3 standards for greater than 50PR counts.
6. Backbone Copper Cable (Interior)
   a. Core of solid copper conductors wrapped in one or more layers of dielectric material to ensure compliance with the dielectric strength requirements.
   b. Jacket: The core shall be enclosed by a uniform, continuous PVC jacket.

C. The multi-pair copper cables shall be in plenum form unless placed in conduit or specified otherwise.

D. The non-shielded, plenum cable shall be conformance tested per Section 270500 – Common Work Results for Communications. The cable shall be UL Listed for Fire Safety and ISO 9001Certified. The non-shielded cable shall be available in pair counts as noted on the contract drawings. If the approved manufacturer does not make the specified pair count, the contractor shall provide the next larger count size and associated additional termination hardware at no additional cost to the contract.

.

E. The non-shielded, nonplenum cable shall be conformance tested per Section 270500 – Common Work Results for Communications. The cable shall be UL� Listed for Fire Safety and ISO 9001 Certified. The non-shielded cable shall be available in pair counts as noted on the contract drawings. If the approved manufacturer does not make the specified pair count, the contractor shall provide the next larger count size and associated additional termination hardware at no additional cost to the contract.

F. Backbone Copper Cable (Exterior)
1. Core of plastic insulated solid copper conductors wrapped in one or more layers of dielectric material, a shield and a steel wrap.
2. Jacket: The core shall be enclosed by a PVC jacket.
3. The cable shall be rated for exterior underground duct and direct burial use. It shall be lightning and wildlife protected.

G. The copper cable shall meet or exceed the following electrical specifications listed below:
1. Maximum Attenuation (dB/100 m [328 ft.])

Frequency	Category 3	Category 6
1.00 MHz	2.6 dB	2.0 dB
4.00 MHz	5.6 dB	4.1 dB
10.00 MHz	9.7 dB	6.5 dB
16.00 MHz	13.1 dB	8.2 dB
20.00 MHz	-	9.3 dB
25.00 MHz	-	10.4 dB
31.25 MHz	-	11.7 dB
62.50 MHz	-	17.0 dB
100.00 MHz	-	22.0 dB

2. Pair-to-Pair NEXT (Worst Pair) dB/100 m [328 ft]

Frequency	Category 3	Category 6
1.0 MHz	39.1 dB	>60
4.0 MHz	32 dB	53.5 dB
10.0 MHz	26 dB	47.0 dB
16.0 MHz	23 dB	43.6 dB
20.0 MHz	-	42.0 dB
25.0 MHz	-	40.3 dB
31.25 MHz	-	38.7 dB
62.5 MHz	-	33.6 dB
100 MHz		30.1 dB

2.3 OPTICAL FIBER AND CABLES

A. Multimode Optical Fibers
1. Fibers must comply with TIA 492 specifications and IS 11801 Standards for OM4.
2. Multimode with a graded index profile capable of operation at 850 nm and 1310 nm.
3. Core: 50 ⍰ 3 micrometers.
4. Cladding: 125 ⍰ 2 micrometers.
5. Coating Diameter: 250 ⍰ 10 microns
6. Cladding non circularity: < 1.5%.
7. Core/Clad Concentricity Error: 1.5 microns
8. Coating/Clad Concentricity Error: 12 microns
9. The fiber shall be manufactured by the outside vapor deposition (OVD) process.
10. The fiber coating shall be mechanically strippable.
11. The supplier shall certify identity of the fiber manufacturer for all fiber used in the specified cable and, upon request, supply fiber ID numbers to ensure traceability.
12. The 50/125 nm Optical Fiber shall perform as shown in the table below:
13.

Wave-length (nm)	Maximum Attenua-tion (dB/Km)	Min Info Trans. Capacity (MHZ-Km)	Max Trans. Dist for 10 GbPS
850	3.0	350 0	550m
130 0	1.0	500	300m

B. Multimode Fiber Cable - Interior (Belden or approved equal)
1. The optical fiber multimode cable construction shall consist of fibers capable of operation at 850 nm and 1300 nm.
2. The indoor cable shall contain non-metallic strength members.
3. The cable shall be plenum rated and shall meet the requirements of NEC for OFNP.
4. The cable shall comply with Bellcore, FDDI, TIA-568, latest edition, IEEE802 and ICEA Standards.
5. The cable shall have a minimum bend radius of ten (10) times the diameter installed and 20 times the outer diameter during installation.
6. The cable shall have a tensile strength of 600 lbs. minimum without changing the fiber characteristics.
7. Assemble cable using 6 or 12 fiber subunits stranded around a central strength member in a RoHS-compliant design. Each subunit shall be uniquely numbered at a minimum of 10' intervals.
8. Sheath: Cover the core by a polyethylene protective sheath. The protective sheath shall consist of an overall polyethylene jacket.

9. The cable shall be air coil type.
10. Each fiber buffer jacket shall be color coded separately. Within unit tubes or sub-bundles, each fiber shall have a distinctly different color coding. Individual fibers shall be enclosed in oversized plastic tubes which are filled with a non-hygroscopic compound, or coated with heavy polymer coating and enclosed in a tight flexible thermoplastic jacket, to provide strength for practical handling, to prevent micro bends and to preserve the individual fibers during installation and long term service.
11. All fiber cable shall be routed in cabletray, innerduct and/or conduit.

C. Multimode Fiber Cable - Exterior (Belden or approved equal)
1. The optical fiber multimode cable construction shall consist fibers capable of operation at 850 nm and 1300 nm.
2. The cable shall contain non-metallic strength members.
3. The cable shall be OSP rated.
4. The cable shall comply with Telcordia GR-20, TIA-568, latest edition, EN 187105 and ANSI/ICEA Standards.
5. The cable shall have a minimum bend radius of ten (10) times the diameter installed and 20 times the outer diameter during installation.
6. The cable shall have a tensile strength of 600 lbs. minimum without changing the fiber characteristics.
7. Assemble cable using 6 or 12 fiber subunits stranded around a central strength member in a RoHS-compliant design. Each subunit shall be uniquely numbered at a minimum of 10' intervals.
8. Sheath: The cable jacket for over 12-strand fiber cable shall consist of a corrugated steel tape armor with MDPE outer jacket. The cable jacket for 12 strand fiber cable and below shall consist of MDPE outer jacket with no corrugated steel tape armor.
9. The cable shall be Gel-Free, Stranded loose tube.
10. Each fiber buffer jacket shall be color coded separately. Within unit tubes or sub-bundles, each fiber shall have a distinctly different color coding. Individual fibers shall be enclosed in oversized plastic tubes which are filled with a non-hygroscopic compound, or coated with heavy polymer coating and enclosed in a tight flexible thermoplastic jacket, to provide strength for practical handling, to prevent micro bends and to preserve the individual fibers during installation and long term service.
11. All fiber cable shall be routed in maxcell duct and/or conduit.

D. Single-Mode Optical Fibers
1. Single-mode optical fibers shall be Zero Water Peak Single-Mode Optical Fibers with and shall comply with ITU-T G.652.D. Fibers must comply with TIA 455 and IEC 793 test methods.
2. Fibers shall be optimized for operation over the entire wavelength range from 1280nm to 1625 nm.
3. Clad Diameter: 125.0 ±0.7 micrometer.
4. Clad Noncircularity: Less than 1%.
5. Core/Clad Concentricity Error: Less than 0.5 micrometers.

6. Coating Diameter (colored): 254 ±0.7 micrometer.
7. Attenuation Uniformity: There shall be no point of discontinuity greater than 0.10 dB at any wavelength.
8. The fiber shall be manufactured by the outside vapor deposition (OVD) process.
9. The supplier shall certify identity of the fiber manufacturer for all fiber used in the specified cable and, upon request, supply fiber ID numbers to ensure traceability.
10. Fiber shall be depressed clad type.

E. Single-Mode Optical Fiber Cable - Exterior (Belden or approved equal)

1. The single-mode fiber optical cable shall consist of fibers separated into color-coded binder groups and surrounded by a water swellable tape and binder.
2. The cable shall have a steel tape armor that envelopes the binder group and has a rip cord with MDPE outer jacket that is UV resistant.
3. The cable shall comply with Telcordia GR-20, EN 187105 and Insulated Cable Engineers Association (ICEA) Standards.
4. The cable shall be rated for exterior underground conduit, direct burial, aerial applications and shall be rodent and lightning resistant.
5. Assemble the groups to form a single compact core.
6. The cable shall be Gel-Free, Stranded loose tube type.
7. The outer sheath jacket shall be comprised of medium-density polyethylene (MDPE).
8. The cable shall have a minimum bend radius of ten (10) times the diameter installed and 20 times the outer diameter during installation.
9. The cable shall have a tensile strength of 600 lbs. minimum without changing the fiber characteristics for trunk cable and 125 lbs. for riser cable.
10. The single-mode transmission parameters are shown below:

Wave-length	Maximum Attenua-tion
1310	0.34 dB
1385	0.31 dB
1490	0.30 dB
1550	0.22 dB

F. Optical fiber conductors shall follow standard color code schemes.
1. Fiber numbers and binders shall correspond to the color code as follows:
   a. Fiber/Binder #1 – Blue
   b. Fiber/Binder #2 – Orange
   c. Fiber/Binder #3 – Green
   d. Fiber/Binder #4 - Brown

e. Fiber/Binder #5 – Slate
f. Fiber/Binder #6 – White
g. Fiber/Binder #7 – Red
h. Fiber/Binder #8 – Black
i. Fiber/Binder #9 – Yellow
j. Fiber/Binder #10 – Violet
k. Fiber/Binder #11- Rose
l. Fiber/Binder #12- Aqua

G. Optical Fiber Patch Cable
1. The optical fiber patch cord shall consist of 1 or 2 fibers (as noted on the contract documents) of the same type as the fiber cabling and shall meet the optical fiber cabling requirements for attenuation and transmission capacity.
2. Cable manufacturer shall be ISO 9000 certified.
3. Cable shall be tight buffered type.
4. Optical Fiber Patch Cord Connectors: Connectors shall be as designated in the Connecting Hardware Section of this specification. The mated connectors shall have a pull strength of
5. 7.5 lbf and a maximum attenuation of 0.4 dB.
6. 5. Splices: Fusion splices shall not exceed a maximum optical attenuation of 0.2 dB.

2.4 CONNECTING HARDWARE

A. General: The connecting devices covered in this section include fiber optic outlets/connectors, and patch panels.
1. Provide connecting devices with a minimum rating equivalent to the wire terminating on the device.
2. All testing for plug and socket type devices shall be tested in a mated state.
3. The patch panel shall be suitable for mounting at the location shown on the drawings.
4. Provide panel with quantity of ports as shown on the drawings. All ports shall be provided with connectors.
5. Label all panels.
6. All terminations shall follow T568B pin-out configuration.

B. 100 Ohm UTP Connectors
1. The connecting hardware shall be of the insulation displacement contact (IDC) type.
2. Data: Terminate the 4-pair copper data cable into the 8 position, non-keyed, modular RJ- 45 jack with the pin/pair assignments wired per T568B. The modular connector shall comply with the Level A reliability requirements of IEC 603-7. The data RJ-45 jackshall match the Category and the data terminating cable rating.
3. Plug insertion life shall be a minimum of 750 insertions.
4. IDC termination life shall be a minimum of 200 terminations.
5. DC Resistance: Maximum 0.3 Ohms.

6. Telephone: Terminate the four telephone to a 8 position, non-keyed, modular RJ-45 jack with the pin/pair assignments wired per T568B. The jack shall match the category rating of the terminating voice cable.
7. The connectors shall be tested to meet the following minimum channel performance parameters:

Category 6 Channel Performance										
Freq (MHz)	Atten (dB)	pr-pr NEXT (dB)	ACR (dB)	PS NEXT (dB)	PS ACR (dB)	pr-pr ELFEXT (dB)	PS ELFEXT (dB)	Return Loss (dB)	Phase Delay (ns)	Delay Skew (ns)
1	2.1	66.3	64.2	66.1	64.0	61.8	59.8	18.0	580	30
4	4.2	56.6	52.4	56.2	52.0	49.8	47.8	18.0	562	30
8	6.0	51.6	45.6	51.2	45.2	43.8	41.8	18.0	557	30
10	6.7	50.0	43.3	49.6	42.9	41.8	39.8	18.0	555	30
16	8.6	46.6	38.0	46.2	37.6	37.8	35.8	18.0	553	30
20	9.6	45.0	35.4	44.6	35.0	35.8	33.8	18.0	552	30
25	10.4	43.4	33.0	42.9	32.5	33.9	31.9	17.0	551	30
31.25	12.2	41.7	29.5	41.2	29.0	31.9	29.9	16.0	550	30

Category 6 Channel Performance										
Freq (MHz)	At-ten (dB)	pr-pr NEXT (dB)	ACR (dB)	PS NEXT (dB)	PS ACR (dB)	pr-pr ELFEXT (dB)	PS ELFEXT (dB)	Re-turn Loss (dB)	Phase De-lay (ns)	De-lay Skew (ns)
62.5	17.6	36.6	19.0	36.1	18.5	25.9	23.9	13.1	549	30
100	22.8	33.1	10.3	32.6	9.8	21.9	19.9	11.0	548	30
125	25.8	31.5	5.7	30.9	5.1	19.9	17.9	10.1	547	30
155.5	29.1	29.8	0.7	29.2	0.1	18.0	16.0	9.1	547	30

C. Optical Fiber Connecting Hardware
1. Connector: The connector shall be duplex LC type for terminating singlemode and multimode fibers.
2. The connector shall be ceramic tip fiber optic connector plug.
3. The connector shall be an aerobic adhesive-style requiring no curing time or proprietary tools.
4. The ferrul shall be zirconia.
5. Identification: The multimode fiber connectors and adapters shall be beige in color. The single mode fiber connectors and adapters shall be blue in color.
6. Pull Strength: The connector shall have an optical axial pull strength of 0.5 lbf.
7. Attenuation: The maximum optical attenuation per each mated LC connector pair shall not exceed 0.4 dB. The total optical attenuation through the cross-connect from any terminated optical fiber to any other terminated optical fiber shall not exceed 0.4 dB.
8. Return Loss: The LC connector return loss shall be greater than or equal to 20 dB for multimode fiber at 23 degrees Celsius.
9. Connector Coupling: Shall have alignment sleeves and shall be Bayonet/Threaded version with locknut. The connector coupling shall accept two (2) connector plugs.
10. Connector Box: The box shall have the ability to secure the optical fiber cable and provide for a minimum of 30 mm bend radius. A minimum of 3.28 feet of two-fiber optical cable or two buffered optical fibers shall be accessible for termination

purposes. The box shall be 4" x 4" with an additional surface mounted box (which mounts to the 4"x4' box), both providing the bend radius, slack storage, and adapter interface.

2.5 PATCH PANELS

A. General:
1. The patch panel shall be suitable for mounting at the location shown on the drawings. Rack mount with the appropriate environmental housing to protect from physical damage and direct exposure to moisture of other corrosive elements.
2. Provide panel with quantity of ports as shown on the drawings. All ports shall be provided with connectors.
3. Label all panels.
4. 100 Ohm UTP Patch Panels:
   a. Provide patch panel with RJ-45 connectors on the front panel and 110 style punch down terminations on the rear of the panel. The RJ-45 connectors shall be of the same rating as the terminating cable.
   b. Keystone type patch panels are not acceptable.
   c. The patch panel shall be minimum 2RU for 24-port or 48-port as indicated on the contract documents and shall include 2 integrated patch cord cable managers and 2 rear cable management bars. Patch panels shall be Belden REVConnect Category 6 Series with termination manager or an approved equal.

B. Fiber Optical Patch Panels:
1. The patch panel shall be suitable for mounting at the location shown on the drawings. Either wall or rack with the appropriate environmental housing to protect from physical damage and direct exposure to moisture of other corrosive elements.
2. Provide panel with quantity of ports as shown on the drawings.
3. Provide fiber patch panels complete with all fiber connectors and couplings on the front and on the rear of the panel.
4. Provide covers for all spare fiber couplings.
5. The fiber patch panel shall include a transparent, hinged and fully removable front and rear door, magnified labels for each port and front and rear sliding fiber tray. The patch panel shall be either 1RU with 72 LC ports of 2RU with 144 LC ports as indicated on the contract documents.
6. Provide with fiber management rings, cable strain relief and patch cord bend radius guides.
7. Patch panels shall be Belden ECX-02U Series fixed shelf using modular cassettes or approved equal. Furnish shelf with connectors to match the fiber type terminating.

C. Telephone Connecting Modules
1. The telephone connecting modules shall be 110 style blocks.
2. The unit shall have the capacity to terminate minimum 25 cable pairs each.
3. Block shall be fire retardant molded plastic.

4. Unit shall have horizontal index strip to secure and organize cables.
5. Unit shall accommodate 22 through 26 gauge wire.
6. Block shall be wall or rack mountable.
7. Block shall be provided with mounting bracket, labels and covers.
8. Provide block pair size as shown on the drawings.
9. Each block shall be labeled.
10. Blocks shall be minimum of the same rating as the terminating horizontal cable.
11. Provide all blocks with legs.

D. Protectors (Outside Plant applications):

Product Number	Description	COM code
331901	Circa 1880NA1/NSC-200: 188-Type, 200-pair protector panel. Input on left side for front of cabinet.	N/A

Product Number	Description	COM code
331902	Circa 1880NA1/NSC-200: 188-Type, 200-pair protector panel. Input on right side for back of cabinet.	N/A
750031	Circa C4B1S: 5-pin solid-state protector module, black shell, 300 volt, sneak current protection and built-in test points.	N/A
4C3S-75	Solid-state protector unit for non-ringing circuits (red)	105 581 086

2.6 COPPER CABLE ROUTES

A. The Contractor shall install copper cable route with a minimum bend radius of six times the diameter of the cable.

B. The Contractor shall conceal all horizontal distribution wiring either above accessible ceilings or in minimum 1" conduit where exposed. If it becomes necessary to use an alternative method, the Contractor shall obtain approval from the Engineer prior to the use of the alternate method.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify conduit, raceways, boxes, fittings and bodies are properly installed following Sections 260533 - Raceway and Boxes for Electrical Systems.

B. Verify grounding and bonding following Section 260526 – Grounding and Bonding for Electrical Systems.

C. Verify supporting devices are properly installed following Section 260529 – Hangers and Supports for Electrical Systems.

D. All protected telecommunication terminations require bonding, grounding and a Busbar.

3.2 PREPARATION

A. Maintain temperature of between 65 degrees Fahrenheit and 78 degrees F and between 30 and 50 percent humidity in areas of voice and data system work, following Section 015000 – Temporary Facilities and Controls.

3.3 INSTALLATION

A. Install work following drawings, manufacturer's instructions and approved submittal data. The number of cables per run, outlet configuration and other pertinent data will be included on the drawings.

B. All installation shall be done in conformance with the most current TIA 568 and BICSI standards. The Contractor shall ensure that the maximum pulling tensions of the specified distribution cables are not exceeded and cable bends maintain the proper radius during the placement of the facilities. Failure to follow the appropriate guidelines will require the Contractor to provide in a timely fashion the additional material and labor necessary to properly rectify the situation. This shall also apply to any and all damages sustained to the cables by the Contractor during the implementation.

C. The SCS installation should meet all applicable national and local codes pertaining to low voltage cable system installations.

D. The contractor will adhere to the installation schedule of the general contractor and should attend all construction meetings scheduled by the general contractor.

E. The contractor will provide service loops (slack) for cables terminating in the main equipment room or the telecommunications closets. A 6 foot service loop will be provided above the access ceiling or cable trays unless specified otherwise. This will allow for future changes or expansion with having to install new cables.

F. The installation will include coordination, testing and problem resolution with the system vendors.

G. Label cabling per Section 270500 – Common Works Results for Communications.

3.4 COPPER CABLE

A. Test all cable prior to installation. Upon failure to perform testing, the installer shall accept the cable as good and assume all liability for the replacement of the cable should it be found defective at a later date.

B. All conformance standards must be certified for multipair and individual cable runs.

C. Jacketing and insulation must satisfy the Underwriter's Laboratories (UL) listed fire rated cable insulation requirements in plenum areas.

D. Any pulling compound or lubricant used in cable installation must not deteriorate the conductor or the insulation. Provide 3M type WLC or an approved equal.

E. The Contractor shall install copper cable with a minimum bend radius of six times the diameter of the cable.

F. Install two (2) loops of slack cable (or 30 feet) in every manhole.

G. Install 10 feet of spare copper cable (service loop) in each closet prior to termination. Arrange slack cable on wall. Provide velcro type tie wrap for cable support and organization.

H. All backbone or riser cable shall be rated for plenum use unless routed in conduit.

I. Do not exceed the manufacturers recommended maximum pulling tension for copper backbone cables. The Contractor shall provide a tension meter during the pulling of all cables. If the meter shows that the tension has been exceeded, the Contractor discard the cable and pull new cable.

3.5 FIBER CABLE

A. Install fiber connectors and terminate and label all fiber optic strands. Cure, prime, polish and buff all fibers prior to installing connector.

B. Test all cable prior to installation. Upon failure to perform testing, the installer shall accept the cable as good and assume all liability for the replacement of the cable should it be found defective at a later date. Provide a copy of the test results to the Owner and the Engineer for approval.

C. Jacketing and insulation must satisfy the Underwriter's Laboratories (UL) listed fire rated cable insulation requirements in plenum areas.

D. All fiber cables shall be installed in innerduct.

E. Any pulling compound or lubricant used in cable installation must not deteriorate the conductor or the insulation. Provide 3M type WLC or an approved equal.

F. The maximum pulling tension of fiber trunk cable is 600 lbf. and 125 lbf for riser cable or per the manufacturer recommendation, whichever is less . Provide a tension meter during the pulling of all cable. If the meter shows that the tension rating has been exceeded, the Contractor shall discard the cable and pull new cable.

G. Multi-mode fiber cable shall not exceed 2000 meters. Single-mode fiber cable shall not exceed 3000 meters.

H. The Contractor shall install fiber cable with a minimum bend radius of ten times the diameter of the cable. The bend radius shall be a minimum of twenty times the cable diameter during installation. The minimum bend radius for 2 stand fiber patch cable shall be a minimum of 1 inch.

I. Install 10 feet of spare fiber cable (service loop) in each closet prior to termination.

J. Install two (2) loops of slack cable (or 30 feet) in every manhole.

K. All fiber splices shall be fusion spliced. The contractor must notify the designer prior to any splicing operation. Fiber splices are acceptable only in the cases where the distance is greater than 2 kilometers or unless noted on the drawings.

3.6 DEVICES AND PATCH PANELS

A. The amount of untwisting in a pair when terminating to connecting hardware shall be no greater than 0.5 inches for category 5 cables and above. No greater than 1.0 inches for category 3 cables.

B. Cables should be connected with connecting hardware of the same category or higher. Also, included are patch cables and jumpers.

C. The connecting hardware used for copper cabling shall be installed to provide minimal signal impairment by preserving wire pair twists as closely as possible to the point of termination.

D. The connecting hardware shall be installed to provide a well-organized installation with cable management and termination practices.

E. Strip back only as much jacket as necessary to terminate the cable.

F. Avoid kinking or crimping the cable wire.

G. Patch panels shall be installed in a neat, well organized manner with optical fiber management and sound optical termination practices.

H. Using a proper punch down tool. Punch each termination down tight, right-up to the jacket. Keep the jacket as close to the connector sleeve as possible.

I. Maintain straight through polarity, do not split pairs.

J. Install devices only in electrical boxes which are clean and free from excess building materials, debris, etc.

K. Gang devices installed at one location together under one coverplate.

L. Align the tops of all group mounted devices. Install plumb and aligned in the plane of the wall.

M. Install devices in vertical position unless otherwise noted.

N. Install galvanized steel plates on devices in unfinished areas and nylon thermoplastic plates in finished areas.

O. Install blanks in all ports not terminated.

P. Mounting Heights:
   1. Refer to contract documents.

3.7 TESTING COPPER AND FIBER OPTICS

A. Tests under Section 270500 – Common Work Results for Communications.

3.8 AS BUILT DRAWINGS

A. Provide three (3) copies of E and three (3) copies of C size prints along with CADD files in .dwg formats showing floor plans with room numbers and actual backbone cabling and pathway locations and labeling. The deliverable is required within 5 business days of final cable testing.

   1. Red Line Drawings: Contract must keep one (1) E size set of floor plans on site during work hours with installation progress marked and backbone cable labels noted. Contractor may be asked to produce these drawings for examination during construction meetings or field inspections.

END OF SECTION 271300

SECTION 271500
HORIZONTAL MEDIA INFRASTRUCTURE

PART 1 - GENERAL

1.1 SUMMARY

A. Subject to the General and Special Conditions, this section shall specify the requirements for the Communications Horizontal Cabling.

B. Section includes: twisted pair cable, connectors, faceplates and testing.

C. All voice and data horizontal cables shall consist of plenum rated, Category 6, 4 pair UTP copper cable from the appropriate IDF to each Telecommunications Outlet location as indicated on the Telecommunications Drawings.

D. Installation and termination of voice and data Category 6 as designated on the on the Telecommunications Drawings.

E. Installation and termination of two (2) Category 6 cable at each Wireless Access Point Outlet as indicated on the Telecommunications Drawings.

F. Installation and termination of coaxial cable CATV locations as indicated on the Telecommunications Drawings.

1.2 REFERENCES

Section 270000 in its entirety shall be included as part of this specification.

A. Related Sections:
1. Section 01
2. Section 263353: Telecommunications Uninterruptible Power Supply (UPS)
3. Section 270000: Communications
4. Section 270526: Telecommunication Grounding and Bonding
5. Section 270528: Interior Communications Pathways
6. Section 270543: Exterior Communication Pathways
7. Section 270553: Identification and Labeling of Communication Infrastructure
8. Section 271100: Communication Room Fittings
9. Section 271300: Backbone and Riser Media Infrastructure
10. Section 271500: Horizontal Media Infrastructure
11. Section 272100: Data Communication Network Equipment
12. Section 280500: Electronic Safety and Security
13. Section 281300: Access Control System (ACS)
14. Section 282300: Digital Video Surveillance System (DVSS)

1.3 COORDINATION

A. Refer to General or Special Conditions.

B. Refer to Division 26, Electrical Work

1.4 SUBMITTALS

A. Follow Section 013300 – Submittal Procedures, Section 270500 – Common Work Results for Communications, and the following:
1. Copper Cable and Patch Cords - Submit data on cable including:
   a. Manufacturers name.
   b. Manufacturers model and part numbers.
   c. Cable numbers.
   d. Cable specifications including quantity of pairs, material, insulation, performance, attenuation, NEXT, diameter, conductor size, jacket, weight and color.
   e. Provide length for patch cords.
   f. Provide connector type for patch cords.
2. Devices - Submit data on outlets, cover plates, and fiber connectors,
   a. Manufacturers name.
   b. Manufacturers model and part numbers.
   c. Outlet specifications including category rating, material, wiring, termination type, wire type and color. Also provide associated coverplate.
   d. Drawing of each device.
3. Connecting Hardware - Submit data on copper patch panels, fiber patch panels.
   a. Manufacturers name.
   b. Manufacturers model and part numbers.
   c. Equipment specifications including quantity of ports, material, dimensions, mounting, terminating devices and color.
4. Connectors - Submit product data on RJ45 outlets and fiber connectors.
   a. Manufacturers name.
   b. Manufacturers model and part numbers.
   c. Connector specifications including material, dimensions, attenuation, NEXT connection losses, ratings, and construction.
   d. Drawing of equipment.
5. Splicing and Terminations – Submit data including:
   a. Splicing and terminating tools, materials and methods.
6. Testing – Submit product data including:
   a. Equipment manufacturer, model and serial number.
   b. Graphic diagram representing test procedure including all connectors, light source, origin and destination for each cable tested.

1.5 QUALITY ASSURANCE

A. Assure that the "as installed" system is correct and complete per construction documents: including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.

B. Owner/Architect/Engineer retains the right to access and inspect all work during the entire duration of the project and any items that do not adhere to the standards, reference, contract, bid, or project documents will be corrected immediately at the expense of the contractor.

C. UL Compliance: Provide products that are UL-classified and labeled.

D. Follow Section 17080 and the following:

E. Material and installation shall meet requirements of NFPA 70.

F. Material, when applicable, shall be approved by a Nationally Recognized Testing Laboratory (NRTL).

G. Monitor and maintain quality control over manufacturers, suppliers, subcontractors, work force, site conditions, products, and services to ensure Work is of specified quality.

H. Workmanship: Install material and equipment in neat and workmanlike manner, in accordance with NEC Section 800-6. Specified requirements represent minimum acceptable quality for Work. Comply with industry standards except when more stringent requirements are specified herein, and tolerances indicate higher standards or more precise workmanship.

I. All communications work shall be performed under the direct on-site supervision of a Building Industry Consulting Service International, Inc. (BICSI) Certified Registered Communications Distribution Designer (RCDD). Submit resumes and RCDD registration to the Architect as proof. Paperwork must be approved by the Architect in writing prior to construction. The RCDD must be at the job site during construction. The RCDD shall be present during all cable testing, pulling and termination procedures.

J. Provide all materials, equipment, and installation in compliance with the latest applicable standards from ANSI, FCC, ASTM, EIA/TIA, IEEE, NEC, NFPA, NEMA, REA, and UL.

K. Installer Qualifications:

1. Knowledge of BICSI installation standards.
2. Knowledge of NEC standards.
3. Knowledge of EIA/TIA standards.
4. Five (5) years experience in the installation of fiber optic cables, including splicing, terminating and testing. Testing on fiber optic cable shall include single and multimode.
5. Three (3) years experience in the installation of Category 3 and Category 6 Unshielded Twisted Pair copper cables for voice and data distribution systems, including splicing, terminating and testing. Testing on Category 3 and Category 5 copper cable shall include complete verification with EIA/TIA cable standards.
6. Ten (10) references for project of equivalent scope, type and complexity of work completed within the last five (5) years. The Contractor shall submit as proof, supporting documents and the names, addresses and telephone numbers of the operating personnel who can be contacted regarding the installation system.
7. Must be a certified installer of the termination equipment manufacturer.

L. Install products only by qualified technicians certified by manufacturers.

M. Provide all electronic equipment with the UL label when applicable.

N. Comply in every way with the requirements of local laws and ordinances, the National Board of Fire Underwriters, and the National Electrical Code. Anything in the plans or specifications that does not strictly comply with the above laws, ordinances, and rules must be referred to the attention of the Engineer for a decision before proceeding. No change in the plans or specifications shall be made without full consent in writing of the Engineer.

PART 2 - PRODUCTS

2.1 APPROVED MANUFACTURERS FOR CHANNEL SOLUTION

A. The approved structured cabling solution for this project is Belden Certified Networking System. Substitutions for Belden are not allowed.

B. Belden Premium Performance System Cable (DataTwist 4800) Category 6

2.2 COPPER WIRE AND CABLES

A. Belden Premium Performance System Cable (DataTwist 4800) Category 6

1. Category 6+ Enhanced Premise Horizontal Cable (600MHz), 4 Pair, 23 AWG Solid Bare Copper Conductors, U/UTP, Plenum-CMP, Flamarrest® PVC-LS Jacket
2. Data: 4813 D15xxxx, color blue
3. Camera: 4813 004xxxx, color yellow

B. Belden Premium Performance System Cable (DataTwist 4800) Category 6A

1. 10GX Category 6A Enhanced Premise Horizontal Cable (625MHz), 4 Pair, 23 AWG Solid Bare Copper Conductors, U/UTP, Plenum-CMP, Flamarrest® PVC-LS Jacket
2. Wireless Access Points (WAPS): 10GX13 007100

C. Horizontal 100 Ohm UTP High Performance Cable (Belden #4813) Category 6.
1. The high-performance cable shall consist of 4 pairs, individually twisted.
2. Cables shall be plenum rated unless routed in plenum rated innerduct or conduit.
3. Color code shall be as shown in the table below:

Conductor Identification	Color Code	Abbreviation
Pair 1	White-Blue (Note 1) Blue (Note 2)	(W-BL) (BL)

Pair 2	White-Orange (Note 1) Orange (Note 2)	(W-O) (O)
Pair 3	White-Green (Note 1) Green (Note 2)	(W-G) (G)
Pair 4	White-Brown (Note 1) Brown (Note 2)	(W-BR) (BR)

1. Notes:
   a. The wire insulation is white, and a colored marking is added for identification. For cables with tightly twisted pairs (less than 1.5 inch per twist) the mate conductor may serve as the marking for the white conductor.
   b. A white marking is optional.

D. 100 Ohm UTP Patch Cable - The performance shall be as noted above for 100 Ohm copper UTP cables and as follows:
1. Cables used for patch cords and cross-connect jumpers shall have stranded conductors.
2. Insulated conductor: The insulated conductor diameter should be in the range of .032 inches to .039 inches and shall not exceed .047 inches.
3. Color Code: The color code shall match that used for 100 OHM UTP cable.
4. Transmission: The transmission shall be as shown in the table for 100 Ohm UTP cable except for attenuation. The attenuation for stranded conductors shall be a maximum of 20% greater than the attenuation for copper cables as notes above.
5. Insulation: The insulation shall be comprised of fluorinated ethylene propylene (FEP).
6. Patch cables and cross-connect jumpers shall be 10’-0” long for work area outlets. The cable shall have RJ-45 jack terminated on each end. The jack shall match the rating of the cable and work area outlet.
7. Patch cables and cross-connect jumpers shall be 20’-0” long for closets and equipment rooms. The cable shall have RJ-45 jacks terminated on each end. The jack shall match the cable rating.
8. Label: Label all patch cables on each end with cable identification and category rating.

2.3 CONNECTING HARDWARE

A. General: The connecting devices covered in this section include telecommunications outlets/connectors, patch panels, transition connectors and cross-connect blocks.
1. Provide connecting devices with a minimum rating equivalent to the wire terminating on the device.
2. All testing for plug and socket type devices shall be tested in a mated state.
3. Label all panels and connecting hardware.
4. All terminations shall follow T568B pin-out configuration

B. Coverplates

1. Provide one piece coverplates for all group mounted devices unless otherwise noted on the drawings.
2. Provide nylon thermoplastic coverplate of the same manufacturer as the device. Color shall match color of receptacles.
3. All work area wall plates shall be 4-port, single-gang coverplates with ID window unless otherwise noted on the drawings.
4. For furniture mounted outlets, the Contractor shall coordinate exact mounting and coverplate requirements with the equipment manufacturer.
5. Provide blank coverplate for all pay telephones.
6. For devices mounted in wireways or system furniture, provide device flush in wireway when possible to maintain cable bend radius. Install device and coverplate raised on wireway when bend radius cannot otherwise be maintained. Coordinate with equipment manufacturer for installation instructions.
7. All coverplates shall be flush wall type unless specifically noted otherwise on the drawings.
8. Provide stainless-steel coverplates for devices in unfinished areas.

C. 100 Ohm UTP Connectors
1. The connecting hardware shall be of the insulation displacement contact (IDC) type.
2. Data: Terminate the 4-pair copper data cable into the 8 position, non-keyed, modular RJ-45 jack with the pin/pair assignments wired per T568B. The modular connector shall comply with TIA-568, latest edition. The data RJ-45 jack shall meet or exceed the Category and the terminating data cable rating.
3. Plug insertion life shall be a minimum of 750 insertions.
4. IDC termination life shall be a minimum of 200 terminations.
5. Telephone: Terminate the four telephones to a 8 position, non-keyed, modular RJ-45 jack with the pin/pair assignments wired per T568B. The jack shall meet or exceed the category rating of the terminating voice cable.
6. The connectors shall be tested to meet the following minimum channel performance parameters:

Category 6 Channel Performance								
Freq	Insertion Loss (dB)	pr-pr NEXT (dB)	PS NEXT (dB)	pr-pr ELFEXT (dB)	PS ELFEXT (dB)	Return loss (dB)	ACR	PS ACR
1	1.9	83.0	80.9	75.1	73.8	25.0	81.2	79.1
4	3.7	74.4	72.9	63.1	60.8	29.6	70.7	69.3

Category 6 Channel Performance								
Freq	Insertion Loss (dB)	pr-pr NEXT (dB)	PS NEXT (dB)	pr-pr ELFEXT (dB)	PS ELFEXT (dB)	Return loss (dB)	ACR	PS ACR
8	5.3	72.1	70.7	57.2	54.9	31.8	66.9	65.6
10	5.9	70.3	68.6	55.4	53	37.7	64.4	62.7
16	7.6	65.5	64.0	52.2	49.6	33.4	57.9	56.8
20	8.9	62.1	60.8	51.0	48.1	31.9	53.2	51.9

25	9.9	61.1	59.9	50.0	47	29.9	51.2	50.0
31.25	11.1	63.8	60.7	48.5	46	30.5	53.1	50.1
62.5	15.9	53.8	52.6	43.6	41.4	26.3	37.9	36.9
100	20.4	55.5	53.0	37.4	34.1	27.4	35.2	33.6
250	33.7	45.1	42.7	26.2	24.5	17.5	11.6	9.2
550	52.7	29.6	29.0	15.6	13.9	15.2	-22.9	-23.4
650	60.2	24.0	23.6	8.2	5.2	15.3	-36.2	-36.5

1. DC Resistance: Maximum 0.3 Ohms.

D. Floor Boxes – Refer to Section 260533 – Raceway and Boxes for Electrical Systems.

2.4 PATCH PANELS

A. General:
1. The patch panel shall be suitable for mounting at the location shown on the drawings. Either wall or rack with the appropriate environmental housing to protect from physical damage and direct exposure to moisture of other corrosive elements.
2. Provide panel with quantity of ports as shown on the drawings. All ports shall be provided with connectors.

B. 100 Ohm UTP Patch Panels:
1. Provide modular patch panel with Belden Cat 6/6A rated connectors. The connectors shall be of the same rating as the terminating cable.
2. Keystone type patch panels are not acceptable.
3. The patch panel shall be either 1RU 24-port of 2RU 48-port as indicated on the contract documents and shall include 2 integrated patch cord cable managers and 2 rear cable management bars. Patch panels shall be Belden 10GXAngledPP482U for 48 port or 10GXAngledPP241U for 24 port panel.

C. Telephone Connecting Modules
1. The telephone connecting modules shall be 110 style blocks.
2. The unit shall have the capacity to terminate minimum 25 cable pairs each.
3. Block shall be fire retardant molded plastic.
4. Unit shall have horizontal index strip to secure and organize cables.
5. Unit shall accommodate 22 through 26 gauge wire.
6. Block shall be wall or rack mountable.
7. Block shall be provided with mounting bracket, labels and covers.
8. Provide block pair size as shown on the drawings.
9. Each block shall be labeled.
10. Blocks shall be minimum of the same rating as the terminating horizontal cable.
11. Provide all blocks with legs.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify conduit, raceways, boxes, fittings and bodies are properly installed following Sections 260533 – Raceway and Boxes for Electrical Systems.

B. Verify grounding and bonding following Section 260526 – Grounding and Bonding for Electrical Systems and Section 271100 – Communications Equipment Room Fittings.

C. Verify supporting devices are properly installed following Section 260529 – Hangers and Supports for Electrical Systems.

D. Maintain temperature of between 65 degrees Fahrenheit and 78 degrees F and between 30 and 50 percent humidity in areas of voice and data system work, following Section 014000 – Quality Requirements.

3.2 INSTALLATION

A. Install work following drawings, manufacturer's instructions and approved submittal data. The number of cables per run, outlet configuration and other pertinent data will be included on the drawings.

B. All installation shall be done in conformance with TIA 568, latest edition, and BICSI standards. The Contractor shall ensure that the maximum pulling tensions of the specified distribution cables are not exceeded and cable bends maintain the proper radius during the placement of the facilities. Failure to follow the appropriate guidelines will require the Contractor to provide in a timely fashion the additional material and labor necessary to properly rectify the situation. This shall also apply to any and all damages sustained to the cables by the Contractor during the implementation.

C. The SCS installation should meet all applicable national and local codes pertaining to low voltage cable system installations.

D. The contractor will adhere to the installation schedule of the general contractor and should attend all construction meetings scheduled by the general contractor.

E. The contractor will be responsible for the cross connection of the horizontal cable runs to the backbone cable system. The connection to voice and data systems will be performed by the vendors installing and/or maintaining those systems. Coordinate all cross-connects with the owner prior to work.

F. The contractor will provide service loops (slack) for cables terminating in the main equipment room or the telecommunications closets. A 6 foot service loop will be provided above the access ceiling or cable trays unless specified otherwise. This will allow for future changes or expansion with having to install new cables.

G. The installation will include coordination, testing and problem resolution with the system vendors.

3.3 COPPER CABLE

A. Test all cable prior to installation. Upon failure to perform testing, the installer shall accept the cable as good and assume all liability for the replacement of the cable should it be found defective at a later date.

B. All conformance standards must be certified for multipair and individual cable runs.

C. Jacketing and insulation must satisfy the Underwriter's Laboratories (UL) listed fire rated cable insulation requirements in plenum areas.

D. Any pulling compound or lubricant used in cable installation must not deteriorate the conductor or the insulation. Provide 3M type WLC or an approved equal.

E. Copper cable runs shall not exceed 285 feet. All runs shall be continuous. No splicing is allowed.

F. The Contractor shall install copper cable with a minimum bend radius of six times the diameter of the cable.

G. Provide a 10 foot patch cable with RJ-45 connector for each work area outlet insert installed. Provide additional patch cables for the TR rooms as required on the contract drawings. The patch cable rating and connector shall match the horizontal cable/connector rating.

H. Install 10 feet of spare copper cable (service loop) in each closet and at work area prior to termination. Arrange slack cable on wall or above ceiling to structure. Provide velcro type tie wrap for cable support and organization.

I. Install 12 inches of spare copper cable in ceiling plenum prior to dropping down wall to outlet. Support slack to structure with J-Hook and Velcro ties. If there is no plenum, loop shall be located in box prior to termination. Provide box of sufficient size to accommodate spare cable, termination equipment if applicable and maintain bending radius.

J. Install 18" of spare copper cable coiled in box at all pay telephone locations. Cable shall be terminated by pay phone installer.

K. All horizontal cable shall be rated for plenum use.

L. Patch cables shall not cross one another vertically or horizontally when transitioning from cable management to the patch panel of from cable management to the network switch.

M. The maximum pulling tension for 4-pair 24 AWG horizontal UTP cables shall not exceed 25 lbf. The Contractor shall provide a tension meter during the pulling of all cables. If the meter shows that the tension has exceeded 25 lbf, the Contractor discard the cable and pull new cable.

N. All cables shall be installed continuously. No splices are acceptable.

3.4 DEVICES AND PATCH PANELS

A. The amount of untwisting in a pair when terminating to connecting hardware shall be no greater than 0.5 inches for category 5 cables and above. No greater than 1.0 inches for category 3 cables.

B. Cables should be connected with connecting hardware of the same category or higher. Also, included are patch cables and jumpers.

C. The connecting hardware used for copper cabling shall be installed to provide minimal signal impairment by preserving wire pair twists as closely as possible to the point of termination.

D. Provide 'decora' style wall plates if electrical is using 'decora' style receptacles. Otherwise, provide standard wall plates.

E. Coordinate wall plate color with architect. Color shall match electrical receptacle color.

F. Provide stainless steel or galvanized coverplate when mounted in mechanical, electrical, unfinished areas or corrosive environments.

G. The connecting hardware shall be installed to provide a well organized installation with cable management and termination practices.

H. Strip back only as much jacket as necessary to terminate the cable.

I. Avoid kinking or crimping the cable wire.

J. Patch panels shall be installed in a neat, well organized manner with optical fiber management and sound optical termination practices.

K. Using a proper punch down tool. Punch each termination down tight, right-up to the jacket. Keep the jacket as close to the connector sleeve as possible.

L. Maintain straight through polarity, do not split pairs.

M. Install devices only in electrical boxes which are clean and free from excess building materials, debris, etc.

N. Gang devices installed at one location together under one coverplate.

O. Align the tops of all group mounted devices. Install plumb and aligned in the plane of the wall.

P. Install devices in vertical position unless otherwise noted.

Q. Install blanks in all ports not terminated.

R. Mounting Heights:
1. Refer to contract documents.

3.5 COPPER CABLE ROUTES

A. The Contractor shall install copper cable route with a minimum bend radius of six times the diameter of the cable.

B. The Contractor shall conceal all horizontal distribution wiring either above accessible ceilings or in minimum 1" conduit where exposed. If it becomes necessary to use an alternative method, the Contractor shall obtain approval from the Engineer prior to the use of the alternate method.

3.6 LOW VOLTAGE CABLE ROUTING AND SUPPORT

A. General:
1. Refer to Division 27, Division 28, and the following.
2. All horizontal cable routed above the accessible ceiling shall be supported by Category 5 rated J-hooks or cable tray.
3. All main cable runs shall be above the accessible ceiling down main corridors or other pathways shown on the drawings. The cable shall turn 90 degrees from the main run to the drop location.
4. The cable shall be routed concealed above the ceiling with 12" of clear space above route whenever possible.
5. The contractor shall provide minimum 1" conduit for low voltage cables. Size conduit based on TIA 569, latest edition.
6. The cable routing shall meet the following minimum criteria:
   a. Maintain minimum separation of 6" from fluorescent fixtures.
   b. Maintain minimum separation of 12" from electrical conduit and cables rated 110 volts or more.
   c. Maintain minimum separation of 48" from motors and transformers.
   d. Maintain minimum clearance of 3’ above ceiling tiles.
   e. Conduit runs shall not exceed two 90 degree bends.
   f. All conduit located in the ceiling shall protrude 2 inches into the closet. Provide bushing on conduit end.

B. J-Hooks:
1. by the equipment manufacturer, whichever is less.

C. TESTING COPPER AND FIBER OPTICS

1. Tests under Section 270500 –Communications.

3.7 SITE QUALITY CONTROL, TESTING AND INSPECTION

A. Every cabling link in the installation shall be tested in accordance with the field test specifications defined in ANSI/TIA/EIA-58-B.2-1 “Transmission Performance Specifications for 4-pair Category 6 Cabling”.

B. The installed twisted-pair horizontal links shall be tested from the patch panel in the telecommunications room to the telecommunication wall outlet in the work area against the “Permanent Link” performance limits specification as defined in ANSI/TIA/EIA-58- B.2-1.

C. Trained technicians who have successfully attended an appropriate training program and have obtained a certificate as proof thereof shall execute the tests. Appropriate training programs include but are not limited to installation certification programs provided by BICSI or the ACP (Association of Cabling Professionals).

D. The test equipment shall comply with the accuracy requirements for level IV field testers as defined in ANSI/TIA/EIA-58-B.2-1. The tester including the appropriate interface adapter must meet the specified accuracy requirements. The accuracy requirements for the permanent link test configuration (baseline accuracy plus adapter contribution) are specified in Table B.2 of Annex B of ANSI/TIA/EIA-58-B.2-1. (Table B.3 in this document specifies the accuracy requirements for the Channel configuration.)

E. The test plug shall fall within the values specified in E.3.2.2 Modular test plug NEXT loss requirements of ANSI/TIA/EIA-58-B.2-1.

F. The tester shall be within the calibration period recommended by the vendor in order to achieve the vendor-specified measurement accuracy.

G. The tester interface adapters must be of high quality and the cable shall not show any twisting or kinking resulting from coiling and storing of the tester interface adapters. In order to deliver optimum accuracy, preference is given to a permanent link interface adapter for the tester that can be calibrated to extend the reference plane of the Return Loss measurement to the permanent link interface. The Cable Contractor shall provide proof that the interface has been calibrated within the period recommended by the vendor. To ensure that normal handling on the job does not cause measurable Return Loss Change, the adapter cord cable shall not be of twisted-pair construction.

H. One hundred percent of the installed cabling links must be tested and must pass the requirements of the standards in this section. Any failing link must be diagnosed and corrected. The corrective action shall be followed with a new test to prove that the corrected link meets the performance requirements. The final and passing result of the tests for all links shall be provided in the test results documentation in accordance with the Test Result Documentation as listed below.

3.8 SITE TESTING, INSPECTION AND ACCEPTANCE

A. The Pass or Fail condition for the link-under-test is determined by the results of the required individual tests. Any Fail or Fail* result yields a Fail for the link-under-test. In order to achieve an overall Pass condition, the results for each individual test parameter must Pass or Pass*.

B. A Pass or Fail result for each parameter is determined by comparing the measured values with the specified test limits for that parameter. The test result of a parameter shall be marked with an asterisk (*) when the result is closer to the test limit than the accuracy of the field tester. The field tester manufacturer must provide documentation as an aid to interpret results marked with asterisks.

C. A representative of the design team shall be invited to witness field testing. The representative shall be notified of the start date of the testing phase five business days before testing commences.

D. At the conclusion of field testing, at a time scheduled by the Owner's representative, the Owner's representative will select a random sample (up to 10%) of the installed links in each wiring closet. The Cable Contractor, under supervision of the Owner's representative, shall test these randomly selected links and the results are to be stored in accordance with the requirements in Test Result Documentation as listed below.

E. The results obtained shall be compared to the data originally provided by the Cable contractor. If any (one or more) of the sample test reports displays a fail or fail* result, the Cable Contractor shall resolve any conditions causing the failed test and under supervision of the Owner's representative shall repeat 100% of the testing and the cost shall be borne by the Cable Contractor.

3.9 PERFORMANCE TEST PARAMETERS

A. The test parameters for Category 6 are defined in TIA Category 6 standard, which refers to the ANSI/TIA/EIA-58-B.2 standard. The test of each link shall contain all of the following parameters as detailed below. In order to pass the test all measurements (at each frequency in the range from 1 MHz through 100 MHz) must meet or exceed the limit value determined in the above-mentioned standard.

1. Wire Map - Wire Map shall report Pass if the wiring of each wire-pair from end to end is determined to be correct. The Wire Map results shall include the continuity of the shield connection if present.
2. Length - The field tester shall be capable of measuring length of all pairs of a basic link or channel based on the propagation delay measurement and the average value for NVP (1). The physical length of the link shall be calculated using the pair with the shortest electrical delay. This length figure shall be reported and shall be used for making the Pass/Fail decision. The Pass/Fail criteria are based on the maximum length allowed for the Permanent Link configuration (90 meters - 295 feet) plus 10% to allow for the variation and uncertainty of NVP.
3. Insertion Loss (Attenuation) - Insertion Loss is a measure of signal loss in the permanent link or channel. The term “Attenuation” has been used to designate “Insertion Loss.” Insertion Loss shall be tested from 1 MHz through 250 MHz in maximum step size of 1 MHz. It is preferred to measure insertion loss at the same frequency intervals as NEXT Loss in order to provide a more accurate calculation of the Attenuation-to-Crosstalk ratio (ACR) parameter. Minimum test results documentation (summary results): Identify the worst wire pair (1 of 4 possible). The test results for the worst wire pair must show the

highest attenuation value measured (worst case), the frequency at which this worst case value occurs, and the test limit value at this frequency.

4. NEXT Loss - Pair-to-pair near-end crosstalk loss (abbreviated as NEXT Loss) shall be tested for each wire pair combination from each end of the link (a total of 12 pair combinations). This parameter is to be measured from 1 through 250 MHz. NEXT Loss measures the crosstalk disturbance on a wire pair at the end from which the disturbance signal is transmitted (near-end) on the disturbing pair. The maximum step size for NEXT Loss measurements shall not exceed the maximum step size defined in the standard as shown in Table 1, column 2. Minimum test results documentation (summary results): Identify the wire pair combination that exhibits the worst case NEXT margin (2) and the wire pair combination that exhibits the worst value of NEXT (worst case). NEXT is to be measured from each end of the link-under-test. These wire pair combinations must be identified for the tests performed from each end. Each reported case shall include the frequency at which it occurs as well as the test limit value at this frequency.
5. PSNEXT Loss - Power Sum NEXT Loss shall be evaluated and reported for each wire pair from both ends of the link under-test (a total of eight results). PSNEXT Loss captures the combined near-end crosstalk effect (statistical) on a wire pair when all other pairs actively transmit signals. Like NEXT this test parameter must be evaluated from 1 through 250 MHz and the step size may not exceed the maximum step size defined in the standard as shown in Table 1, column 2. Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst-case margin and the wire pair that exhibits the worst value for PSNEXT. These wire pairs must be identified for the tests performed from each end. Each reported case shall include the frequency at which it occurs as well as the test limit value at this frequency.
6. ELFEXT Loss, pair-to-pair - Pair-to-pair FEXT Loss shall be measured for each wire-pair combination from both ends of the link under-test. FEXT Loss measures the crosstalk disturbance on a wire pair at the opposite end (far-end) from which the transmitter emits the disturbing signal on the disturbing pair. FEXT is measured to compute ELFEXT Loss that must be evaluated and reported in the test results. ELFEXT measures the relative strength of the far-end crosstalk disturbance relative to the attenuated signal that arrives at the end of the link. This test yields 24 wire pair combinations. ELFEXT is to be measured from 1 through 250 MHz and the maximum step size for FEXT Loss measurements shall not exceed the maximum step size defined in the standard as in Table 1, column 2. Minimum test results documentation (summary results): Identify the wire pair combination that exhibits the worst-case margin and the wire pair combination that exhibits the worst value for ELFEXT. These wire pairs must be identified for the tests performed from each end. Each reported case shall include the frequency at which it occurs as well as the test limit value at this frequency.
7. PSELFEXT Loss - Power Sum ELFEXT is a calculated parameter that combines the effect of the FEXT disturbance from three wire pairs on the fourth one. This test yields eight wire-pair combinations. Each wire-pair is evaluated from 1 through 250 MHz in frequency increments that do not exceed the maximum step size defined in the standard as shown in Table 1, column 2. Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst pair combinations must be identified for the tests performed from each end. Each reported case shall include the frequency at which it occurs as well as the test limit value at this frequency.

8. Return Loss - Return Loss (RL) measures the total energy reflected on each wire pair. Return Loss is to be measured from both ends of the link-under-test for each wire pair. This parameter is also to be measured from 1 through 250 MHz in frequency increments that do not exceed the maximum step size defined in the standard as shown in Table 1, column 2. Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst-case margin and the wire pair that exhibits the worst value for Return Loss. These wire pairs must be identified for the tests performed from each end. Each reported case shall include the frequency at which it occurs as well as the test limit value at this frequency.
9. ACR (Attenuation to crosstalk ratio) - This parameter is not demanded by the standard but may be required in order to obtain the premise wiring manufacturer's warranty. ACR provides an indication of bandwidth for the two wire-pair network applications. ACR is a computed parameter that is analogous to ELFEXT and expresses the signal to noise ratio for a two wire-pair system. This calculation yields 12 combinations - six from each end of the link. Minimum test results documentation (summary results): Identify the wire pair combination that exhibits the worst-case margin and the wire pair combination that exhibits the worst value for ACR. These wire pair combinations must be identified for the tests performed from each end. Each reported case shall include the frequency at which it occurs as well as the test limit value at this frequency.
10. PSACR - [This parameter is not required by the standard but may be required in order to obtain the premise wiring vendor's warranty]. The Power Sum version of ACR is based on PSNEXT and takes into account the combined NEXT disturbance of all adjacent wire pairs on each individual pair. This calculation yields eight combinations -one for each wire pair from both ends of the link. Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst-case margin and the wire pair that exhibits the worst value for PSACR. These wire pairs must be identified for the tests performed from each end. Each reported case shall include the frequency at which it occurs as well as the test limit value at this frequency.
11. Propagation Delay - Propagation delay is the time required for the signal to travel from one of the link to the other. This measurement is to be performed for each of the four wire pairs. Minimum test results documentation (summary results): Identify the wire pair with the worst-case propagation delay. The report shall include the propagation delay value measured as well as the test limit value.
12. Delay Skew [as defined in TIA/EIA-58-B.1; Section 11.2.4.11] - This parameter shows the difference in propagation delay between the four wire pairs. The pair with the shortest propagation delay is the reference pair with a delay skew value of zero. Minimum test results documentation (summary results): Identify the wire pair with the worst-case propagation delay (the longest propagation delay). The report shall include the delay skew value measured as well as the test limit value.

3.10 TEST RESULT DOCUMENTATION

A. The test results information for each link shall be recorded in the memory of the field tester upon completion of the test.

B. The test results records saved by the tester shall be transferred into a Windows™-based database utility that allows for the maintenance, inspection and archiving of these test records. A guarantee must be made that the measurement results are transferred to the PC unaltered, i.e., “as saved in the tester” at the end of each test and that these results cannot be modified at a later time. Superior protection in this regard is offered by testers that transfer the numeric measurement data from the tester to the PC in a non-printable format.

C. The database for the completed job shall be stored and delivered on CD-ROM including the software tools required to view, inspect, and print any selection of test reports.

D. The test results shall be provided on CD-ROM listing the links that have been tested with the following summary information:

1. The identification of the link in accordance with the naming convention defined in the overall system documentation.
2. The overall Pass/Fail evaluation of the link-under-test including the NEXT Headroom (overall worst case) number.
3. The date and time the test results were saved in the memory of the tester.

E. General Information to be provided in the electronic data base with the test results information for each link:

1. The identification of the customer site as specified by the end-user.
2. The identification of the link in accordance with the naming convention defined in the overall system documentation.
3. The overall Pass/Fail evaluation of the link-under-test.
4. The name of the standard selected to execute the stored test results.
5. The cable type and the value of NVP used for length calculations.
6. The date and time the test results were saved in the memory of the tester.
7. The brand name, model and serial number of the tester.
8. The identification of the tester interface.
9. The revision of the tester software and the revision of the test standards database in the tester.
10. The test results information must contain information on each of the required test parameters.
11. The name of the person performing the test.

F. The detailed test results data to be provided in the electronic database for each tested link must contain the following information:

G. For each of the frequency-dependent test parameters, the value measured at every frequency during the test is stored. In this case, the PC-resident database program must be able to process the stored results to display and print a color graph of the measured parameters. The PC-resident software must also provide a summary numeric format in which some critical information is provided numerically as defined by the summary results (minimum numeric test results documentation) as outlined above for each of the test parameters.

1. Length: Identify the wire-pair with the shortest electrical length, the value of the length rounded to the nearest 0.1 m (1) and the test limit value.

2. Propagation delay: Identify the pair with the shortest propagation delay, the value measured in nanoseconds (ns) and the test limit value.
3. Delay Skew: Identify the pair with the largest value for delay skew, the value calculated in nanoseconds (ns) and the test limit value.
4. Attenuation: Minimum test results for the worst pair.
5. Return Loss: Minimum test results for the worst pair as measured from each end of the link.
6. NEXT, ELFEXT, ACR: Minimum test results documentation for the worst pair combination as measured from each end of the link.
7. PSNEXT, PSELFEXT, and PSACR: Minimum test results documentation for the worst pair as measured from each end of the link.

END OF SECTION 271500

SECTION 272100
DATA COMMS AND NETWORK EQUIPMENT

PART 1 - GENERAL

1.1 PROJECT SCOPE SUMMARY

A. Subject to the General and Special Conditions, this section shall specify…

B. Section Includes:

1. Core switch in MDF
2. Access Switch in IDF
3. Wireless Access Point (WAP)
4. Rack UPS
5. Integrated Service Router

C. The Contractor shall provide, install and test a complete network system of switch components. The Contractor shall be responsible for the compatibility of all equipment in the network and configuration of the equipment. The network shall consist of a 1000Base-FX fiber optic backbone and 10/100/1000 BASE-TX Ethernet to the workstation and peripheral equipment. All system components shall be VLAN tagging compatible (IEEE802.1Q).

1.2 DEFINITIONS

A. Definitions

B. Abbreviations

1.	ANSI	American National Standards Institute
2.	ATM	Asynchronous Transfer Mode
3.	EIA	Electronics Industries Alliance
4.	Gbps	Gigabits per second
5.	IEEE	Institute of Electrical and Electronic Engineers
6.	ISO	International Organization for Standardization
7.	Mbps	Megabits Per Second
8.	MIMO	Multiple-In and Multiple-Out
9.	Multi-path	The possible multiple routes of a single source of RF energy due to reflection, refraction, or diffraction.
10.	NEC	National Electrical Code
11.	NEMA	National Electrical Manufacturing Association
12.	RF	Radio Frequency: Signal generated by a radio transmitter and sent out through an antenna. The frequency of the transmission

is described in terms of the number of cycles per second or Hertz (Hz).

13. SFP Small Form-Factor Pluggable – Hot-pluggable transceiver used for both telecommunication and data communication applications. Comes in both copper and fiber.
14. SNMP Simple Network Management Protocol
15. TIA Telecommunications Industry Association
16. TR Telecommunications Room

1.4 COORDINATION

A. Refer to General or Special Conditions.

B. HCCS for configuration and integration into the overall LAN

1.5 QUALITY ASSURANCE

A. Assure that the "as installed" system is correct and complete per construction documents: including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.

B. Owner/Architect/Engineer retains the right to access and inspect all work during the entire duration of the project and any items that do not adhere to the standards, reference, contract, bid, or project documents will be corrected immediately at the expense of the contractor.

C. UL Compliance: Provide products that are UL-classified and labeled.

D. Installer Qualifications

1. Installer shall have a minimum certification of Cisco CCNA.
2. Knowledge of NEC standards.
3. Knowledge of EIA/TIA standards.
4. Five (5) years experience in the installation of local and wide area network hardware and software including hubs, routers, switchers, terminating and testing.
5. Five (5) years experience in the installation and configuration of 10Base Ethernet, 100Base Ethernet, FDDI, ISDN, ATM and Token Ring networks.

6. Five (5) references for projects of equivalent scope, type and complexity of work completed within the last five (5) years. The Contractor shall submit as proof, supporting documents and the names, addresses and telephone numbers of the operating personnel who can be contacted regarding the installation system.
7. Must be certified by the equipment manufacturers to install and configure the specified products.

E. Install products only by qualified technicians.

F. Provide all electronic equipment with the UL label when applicable.

G. Comply in every way with the requirements of local and City laws and ordinances, the National Board of Fire Underwriters, and the National Electrical Code. Anything in the plans or specifications that does not strictly comply with the above laws, ordinances, and rules must be referred to the attention of the Engineer for a decision before proceeding. No change in the plans or specifications shall be made without full consent in writing of the Engineer.

H. Contractor is responsible to ensure equipment has the correct modules, quantities, and firmware updates for a complete and functional system. If drawings or specifications are not accurate, contractor shall notify owner of discrepancy prior to bid. Owner will not be responsible to pay for any additional equipment that contractor left out to make the system completely functional.

1.6 WARRANTY

A. Provide in accordance with Division 01.

B. Provide a three (3) year warranty on all active network products and installation.

C. Provide the Owner with on-line telephone support for the network active products and configuration for a period of two (2) years.

D. The Contractor shall bear the burden to replace or repair any such defective products during the three (3) year period at his cost including labor and materials.

PART 2 - PRODUCTS

2.1 CORE NETWORK SWITCH

The standard configuration for the CORE switch is shown in the table below.

CORE - TYPE 1	
PART NUMBER	DESCRIPTION
C9606R Chassis	6 Slot Chassis, 4 Line Card Slots, 2 Sup Engine Slots, 4 PS Bays
C9606R	Cisco Catalyst 9600 Series Supervisor Engine 1
C9606R	Cisco Catalyst 9600X Series Supervisor Engine 2
C9600-LC-40YL4CD	Combo Line Card, 40 ports 1/10/25GE SFP and 2 ports 40/100GE QSFP Uplinks
C9600-LC-24C	Cisco Catalyst 9600 Series 24-port 40GE/100GE line card
C9600-LC-48YL	Cisco Catalyst 9600 Series 48-port 25GE/10GE1 SFP28 line card
C9600-PWR-3KWAC	3000W Power Supply, Qty=4
CAB-C19-CBN	Cabinet Jumper 16A, 250VAC, Qty=4
C9606-FAN	Fan Tray, 1621 BTU (max)
C9606-RACK-KIT	Cisco Catalyst 9600 Series 6 slot chassis Rack Mount
C9600-DNA-A-5Y	C9600 Cisco DNA Advantage Software subscription, 5 Year License

2.2 48 PORT ACCESS NETWORK SWITCH TYPE 1

A. Usage: Data Center Server Cabinets. 2 per cabinet

48 PORT ACCESS - TYPE 1 (10GE)	
PART NUMBER	DESCRIPTION
C9300-48P-E	Catalyst 9300 48-port PoE+, Network Essentials

2.6 WIRELESS ACCESS POINT (WAP)

A. Provide where shown on drawings

B. Provide 2 CAT 6A cables for each WAP

C. Compliance: 802.11 a,b,g,n,ac,ax

D. Mounting brackets.

E. Provide indoor unit for building interior, outdoor unit for building exterior.

F. Cisco/Meraki MR52 or owner approved equal.

G. Provide mobility controller in MDF if not provided by owner. Contractor to verify exact requirements.

2.7 UNINTERRUPTABLE POWER SUPPLY (UPS)

A. Project is providing Room UPS. Reference Division 26.

2.8 Power Distribution Unit (PDU)

A. Reference 271100

2.10 INTEGRATED SERVICE ROUTER

A. Cisco ONE ISR 4431 (4GE,3NIM,8G FLASH,4GDRAM,IPB)

B. SNTC-8X5XNBD C1 ISR 4431 (4GE,3NIM,8G FLASH)

C. IP Base License for Cisco ISR 4400 Series

D. AC Power Supply for Cisco ISR 4430

E. AC Power Cord (North America), C13, NEMA 5-15P, 2.1m

F. 8G eUSB Flash Memory for Cisco ISR 4430

G. Cover for empty 2nd Power Supply slot on Cisco ISR 4430

H. 2G DRAM (1 DIMM) for Cisco ISR 4400 Data Plane

I. 4G DRAM (1 x 4G) for Cisco ISR 4400

J. 64-channel DSP module

K. Cisco ONE Advanced UC Perpetual License ISR 4400

L. SWSS UPGRADES C1 Advanced Perpetual Lic ISR 4400

M. Unified Communication License for Cisco ISR 4400 Series

N. SRST-25 Seat License (CME uses CUCME Phone License ONLY)

O. Unifed Border Element Enterprise License – 25 sessions

P. Tracker PID v01 Adv Perpetual ISR4400S - no delivery

Q. Cisco ISR 4400 Series IOS XE Universal

R. Cisco Survivable Remote Site Telephony (SRST) License

S. SRST-100 Seat License (CME uses CUCME Phone License ONLY)

T. 2 port Multfex Trunk Voice/Clear-channel Data T1/E1 Module

U. 32-channel DSP module

V. 4-port Network Interface Module - FXO (Universal)

W. 4-Port Network Interface Module - FXS, FXS-E and DID

2.11 MANUFACTURERS

A. Cisco

B. Cisco/Meraki

C. APC

PART 3 - EXECUTION

3.1 PRODUCT HANDLING

A. The Contractor shall be responsible for any and all loss or damage in the shipment and delivery of all material until transfer of title.

3.2 PREPARATION

A. Heating, ventilation, and air conditioning sensors and control equipment must maintain the room temperature between 64° F and 87° F. The relative humidity must be 20% to 80%.

3.3 INSTALLATION

A. Install components in accordance with contract drawings, manufacturer's instructions and approved submittal data.

B. System installation and construction methods shall conform to the requirements of the Federal Communications Commission.

C. The Contractor shall install all system components including furnished equipment, and appurtenances in accordance with the manufacturer's instructions, and adjustments required for a complete and operable system.

D. Grounding shall be installed as necessary to preclude ground loops, noise, and surges from adversely affecting system operation.

E. The Owner Representative shall perform final configuration of the network equipment. This includes, but is not limited to: VLAN configuration, IP addressing schemas, final port assignments, and trunking/bonding configurations. Installation contractor shall ensure that the proper documentation is provided to assist in the final system configuration.

3.4 HARDWARE INSTALLATION

A. The Contractor shall obtain written permission from the Owner's representative (Engineer) before proceeding with any work which requires cutting into or through any part of the building structures such as, but not limited to, girders, beams, concrete, carpeted or tiled floors, partitions or ceilings. The Contractor shall also consult with the Owner's representative before cutting into or through any part of the building structures where fireproofing or moisture proofing could be impaired.

B. The Contractor shall take all steps necessary to ensure that all public areas remain clear or are properly marked during installation or maintenance.

C. The Contractor shall develop a detailed network map to be utilized as a road map during the implementation of the LAN. This map shall show all segments, all interconnects between segments and all active network devices. This network map shall not include the individual nodes interconnected to each concentrator, but will have the modules, interfaces, protocols, addresses and other identifying features for each concentrator and other active device.

D. The Contractor shall also develop a Cable Plant interconnectivity chart showing all fiber patch panels and individual identifiers for each fiber associated with the interconnectivity of each network device.

E. Prior to installing Wireless Access Points, conduct and document an RF site survey to determine the maximum operating range between an AP (fixed location) and mobile stations for a specified transmit power level. Survey shall also identify holes of coverage due to multi-path, interference sources, and interference from other wireless installations.

F. The contractor shall place materials only in those locations that have been previously approved. The Owner's representative Engineer shall approve any other locations, in writing.

3.5 SYSTEM STARTUP

A. The Contractor shall not apply power to the system until after:

1. System and components have been installed and inspected in accordance with the manufacturer's installation instructions.
2. A visual inspection of the system components has been conducted to ensure that defective equipment items have not been installed and that there are no loose connections.
3. System wiring has been tested and verified as correctly connected as indicated.
4. All system grounding and transient protection systems have been verified as properly installed and connected, as indicated.
5. The Owner's representative Engineer and the IT Representative have approved the installation.

B. Satisfaction of the above requirements shall not relieve the contractor of responsibility for incorrect installations, defective equipment items, or collateral damage as a result of contractor's deficient work/defective equipment.

3.6 ACCEPTANCE TESTING

A. The contractor shall develop and execute an onsite acceptance-testing program.

B. The plan shall address all requirements identified in this specification and test all contractor supplied cabling and hardware components. The plan shall follow accepted industry testing practices and have a method of independent verification described.

C. Any specified item that does not satisfy the requirements of this specification shall be replaced, upgraded, or added by the contractor as necessary to correct the noted deficiencies. After correction of a noted deficiency, re-testing shall be performed to verify the effectiveness of the corrective action.

3.7 IDENTIFIERS, LABELS AND LABELING SYSTEM

A. All Identification and Labeling shall follow Specification 270553.

END OF SECTION 272100

SECTION 274100
AUDIO VIDEO SYSTEM

PART 1 - GENERAL

1.1 SCOPE SUMMARY

A. This section includes Specifications for Audio Video System (AVS) field devices, and system integration and programming as required by Owner.

B. Work under this contract shall include the furnishing of materials, labor, tools, transportation services, etc., necessary to complete the installation of the audio/video systems and their related systems.

C. These Specifications may include components that are not required. Use drawings to determine the quantities and parts to be installed. Include in the original bid, all equipment, software, cabling, connectors, etc., whether specified here or not, such that said bid fulfills the intent of these Specifications and renders these systems functional and fully operational.

D. Contractor shall provide all required licenses.

1. The Contractor shall be experienced in installation of similar or larger size and scope within the last three (3) years.
2. The Contractor will have at least one member of the Project Management team CTS certified.
3. Capabilities: The Contractor shall furnish, at the request of the Owner and to the satisfaction of the Owner, General Contractor and Consultant, information demonstrating that the Contractor has:
    a. Satisfactory work in similar completed installations.
    b. Adequate physical plant and staff to accomplish the work described herein.
    c. Adequate financial condition for the commitments of the project.
4. Product Dealership: If the Contractor is not an Authorized Dealer or franchised supplier for the manufacturer(s) of significant items in the audio system, the Contractor shall make provisions for the warranty repair and maintenance of that equipment through subcontracting arrangements with an Authorized Dealer or franchised supplier. This subcontractor arrangement shall be described on the Identification of Proposed Subcontractors Form and is subject to approval by the Owner, General Contractor, Architect and Consultant.

E. Related Specification Sections:

1. Section 01
2. Section 27 00 00 - Communications
3. Section 27 05 26 - Telecommunication Grounding and Bonding
4. Section 27 05 28 - Interior Communication Pathways

5. Section 27 05 43 - Exterior Communication Pathways
6. Section 27 05 53 - Testing Administration Identification
7. Section 27 11 00 - Communication Cabinets and Equipment Rooms
8. Section 27 13 00 - Backbone and Riser Media Infrastructure
9. Section 27 15 00 - Horizontal Media Infrastructure
10. Section 27 21 00 - Data Communication Network Equipment
11. Section 24 41 00 - Audio Video Systems
12. Section 28 13 00 - Access Control System
13. Section 28 23 00 - Digital Video Management System

F. References:

Section 270000 in its entirety shall be included as part of this specification.

1.2 DEFINITIONS

A. Definitions

1. ARCHITECT – FSGROUP ARCHITECTS
2. CONTRACTOR - TBD
3. CONSULTANT – PGA ENGINEERS
4. OWNER – FORT BEND COUNTY

B. Abbreviations

1.	ADA	Americans With Disabilities Act
2.	AEC	Auto Echo Cancelation.
3.	AFF	Above Finished Floor
4.	ANSI	American National Standards Institute
5.	AVCS	Audio Video Control System
6.	AVI	Audio Visual Integrator
7.	AVLAN	Audio Visual Local Area Network
8.	AVO	Audio Visual Outlet
9.	BLAN	Business Local Area Network
10.	CCTV	Closed Circuit Television
11.	DANTE	Digital Audio Network Through Ethernet
12.	DSP	Digital Sound Processor
13.	DTO	Data Terminal Outlet
14.	EDID	Extended Display Identification Data
15.	EIA	Electronics Industries Alliance
16.	FPD	Flat Panel Display
17.	HDBT	HDBaseT (Video Standard)
18.	HDCP	High-bandwidth Digital Content Protection
19.	HDMI	High-Definition Multimedia Interface
20.	IDF	Intermediate Distribution Frame
21.	IEEE	Institute of Electrical and Electronic Engineers
22.	ISO	International Organization for Standardization

23. LAN Local Area Network
24. Multi-path The possible multiple routes of a single source of RF energy due to reflection, refraction, or diffraction.
25. NEC National Electrical Code
26. NEMA National Electrical Manufacturing Association
27. POE Power Over Ethernet
28. RU Rack Unit (1.75”) of vertical space in an AV Rack
29. UL Underwriters Laboratories American National Standards Institute:
30. UPS Uninterruptible Power Supply
31. VOIP Voice over Internet Protocol.

C. Project Record Documents

1. O&M Manual -This manual shall contain detailed instructions on how to perform regular and preventive maintenance on all components of the AVS that can be performed by Owner's staff. One hard copy and one reproducible/electronic copy shall be provided. Manual shall include:
    a. Description of unit and component parts, including complete nomenclature and commercial number of all replaceable parts.
    b. Operating procedures: Include start-up; break-in; routine and normal operating instruction; regulation, control, stopping, shutdown and emergency instructions; and special operating instructions as applicable.
    c. Maintenance procedures: Include routine operations; guide to trouble shooting; servicing; description of sequence of operation; as-installed control diagrams; as installed color-coded piping and wiring diagrams; and a list of spare parts and recommended quantities to be maintained in storage on-site.
    d. Include trouble-shooting guide for repairs that can be performed by Owner's staff.
    e. Include manufacturer's product data with each sheet annotated to clearly identify data applicable to installation and delete references to inapplicable information.
    f. Supplement product data with drawings as necessary to clearly illustrate relations of component parts of equipment and systems.
    g. Include copy of each manufacturer's warranty and give information sheet for proper procedures in event of failure and instances that may affect validity of warranties.
2. As-built documentation. Notes shall be kept during initial installation and shall be made a permanent part of the installation manual pages as required. Provide Owner with a hard copy set of drawings and an electronic file showing any modifications or clarifications not present on original Contract Drawings including equipment field wiring diagrams, electrical circuitry and service schematics.
3. Contractor shall also deliver to Owner copies of all licenses, registrations, documentation, disks and other media as may have been included with those commercially available software packages provided with system. In addition, Contractor shall ensure that all licenses, registrations and warranties have been transferred to Owner prior to final software turnover.

1.3 COORDINATION

A. Refer to General or Special Conditions.

B. Refer to Division 26, Electrical Work

C. Refer to Division 27, Telecommunications

D. Refer to Division 28 (Electronic Safety and Security)

1.4 QUALITY ASSURANCE

A. Contractor Qualifications:

1. The contractor must be certified by the manufacturer of the products to be installed adhere to the engineering, installation and testing procedures, and utilize the authorized manufacturer components and distribution channels in provisioning this Project. Submit manufacturer certification as part of Submittals 1.4 above.
2. All members of the installation team must be certified by the manufacturer(s) as having completed the necessary training to complete their part of the installation.
3. Contractor shall provide five references for projects of approved equivalent scope, type and complexity of work completed within the last five years.

B. Equipment and materials supplied shall be a standard product of manufacturers regularly engaged in the manufacture and installation of an AVS and shall be the manufacturer's latest standard design. Items of the same classification shall be identical. This requirement includes equipment, modules, assemblies, parts, and components. Electrically powered equipment shall be UL approved. Electronic equipment shall meet the requirements of CFR 47 Part 15.

C. All hardware, software, firmware, and/or operating system requirements given are the minimum requirements. The Contractor's product shall meet or exceed these requirements. The product selected shall meet the operational, functional, and performance requirements specified herein. Additionally, due to the rapid advancement and antiquation of technology related products, the supplied product shall be the “contemporary technical equivalent” of that specified. “Contemporary technical equivalent” shall be based on a comparison of technology at the time of publication of specification to the technology at the time of the first product submittal. Final product approval is at the sole discretion of the Salvation Army or Owners Representative.

D. Assure that the, "as installed" system is correct and complete per construction documents: including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.

E. Owner/Architect/Engineer retains the right to access and inspect all work during the entire duration of the project and any items that do not adhere to the standards, reference, contract, bid, or project documents will be corrected immediately at the expense of the contractor.

F. UL Compliance: Provide products that are UL-classified and labeled.

1.5 TRAINING

A. Training: The Contractor shall provide one technician with thorough knowledge of the installed system for no less than 4 hours of user training. It shall include basic room operation, system care, and troubleshooting as a minimum requirement.

B. First Major Use: The Contractor shall provide one technician with thorough knowledge of the installed system for first major uses of the completed system as determined by the Consultant.

1.6 SCOPE OF WORK

A. The Contractor shall provide Audiovisual System(s) compatible with the Owner's communications systems (i.e. telephone, video, and computer systems) and operations.

B. The Contractor shall provide equipment that, where required, shall conform to the applicable requirements of the Underwriters Laboratories, Inc., local codes, the National Electrical Code and any other governing codes. Such items shall bear a label or mark indicating their conformance to the above requirements.

C. The Contractor shall provide complete and operational system(s) configured and installed for user-friendly operation and low maintenance. Provide for reprogramming of the remote control software two (2) times, as directed by the Owner or Consultant, before Final Acceptance. Provide for two (2) level adjustments of the Audio System(s), as directed by the Owner or Consultant, before Final Acceptance. On-site factory technical support shall be provided, if necessary, to assure performance.

D. The Contractor shall restore all finish hardware to original condition including painting, ceiling modifications, and attachments as specified in Division 09 Finishes.

E. Installation work shall be in compliance with all applicable standards and all governing codes and regulations of the authorities having jurisdiction and the Contract Documents.

F. The Contractor shall validate exact location and installation of the equipment, power, conduit, and raceway systems.

G. All software affiliated with the equipment, including but not limited to, the audio DSP, Control System, etc. is the property of the Owner and will be provided for archival purposes at project acceptance.

H. The Contractor shall supply all control software, programming service codes, programming notes, files interactive source codes, all media and associated software, touch panel design, all passwords, licenses, dangles and "keys" or other associated control or programming items at no additional cost to the Owner at commissioning.

I. If utilizing / integrating existing audio DSP and/or Control Systems into the project is necessary for a functional system, it will be the responsibility of the contractor to modify the existing code / DSP files.

PART 2 - PRODUCTS

2.1 ALTERNATE ACCEPTABLE PRODUCTS

A. Alternate Manufacturers: Products manufactured by the listed Alternate Acceptable Manufacturers for each category are acceptable as follows:

1. The video, audio, and control performances of the alternate product meet or exceed the performances of the ‘basis of design’ product.
2. The functionality and features of the alternate product meets or exceeds the functionality of the ‘basis of design’ product.
3. The number and type of inputs and outputs of the alternate product meets or exceeds the required number and type as shown on the drawings.
4. If space is critical, the size of the alternate product does not exceed the size of the ‘basis of design’ product.
5. The color of the alternate product meets the requirements of the project.

B. Acceptance of Alternate Product: The final acceptance of the alternate product is the sole discretion of the Consult and/or Owner.

1. Contractor shall submit manufacturer’s data or spec sheet to Consultant for final approval of any alternate products.

2.2 VIDEO ENDPOINTS

A. TRANSMITTER

1. Basis of Design: Crestron DM-TX-4KZ-100-C-1G-B-T
   a. HDMI Inputs: 1
   b. HDBaseT Outputs: 1
   c. RS-232 Ports: 1
   d. IR Ports: 1
2. Approved Substitute
   a. Extron

B. RECEIVER

1. Basis of Design: Crestron DM-RMC-4KZ-SCALER-C
   a. HDBaseT Inputs: 1
   b. HDMI Inputs: 1
   c. HDMI Outputs: 1
   d. Lan Port: 1
   e. Balanced Stereo Audio Outputs: 1
   f. Rs-232 Ports: 1`
   g. IR Ports: 1
   h. Relay Ports: 2

2. Approved Substitute
    a. Extron

2.3 FLAT PANEL DISPLAY

A. LED DISPLAY - TYPE 1

1. Basis of Design: LG: 55UH5J-H
    a. Type: 55" LED Display
    b. Aspect Ratio: 16:9
    c. Native Resolution: 3840 x 2160 (UHD)
    d. HDMI Inputs: 3
    e. LAN Port: 1
    f. RS-232 Ports: 1
2. Approved Substitute
    a. Panasonic
    b. Planar
    c. NEC

B. LED DISPLAY - TYPE 2

1. Basis of Design: LG: 65UH5J-H
    a. Type: 65" LED Display
    b. Aspect Ratio: 16:9
    c. Native Resolution: 3840 x 2160 (UHD)
    d. HDMI Inputs: 3
    e. LAN Port: 1
    f. RS-232 Ports: 1
2. Approved Substitute
    a. Panasonic
    b. Planar
    c. NEC

C. LED DISPLAY - TYPE 3

1. Basis of Design: LG: 75UL3J-E
    a. Type: 75" LED Display
    b. Aspect Ratio: 16:9
    c. Native Resolution: 3840 x 2160 (UHD)
    d. HDMI Inputs: 3
    e. LAN Port: 1
    f. RS-232 Ports: 1
2. Approved Substitute
    a. Panasonic
    b. Planar
    c. NEC

D. LED DISPLAY - TYPE 4

1. Basis of Design: LG: 86UL3J-E
    a. Type: 86" LED Display
    b. Aspect Ratio: 16:9
    c. Native Resolution: 3840 x 2160 (UHD)
    d. HDMI Inputs: 3
    e. LAN Port: 1
    f. RS-232 Ports: 1
2. Approved Substitute
    a. Panasonic
    b. Planar
    c. NEC

2.4 VIDEO CONFERENCING

A. ALL IN ONE VIDEO CONFERENCING BAR

1. Basis of Design: LOGITECH RALLY BAR or approved equal.
    a. Camera: Integrated 4K PTZ
    b. Microphones: Integrated Beam-Forming array.
    c. Content Input: HDMI
    d. Conferencing Solution: Microsoft Teams, ZOOM, etc.

B. VIDEO CONFERENCING BAR TOUCH PANEL or approved equal.

1. Basis of Design: LOGITECH TAP
    a. Power: POE
    b. Content Input: HDMI
    c. Conferencing Solution: Microsoft Teams, Zoom, etc.

2.5 MICROPHONES

A. Gooseneck/Podium

1. Basis of Design: Shure Microflex Mx418d/C
    a. Element: Condenser
    b. Pattern: Cardioid
    c. Length: 18"
    d. Mount: Furnish with Standard Mount Kit.
    e. Color: By Owner (TBD)
2. Approved Substitute
    a. AKG
    b. Audio Technica
    c. Clock Audio
    d. Electro-Voice

e. Neumann.
f. Sennheiser.

B. Wireless.

1. Basis of Design: Shure Microflex Series.
   a. MXWAPT8 - 4-channel Wireless Access Point
      1) Quantity: 2
   b. MXWNCS4 Port Networked Charging Station
      1) Quantity: 2
   c. MXW1 – BODY PACK – ***Include WL185 lavalier Microphone.***
      1) Quantity: 4
   d. MXW2/SM58 – Handheld Microphone
      1) Quantity: 4

2.6 LOUDSPEAKERS

A. 70V Ceiling Speaker – TYPE 1

1. Basis of Design: JBL Control 26CT
   a. Driver: Two; 6.5" Low with A 3/4" Hi
   b. Freq. Range: 75 Hz – 20 kHz
   c. Power Handling: 150W Program, 75 Pink noise.
   d. Mount: Furnish with standard mount kit.
   e. Color: By Owner (TBD)
2. Approved Substitute
   a. SoundTube
   b. Tannoy

B. 70V Pendant Speaker – TYPE 2

1. Basis of Design: JBL Control 64 P/T
   a. Driver: Two; 6.5" Low with A 3/4" Hi
   b. Freq. Range: 75 Hz – 20 kHz
   c. Power Handling: 150W Program, 75 Pink noise.
   d. Mount: Furnish with standard mount kit.
   e. Color: By Owner (TBD)
2. Approved Substitute
   a. SoundTube
   b. Tannoy

2.7 AMPLIFIERS

A. 70V AMPLIFIER <=200W

1. Basis of Design: QSC SPA2-200
    a. Channels: One, Or Two Channels Bridged.
    b. Minimum Power: 100 Watts Per Channel Per 70.7- Volt Load
    c. Minimum Headroom: 20% Of Total
2. Approved Substitute
    a. Crown
    b. Extron
    c. Lab Gruppen

B. 70V AMPLIFIER >=300W

1. Basis of Design: QSC CX602V
    a. Channels: One, Or Two Channels Bridged.
    b. Minimum Power: 100 Watts Per Channel Per 70.7- Volt Load
    c. Minimum Headroom: 20% Of Total
2. Approved Substitute
    a. Crown
    b. Extron
    c. Lab Gruppen

2.8 DIGITAL SIGNAL PROCESSOR

A. SELF CONTAINED UNIT

1. Basis of Design: QSC 110F
    a. Microphone / Line Level Inputs: 8 Channels
    b. Line Level Outputs: 8 Channels
2. Approved Substitute
    a. Biamp
    b. BSS
    c. Clear One

2.9 VIDEO CONFERENCING CAMERA

A. PTZ CONFERENCE CAMERAS

1. Basis of Design: QSC NC Series
    a. NC-12x80: 12x optical zoom, 80° horizontal field of view
    b. NC-20x60: 20x optical zoom, 60° horizontal field of view

2.10 VIDEO CONFERENCING BRIDGE

A. I/O-USB Bridge

1. Basis of Design: QSC I/O-USB Bridge
   a. Driverless USB 2.0 Connection
   b. Built for BYOD (plug and play)
   c. Resolutions up to 1080p
   d. Emulates webcam video and AEC speakerphone audio over single USB connection
   e. Emulates computer soundcard
   f. Bridges audio and video over Q-LAN to USB
   g. Route USB HID events across Q-LAN networks
   External Power Supply or PoE enabled (802.3af)

2.11 VIDEO MATRIX SWITCHER

A. SELF CONTAINED UNIT

1. Basis of Design: Crestron DMPS3-4K-150-C
   a. HDMI Inputs: 4
   b. HDBaseT Inputs: 2
   c. HDMI Outputs: 1
   d. HDBaseT Outputs: 1
2. Approved Substitute
   a. AMX
   b. Extron

B. MODULAR UNIT

1. Basis of Design: Crestron DM-MD8X8-CPU3
   a. HDMI Inputs: 0-8
   b. HDBaseT Inputs: 0-8
   c. HDMI Outputs: 0-8
   d. HDBaseT Outputs: 0-8
2. Approved Substitute
   a. AMX
   b. Extron

2.12 WIRELESS VIDEO

A. WIRELESS VIDEO SYSTEM

1. Basis of Design: Mersive Solstice Pod
   a. Dual HDMI Outputs for Dual Screen Rooms
   b. Dual USB for Camera and Audio
   c. Wired or Wireless Network Connection
   d. Power-over-Ethernet (PoE) Compatible
2. Approved Substitute
   a. Barco Clickshare CX50 ***<u>Gen 1</u>***

2.13 OVERHEAD PROJECTORS

A. LASER PORJECTOR

1. Basis of Design: Panasonic: PT-RCQ80
   a. Lumens: 8000
   b. Type: 1 Chip DLP Laser
   c. Aspect Ratio: 16:10, Native, 16:9 Compatible
   d. Native Resolution: (4K Downscaled)
   e. HDMI Inputs: 1
   f. DVI-D Inputs: 1
   g. HDBaseT Inputs: 1
   h. LAN Port: 1
   i. RS-232 Ports: 1
2. Approved Substitute
   a. Barco
   b. Christie
   c. Sony

2.14 MOTORISED PROJECTION SCREEN

A. Basis of Design: DRAPER ACCESS E 184”

1. Surface Material MATTE WHITE
2. Aspect Ratio: 16:9
3. Voltage: 110V

B. Approved Substitute
   a. DA-LITE

2.15 MOTORISED PROJECTOR LIFE

A. Basis of Design: DRAPER Scissor Lift SL6

1. Extension: 6’ Max
2. Max Load: 125lb
3. Voltage: 115V

C. Approved Substitute
   a. Chief

2.16 A/V CONTROL EQUIPMENT

A. CONTROL PROCESSOR

1. Basis of Design: Crestron CP4

a. LAN Port: 1
b. Balanced Stereo Audio Outputs: 1
c. RS-232 Ports: 3
d. IR Ports: 8
e. Relay Ports: 8

2. Approved Substitute
a. AMX
b. Extron

B. Wired Touch Panel – TYPE 1

1. Basis of Design: Crestron TSW-1070-B-S
a. POE LAN Port: 1

C. Wired Touch Panel – TYPE 3

1. Basis of Design: Crestron MPC3-302-W
a. POE LAN Port: 1
b. Cresnet Port: 1
c. Relay Ports: 2
d. COM/RS-232 Ports: 1
e. I/O Ports: 1

2.17 ROOM SCHEDULING EQUIPMENT

A. Wall Mounted Scheduling Panel

1. Basis of Design: Crestron + Microsoft Teams Panel
a. LAN PoE Port: 1
b. Microsoft Exchange Server Support

2. Approved Substitute
a. Evoko
b. Logitech

2.18 UNINTERRUPTIBLE POWER SUPPLY

A. Horizonal Rack-Mounted Ups

1. Basis of Design: Tripp Lite SMART1000RM1U
a. Output Volt Amp Capacity (VA): 1000
b. Output Watt Capacity (WATTS): 800
c. Full Load Runtime: 4 MIN. (800W)
d. Half Load Runtime: 14 MIN. (400W)

2. Approved Substitute
a. APC

b. EATON

2.19 HARDWARE

A. Ceiling Box

1. Basis of Design: FSR CB 22P
2. Approved Substitute
   a. Chief
   b. Middle Atlantic

B. Floor Box

1. Basis of Design: Wiremold Evolution EFB45
   a. Capacity: 4 x 1-Gang
2. Approved Substitute
   a. FSR

C. Wall Box

1. Basis of Design: Chief PAC 526
2. Approved Substitute
   a. FSR

D. Equipment Rack

1. Basis of Design: Middle Atlantic SRSR-2-14
   a. TYPE: Slide-out Rotating Equipment Rack
   b. Rack Units (RU): 14
2. Approved Substitute
   a. CPI
   b. B-LINE
   c. Legrand

E. Cable Cubby

1. Basis of Design: Extron Cable Cubby 500
   a. TYPE: Retractable Cable Cubby
   b. Modules: 4
2. Approved Substitute
   a. Crestron
   b. Legrand

F. DISPLAY MOUNTS

1. WALL MOUNT Basis of Design: CHIEF XTM1U

2. CEILING MOUNT Basis of Design: CHIEF XCM1U

PART 3 - EXECUTION

3.1 INSTALLATION

A. All devices and components shall be compatible and installed in accordance with contract drawings, manufacturer's instructions and approved submittal data.

B. The Contractor shall install all system components including furnished equipment, and appurtenances in accordance with the manufacturer's instructions, and adjustments required for a complete and operable system.

C. Adjust all cameras to specified resolution for area of install. Make all necessary adjustments to obtain clear, crisp images and desired field of view to the Owners Representative's satisfaction. It is the responsibility of the contractor to select camera lenses as necessary to obtain required field of view. No additional funding shall be provided for additional lenses.

D. ***Coordinate with Owners Representative for all system programming requirements.*** Obtain a printout of all programming prior to system check out and final acceptance inspection.

E. Install the initial system, setup parameters, and program all system components as necessary for proper operation. Submit all programming on electronic media to the Owner.

F. Install all Point-to-Point wiring with appropriate terminal connections for every wire and component termination so that all connections are mechanically and electrically secure.

G. Install field wiring in continuous lengths, without splices.

H. Verify upon job completion that all wiring and terminations are clearly labeled using the Salvation Army standards to identify the wire and terminal.

3.2 PRODUCT HANDLING

A. The Contractor shall be responsible for any and all loss or damage in the shipment and delivery of all material until transfer of title to the Salvation Army.

3.3 HARDWARE INSTALLATION

A. The Contractor shall obtain written permission from the Salvation Army before proceeding with any work which requires cutting into or through any part of the building structures such as, but not limited to, girders, beams, concrete, carpeted or tiled floors, partitions or ceilings. The Contractor shall also consult with the Owner's Representative before cutting into or through any part of the building structures where fireproofing or moisture proofing could be impaired.

B. The Contractor shall take all steps necessary to ensure that all public areas remain clear or are properly marked during installation or maintenance.

C. The Contractor shall develop a detailed network map to be utilized as a road map during the implementation of the LAN. This map shall show all segments, all interconnects between segments and all active network devices. This network map shall not include the individual nodes interconnected to each concentrator, but will have the modules, interfaces, protocols, addresses and other identifying features for each concentrator and other active device.

D. The Contractor shall also develop a Cable Plant interconnectivity chart showing all fiber patch panels and individual identifiers for each fiber associated with the interconnectivity of each network device.

E. Prior to installing Wireless Access Points, conduct and document an RF site survey to determine the maximum operating range between an AP (fixed location) and mobile stations for a specified transmit power level. Survey shall also identify holes of coverage due to multi-path, interference sources, and interference from other wireless installations.

F. The contractor shall place materials only in those locations that have been previously approved. The Owner's Representative shall approve any other locations, in writing.

3.4 SYSTEM STARTUP

A. The Contractor shall not apply power to the system until after:

1. System and components have been installed and inspected in accordance with the manufacturer's installation instructions.
2. A visual inspection of the system components has been conducted to ensure that defective equipment items have not been installed and that there are no loose connections.
3. System wiring has been tested and verified as correctly connected as indicated.
4. All system grounding and transient protection systems have been verified as properly installed and connected, as indicated.
5. The Owner's Representative have approved the installation.

B. Satisfaction of the above requirements shall not relieve the contractor of responsibility for incorrect installations, defective equipment or collateral damage as a result of contractor's deficient work/defective equipment.

3.5 ACCEPTANCE TESTING

A. The contractor shall develop and execute an onsite acceptance-testing program.

B. The plan shall address all requirements identified in this specification and test all contractor supplied cabling and hardware components. The plan shall follow accepted industry testing practices and have a method of independent verification described.

C. Any specified item that does not satisfy the requirements of this specification shall be replaced, upgraded, or added by the contractor as necessary to correct the noted deficiencies. After correction of a noted deficiency, re-testing shall be performed to verify the effectiveness of the corrective action.

3.6 IDENTIFIERS, LABELS AND LABELING SYSTEM

A. All Identification and Labeling shall follow Specification: 270553–Identification and Labeling of Communication Infrastructure. **Any deviation from the specification must be approved by the Owner's Representative prior to installation.**

END OF SECTION 274100

SECTION 276200
PUBLIC SAFETY DISTRIBUTED ANTENNA SYSTEMS (PSDAS)

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. This section includes the specifications for the installation of a Distributed Antenna System for the purpose of distributing Public Safety Radio throughout the Facility.
2. The carrier DAS is not in scope except for a raceway from roof to the MDF.
3. The carrier DAS is not part of the public safety DAS.
4. The Public Safety DAS is entirely specified within and will be provided as part of this project.
5. The contractor shall provide the necessary head end fiber interfaces and configuration required to provide a fully functional PS DAS system.
6. The antennas are connected via 50 Ohm coaxial cable to active Remote Units in the IDF closets or where shown on the drawings. The Remote Units are connected to a radio head-end via a fiber optic backbone cable.
7. Some common services supported by a Public Safety DAS shall include
8. 700 MHz Public Safety
9. 800 MHz Public Safety

1.2 DEFINITIONS

A. Abbreviations used include the following:
1. AC - Alternating Current
2. AHJ - Authority Having Jurisdiction
3. BIM - Building Information Modeling
4. BDA - Bidirectional Amplifier
5. BTS - Base Transceiver Station
6. CW - Continuous Wave
7. DAS - Distributed Antenna System
8. DC - Direct Current
9. EIRP - Effective Isotropic Radiated Power
10. EMI - Electromagnetic Interference
11. ER - Equipment Room
12. ERP - Effective Radiated Power
13. ERRC – Emergency Responder Radio Coverage
14. ICT - Information and Communication Technology
15. LMR - Land Mobile Radio
16. LTE - Long Term Evolution
17. MCU - Master Control Unit
18. MIMO - Multiple Input/Multiple Output (antenna)
19. PoE - Power over Ethernet
20. PIM - Passive Intermodulation

21. PTP - Point-to-Point
22. RF - Radio Frequency
23. RFI - Radio Frequency Interference
24. SNMP - Simple Network Management Protocol
25. TR - Telecommunications Room
26. UMTS - Universal Mobile Telecommunications System
27. UTP - Unshielded Twisted-Pair
28. UHF - Ultra High Frequency
29. VHF - Very High Frequency
30. VSWR - Voltage Standing Wave Ratio
31. WAN - Wide Area Network
32. WLAN - Wireless Local Area Network
33. WSP - Wireless Service Provider

1.3 REFERENCES

A. Related Sections: The references and standards listed herein shall be considered part of this specification. Bidder and Contractor shall conform to the following references and standards:

1. 270526 Telecommunications Grounding and Bonding
2. 270528 Interior Communication Pathways
3. 270543 Exterior Communication Pathways
4. 270553 Identification and Labeling of Communications Infrastructure
5. 271033 Queue Management System
6. 271045 Restroom Monitoring System
7. 271100 Communications Cabinets and Equipment Rooms
8. 271300 Backbone and Riser Media Infrastructure
9. 271500 Horizontal Media Infrastructure
10. 272100 Data Communications Network Equipment
11. 272200 PC, Laptop, and Servers Equipment
12. 274100 Electronic Visual Information Display System (EVIDS)
13. 275116 Public Address System
14. 276200 Public Safety Distributed Antenna System (PSDAS)

B. Specific reference in specifications to codes, rules, regulations, standards, manufacturer’s instructions, or requirements of regulatory agencies shall mean the latest printed edition of each in effect at the date of contract unless the document is shown dated.

C. Conflicts

1. Between referenced requirements: Comply with the one establishing the more stringent requirements.
2. Between referenced requirements and contract documents: Comply with the one establishing the more stringent requirements.

D. NFPA 1225 (2022), Standard for Emergency Services Communications

1. Pathway Survivability

a. Section 18.12.3.3, backbone cables and backbone cable components installed in buildings that are fully protected by an automatic sprinkler system in accordance with NFPA 13 shall not be required to have a fire resistance rating. They should conform to one of the following conditions:
b. Section 18.12.3.4 states that backbone cables and backbone cable components installed in areas that are not directly sprayed by fire sprinklers should have a fire resistance rating in accordance with 18.12.3.4(1)(a), 18.12.3.4(1)(b), or 18.12.3.4(1)(c), based on the fire resistance rating of the primary structural frame.
    1) 18.12.3.4(1)(a): backbone cables and backbone cable components installed in areas that are not directly sprayed by fire sprinklers should have a fire resistance rating of 2 hours if the primary structural frame of the building is required to have a fire-resistance rating of 2 hours or more or is classified as heavy timber construction.
    2) 18.12.3.4(1)(b): backbone cables and backbone cable components installed in areas that are not directly sprayed by fire sprinklers should have a fire resistance rating of 1 hour if the primary structural frame of the building is required to have a fire-resistance rating of 1 hour.
    3) 18.12.3.4(1)(c): backbone cables and backbone cable components installed in areas that are not directly sprayed by fire sprinklers should have a fire resistance rating only if the primary structural frame of the building requires a fire-resistance rating of 1 hour or more.

2. 18.3.1 Component Enclosures
    a. 18.3.1.1: battery systems used for the emergency power source should be contained in a NEMA 3R or higher-rated cabinet.
    b. 18.3.1.2: all repeater, transmitter, receiver, signal booster components, optical-to-RF and RF-to-optical converters, and external filters should be contained in a NEMA 4– or NEMA 4X–type enclosure(s).
    c. 18.12.1.3 requires that in-building emergency responder communication enhancement systems installed within buildings shall be listed and labeled in accordance with UL 2524, In-building 2-Way Emergency Radio Communication Enhancement Systems.
3. 18.13 Power Sources
    a. At least two independent and reliable power sources shall be provided for all RF emitting devices and any other active electronic components of the system: one primary and one secondary.
    b. At least two independent and reliable power sources shall be provided for all RF emitting devices and any other active electronic components of the system: one primary and one secondary.
4. 18.13.1 Primary Power Sources
    a. Supplied from a dedicated branch circuit.
    b. Permanently connected.
    c. Compliant with NFPA 72
    d. Protected from overvoltage.
5. 18.13.2 Secondary Power Source
    a. A storage battery dedicated to the system with 12 hours of 100% system operation capacity.
    b. An alternative power source of 12 hours at 100% system operation capacity as approved by the AHJ.

c. A 2-hour standby battery and connection to the facility generator power system, providing the facility generator powers system can support the complete system load for 12 hours.

1.5 DESIGN PARAMETERS

A. If a donor antenna exists, isolation shall be maintained between the donor antenna and all inside antennas and shall be a minimum of 15 dB above the signal booster gain under all operating conditions.

B. Downlink Signal Level (RSS): ≥ -95 dBm

C. Uplink Carrier/Noise Ratio: ≥ 20 dBm

D. Coverage Requirement for Public Safety: ≥ 95%

E. PIM: > -150 dBc (decibels relative to the carrier)

F. System Operating Margin: > 15 dB

G. Fade Margin: > 15 dB

H. Body Loss: 3 dB

I. Wall Loss: 5 dB

J. Battery backup for BDA and remote units: 12 hours

1.6 SUBMITTALS

A. Manufacturer's data for all proposed equipment.

B. Proposed equipment data must be submitted for all coaxial cabling, antennas, radios, amplifiers, and accessories. Submitted data shall include, as a minimum:

C. Manufacturer's name
  1. Manufacturer's part numbers, model numbers, and specifications

D. Delegated Design Submittal: For Emergency Responder Radio Coverage (ERRC) including radio propagation analysis (Heat Maps) signed and sealed by qualified professional engineer responsible for their preparation.

E. Detailed Design Package
  1. The Contractor will prepare a detailed design package consisting of proposed equipment locations, antenna placement with RF link budgets and supporting analysis/test measurements. The detailed system level design package will show the design criteria, method, and system calculation of the system demonstrating compliance to requirements set forth in the design. The following shall be included in the Detailed Design Package:

    a. Contractor Pre-Design Site Survey Cost to Include:
      1) Detailed site survey noting cable pathways, installation requirements, restrictions, etc.
      2) Continuous Wave (CW) testing
      3) Data import into iBwave design file to improve accuracy of design.
    b. Contractor Design Requirements:
      1) iBwave design services to include detailed heat maps.
      2) Propagation studies at worst case scenario
      3) Deliverables include: iBwave design file (.ibw and .pdf versions)
    c. Power Budgets - The Contractor will prepare maximum power consumption budgets for each equipment location.
    d. Bill of Material - The Contractor will prepare a final, comprehensive bill of material (BOM) for all Contractor sourced materials and equipment. The BOM will be provided for information/documentation purposes and does not affect the Contract Sum, up or down, unless said difference is the result of a mutually agreed change to the Contract. Bill of Material does not include spares.
    e. Product Data Sheets - The Contractor will provide product data sheets for all products listed in the final BOM.
    f. Racks, Cabinets, and Enclosure Layout Drawings - The Contractor will prepare elevation layout drawings for all Contractor provided equipment racks, cabinets, and enclosures.
    g. Recommended Spares - The Contractor will provide the City a recommended spares list based on a Line Replaceable Unit maintenance philosophy.
    h. Structural/Mechanical Design - The Contractor shall not be required to perform any structural and mechanical analysis.

i. Installation Drawings - The Contractor will electronically update the Architect's Design drawings to incorporate the Contractor's proposed installation, including equipment locations, general coaxial cable routes, and specific antenna placements as required to adequately define the relevant design requirements. The Contractor will then submit these modified drawings to the Airport Engineer for approval in accordance with the contract submittal requirements. The Contractor shall be responsible for incorporating any supplemental information and formatting required by the Airport. The Contractor shall submit the installation drawings to the Airport for approval. The Contractor will be responsible for updating these drawings as may be necessary due to changes in equipment locations and/or antenna placements necessary to ensure approval of the final design submission.

F. System Commissioning Procedure

1. The Contractor will prepare and submit a detailed commissioning procedure outlining specific activities to be performed to ready the system for System Acceptance Testing. The procedure will address setting system gains necessary to achieve the desired noise and interference levels. The commissioning procedure will list all required test equipment and include all test record sheets and to include at a minimum the following: Test each device for Uplink/Downlink Power Output, Noise Figure and PIM at all input and output ports.
   a. Continuous Wave testing for each sector, including RSSI level based on 43 dBm output power.
   b. Deliverables to include: System Baseline System Performance Test Report and CW Test report with findings.

G. System Acceptance Test Procedure

1. The Contractor will prepare and submit for approval a System Acceptance Test Procedure for conducting system acceptance of the System. The test procedure will validate the electrical parameters specified in Paragraph 1.4, Design Parameters, including, but not limited to, measurement of downlink signal level, uplink carrier-to-noise ratio, and uplink noise levels at the base station point of interface.

H. Record Drawings: Furnish CAD drawings of all installed cabling and equipment.

1.7 QUALITY ASSURANCE

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 45 00 "Contractors Assurance Program" to finalize design of ERRC (Public Safety DAS).

B. Contractor Qualifications

1. Must be a Certified Value-Added Reseller (VAR) of the solution being installed. Submit verification of certification in letter form or certificate signed by the manufacturer as a formal submittal in accordance with Specification Section 01 33 00 and 01 45 00. The contractor must adhere to the engineering, installation and testing procedures provided by the manufacturer and utilize the authorized manufacturer components and distribution channels in provisioning this Project.
2. Must provide three references for projects of equivalent scope, type and complexity of work completed within the last three years.

C. Hardware manufacturer's experience:
   1. All components shall be produced by manufacturers who have been regularly engaged in the production of radio equipment, cabling, and antenna components of the types to be installed in this project for a period of five years.

1.8 WARRANTY

A. The warranty on all Radio components shall be for a period of not less than one year. If items supplied as part of this project have longer warranties, Contractor shall supply longer warranty.

B. The warranty shall cover the replacement or repair of defective product(s) and labor for the replacement or repair of such defective product(s).

PART 2 - PRODUCTS

2.1 PUBLIC SAFTEY HEAD END

A. The DAS Head End located in the Data Center

B. Integrated BDA + Battery Backup + Annunciator Features:
   1. Supports Public Safety 700 & 800MHz dual band version
   2. 24hr Battery backup and Annunciator included in the same cabinet
   3. Band 14 available
   4. Upgradeable options: Class B to Class A & 0.5W/27dBm to 2W/33dBm
   5. Fully digital, FPGA based
   6. Auto Diagnostic
   7. Automatic gain control per band; Per channel and per time slot on channel selective mode
   8. Oscillation detection with alarm and auto-shutdown
   9. Antenna Isolation measurement feature
   10. Innovative donor antenna disconnect and malfunction alarms
   11. EPO switch support • Weatherproof enclosure, NEMA 4
   12. NFPA compliant with dry contact alarms
   13. Uplink and downlink squelch, per channel and per time slot on channel selective mode
   14. Assisted GUI wizard with Automatic Calibration features (Patent Pending) to reduce the uplink noise
   15. User adjustable gain control, UL and DL independent, per band and per channel on channel selective mode

16. UL2524 2nd Edition Listing with SGS, Nationally Recognized Testing Laboratory (NRTL) approved by OSHA for UL2524
17. IFC 2015, 2018, 2021 Edition
18. FPA 72 2013 Edition, NFPA 1221 2016 2019 Edition, NFPA 1225 2022 Edition
19. Buy American Compliant: Meets the definition of Domestic
20. Construction Material under the Buy American Act
21. 3 years Warranty

C. Applications
1. Provides simultaneous support of Analog and Digital
2. communications for P25 Phase I & Phase II, DMR, NXDN and Conventional systems
3. Indoor coverage: buildings, schools, hospitals, casinos, tunnels, metro stations
4. Outdoor coverage: oil rigs, stadiums, dense urban areas, rural areas

D. Standards and Codes
1. Buy American Compliant: Meets the definition of Domestic
2. Construction material under the Buy American Act
3. FCC (Federal Communications Commission-US)
4. IC Approved
5. SGS C-UL Compliant
6. UL2524 2nd Edition Standard with SGS, Nationally Recognized
7. Testing Laboratory (NRTL) approved by OSHA for UL 2524
8. IFC 2015, 2018, 2021 Edition
9. NFPA 72 2013 Edition, NFPA 1221 2016 2019 Edition, NFPA 1225
10. 2022 Edition
11. ROHS Compliant

E. Basis of Design: Honeywell HONBDA-7S

2.1 DONOR ANTENNAS

A. TYPE 2 – YAGI Antenna 698 - 869 MHz
1. Type: YAGI 10 element
2. Gain: 14 DBi
3. Front/Back Ratio: >18 dB
4. Lightning Protection: DC Ground

5. Rated Wind Velocity: 130 mph
6. Operating Temperature: -40 to 65 C
7. Horizontal Beamwidth: 40 degrees
8. Vertical Beamwidth: 32 degrees
9. VSWR: <= 1.5:1
10. Max Input Power: 100W

B. Basis of Design: Honeywell BDA-YDA763869-14-1

2.2 Lightning Protection

A. Lightning protection shall be provided at the RF feeder building entrance in compliance with Section 510.4.2 Per NFPA 1221 Section 9.6.3. Installed per NFPA 780.

B. Lightning Protection Characteristics:

1. Type: Coaxial Surge Protector
2. Frequency: DC to 7GHz
3. Power Rating: 70W
4. Insertion Loss: <0.2 dB
5. Return loss: > 19 dB
6. Impedance: 50 ohms
7. VSWR: <1.25:1
8. Max. load current: 10 A
9. Operating current(Continious current at Uc): None
10. Max. discharge current(max. withstand @ 8/20 -s by pole): 20 kA
11. Protection mode(s): Common mode
12. Protection level (@ In (8/20-s): < 1100 V
13. Impulse current(2 x 10/350-s Test - D1 Category): 1 kA
14. Nominal discharge current(8/20-s Test x 10 - C2 Category): 5 kA
15. Max Power: 70 W
16. Typical let through energy (50 ohms): Input 4kV 1.2/50-s - 2kA 8/20-s) 2.2 mJ
17. DC Pass: True
18. Insulation resistance: ≥10 GOhms
19. Technology: Gas discharge tube
20. Connector: N Female/Female

21. Mounting: Feedthrough
22. Operating temperature: -40/+85°C
23. Protection rating: IP66
24. Outdoor application: Yes
25. Failsafe mode: Short-circuit

C. Basis of Design: Honeywell BDA-P8AX09-6G-N/FF

2.3 Fire Rated Coaxial Cable

A. The Fire Rated Coaxial Cable and connectors shall meet the following standards:

1. UL 2196 Standard for Fire Test for Circuit Integrity of Fire-Resistive Power, Instrumentation, Control and Data Cables
2. NFPA 72 & NFPA 1221 survivable at temperatures up to 1,850 degrees F

B. Cable Characteristics:

1. Cable: Type Air-Dielectric: Corrugated
2. Size: 1/2’’
3. Inner Conductor: mm (in) 4.8 (0.19) Copper Wire
4. Dielectric: mm (in) 11.81 (0.465)
5. Outer Conductor: mm (in) 13.8 (0.54) Corrugated Copper
6. Jacket: mm (in) 18 (0.71) PVC, Plenum-Rated / Color Red
7. Impedance: 50 +/-2 Ω
8. Maximum Frequency: 1 GHz
9. Attenuation and Power Rating:
   a. 150 MHz, 0.93 dB/100 ft, 2.36 KW
   b. 450 MHz, 1.73 dB/100 ft 1.27 KW
   c. 700 MHz, 2.25 dB/100 ft 0.97 KW
   d. 800 MHz, 2.44 dB/100 ft 0.90 KW
   e. 900 MHz, 2.63 dB/100 ft 0.83 KW
   f. 1000 MHz, 2.79 dB/100 ft 0.78 KW
10. Velocity: 85%
11. Capacitance pF/m: (pF/ft) 70.6 (21.5)
12. Inductance µH/m: + 0.19 (0.058)(µH/ft)
13. Peak Power Rating: 40 kW

14. RF Peak Voltage: 2000 Volts
15. Jacket Spark: 8000 Volt RMS
16. Inner Conductor dc Resistance: 0.96 (0.29) Ω/1000 m
17. Outer Conductor dc Resistance: 1.31 (0.4) Ω/1000 m
18. Maximum VSW: 1.5:1
19. Minimum Bending Radius: Single Bend mm (in) 178 (7)
20. Minimum Bending Radius: Repeated Bends mm (in) 254 (10)
21. Bending Moment Nm (lb*ft) 8.7 (6.4)
22. Tensile Strength: 890 (200) N (lb)
23. Crush Strength kg/cm (lb/in) 31.25 (175.0)

C. Flame Retardant Jacket Specifications: Meets/Exceeds Steiner Tunnel Test Method NFPA-262. NEC820-53 (a), CATVP, UL2196 (2hours).

D. Regulatory Compliance: NEC Article 820 CATVP Cable to UL1655, Circuit integrity UL Listed to UL2196, CATVP, NFPA-262, NFPA130, NFPA 72, NFPA 1221 2019 (section 5.5.1.1), Canadian CSA C.22.2/FT6, UL R40176, E239351, UL System FHIT 1250.

E. Installation Temperature: -20 to 60 (-4 to 140) °C (°F)

F. Storage Temperature: -40 to 75 (-40 to 167) °C (°F)

G. Operation Temperature: -40 TO 1,010 (-40 TO 1,850) °C (°F)

H. Basis of Design: RFS Dragonskin

2.4 Two Hour Fire-Rated Cabinet

A. The 2-hour fire rated cabinet shall provide fire and temperature protection for connectors, tappers, splitters and other components used in ERCES systems.

B. Complies with requirements of the International Building Code (IBC), the International Fire Code (IFC), and NFPA 1221 and 1225 standards for Emergency Services Communications Systems.

C. Characteristics:

1. Temperature control provides circuit integrity at the connector/tapper/splitter
2. Enables flexible cable routing of connectors/tapper/splitters anywhere in the building
3. Allows splitting: Single cable in; dual cable out
4. Easy to install: Readily serviceable

5. Mounting: Floor, Wall, Ceiling
6. Exterior Dimensions: 30 x 20 x 20 inches
7. Interior Dimension: in 20 x 10 x 10 inches
8. Weight:170 lbs
9. Certifications: UL 263 & ASTM E1725 labeled and listed

D. Basis of Design: 2HB-DS-CAB

2.5 Indoor Antennas

A. TYPE 1 – Indoor Ceiling Mount Omnidirectional Antenna 380 – 698, 698 – 960, 1710 – 2700 MHz

1. Type: Ceiling Mount Omnidirectional antenna
2. Freq. Range: 380-698 MHz, 698-960 MHz, 1710-2700 MHz
3. Gain(max): 2±1.5, 3±1.5, 6.5±1.5 dBi
4. VSWR: ≤2.5, ≤2.5, ≤1.7
5. Vertical Beamwidth (Typical value): 85, 60, 25 degrees
6. Impedance: 50 Ohms
7. Polarization: Vertical
8. Max. Power: 50W
9. Connector Type: N-female
10. Dimension: 12.6×6.88 inches
11. Weight: 1.54 lbs (0.7±0.2 Kg)
12. Color: White
13. Basis of Design: Honeywell BDA-OIA-3851-6996

2.6 RF PASSIVE EQUIPMENT

A. Duplexer

1. Characteristics:
   a. Frequency: CH1: 135-520 MHz CH2: 690-2700 MHz
   b. Connectors: Type N, 7/16DIN or 4.3/10 Type Connectors
   c. Insertion loss: < 1.0 dB
   d. VSWR: 1.4:1
   e. Isolation: ≥35

f. Impedance: 50 Ohm

g. IP65 Rated

h. Power Rating: 50W

i. Relative Humidity: 5% -95%

2. Basis of design: Honeywell BDA-DBC-22

B. Tapper

1. Characteristics:

a. Frequency: 340 - 960 MHz

b. Connectors: Type N

c. Dissipative loss: < 0.1 dB

d. VSWR: 1.35:1

e. IP67 Rated

f. Power Rating: 200W

g. Basis of design: MicroLab D2-41FN

2. Basis of Design Microlab:

a. DN-EP-20-738FE (20 dB)

b. DN-PS-10-396FN (10 dB)

c. DN-EP-3-738FE (3 dB)

d. DN-PS-8-396FN (8 dB)

e. DN-PS-6-396FN (6 dB)

2.7 JUMPERS AND CONNECTORS

A. Jumper Cable with interface types 4.3-10 Male and 4.3-10 Male, 1

1. Comscope L4A-HPHMHM-1M

B. 0.500” Distribution Cable RF Connector

1. Commscope L4TNM-PSA: Type N Male Positive Stop™ fits LDF4-50A or approved equal.

C. Fiber Optic Patch Cord

1. Duplex, Single Mode, SC/APC type connectors on RU end, and LC/APC type connectors on Patch Panel end.
2. Length as required to connect RU to IDF Fiber Patch Panel.
3. All patch cords shall be routed through an innerduct.
4. Label Patch cord and innerduct on both ends.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify conduit, raceways and boxes are properly installed following Section 271300.

B. Verify conduit is minimum 1-inch diameter.

C. Verify main grounding system is properly installed and tested following Sections 260526

3.2 INSTALLATION

A. All RF antenna cable shall be installed in a conduit from the antenna to the IDF

B. Install work following drawings, manufacturer’s instructions and approved submittal data.

C. The DAS installation shall meet all applicable national and local codes pertaining Distributed Antenna Systems.

D. The contractor shall adhere to the installation schedule of the general contractor and should attend all construction meetings scheduled by the general contractor.

E. The installation will include coordination, testing and problem resolution with the system vendors.

F. The contractor shall provide all test equipment necessary to properly install, maintain, and troubleshoot the system. Any equipment purchased for this contract shall become the property of the City upon completion of the project.

G. All cables shall be labeled in accordance with the Airport’s numbering scheme and automated cable management system. CMAR to confirm IDF naming convention before any cables are labeled.

H. Cable labels shall be placed in the following locations: on jack face plates, on cable inside back boxes, junction boxes, access points, and manholes/handholds, on cable above the terminations in the TR and MDF, on patch panels, and every fifty (50) feet when not in conduit. Conduits shall be labeled “communications” every fifty (50) feet and at the origination and destination.

I. Upon completion of the installation, Contractor shall prepare as built documentation of the entire System. This documentation should include:
1. Drawings
a. All drawings shall be provided on electronic media in a form compatible with Autodesk AutoCAD and Revit and PDF.
b. A complete set of project plans will be provided to the Contractor.
c. The Contractor will modify the drawings by placing the pertinent information on a separate layer.
d. All of the requested drawings will be placed on these plans so that all cable routes are to scale and provide accurate information for use in the future when changes are made and the exact location of cables are required to avoid service interruptions.
e. A complete diagram of all terminations in the Telecommunications Closets.
f. A complete diagram of all coaxial riser cable.
g. A complete diagram of all coaxial inter-building cable.
h. Floor plans showing exact cable routings with each outlet clearly marked with cable number.
2. Documentation
a. All cable inventory data documentation will be submitted in designated Microsoft Excel format, or ASCII, comma delimited files with fields in identical order so that data can be incorporated into existing databases.
a. Documentation on customer drop cable will include cable number and length of cable.
b. Documentation on distribution riser cable and inter-building cable will include cable number, source and destination, type of cable, length of cable, and quantity.

3.3 CONTRACTOR’S FIELD QUALITY CONTROL

A. Tests under Section 014500.

B. Manufacturer’s Testing
1. Copper Cable testing
2. Testing of all copper cabling shall be performed prior to system startup. One hundred (100) percent of the distribution cable shall be tested for length, opens, shorts, and sweep tested for all frequencies the system will use. The contractor, at no charge to the City, shall correct all discrepancies. Complete end-to-end test results must be submitted to the City for approval.
3. At a minimum, a City Engineer shall randomly perform unannounced, on-site reviews during the installation. In addition, the City Engineer shall perform a final inspection and a complete review of the test results before the installation is accepted.

C. System Commissioning
1. Once the installation has been completed and tested by the Contractor in accordance with established verification procedures and all noted deficiencies have been appropriately resolved and documented, the Contractor will be responsible for system commissioning of the System. System spares shall be available for use prior to the start of system commissioning and shall be available throughout system commissioning and system acceptance testing, if purchased.

2. System commissioning will address setting system downlink and uplink gains necessary to achieve the desired noise and interference levels. Alarm verification will also be performed to ensure that faults are displayed properly.
3. The Contractor will prepare a comprehensive test report containing measured test data taken during commissioning of the system. One (1) CD containing the test report will be submitted to the Airport in accordance with the contract submittal procedures for information only. The commissioning records will be used to denote the system baseline performance. The test results will be documented by location and include a complete as-installed equipment configuration list (i.e., part/serial numbers for each major assembly).

D. RF System Acceptance Testing

1. Once the system has been successfully commissioned, the Contractor will perform system acceptance testing in accordance with the System Acceptance Test Procedure as required to validate the electrical parameters specified in Paragraph 1.2, Design Parameters. System acceptance testing will include measurement of downlink received signal level and estimating uplink Carrier-to-Noise (C/N) ratio.
2. Downlink signal level measurements and uplink carrier-to-noise estimates will be made in public areas free of crowd loss and recorded in 100% of the coverage area using a CW test signal in the operating band and measured using a calibrated receiver with dipole antenna positioned approximately 4 feet above the surface. Measurements will be recorded for the test routes defined and approved in the System Acceptance Test Procedure. Measurement samples will be collected at a rate in excess of the Nyquist rate and averaged over forty (40) wavelengths. If 95% of the averaged data points meet or exceed the levels specified in Paragraph 1.2, Design Parameters, the system will be deemed to have successfully passed this test.
3. Downlink received signal levels will be measured by injecting CW signals, in the 800 MHz and 1900 MHz bands, into the downlink Point of Interface and then performing a walkthrough of the coverage areas while recording the data with a portable receiver. The receiver will be set to record RSSI levels at a pre-determined CW frequency. Data will be recorded for each area and then post-test analyzed over a 40-wavelength average to provide a relative signal level for each path traveled. Given the injection signal level, the recorded data can be used to calculate the propagation losses as well.
4. The uplink noise floor will be measured to verify that it agrees with predicted levels. The noise floor will be measured by connecting a spectrum analyzer to the uplink RX port. Using the uplink noise floor and the propagation losses calculated during the downlink measurements, the uplink Carrier-to-Noise (C/N) ratio will be calculated.
5. In addition to measuring the downlink signal level and estimating the carrier-to-noise (C/N); the contractor will calculate the service area reliability. The service reliability is equal to the percentage of the test locations that meet or exceed the required service quality which is given by:

   Service Area Reliability (%) = Tp / Tt x 100%

   where:

   Tp = Total of tests passed
   Tt = Total number of tests

6. Total number of tests should be large enough to accurately calculate the required reliability percentage (95%). The Contractor will prepare a comprehensive test report containing measured test data collected during the system acceptance testing. Soft copies of all measured field strength and spectrum analyzer screen displays will be submitted on CD. CDs containing the test report will be submitted to the City for approval in accordance with the contract submittal requirements.

E. Final System Acceptance

1. The Contractor will prepare a System Acceptance Test Report containing the data recorded and analyzed from the System Acceptance Test Procedure, and a summary of the results showing compliance to the system requirements. The Contractor will submit the System Acceptance Test Report to the City for approval in accordance with the contract submittal requirements.
2. The City shall review and approve the System Acceptance Test Report and return it within the time period as identified in this contract.
3. If the City finds fault with the System Acceptance Test Report, they shall, within the time period as identified in this contract, notify the Contractor, in writing, of the fault as it specifically relates to the System Acceptance Test Report and/or the requirements to which acceptance testing was conducted. The Contractor shall work in good faith to immediately resolve the System Acceptance Test Report fault.

END OF SECTION 276200

SECTION 280500
ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Project overview for the Fort Bend County Information Technology Building.
2. Security System Project Management requirements and Quality Assurance Requirements.
3. Security System Documentation requirements.
4. Security System testing requirements.
5. Except as modified in this section, General Conditions, Supplementary Conditions, applicable provisions of Division 1, General Requirements, and other provisions and requirements of the contract documents apply to work of Division 28 – Electronic Safety and Security.
6. Each section included in Division 28 – Electronic Safety and Security incorporates this section by reference and is incomplete without the provisions stated herein.
7. Coordinate work included in other Divisions, which affect the work in this Division.

B. Project Overview for the Access Control System:

1. The access control system is a system of card readers, electronic locking devices, contacts and other alarm points. All access control and alarm sensing components shall be the Infenias Access Control System by 3xLogix. No substitutions will be allowed. The software will utilize a server-client environment allowing users with appropriate access levels to access the system from anywhere a client system resides.
2. Access control for the facility will consist of locating card readers or other alarm points on all the perimeter doors and interior doors where differing access levels are required or where after hour building entry by authorized personnel is required. Loading docks and other areas that may require after hours entry by unauthorized personnel will receive a, intercom handset for automatic calling to allow someone inside the building to remotely open a door to grant access thru the intercom system. Video monitoring will be used at all locations where unauthorized access may be needed. The security access system will fail- secure during a fire alarm except where magnetic locks or delayed egress devices are utilized. Where magnetic locks or delayed egress devices are used, the system will be fail- safe.
3. Vehicle entry to the facility will be controlled by access cards.
4. In addition, an intercom will be located at designated vehicle gates in the case of unauthorized access needs.
5. All card readers will be 3XLogic type readers to match existing readers. Lock power will be furnished by a separate power supply. All card readers and interior alarm points will tie into the access control system.

6. The contractor will furnish, install, and program the system with coordination from the owner. The contractor will provide all licenses, permitting and associated signage requirements.

C. Project Overview for the Surveillance System:

1. The surveillance system is a system of cameras. The surveillance system will utilize the Pelco Video Expert Surveillance System. The software will utilize a server-client environment allowing users with appropriate access levels to access the system from anywhere a client system resides. The surveillance system will be compatible with a variety of 3rd party hardware manufacturers for cameras, recording devices, viedo streamers and encoders, matrix switches, etc. The system shall contain a graphics user interface allowing the operator point-and-click functionality of the surveillance system. All PTZ functions will be controlled by mouse movement on a cadd map. The surveillance system shall include live viewing, image retrieval and image storage. The images will be archived to a new Storage Area Network (SAN) to provide 20 days video retention. The system will provide for live viewing of the signals, motion recording and recording at different frame rates.
2. The surveillance system will monitor all floor access points such as primary corridors, building entrances or other interior points as required by the owner. The system will also provide for perimeter building coverage, parking area coverage, vehicle gates, radio tower and other exterior building areas as required by the owner. The camera images will be recorded via a Pelco NVR. The NVR will provide storage capacity for 5 days. The software will provide automatic archiving of images over 5 days for storage on the SAN. The SAN will store the images an additional 15 days.
3. All interior surveillance cameras will be high resolution TCP/IP type cameras utilizing Power over Ethernet switches for associated power requirements. All exterior surveillance cameras will be high resolution day/night type digital cameras. The cameras will be manufactured by Pelco, no substitutions.
4. The contractor will provide all software, servers, storage, licenses, installation and programming as required for a fully functional system.

D. Other Items for Coordination

1. All Cat 6 UTP or fiber optic horizontal camera cable runs will be provided and installed by the communications contractor. All underfloor and overhead communications pathways will be provided and installed by the communications contractor except if specifically noted otherwise. The security contractorwill furnish all associated UTP patch cords as well as the remaining security equipment and cabling.
2. All conduit and boxes will be provided and installed by the electrical contractor. The security contractor shall coordinate with the electrical contractor to assure the proper size box, mounting location and rough-in occur.
3. All door contacts, electronic locks and power transfer hinges will be provided and installed by the door hardware manufacturer. The security contractor shall coordinate with door hardware as required.
4. The intercom system will be an Aiphone System, no substitutions

5. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.
6. The ACS shall be an extension of the Owner ACS located at the Owner's Headquarter. The Access Control System (ACS) shall consist of card readers, access control panels (ACP), and low voltage power supplies. The access control panel(s) shall be wall mounted in the MDF / IDF and connected to the city's LAN/WAN. Coordinate with Owner IT for network port, switch routing requirements. The ACS shall be monitored at Owner's Monitoring Headquarter.
7. ACS system description: ACS shall be an on-line, computer-based system for those authorized by Owner to have access to controlled areas.

1.2 Related Section Includes:

1. Section 263353: Telecommunications Uninterruptible Power Supply (UPS)
2. Section 270000: Communications
3. Section 270526: Telecommunication Grounding and Bonding
4. Section 270528: Interior Communications Pathways
5. Section 270543: Exterior Communication Pathways
6. Section 270553: Identification and Labeling of Communication Infrastructure
7. Section 271100: Communication Room Fittings
8. Section 271300: Backbone and Riser Media Infrastructure
9. Section 271500: Horizontal Media Infrastructure
10. Section 272100: Data Communication Network Equipment
11. Section 280500: Electronic Safety and Security
12. Section 281300: Access Control System (ACS)
13. Section 282300: Digital Video Surveillance System (DVSS)

1.3 REFERENCES

Section 270000 in its entirety shall be included as part of this specification.

1.4 DESCRIPTION

A. The Security Contractor shall completely coordinate all relevant work of other trades/systems including, but not limited to:

1. Door Hardware
2. Fire Alarm System
3. Electrical Systems(s)
4. Telecommunications System(s)

B. Electric Locking Mechanisms: The security contractor and door hardware contractor shall coordinate all door hardware, door and door frame design. The security contractor shall verify all specified door hardware is appropriate for the security application and verify the sequence of operations for each access-controlled opening.

C. Fire Alarm and Life Safety:

1. The security contractor shall coordinate the access control system design with the life safety consultant to ensure compliance with applicable codes and requirements. This includes, but is not limited to, the fire alarm interface, fail safe/secure locking mechanisms, delayed egress, and inter-lock doors.
2. Installation of security devices that do not comply with life Safety Code NFPA 101 shall require contractor to restore work with no charge to owner.

1.5 COORDINATION

A. Refer to General or Special Conditions.

B. Refer to Division 26, Electrical Work

C. Refer to Division 27, Telecommunications

1.6 CONTRACT DRAWINGS

A. Drawings are generally diagrammatic and are intended to encompass a system that will not interfere with the structural and architectural design of the building. Coordinate the work to avoid interferences between conduit, equipment, architectural and structural work.

B. Coordinate with architectural features, trim and millwork details, and install equipment in cabinets or other special areas as directed by A/E.

C. Drawings are based on equipment specified as the 'basis of design'. Make adjustments, modifications or changes required, due to use of other equipment, at no additional compensation.

1.7 QUALITY ASSURANCE

A. Follow Section 014000 – Quality Requirements and the following.

B. Perform work in accordance with the latest editions, revisions, amendments or supplements of applicable statutes, ordinances, codes or regulations of Federal, State and Local Authorities having jurisdiction in effect on the date bids are received. .

C. Where approval standards have been established by OSHA, Underwriter's Laboratories, ASME, AGA, AMCA, ANSI, ARI, NFPA 70, State Fire Insurance Regulatory Body, and FM, these standards shall be followed whether or not indicated on the Contract Drawings and Specifications. Include the cost of all work required to comply with the requirements of these authorities in the original proposal. Comply with ANSI C2 where applicable.

D. Comply in every way with the requirements of local laws and ordinances, the National Board of Fire Underwriters, and the National Electrical Code. Anything in the plans or specifications that does not strictly comply with the above laws, ordinances, and rules must be referred to the attention of the Engineer for a decision before proceeding. No change in the plans or specifications shall be made without full consent in writing of the Engineer.

E. Monitor and maintain quality control over manufacturers, suppliers, subcontractors, work force, site conditions, products, and services to ensure Work is of specified quality.

F. The security contractor is required to furnish and install all signage required for the access control system to adhere to local building codes and ordinances. In addition, the security contractor will provide documentation and fees required by Fort Bend County for an Electronic Lock Permit.

G. Provide all materials, equipment, and installation in compliance with the latest applicable standards from ANSI, FCC, ASTM, TIA, IEEE, NEC, NFPA, NEMA, REA, and UL. All products shall have a UL label.

H. Access Control System Contractor Qualifications:

1. Knowledge of NEC and industry security standards.
2. Must be familiar with the Fort Bend County Electronic Lock Permitting requirements and procedures.
3. 5 References for projects of equivalent scope, type and complexity of work completed within the last 5 years.
4. Install products only by qualified technicians.
5. Must be a 3xLogix certified Security System installer for installing all access control equipment.

I. Surveillance System Contractor Qualifications

1. Knowledge of NEC and industry security standards.
2. 5 References for projects of equivalent scope, type and complexity of work completed within the last 5 years.
3. Install products only by qualified technicians.
4. Must be a Pelco System certified installer for installing all surveillance equipment.

J. Requirements in reference specifications and standards are minimum for all equipment, material and work. In instances where capacities, size or other features of equipment, devices or materials exceed these minimums, meet listed or shown capacities.

K. Resolve any code violation discovered in contract documents with the A/E prior to award of the contract. After award of the contract, make any correction or addition necessary for compliance with applicable codes at no additional compensation.

L. Arrange with local and state authorities and utility companies for permits, fees and service connections, verifying locations and arrangement, and pay all charges including inspections.

1.8 MATERIALS AND WORKMANSHIP

A. Provide new materials and equipment of a domestic manufacturer by those regularly engaged in the production and manufacture of specified materials and equipment. Where Underwriter's Laboratories or other agency has established standards for materials, provide materials, which are listed and labeled accordingly. The commercially standard items of equipment and the specific names mentioned herein are intended to identify standards of quality and performance necessary for the proper functioning of the work.

B. Perform work by workmen skilled in the trade required for the work. Install all materials and equipment to present a neat appearance when completed and in accordance with the approved recommendations of the manufacturer and the best practices of the trade and in conformance with the Contract Documents.

C. Provide all labor, materials, apparatus, and appliances essential to the complete functioning of the systems described or indicated herein, or which may be reasonably implied as essential whether mentioned in the Contract Documents or not.

D. In cases of doubt as to the Work intended or in the event of need for explanation thereof, make written request for supplementary instructions to A/E.

E. Since manufacturing methods vary, reasonable minor variations are expected; however, performance and material requirements are the minimum standards acceptable. The right to judge the quality of equipment that deviates from the Contract Documents remains solely with A/E.

F. Exterior and interior raceway systems may be installed by a licensed electrical contractor. All security pathways shall meet the installtion requirements of Division 27.

G. Access Control and Intrusion Detection cable terminations and testing shall be performed only by the respective security system contractor.

H. If a part number shown in this document has been discontinued or is no longer in production, then the manufacturer's replacement part number shall be used. If there is no replacement part number, then the contractor shall notify the engineer in writing requesting instructions for an approval replacement part number.

1.9 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Follow the manufacturer's directions completely in the delivery, storage, and handling of equipment and materials.

B. Store equipment in a clean, dry place, protected from other construction. While stored, maintain factory wrappings or tightly cover and protect equipment against dirt, water, construction debris, chemical, physical or weather damage, traffic and theft.

C. Adequately brace and package equipment to prevent breakage and distortion while in transit.

1.10 OPERATING INSTRUCTIONS

A. Provide the services of competent representatives of the manufacturer capable of certifying that the equipment is installed according to the manufacturer's recommendations, is operating properly, and to instruct the Owner's operating personnel during start-up and operating tests of the complete telecommunication system. Prove the operation of equipment to the satisfaction of A/E. Give at least seven days' notice to A/E prior to beginning equipment start-up.

B. Certify that these services have been performed by including a properly executed invoice for these services or a letter from the manufacturer.

C. Perform all tests outlined in Division 28.

1.11 SERVICE

A. Remove all excess material and debris. Place all security systems in complete working order before request for final review. Broom clean all areas.

B. Clean and polish all camera domes, equipment, and materials thoroughly, and return to "as new" condition.

1.12 PROJECT RECORD DOCUMENTS

A. Comply with Section 017839 - Project Record Documentation and the following.

B. Maintain a set of prints of the Contract Documents at the job site for the purpose of recording the final size, location and interrelation of all work under this Division in accordance with Section 017839 - Project Record Documentation. Mark-up this set of drawings as the job progresses to indicate "as-built" location of all equipment, including concealed conduit, equipment and the like.

C. Clearly and accurately delineate the work by dimensions on the record drawings as installed, with equipment locations identified by at least two dimensions to permanent structures.

D. The final record drawings shall be marked "AS-BUILT," and signed and dated by a certified representative of the Contractor.

E. At the conclusion of project, provide certified "AS-BUILT" drawings which shall consist of the following:

1. All drawings shall be provided on disk in a form compatible with AutoCad Release 2004. A complete set of project plans will be provided to the Contractor on disk. The Contractor will modify the drawings by placing the security equipment ID and cable information on a separate layer. All of the requested drawings will be placed on these plans so that all cable routes are to scale and provide accurate information for use in

the future when changes are made and the exact location of cables are required to avoid service interruptions.

2. A complete diagram of all security terminations in the Telecommunications Closets.
3. A complete diagram of all security power supplies, switchers, streamers, recorders, transceivers, etc.
4. A complete diagram of all security cable tray, conduits and conduit sleeves.
5. A complete diagram of all manholes including section views detailing which cable is in which manhole duct.
6. Complete wiring and interconnection diagrams for each system including, but not limited to, video streamers, power supplies, reader interface cards, input and output cards, intelligent controllers, matrix switchers, monitors, fiber transceivers, etc.

1.13 FINAL REVIEW

A. Comply with Section 017700 – Closeout Procedures and the following.

B. Obtain all necessary electronic lock permits from local authorities.

C. Prior to requesting final payment, submit final approved operation and maintenance manuals including approved submittals, test reports and "AS-BUILT" drawings. Delivery of operation and maintenance manuals is a condition of final acceptance.

1.14 GUARANTEE

A. Guarantee materials, parts and labor for all work for one year from the date of issuance of occupancy permit. During that period make good any faults or imperfections that may arise due to defects or omissions in materials or workmanship with no additional compensation and to the complete satisfaction of A/E.

1.15 WARRANTY

A. A one (1) year Product Warranty and System Assurance Warranty for this Security system shall be provided.
   1. Product Warranty
      a. The Product Warranty shall ensure against product defects for a one (1) year period. The warranty shall apply to all security system components.

1.16 SAFETY

A. The contractor shall follow the safety procedures.

   1. The contractors shall be responsible for training all personnel under their employ in areas concerning safe work habits and construction safety. The contractor shall continually inform personnel on hazards particular to this project and update the information as the project progresses.

1.17 PROJECT/SITE CONDITIONS

A. Site Visitation: Visit the site of the proposed construction to thoroughly become familiar with all details of the work and working conditions, verify all dimensions in the field, and advise A/E of any discrepancy before performing any work.

B. Space Requirements:

a. Consider space limitations imposed by contiguous work in selection and location of equipment and material. Do not provide equipment or material that is not suitable in this respect.
b. Make changes in equipment location of up to 5 feet, to allow for field conditions prior to actual installation, at no additional compensation, as directed by A/E.
c. Install all equipment requiring service so that it is easily accessible.
d. Compare the equipment sizes with the space allotted for installation before installation and make written notice of possible conflict. Disassemble large equipment to permit installation through normal room openings when required. Should written notice not be made in a timely manner, make adjustments and modifications necessary without additional compensation.
e. Timely place all equipment too large to fit through finished openings, stairways, etc.

2. Site Obstructions
a. The drawings indicate certain information pertaining to surface and subsurface obstructions, which has been taken from available drawings. Such information is not guaranteed; however, as to the accuracy of location or the completeness of the information.
b. Before any cutting or trenching operations are begun verify with A/E, utility companies, municipalities, and other interested parties that all available information has been provided. Verify locations given.
c. Should obstruction be encountered, whether shown or not, alter routing of new work, reroute existing lines, remove obstruction where permitted, or otherwise perform whatever work is necessary to satisfy the purpose of the new work and leave existing services and structures in a satisfactory and serviceable condition.
d. Assume total responsibility for and repair any damage to existing utilities or construction, whether or not such existing facilities are shown. If damaged, repair the lines at no additional compensation.

3. Cutting and Patching: Comply with Section 017329 – Cutting and Patching.
a. Submit a written request to A/E in advance of cutting or alterations.

4. Execute cutting and demolition by methods, which will prevent damages to other work and will provide proper surfaces to receive installation of repairs.

5. Restore work which has been cut or removed; install new products complying with specified products, functions, tolerances and finishes as stated in the contract documents. Provide heavy chrome-plated or nickel-plated escutcheon plates of approved pattern for penetrations of finished surface. Approved escutcheon plates are B&C No. 10 with concealed hinges.

6. Fit work airtight to conduit, sleeves and other penetrations through surfaces. For fire-rated penetrations, provide in accordance with UL 1479 and ASTM E-814 assemblies utilizing products and materials equal to the rating of all surfaces penetrated.

C. Outages: All outages to existing on-line systems shall be coordinated and approved in writing by the owner prior to outage.

D. The contractor may have to perform some work after hours such as new cable pulls through active manhole systems, outage of existing services and such.

E. The contractor shall provide and install all cross-connect cabling, connectors, coupling panels. Couplers and any other materials necessary for a complete system installation when working in existing areas to extend active circuits.

1.18 IDENTIFICATION

A. Labeling - General

1. Label all security cables, cameras, patch panel termination positions, distribution frames, card readers, and boxes.
2. Wire labels shall be clear vinyl with acrylic adhesive tape. Text shall be typed with minimum 8 point font.
3. Provide front adhesive label for individual patch panel positions. Label patch panels consecutively from bottom to top. Label shall be typed with minimum font size of 8 point.

B. Labeling – Cables

1. Labels shall be a self-laminated vinyl.
2. Labels shall have a white background for printing and a clear tab to protect the printed text.
3. Labels shall be a minimum of 1” wide and 1-1/4” long, the printed area shall be no less than ½” high.
4. Generate labels using a handheld Brady I.D. Pro-plus labeler Model ID PRO-PLUS, or equivalent.
5. Labels shall be attached to each security cable at each termination end and at all box locations.
6. Label shall be attached to fiber cable at each end and to each individual fiber at each end prior to termination.
7. Cable labels shall be placed in the following locations: on jack face plates, on cable inside back boxes, junction boxes, access points, and manholes/handholds, on cable above the terminations in the IDF and MDF, on patch panels, and every 50 feet when not inconduit.

C. Tagging of Conductors:

1. Tag all branch cables at all access locations (ends, boxes) for purpose of identifying various cameras.

2. Label text shall be printed utilizing the “SMALL” text size setting.
3. Label text shall be printed on three lines utilizing the “WIRE” setting.
4. Label shall be affixed to cable jacket no more than 1” from where jacket is stripped back to allow ease of cable identification.
5. Label shall be affixed to cable jacket by adhering the white printed portion of the label directly to the jacketing and then wrapping the clear portion of the label around and over the white printed portion to protect the printed text of the label.
6. Label shall be positioned so that it can be easily read without needing to adjust or reposition label or surrounding cabling.

D. Nameplates

1. Nameplates: Provide engraved three-layer laminated plastic nameplates with white letters on a black background.
2. Provide nameplates for the following:
3. Equipment Racks and cabinets.
4. Equipment enclosures.
5. Surveillance Cameras
6. Card Readers

E. Telecommunications Administration

1. Coverplates shall be labeled initially with an ultra fine tip black permanent sharpie and covered with “P-Touch” or approved equal.
2. Follow 280500-1.18 for labeling and color coding.

F. Security Cabinet: Floor-standing cabinet and wall-mounted cabinet.

1. Floor-standing cabinet label shall have building number, color designation for classification of security equipment, IDF number, and sequential character.
2. Center label at top of front door of cabinet.

G. Access Control Conduit Pullbox located above portal: Install engraved plastic label to cover of pullbox.

H. Conduit: Label conduits with appropriate color-coded tape.

1. Install tie wrap label tag on each conduit end point that terminates in IDF, or stubbed through floor, ceiling or wall without pullbox.
2. Hand-letter with permanent black ink, in block type letters with clear, legible letters.
3. Match label information to information in nearest J-Box label that conduit leads to.

1.19 CABLE TESTING

A. Refer to Division 27 – COMMUNICATIONS for copper multipair, copper UTP, and fiber cable testing requirements.

B. Cabling Tests - General

1. Furnish all necessary instruments and equipment required for making tests. Test all wiring for shorts, open circuits or grounding.
2. Immediately correct any defective work.
3. When entire installation has been completed, test out circuits and demonstrate that operation of system is in accordance with the Drawings.

C. Contractor Qualifications:

1. The contractor must be certified by the manufacturer of the products to be installed adhere to the engineering, installation and testing procedures, and utilize the authorized manufacturer components and distribution channels in provisioning this Project.
2. All members of the installation team must be certified by the manufacturer(s) as having completed the necessary training to complete their part of the installation.
3. Contractor shall provide five references for projects of approved equivalent scope, type and complexity of work completed within the last five years.

D. Equipment and materials supplied shall be a standard product of manufacturers regularly engaged in the manufacture and installation of access control systems and shall be the manufacturer's latest standard design. Items of the same classification shall be identical. This requirement includes equipment, modules, assemblies, parts, and components. Electrically powered equipment shall be UL approved. Electronic equipment shall meet the requirements of CFR 47 Part 15.

E. All hardware, software, firmware, and/or operating system requirements given are the minimum requirements. The Contractor's product shall meet or exceed these requirements. The product selected shall meet the operational, functional, and performance requirements specified herein. Additionally, due to the rapid advancement and antiquation of technology related products, the supplied product shall be the “contemporary technical equivalent” of that specified. “Contemporary technical equivalent” shall be based on a comparison of technology at the time of publication of specification to the technology at the time of the first product submittal. Final product approval is at the sole discretion of the Owner.

F. Assure that the "as installed" system is correct and complete per construction documents: including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.

G. Owner/Architect/Engineer retains the right to access and inspect all work during the entire duration of the project and any items that do not adhere to the standards, reference, contract, bid, or project documents will be corrected immediately at the expense of the contractor.

H. UL Compliance: Provide products that are UL-classified and labeled.

PART 2 - PRODUCTS

Not Used.

PART 3 - EXECUTION

3.1 GROUNDING AND BONDING

A. Equipment Cabinets and Racks

1. To provide electrical continuity between enclosure elements, paint-piercing grounding washers shall be used for all cabinets.
2. A horizontal busbar shall be installed at the bottom of each enclosure.
3. Each enclosure shall be provided with a minimum # 6 AWG insulated ground wire.
4. Furnish all required bonding materials and hardware manufactured for this purpose. Follow NEC bonding procedures/specifications.
5. To bond each enclosure to ground, burnish clean a one square inch area, drill, tap, apply an adequate amount of antioxidant joint compound mixed for the metal surface types affected, and bolt connectorized conductor to burnished and compounded area.

3.2 INSTALLATION

A. After racks/cabinets are installed, install all required components to support rack mounted security equipment. Extend UPS/emergency power to rack mounted equipment as required.

B. Install Access Control Panels, power supply enclosures, and security equipment distribution enclosures as specified in related sections. Attach equipment enclosures securely to walls or millwork if applicable.

C. Install all conduit, back boxes, wire and cable management as required for interconnection of security equipment, access control panels, and power supply.

D. Extend commercial/emergency/UPS power circuits to security components as required.

E. Neatly lace and dress all cables in each rack/cabinet. All wiring and cable shall be properly supported. Utilize suitable cable management devices, no tie-wraps allowed.

F. Install all components in compliance with manufacturer standard recommended practices, industry standards, and applicable codes and laws.

G. Furnish and coordinate installation of all special device back boxes and ACS ID field devices as shown on the security drawings and as specified in this section.

H. The exact installation locations of all equipment shall be coordinated and verified with the Owner prior to installation. Contractor shall notify the Owner if any location appears to be unsuitable.

I. Provide low voltage power supplies for electric locking devices and ACS ID devices and components as shown on the security drawings and specified in this Section.

J. Extend emergency/UPS power circuits as required to security equipment and power supply Enclosures.

K. Coordinate with the Fire Alarm Contractor to provide interface to the Fire Alarm System as required.

L. Coordinate with the Telecommunications Contractor for data network connections, IP address requirements, and telephone circuits as required.

M. Prepare all systems for user operation. The security system must be complete and ready to operate prior to Owner's final acceptance of the system.

N. Coordinate with the Owner for all system programming requirements.

O. Perform database programming as required to support the card reader, alarm point, and control panel configuration required.

END OF SECTION 280500

SECTION 281300
ACCESS CONTROL SYSTEM (ACS)

1.1 SUMMARY

A. Furnish and install an access control system consisting of necessary hardware, software, connecting hardware, firmware and license to provide a complete system. The access control system shall be fully integrated with the CCTV system. The access control system will be the 3XLogix Infenias Access Control System. No alternatives to the 3xLogix System will be allowed.

B. Access Control System shall consist of:

1. Keypads and card readers.
2. Credentials
3. Call Box.
4. Controller Panel.
5. Door hardware related to access control
6. Interface boards
7. Badging System
8. Visitor Badging System
9. Controller, operator and applications Software
10. Power Supplies
11. Cabling
12. Server
13. Client Workstation

C. Provide conduit, cable, patch cords, junction and pull boxes, outlet boxes, and all conduit fittings or accessories and additional equipment as required for a fully functional system.

D. Related Section Includes:

1. Section 01
2. Section 263353: Telecommunications Uninterruptible Power Supply (UPS)
3. Section 270000: Communications
4. Section 270526: Telecommunication Grounding and Bonding
5. Section 270528: Interior Communications Pathways
6. Section 270543: Exterior Communication Pathways
7. Section 270553: Identification and Labeling of Communication Infrastructure
8. Section 271100: Communication Room Fittings
9. Section 271300: Backbone and Riser Media Infrastructure
10. Section 271500: Horizontal Media Infrastructure
11. Section 280500: Electronic Safety and Security
12. Section 272100: Data Communication Network Equipment
13. Section 282300: Digital Video Surveillance System (DVSS)

1.2 REFERENCES

Section 270000 in its entirety shall be included as part of this specification.

1.3 SUBMITTALS

A. Product Data: Manufacturer's cut sheets and catalog data for each component.

B. Installation procedures.

C. Code compliance certifications.

1.4 SYSTEM OPERATION

A. The access control system is a system of card readers, electronic locking devices and contacts located on all the perimeter doors and interior doors where differing access levels are required.

B. Doors requiring after hours building entry by authorized personnel will receive a card reader.

C. Loading docks and other areas that may require after hours entry by unauthorized personnel will receive a telephone handset for automatic calling to allow someone inside the building to open a door to grant access.

D. Video monitoring will be provided at all monitored door locations, corridors, secure rooms, parking areas and vehicle access gates.

E. All perimeter doors that are to remain locked after hours will receive a door contact only to alarm the system if the door is ajar.

F. The security access system will fail-secure during a fire alarm except where magnetic locks or delayed egress devices are utilized. Where magnetic locks or delayed egress devices are used, the system will be fail-safe.

G. All interior card readers will be MultiCLASS SE readers. Lock power will be furnished by a separate power supply.

H. Vehicle entry to the Site will be controlled by access cards. In addition, a call box will be located at designated vehicle gates in the case of unauthorized access needs or gate malfunction.

1.5 CONTRACTOR DUTIES

A. Perform all work, coordination, systems integration, engineering design, and testing, and shall provide all products required in order to ensure a fully operative system and proper installation of equipment. System operability and proper installation shall be verified via completion of the acceptance test plan.

B. Provide all system documentation and submittals.

C. Provide warranty and maintenance support as specified.

D. Provide and pay for all labor, materials, andequipment.

E. Secure and pay for plan check fees, permits, fees, and licenses necessary for execution of Work as applicable for the project.

F. Provide any signage as required for the Locking Permit or City Building or Fire Code due to electronically locking the door.

G. Give required notices.

H. Comply with all codes, ordinances, regulations, and other legal requirements of public authorities that bear on performance of Work.

1.6 DESCRIPTION

A. The Security Contractor shall completely coordinate all relevant work of other trades/systems including, but not limited to:

1. Door Hardware
2. Fire Alarm System
3. Electrical Systems(s)
4. Telecommunications System(s)

B. Electric Locking Mechanisms: The security contractor and door hardware contractor shall coordinate all door hardware, door and door frame design. The security contractor shall verify all specified door hardware is appropriate for the security application and verify the sequence of operations for each access-controlled opening.

C. Fire Alarm and Life Safety:

1. The security contractor shall coordinate the access control system design with the life safety consultant to ensure compliance with applicable codes and requirements. This includes, but is not limited to, the fire alarm interface, fail safe/secure locking mechanisms, delayed egress, and inter-lock doors.
2. Installation of security devices that do not comply with life Safety Code NFPA 101 shall require contractor to restore work with no charge to owner.

1.7 COORDINATION

A. Refer to General or Special Conditions.

B. Refer to Division 26, Electrical Work

C. Refer to Division 27, Telecommunications

1.8 QUALITY ASSURANCE

A. Contractor Qualifications:

1. The contractor must be certified by the manufacturer of the products to be installed, adhere to the engineering, installation and testing procedures, and utilize the authorized manufacturer components and distribution channels in provisioning this Project.
2. All members of the installation team must be factory certified by the manufacturer(s) as having completed the necessary training to complete their part of the installation. Written confirmation of such certification by manufacturer(s) shall be submitted to the Owner if requested.
3. Contractor shall provide five references for projects completed within the last five years of approved equivalent scope, type and complexity.

B. Equipment and materials supplied shall be a standard product of manufacturers regularly engaged in the manufacture and installation of access control systems and shall be the manufacturer's latest standard design. Items of the same classification shall be identical. This requirement includes equipment, modules, assemblies, parts, and components. Electrically powered equipment shall be UL approved. Electronic equipment shall meet the requirements of CFR 47 Part 15.

C. All hardware, software, firmware, and/or operating system requirements given are the minimum requirements. The Contractor's product shall meet or exceed these requirements. The product selected shall meet the operational, functional, and performance requirements specified herein. Additionally, due to the rapid advancement and antiquation of technology related products, the supplied product shall be the “contemporary technical equivalent” of that specified. “Contemporary technical equivalent” shall be based on a comparison of technology at the time of publication of specification to the technology at the time of the first product submittal. Final product approval is at the sole discretion of the Owner.

1.9 WARRANTY

A. Warrant all equipment and work for a period of not less than one year following formal notice of substantial completion or commencement of beneficial use. The warranty shall ensure that the installed equipment will conform to its description and any applicable specifications, and shall be of good quality for the known purpose for which it is intended. The warranty shall allow for replacement or repair at the discretion of the Engineer or Owner’s Rep and shall include all upgrades for firmware and/or operating systems.

B. Software Licenses

1. Required software licenses shall be identified and supplied by the Contractor.
2. All software licenses and warranties shall be registered in the name of Fort Bend County.

C. Contractor Qualifications:

1. The contractor must be certified by the manufacturer of the products to be installed, adhere to the engineering, installation and testing procedures, and utilize the authorized manufacturer components and distribution channels in provisioning this Project.
2. All members of the installation team must be factory certified by the manufacturer(s) as having completed the necessary training to complete their part of the installation. Written confirmation of such certification by manufacturer(s) shall be submitted to the Owner if requested.
3. Contractor shall provide five references for projects completed within the last five years of approved equivalent scope, type and complexity.

D. Equipment and materials supplied shall be a standard product of manufacturers regularly engaged in the manufacture and installation of access control systems and shall be the manufacturer's latest standard design. Items of the same classification shall be identical. This requirement includes equipment, modules, assemblies, parts, and components. Electrically powered equipment shall be UL approved. Electronic equipment shall meet the requirements of CFR 47 Part 15.

E. All hardware, software, firmware, and/or operating system requirements given are the minimum requirements. The Contractor's product shall meet or exceed these requirements. The product selected shall meet the operational, functional, and performance requirements specified herein. Additionally, due to the rapid advancement and antiquation of technology related products, the supplied product shall be the “contemporary technical equivalent” of that specified. “Contemporary technical equivalent” shall be based on a comparison of technology at the time of publication of specification to the technology at the time of the first product submittal. Final product approval is at the sole discretion of the Owner.

1.10 WARRANTY

A. Warrant all equipment and work for a period of not less than one year following formal notice of substantial completion or commencement of beneficial use. The warranty shall ensure that the installed equipment will conform to its description and any applicable specifications, and shall be of good quality for the known purpose for which it is intended. The warranty shall allow for replacement or repair at the discretion of the Engineer or Owner’s Rep and shall include all upgrades for firmware and/or operating systems.

B. Software Licenses

1. Required software licenses shall be identified and supplied by the Contractor.
2. All software licenses and warranties shall be registered in the name of Fort Bend County.

1.11 PROCUREMENT

A. Procure equipment specified in this document in order to ensure that the technology is acquired in a timely fashion, but not outdated by the installation date.

B. The Contractor shall not purchase any materials requiring submittals until the Engineer approves the submittal for that material.

C. All products shall be purchased not earlier than 6 months prior to installation.

1.12 DOOR PERMITTING

A. Contractor is responsible for submitting permit drawings for approval by the Fort Bend County permitting office.

B. Contractor is responsible for coordinating the final inspection with the Fort Bend County permitting office.

C. Contractor is responsible for all fees and materials required for door permitting.

D. Contractor shall notify Engineer is door configuration is not code compliant.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Honeywell is the only approved manufacturer for the Access Control System.

2.2 ACCESS CONTROL AND MANAGEMENT SYSTEM SOFTWARE

A. The access control system software shall be 3xLogix Infinias System, Current Edition. No substitutions will be allowed.

2.3 INTELLIGENT FIELD PANELS (IFP's)

A. The Intelligent Field Panel shall be connected to the security host, by means of a TCP/IP network. It shall respond to commands from the host. Each IFP shall connect into the TCP/IP network through an Ethernet HUB. The IFP shall forward to the host information regarding access, status and alarms, which the IFP has gathered from the readers and sensor devices that the IFP controls. The IFP shall meet or exceed the following functional requirements: Each IFP shall be identifiable from the central host by means of a unique IP address. IFPs and associated modules and components shall be manufactured by Honeywell, no substitution.

B. The IFP shall operate normally as an online device.

C. In its offline mode, the IFP shall be able to save (buffer) 35,000 badge transactions.

D. When the IFP returns to online mode from its stand-alone (offline) mode of operation, the transactions it stored shall be transmitted to the host during the subsequent polling sequences. Such transmission shall not impede current transaction processing. Historical activity must be differentiated from current activity.

E. Any portal controlled by the IFP shall be capable of being opened or closed by the issuance of a command from the host.

F. Each IFP shall be capable of supporting up to 32 card readers for badge access.

G. The IFP shall support readers, which utilize smart card technology.

H. Time shall be generated locally at each IFP, and the local time shall be capable of being updated for accuracy from a host master clock at any time.

I. The IFP shall be in current factory production.

J. The IFP shall include power backup in the form of re-chargeable batteries. In the event of an AC power failure, the battery backup shall protect any data or software stored in the memory of the IFP for not less than 1 hour.

K. The IFP shall be installed with capacity to connect one additional card reader for each 3 card readers installed.

L. Operation from 2 to +43 degrees Celsius, at up to 85% non-condensing relative humidity.

M. Provide each IFP with an enclosure. Enclosures shall be rack mounted unless otherwise noted on the contract documents. Provide each enclosure with an integral tamper alarm switch.

N. The IFP shall be capable of maintaining a database of badge holders, badge holder PINs (user definable) and their privileges. During degrade mode, the IFP will continue to grant appropriate accesses for individuals based on this database and shall not degrade the access selection rules. IFPs are to be capable of maintaining at least 7,800 badge holders.

O. The IFP shall communicate via an Ethernet TCP/IP data interface.

P. Component models:

1. Intelligent Field Panels PW3K1IC
2. Enclosure PW5K2ENC2
3. Enclosure power supply PW6K2E2PS
4. Dual Reader Module PW6K1R2
5. Input Module PW6K1IN
6. Output relay Module PW6K1OUT

2.4 CARD READERS:

A. Provide MultiCLASS Multi-Technology Card readers, NO EXCEPTIONS, as shown on the drawings. Card readers shall be "single-package" type, combining controller, electronics and antenna in one package, in the following configurations:

B. RP40 - MultiCLASS SE Reader, Wall Mounting (Single-Gang Mounting Applications):

1. Provide “single-gang” mounting style contactless smart card readers for wall mounting, vehicle stanchions and pedestals, and where shown on plans.
2. The reader shall be of potted, polycarbonate material, sealed to a NEMA rating of 4X (IP65).
3. The reader shall contain an integral magnet for use with an external magnetic reed switch to provide tamper protection when connected to an external alarm system.
4. The reader shall be FCC and CE certified, and shall conform to the following ISO Standards: 15693 (read-only), 14443A (CSN read-only), and 14443B2 (read-only).
5. Include Open Supervised Device Protocol (OSDP)
6. Card Compatibility: 13.56 MHz – 125KHz
7. The reader shall have an approximate read range of 2”- 4.5” when used with the compatible access card.
8. The reader shall require that a card, once read, must be removed from the RF field for one second before it will be read again, to prevent multiple reads from a single card presentation and anti-passback errors.
9. The reader shall have a Wiegand output port and shall operate under internal control for read-only access control applications.
10. The reader shall have separate terminal control points for the green and red LED’s, and for the audible indicator.
11. The reader shall have multiple LEDs for increased visibility.
12. The reader shall have an audio transducer capable of providing unique tone sequences for various status conditions.
13. The reader shall have a configurable hold input, which when asserted shall either buffer a single card read or disable the reader, until the line is released. This input may be used for special applications or with loop detectors.
14. Access control data shall be protected using 64-bit diversified security keys, encrypted RF data transmission, and mutual authentication using a proprietary symmetrical key-based algorithm.
15. The reader shall have flash memory to allow future feature enhancements to be added in the field.
16. The reader shall have a lifetime warranty against defects in materials and workmanship.
17. Color shall be black.
18. HID RP40, no substitutions.

C. RP15 - Contactless Smart Card Reader, Special Mounting (applications with a minimum of mounting space) Provide “surface” mounting style contactless smart card readers for door mullions, special minimum-space mounting configurations, and where shown on plans.

1. The reader shall be of potted, polycarbonate material, sealed to a NEMA rating of 4X (IP65).
2. The reader shall be FCC and CE certified, and shall conform to the following ISO Standards: 15693 (read-only), 14443A (CSN read-only), and 14443B2 (read-only).
3. Include Open Supervised Device Protocol (OSDP)
4. Card Compatibility: 13.56 MHz – 125KHz
5. The reader shall have an approximate read range of 1”- 3” when used with the compatible access card.
6. The reader shall require that a card, once read, must be removed from the RF field for one second before it will be read again, to prevent multiple reads from a single card presentation and anti-passback errors.
7. The reader shall have a Wiegand output port and shall operate under internal control for read-only access control applications.
8. The reader shall have separate terminal control points for the green and red LED’s, and for the audible indicator.
9. The reader shall have multiple LEDs for increased visibility.
10. The reader shall have an audio transducer capable of providing unique tone sequences for various status conditions.
11. The reader shall have a configurable hold input, which when asserted shall either buffer a single card read or disable the reader, until the line is released. This input may be used for special applications or with loop detectors.
12. Access control data shall be protected using 64-bit diversified security keys, encrypted RF data transmission, and mutual authentication using a proprietary symmetrical key-based algorithm.
13. The reader shall have flash memory to allow future feature enhancements to be added in the field.
14. The reader shall have a lifetime warranty against defects in materials and workmanship.
15. Color shall be black.
16. HID RP10, no substitutions.

2.5 FIELD DEVICES

A. Credentials: Provide MultiClass 13.56 MHz, single-coil, contactless smart card with a minimum of 16k bits. Quantity of application areas to be determined by owner prior to ordering. Credential shall be pre-programmed by the manufacturer and include location on front for artwork and photo ID. Back to be plain white with gloss finish. Use 26-bit or 37-bit card as directed by owner. Additional card information to be coordinated with owner prior to ordering.

B. Electric Power Transfer: This item is being furnished under section 08710.

C. The electrical power transfer shall be Von Duprin #EPT-10 or an approved equivalent.

D. Electric Lock: This item is being furnished under section 08710. The electric lock shall be a mortise-type lock (Schlage model #L9080EU-RX or equal). The lock shall include the following minimum features: :

1. Replaceable breakaway spindle
2. Solid stainless steel 1.5" deadbolt with 1" throw.
3. Reversible handing without disassembly (lock case is not required to be opening in order to reverse).
4. Universal lock chassis.
5. Free-wheeling lever to resist force when locked.
6. Independent heavy duty spring cage for lever support.
7. Interchangeable core compatible with master keying, grand master keying and construction keying. Furnish core that is compatible with existing HAS Master cores (Best Series V Core).
8. Furnish with ADA compliant lever set that is consistent with building standards.
9. Lockset shall include request-to-exit feature and fail secure design.
10. Include a switch for monitoring of the retractor crank. Switch to be activated when rotation of the lever rotates the retractor hub.
11. Inside lever must allow immediate egress.

E. Magnetic Lock: Provide magnetic lock complete with necessary mounting brackets, adapter plates, and mounting hardware at door locations as indicated on the prints. Locks shall have the following features and characteristics:

1. Construction - lock body constructed of steel with aluminum finish. Strike plate constructed of 1/2" cadmium plated steel.
2. Holding force - 1200 lbs. or greater for doors without panic hardware, 500 lbs. or greater for doors equipped with panic hardware.
3. Mounting - surface mounted on frame and door. Provide brackets and Adapters as required.
4. Power - 24 VDC, not more than 0.2 amps for 500 lb. Units and not more than 0.5amps for the 1200 lb. units.
5. Door Status Sensing - Dry contact closure to the Intelligent Field Panel or Reader/or reader controls to indicate that the magnetic bond is present between the lock and the strike plate.
6. Remote Control - Accept control via power interruption from the Intelligent Field Panel or reader (or reader controller) to lock/unlock the door.
7. Locks shall be fail safe.

F. Door Position Switch: This item is being furnished under section 08710. Provide high security magnetic door contacts at door locations as indicated on the drawings. Door contacts shall have the following features and characteristics: :

1. Construction - totally encapsulated brushed housing.
2. Life Expectancy - Greater than 10,000,000 cycles.
3. Gap distance - 5/8" or greater for contacts on pedestrian doors; 2" or greater for overhead doors.
4. UL listing - UL listed 634 for use with security systems.
5. Door Contacts - The contacts shall be recessed, normally closed with a wide gap.
6. Provide supervision for all door contacts.
7. Pedestrian doors (Sentrol #1078 or equal).
8. Roll-up doors (Sentrol #2025A or equal)

G. Hold-Up Button

1. Concealed finger-operated switch for activating alarm signal.
2. The switch shall be capable of being a latching or non-latching device.
3. The hold-up button shall be furnished with a reset key in case of latching operation.
4. Use Ademco #269R or equal).

H. Panic Hardware with Contact: This item is being furnished under section 087100. Panic hardware

is to be suitable for emergency/fire exit. They are to be Push/Crash type with integral electric lock and request-to-exit feature.

I. Lock Power Supply: Electric Locks shall be powered by an external 24VDC power supply. The following is the minimum functional requirements:

1. The power supply shall furnish regulated 24VDC @ 10A and shall be U.L. class 2 listed.
2. 16 separate output fuses shall be provided to divide the load. The power supply shall have the ability to add additional fuses as required.
3. LED'S shall monitor zone status (voltage/no voltage) and slide switches shall be provided to connect or disconnect the load from power.
4. The power supply shall be supplied complete requiring only 120VAC to the fused input and shall be supplied in a lockable enclosure that can be wall mounted.
5. The power supply shall be provided with emergency release terminals that allow the release of all devices upon activation of the fire alarm system.
6. The power supply cabinet shall be provided with a tamper switch.
7. Furnish unity with large enclosure.
8. Furnish the power supply with an ethernet network module for monitoring over the network (Altronix #LINQ2 or equal). Furnish with Cat 6 copper patch cord. Coordinate exact cord length and color.
9. The power supply shall be Altronix #eFlow104NX16 or equal).

J. Panel Directory: Provide a directory for each Access Control Controller Panel. Directory shall list all card access components and the respective ports. It shall contain the Controller Panel name and IP address. The directory must be typed and mounted to the inside front door of the ISC power supply panel in a permanent, clear Lexan card holder.

K. INTERCOM PHONE SYSTEM (Aiphone IX Series 2).

1. The information call box phone shall be an ADA compliant, with cast metal raised letters and Braille signage, with an LED indicator for the hearing impaired.
2. It shall be a hands-free phone.
3. It shall include 1-button for ring-down function and full duplex 2-way communication.
4. It will contain a built-in auto-dialer that can dial six (6) different numbers.
5. The phone will utilize power over ethernet (PoE, 802.3af), local 19-27VDC.
6. The information phone shall include a vandal resistant stainless steel faceplate and metalbutton.

7. The information phone shall include 3 auxiliary inputs and 3 auxiliary output, dry contact.
8. Provide VOIP information phone with PoE ethernet extender when cable distance exceeds 250LF.
9. Programming of the phone can be done with non-volatile flash memory programming and configuration through Web GUI.
10. Management and Operation via HTTPS, DHCP and static IP, remote automatic software upgrade,
11. centralized monitoring status LED.
12. Upon activation of the INFORMATION button on the communication devices, the following function shall immediately occur:
    a. Dial to the operator console (or up to five additional locations as determined by owner).
    b. A signal will be sent thru the access control system which will pull up the associated pre- set camera.
    c. The operator can grant access thru the phone system to open the associated controlled portal allowing access into the facility.

2.6 WIRING

A. Refer to Section 280513 – Conductors and Cables for Electronic Safety and Security.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install work following drawings, manufacturer's instructions and approved submittal data.

B. The access control components shall be wall or rack mountable and installed in lockable cabinets or within access controlled equipment rooms.

C. The contractor is responsible for all Fort Bend County Permitting requirements including, but not limited to, fees, signage, drawing submission, field verification, etc.

D. Provide a directory for every Controller Panel. The directory must include the following minimum information: Controller Name, location and room number; IP Address, identification of each card connected, each I/O connected and the associated port in the panel; where a board is installed in a port, provide the corresponding card reader name and channel.

E. Provide a nameplate on the front door for all Controller Panels, power supplies, equipment enclosures, etc. The nameplate shall be three-layer lexan tag.

F. All cable ends must have a name tag. Refer to Section 280500 – Common Work Results for Electronic Safety and Security.

G. Locate all supervised door position switches on the open side of the door at the top (not on the hinge side). Refer to detail in the drawing package.

H. All power supplies and Controllers shall be hard wired. Do not use plug-in power supply.

I. Provide fire alarm interface to tie the Access Control System panels into the fire alarm system at all locations using a delayed-egress or magnetic locking device. Upon alarm by the fire alarm system, the doors in the fire alarm zone and adjacent zones shall fail-safe. Provide the necessary fire alarm points, and modules as required to assure proper operation and maintain UL listing of the system. All fire alarm panel modifications must be provided by a certified fire alarm system

J. representative.

K. Provide alarm points on the Controller panel for the associated card reader or keypad and electric lock power supply panels. The power supply panels shall send an alarm to the controller in the following cases: Power Failure, Low Battery, Tamper.

L. Provide connection for the information phone into the access control alarm input and output relay boards as required to provide the functionality noted.

M. Provide connection from all panic stations into the access control alarm input and output relay boards as required to provide the functionality noted.

N. Install each Controller and power supply panel so that the maximum height is 7’-0” AFF to the top of the panel and the minimum height is 18” AFF to the bottom of the panel.

O. Installation of equipment and devices that pertain to other work in the contract shall be closely coordinated with the appropriate subcontractors.

P. Install all card readers with black plexiglass backing. Engrave card reader ID on plexiglass. Use minimum 24 pt font. Submit sample for approval prior to installation.

Q. All plenum wiring is to be installed parallel and perpendicular to the building structure. Install wiring tight up against structure for protection. Cable shall be bundled on a maximum of 2’-6” and secured to the structure at a maximum of 5’ on center. Bundling and support shall be with plenum rated Velcro cable ties and cat 5 rated hangars. Security pathways may be shared with communications. Security cabling to always be installed in the communications cabletray system where available. Refer to the communication drawings for cabletray locations and routes.

R. Provide all components of the Access Control System, as listed herein and shown on the contract drawings, with licenses, software and hardware, as required to make the system fully functional and programmable with the Access Control System.

3.2 TRAINING

A. The contractor shall provide training of the Access Control System. The training shall be provided by a CISCO factory representative. A certified distributor is not an acceptable instructor for training. Training shall include all software components related to access control and associated surveillance package components.

B. Training times, days and location shall be coordinated with the Owner personnel a minimum of three weeks in advance of the training session.

C. The contractor shall provide a minimum of two (2) 4-hour training sessions.

3.3 FIELD QUALITY CONTROL

A. Provide services of manufacturer's authorized representative to provide all on-site supervision of installation of complete access control system installation, perform complete functional test of

system, and submit written report attesting to proper operation of completed system.

3.4 SPARE PARTS

A. Provide 10% spare equipment of everything listed in Section 2 (this section) rounded up to nearest whole number. For example, 41 card readers would require 5 spares.

END OF SECTION 281300

SECTION 282300
DIGITAL VIDEO SURVEILLANCE SYSTEM (DVSS)

1.1 SUMMARY

A. Furnish and install closed circuit television (CCTV) components including all software, licenses and hardware required to make the system a fully functional Pelco Digital Sentry System.

B. The CCTV System shall consist of:

1. Camera, lens, housing
2. Control Equipment.
3. Power Supply
4. Monitoring System
5. Cabling
6. Server
7. Client Workstation
8. Storage Server with storage capacity hard drive

C. Provide conduit, cable, patch cords, connectors, junction and pull boxes, outlet boxes, and all conduit fittings or accessories and additional equipment as required for a fully functional system.

D. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.

E. This section includes Specifications for Digital Video Surveillance System (DVSS) field devices, video storage system, and system integration and programming as required by Owner.

F. Cameras will be recorded 24 hours/day, 7 days/week for duration of 30 days. Cameras will compatible with Owner's existing DVSS, High Definition (HD), Internet Protocol (IP), H.264 compression.

G. Outdoor field devices will be specified for use in outdoor environment and be weather and vandal resistant.

H. Cameras shall be connected to the new data network provided as part of this project and integrated with the Owner's overall data network and DVSS system.

I. Cameras shall be powered via POE from the network switch or external POE injector inside the MDF/IDF. The DVSS devices will be monitored and managed by Owner's General Services Division (GSD).

J. These Specifications may include components that are not required. Use drawings to determine the quantities to be installed. Include in the original bid, all equipment, software, cabling, connectors, transformers, relays, etc., whether specified here or not, such that said bid fulfills the intent of these Specifications and renders these systems functional and fully operational.

K. Contractor shall provide all required licenses, including any required licenses for the head-end at existing Owner's monitoring Headquarter.

1.2 REFERENCES

Section 270000 in its entirety shall be included as part of this specification.

A. Related Sections:

1. Section 01
2. Section 263353: Telecommunications Uninterruptible Power Supply (UPS)
3. Section 270000: Communications
4. Section 270526: Telecommunication Grounding and Bonding
5. Section 270528: Interior Communications Pathways
6. Section 270543: Exterior Communication Pathways
7. Section 270553: Identification and Labeling of Communication Infrastructure
8. Section 271100: Communication Room Fittings
9. Section 271300: Backbone and Riser Media Infrastructure
10. Section 271500: Horizontal Media Infrastructure
11. Section 272100: Data Communication Network Equipment
12. Section 280500: Electronic Safety and Security
13. Section 280500: Electronic Safety and Security
14. Section 281300: Access Control System (ACS)
15. Section 282300 - Digital Video Surveillance System (DVSS)

1.3 DEFINITIONS

A. ANSI – American National Standards Institute

B. EIA – Electronics Industries Alliance

C. IEEE – Institute of Electrical and Electronic Engineers

D. ISO – International Organization for Standardization

E. Multi-path – The possible multiple routes of a single source of RF energy due to reflection, refraction, or diffraction.

F. NEC – National Electrical Code

G. NEMA – National Electrical Manufacturing Association

H. UL – Underwriters Laboratories American National Standards Institute:

1.4 SUBMITTALS

A. Requirements: Provide Shop Drawings and Equipment Submittals for all equipment shown on drawing or as specified herein. In addition, provide the following information complete, and in the manner described herein:

B. Shop Drawings: Indicate dimensions, reinforcement, size and locations of openings, and accessory locations for precast manholes.

C. Product Data: Submit for all products.

D. Manufacture certifications that you have been trained and are authorized to install DVSS components.

E. Manufacturer's Installation Instructions: Submit application conditions and limitations of use stipulated by Product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, and installation of Product.

F. Submit plan and section drawings detailing proposed vault specifications.

1.5 COORDINATION

A. Refer to General or Special Conditions.

B. Refer to Division 26, Electrical Work

C. Refer to Division 27, Telecommunications

1.6 QUALITY ASSURANCE

1.7 CONTRACTOR QUALIFICATIONS

A. Must be a certified and currently registered Video Insight Channel Partner capable of issuing a numbered registration certificate for the entire security system.

B. All members of the installation team must be certified by the manufacturer as having completed the necessary training to complete their part of the installation. Resumes of the entire team should be provided along with documentation of completed training courses.

C. Must provide five (5) references for projects of equivalent scope, type and complexity of work completed within the last 5 years.

1. The contractor must be certified by the manufacturer of the products to be installed adhere to the engineering, installation and testing procedures, and utilize the authorized manufacturer components and distribution channels in provisioning this Project. Submit manufacturer certification as part of Submittals 1.4 above.
2. All members of the installation team must be certified by the manufacturer(s) as having completed the necessary training to complete their part of the installation.
3. Contractor shall provide five references for projects of approved equivalent scope, type and complexity of work completed within the last five years.

D. Equipment and materials supplied shall be a standard product of manufacturers regularly engaged in the manufacture and installation of DVSS systems and shall be the manufacturer's latest standard design. Items of the same classification shall be identical. This requirement includes equipment, modules, assemblies, parts, and components. Electrically powered equipment shall be UL approved. Electronic equipment shall meet the requirements of CFR 47 Part 15.

E. All hardware, software, firmware, and/or operating system requirements given are the minimum requirements. The Contractor's product shall meet or exceed these requirements. The product selected shall meet the operational, functional, and performance requirements specified herein. Additionally, due to the rapid advancement and antiquation of technology related products, the supplied product shall be the “contemporary technical equivalent” of that specified. “Contemporary technical equivalent” shall be based on a comparison of technology at the time of publication of specification to the technology at the time of the first product submittal. Final product approval is at the sole discretion of the City.

F. Assure that the "as installed" system is correct and complete per construction documents: including engineering drawings, manuals, and operational procedures in such a manner as to support maintenance and future expansion of the system.

G. Owner/Architect/Engineer retains the right to access and inspect all work during the entire duration of the project and any items that do not adhere to the standards, reference, contract, bid, or project documents will be corrected immediately at the expense of the contractor.

H. UL Compliance: Provide products that are UL-classified and labeled.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The only approved camera manufacturer is Pelco, no substitutions allowed.

B. The only approved Video Management System in Video Insight. No substitutions allowed.

2.2 VIDEO SURVEILLANCE MANAGEMENT SYSTEM (VSM) SOFTWARE:

A. The video surveillance and retrieval system software shall be Video Insight 'VI Monitor 6 Video Management Software, latest version. This shall be an enterprise VMS Client that allows centralized IP camera viewing and management from any server.

B. Furnish all software, hardware and software licenses as required for camera quantity installed including one (1) server with storage array and six (6) client station licenses with capacity for 25% camera growth.

2.3 VIDEO MANAGEMENT (VSM) SYSTEM HARDWARE WITH STORAGE CAPACITY

A. The server shall be the Video Insight Dell Power Edge Rack Mount Surveillance Server (Video Insight #NVR-R-1-1-6TB). No substitutions will be accepted.

B. The server shall include 6TB of total storage capacity with Intel C222 chipset installed in 1RU of rack space. Furnish server with 20" flatscreen monitor, power cable and associated licenses for fully functional system. This unit shall include a 3-year warranty and all associated licenses and programming as needed for a fully functional system.

2.4 CAMERAS

A. The information listed below outlines the general requirements for the CCTV camera. Refer to the Camera Schedule in the contract drawings for specific model numbers. The model number represents the exact functions, performance the features required. The contractor may submit and equivalent model of the same manufacturer to the one specified in the contract drawings.

B. General Camera Requirements:

1. Provide all cameras with variable focal length lens with automatic iris control.
2. The exterior camera shall include a thermostatically controlled heater or a pressurized IP66 housing. The housing color shall be coordinated with surroundings. All exterior cameras shall be true day/night.
3. For cameras requiring Wide Dynamic Range, Range shall be 120dB maximum and 102dB typical.
4. All day/night cameras shall include automatic IR-cut filter removal.
5. All cameras shall be provided with the appropriate mounting hardware and adapter plates for the location in which they will mount. For flush ceiling, provide with ceiling tile mount support adapter and security chain from camera to structural steel. The contractor is required to coordinate the exact mounting height and mount type with architectural and structural features.

6. Coordinate all housing finishes with architect prior to ordering any products. For this project, generally the finishes for all interior cameras will be white housing and mounting hardware and all exterior cameras will be gray housing and mounting hardware. However, where ceiling finishes vary in color, the housing will vary to match the ceiling following architectural coordination. All interior cameras to have smoked dome and all exterior cameras to have clear dome.
7. All cameras shall include motion detection capability.

C. IP Cameras shall meet the following requirements:

1. All high definition (HD) cameras shall be high resolution with a minimum of 1920 x 1080 picture elements. The camera shall have a digital backlight compensation and automatic gain control (AGC) capability.
2. The cameras shall be 1/4 or 1/3 inch with progressive scan RGB CMOS image sensor. The camera shall produce video streams in H.264 and Motion JPEG.
3. It shall be capable of manual camera adjustments from +180° to -140° pan, ±75° tilt and
4. ±100° rotation.
5. Auto back-focus requirement can configure for auto back-focus periodically.
6. The cameras shall utilize H.264, MPEG-4 and MJPEG compression formats. The camera must have built-in multicasting capability, motion detection/alarm output, progressive scan and buffer memory for pre- and post-alarm.
7. The camera shall be capable of single or dual video streams and shall include manual camera adjustments up to 360° pan, 160° tilt and 340° rotation. The output shall be a 100/10 Base-T (RJ-45) connector and the camera power shall be compatible with Power over Ethernet IEEE 802.3af.
8. The cameras shall be capable of 30fps rate in all resolutions for SD thru 2MP cameras and 20fps for over 2MP cameras. Both the frame rate and bandwidth shall be controllable in each compression format.
9. All IP cameras shall support the following protocols: TCP/IP, DHCP, RTP and NTP, FTP, HTTP, HTTPS, RTSP, SMTP, SSL/TLS.

D. The individual camera types, as defined by the Design Drawings, shall include the following camera and equipment:

2.5 MONITORS

A. All major controls, including brightness, contrast, horizontal hold, vertical hold, and power ON/OFF shall be on screen display.

B. Linearity shall be less than 8% horizontal and vertical linearity shall be less than 7%.

C. Video input and output connectors shall permit monitors to be used singly, or to be connected in a “loop-through” configuration with other monitors.

D. Monitor shall be high definition LCD, color, powered by 120VAC with minimum 1280 x 1024 SXGA resolution, max contract ratio 500:1, max brightness 400 Cd/mz.

E. Monitor shall have a quick start circuit so that an image shall be produced on the screen instantly.

F. The equipment room monitor shall be 20" flat screen type. The work station monitor shall be 24" flat screen 'planar' type.

2.6 CAMERA POWER SUPPLIES

A. All interior and exterior cameras shall be IP based and shall utilize the PoE network switch for power.

PART 3 - EXECUTION

3.1 CAMERAS

A. Install cameras as shown on the Design Drawings. Wall or ceiling mounts shall be anchored/braced as required, at a height which shall allow for camera repositioning. Coordinate mounting heights with the Owner and/or the Engineer.

B. All exposed video cabling from wall to camera shall be neatly dressed and wrapped in black spiral plastic sheath. Route all cables concealed.

C. Provide final termination of power to camera as required, and/or control cables, and terminate at the CCTV monitoring equipment locations as designated by the Design Drawings. Inspect, test, and clean all camera equipment after installation.

D. Lens sizes specified within this Section are provided for what is considered to be the "optimum" field of vision. However, to ensure the correct camera field of vision, provide adjustment of each camera in coordination with the Owner and/or the Engineer.

E. Provide for one adjustment after installation for each camera and lens as a part of the Bid and ensure that the cable guidelines are followed to allow maximum distance for relocation.

F. Ensure that wire supports for ceiling tiles are adequate for all ceiling mounted cameras.

3.2 VIDEO DISTRIBUTION QUALITY ASSURANCE

A. Contractor shall test the video distribution channel from every camera to the input of the distribution amplifier (see figure).

IDF ROOM

B. The following test parameters shall be used to qualify the installation of the new camera and CCTV cable.

3.3 TESTING

A. On-Site Acceptance Testing and Commissioning Service:

1. Prepare the Acceptance Test Format for acceptance by the Owner and/or the Engineer prior to commencement of acceptance testing.
2. Perform these on-site acceptance tests with witness by the Owner and/or the Engineer, providing all personnel and equipment necessary to perform these tests.
3. Provide a hard copy of all system points tested, as well as a letter certifying 100% completeness and operation of this system, with each device listed and the results of its operational testing (passed or failed).
4. Upon completion of testing, the Contractor and the Owner and/or the Engineer shall sign the Acceptance Test forms documenting system completion and acceptance. If acceptable by the Owner and/or the Engineer, minor discrepancies will be resolved under project warranties.

3.4 OPERATOR INSTRUCTIONS

A. Provide a complete and comprehensive operator and system administration training program to security personnel. Training plan must be submitted for approval prior to commencing training.

1. Provide one (1) 4-hour session for operator training.
2. Provide one (1) session for technical training on all hardware installed.

B. Conduct operator training on all systems prior to system acceptance. Training shall be performed for two operator levels, and shall include four hours dedicated instructor time for Level 1 training, and eight hours dedicated instructor time for Level 2 training.

1. Level 1: Basic data display and interrelation of addresses, device controls and displays, printouts requesting all data displays, and using the system.
2. Level 2: Total System Programming. This level of training shall include installation of all other programs and program changes specified herein to be keyboard programmable.This training shall include a complete understanding of all application packages, the custom written data file and user programs, and the ability to write and change new and existing specified programs. Trainer shall review and use documentation, as specified.

C. Provide the Owner with videotaping (DVD format) of all training sessions. Provide two copies of video tapes of all final training sessions.

3.5 COMMISSIONING SERVICES

A. Program system and perform all required operational checks to ensure that the system is functioning in full accordance with these Specifications.

B. Train all personnel in accordance with the provisions herein. Training of all Owner designated employees shall be completed prior to acceptance testing. Data input for system operation shall be required as preparation for user training.

C. System programming should be complete, meeting all user-defined requirements, at time of system acceptance.

3.6 FIELD QUALITY CONTROL

A. Provide services of manufacturer's authorized representative to provide all on-site supervision of installation of complete CCTV system installation, perform complete functional test of system, and submit written report attesting to proper operation of completed system.

END OF SECTION 282300

28 31 01

FIRE ALARM AND SMOKE DETECTION SYSTEM

PART 1 - GENERAL

1.01 SCOPE

A. Where there is an existing fire alarm system it will be expanded upon to provide proper coverage of signaling and detection per applicable codes.

B. The contractor shall remove the existing field devices (where applicable) from the building prior to demolition. The contractor shall provide new field equipment to supplement the quantity of existing devices to meet applicable building codes for the new construction. In new construction, all devices and equipment shall be new.

C. The contractor shall furnish and install a complete distributed microprocessor based 24VDC, electrically supervised, MULTIPLEX, integrated fire alarm and voice evacuation (where applicable) system as specified herein and indicated on the drawings. The system shall include, but not be limited to, all control equipment, remote transponders, printer, power supplies, signal initiating and signaling devices, conduit, wire, fittings, and all other accessories required to provide a complete and operable system.

D. The system shall operate as a non-coded, continuous sounding system which will sound alarm devices until manually silenced, as herein specified.

E. The system shall be wired as a Class B supervised system for all circuits.

F. The installing contractor shall include at minimum 6 months of monitoring services. Monitoring services shall be provided by the authorized Fort Bend County fire alarm services provider.

1.02 CODES AND STANDARDS

A. The system shall comply with the applicable Codes and Standards as follows:

1. National Electrical Code - Article 760.
2. National Fire Protection Association Standards: NFPA 70 NEC
3. NFPA 72 National Fire Alarm Code (2013) NFPA 90A Air Conditioning
4. NFPA 101 Life Safety Code UL 1971 Visual Devices ANSI 117.1 Visual Devices
5. Local & State Building Codes (Including all adopted amendments)
6. Texas Accessibility Standards (TAS) 05 Americans with Disabilities Act (ADA)
7. Requirements of Local Authorities having Jurisdiction

8. Underwriters Laboratory Requirements and Listings for use in Fire Protective Signaling Systems as follows:

9. UL 864 Control Panels (9th Edition) UL 268 Smoke Detectors - Systems UL 268A Duct Smoke Detectors

10. UL 521 Heat Detectors

11. UL 228 Door Holder-Closers

1.03 INSTALLING CONTRACTOR'S RESPONSIBILITY

A. The installing fire alarm contractor is responsible for the design of a code compliant system, which meets the intent of all State and Local Authority Having Jurisdiction Codes and their adopted amendments along all permitting of such plans and associated permit fees. Reference and coordinate with all contract specifications and plans.

1.04 ACCEPTABLE MANUFACTURERS

A. A.To establish the type, quality, and features of system required, the equipment specified is that of the NOTIFIER Fire Systems. System must be compatible with Notifier Onyx workstation where applicable.

B. All equipment, materials, accessories, devices, etc. covered by the specifications and/or noted on the contract drawings shall be new and unused and be U.L. listed for their intended use.

C. All references to manufacturer's or supplier's model numbers and other pertinent information herein is intended to establish a minimum standard of quality, performance and features required. All equipment proposed as an EQUAL to that specified shall COMPLETELY conform to the specifications herein.

D. Equipment of other manufacturer's or supplier's may be considered as an equal to that specified provided that completely marked and identified catalog sheets of all proposed equipment is provided to the architect/ engineer for review ten (10) days prior to the date of bid for evaluation. In addition, a list of the contractor's qualifications and any exceptions to the specifications must be provided for review. Approval for any such substitution of equipment must be obtained in writing from the architect/engineer five (5) days prior to bid.

E. Acceptable fire alarm systems manufacturer:

1. NOTIFIER Fire Systems (Must be an Authorized Distributor)

2. Other manufacturers will be considered upon approval by Fort Bend County.

1.05 GENERAL REQUIREMENTS

A. Contractor Qualifications:

1. The equipment supplier shall be an authorized and designated representative of the Fire Alarm Manufacturer to sell, install, and service the proposed manufacturer's equipment and shall be approved by the City of Houston to perform the work.

2. The equipment supplier and installing contractor shall be licensed by the State Fire Marshall to sell, install, and service fire alarm systems as required by Article 5.43-2 of the Texas Insurance Code.

3. The installing contractor and/or equipment supplier shall have on his staff a minimum of three (3) installation superintendents who are licensed by the State Fire Marshall's office for such purpose and under whose supervision installation, final connections, and check out will take place as required by the Texas Insurance Code.

4. The installing contractor or equipment supplier shall have on staff a minimum of one (1) certified NICET Level III state licensed fire alarm planner under whose supervision system design shall take place.

5. The installing contractor shall provide 24 hour, 365 days per year emergency service with qualified and state licensed service technicians.

6. The installing contractor shall have been actively engaged in the business of selling, installing, and servicing fire alarm systems for at least ten (10) years.

1.06 SUBMITTALS

A. The installing contractor and/or equipment manufacturer shall provide complete and detailed shop drawings and include:

1. Control panel configuration including wiring and interconnection schematics.

2. Complete point to point wiring diagram showing terminal connections to all system devices.

3. Riser wiring diagram and associated zoning/addressing configurations with associated conduit sizes.

4. Complete floor plan drawings locating all devices associated with the fire alarm system. Floor plan drawings shall include conduit and wiring routing complete with conduit sizing and number of conductors by type. Floor plans shall be on AutoCAD.

5. Factory data sheets on each piece of equipment to be used and so marked as to model, dimensions, size, voltage, and configuration.

6. Detailed system description in this specification format describing system functions and operation. All specification variations and deviations shall be clearly noted and marked.

7. Complete Bill of Material for reference.

8. Programming matrix defining all input/output functions and zoning.

9. Power supply and battery calculations.

10. Written certification from the manufacturer stating that the distributor is authorized to sell, service and install the proposed fire alarm system.

B. All submittal data will be in bound form with contractor's name, supplier's name, project name, and state fire alarm license number adequately identified.

C. Only basic equipment devices have been shown on the contract drawings. Specific wiring between equipment/devices has not been shown. It is the contractor’s responsibility to submit for approval the COMPLETE ENGINEERED system configuration and layout showing all devices, wiring, conduit, and locations along with other required information as specified herein.

1.07 COORDINATION

A. It shall be the responsibility of the installing contractor to coordinate all requirements surrounding installation of the fire alarm system with all trades including, but, not exclusive of: electrical contractor, sprinkler contractor, and HVAC/controls contractor and intercom system. Adequate coordination shall be provided to insure proper installation and interface to all peripheral items required to interact with the fire alarm and communication system to provide a complete and functional life safety system.

PART 2 - GENERAL

2.01 SYSTEM FUNCTIONAL OPERATION

A. Alarm Detection

1. When a fire alarm condition is detected via the main fire control panel by any of the system alarm initiating devices, the following functions shall occur:

a. The system common alarm LED on the CPU Module shall flash. The internal audible trouble device shall sound. Acknowledging the alarm condition shall silence the audible trouble device and revert the flashing common alarm LEDs to a steady state.

b. A 640 character back-lit LCD Display shall indicate all applicable information associated with the alarm condition including: zone, device type, device location, and time of alarm. Location and zoning messages shall be custom field programmed to respective premises.

c. Any remote annunciator LCD display associated with the alarm zone shall be activated as herein specified.

d. The remote off-site monitoring shall transmit alarm signals to an Approved Central Supervising Station. (Central station connection, phone lines and service provided by Owner).

e. All automatic events programmed to the alarm point shall be executed and the associated indicating devices and/or outputs activated.

f. Alarm tones shall sound throughout the facility. Upon expiration of the alert tone, a digitized predetermined voice evacuation message shall be automatically transmitted throughout the facility. The system shall have the capability to generate multiple distinct digital messages as determined by event-initiated programs.

g. Flash all strobe lights (visual signals) throughout the facility.

h. Recall elevators to ground floor as specified herein, or to the alternate floor if the alarm condition originates on the ground floor.

i. Unlock all electrically locked doors.

B. Print status on the system printer (where applicable).

1. All designated "non-silenceable" auxiliary control functions shall remain in operation (even upon silencing of audible alarms) until such time as the control panel is cleared and reset manually (i.e. fan control outputs, central station interface, elevator recall interface, etc.).

2. In addition, remote annunciators shall be located where indicated. The annunciators shall duplicate the control panel alarm status indicators (for selected system zones/points) and in addition, annunciate any system trouble conditions and operate as herein specified.

C. SUPERVISORY CONDITION

1. When a supervisory condition is detected via the main fire control panel by any of the system supervisory initiating devices, the following functions shall occur:

a. The system common supervisory LED on the CPU Module shall flash. The internal audible trouble device shall sound. Acknowledging the supervisory condition shall silence the audible device and revert the flashing common supervisory LED's to a steady state.

b. A 640 character back-lit LCD Display shall indicate all applicable information associated with the supervisory condition including: zone, device type, device location, and time of the supervisory condition. Location and zoning messages shall be custom field programmed to respective premises.

c. Any remote annunciator LCD display associated with the supervisory signal shall be activated as herein specified.

d. The remote off-site monitoring shall transmit supervisory signals to an Approved Central Supervising Station.

e. Print status on the system printer.

D. TROUBLE CONDITION

1. When a trouble condition is detected by the CPU, one of the system initiating alarm or SLC Circuit(s), the following functions shall immediately occur:

a. The system trouble LED on the CPU module shall flash and the internal audible trouble device shall sound. Acknowledgment of the trouble condition shall silence the audible trouble device and cause all trouble LED's to illuminate steady.

b. The 640 character alphanumeric LCD annunciator shall display all applicable information via the alphanumeric display associated with the respective trouble condition and its location.

c. The system common trouble indicator on associated remote annunciators shall be illuminated as specified herein.

d. The remote off-site monitoring shall transmit supervisory signals to an Approved Central Supervising Station.

e. Print status on the system printer.

2.02 ZONING

A. The system shall have the inherent capability to employ "Intelligent" smoke detectors and addressable interface devices capable of being recognized and annunciated at the main control panel on an individual basis. All zoning/device location information shall be totally field programmable to exact job requirements as approved by the architect/engineer.

B. The system shall utilize remote amplifier cabinets for distributed voice communications (if needed), notification appliance circuits, and auxiliary control output circuits. Remote transponder panels shall communicate with the main CPU via the SLC data loop and be capable of being intermixed on the same loop as intelligent smoke detection and control modules.

2.03 ZONING

A. The fire alarm control panel shall be Notifier series NFS2-640/NFS2-320/NFS2-3030 of which should be sized according to manufacturer specs. The control panel shall be modular in design utilizing DISTRIBUTED solid state MICROPROCESSORS and be capable of future expansion. The microprocessor based CPU shall be completely FIELD PROGRAMMABLE. CPU module shall provide for programmable non-volatile RAM memory utilizing integral lithium-based memory IC chips. All circuitry shall be U.L. listed for power-limited application.

B. Central Processing Unit Module (CPU): The CPU shall contain and execute all custom time control functions or control-by-event programs for specified events. Time control events/programs shall be automatically overridden by priority fire alarm events. All programs shall be held in non-volatile programmable RAM memory and shall not be lost even if both system primary and secondary power failure occurs. The system shall include a trouble reminder feature to alert operating personnel to the continued presence of system trouble conditions.

C. Display Interface Board (DIA): The DIA shall provide a 640-character back-lit, super-twist Liquid Crystal Display (LCD). It shall provide Light-Emitting Diodes (LED's) for AC POWER; SYSTEM ALARM; SYSTEM TROUBLE; DISPLAY TROUBLE; and DISABLE. The DIA shall provide a 25-key membrane keypad with control capability to command all system functions, status readouts, manual control action, and entry of any alphabetic or numeric information. The keypad shall include means to enter multiple five digit passwords to prevent unauthorized manual control or programming.

D. CONTROL SWITCHES

1. Acknowledge/step Switch

2. Signal Silence Switch

3. System Reset Switch 04 System Test Switch

4. Lamp Test

E. Loop Control/Expander Module (LCM/LEM): The LCM/LEM shall communicate and provide power to all devices on its loop over a single pair of wires. Each signaling line circuit shall provide the capability to support up to 159 smoke detectors and 159 monitor and control modules. The LCM/LEM shall receive digital/ANALOG information from all "intelligent" detectors and shall process this information to determine normal, alarm, trouble, and sensitivity conditions. The analog information may be used for automatic test and determination of maintenance requirements. The LCM/LEM module shall individually monitor all "intelligent" detectors for sensitivity variation initiating a trouble condition should detector sensitivity "drift" become excessive. The system control unit shall have the capability to remotely read each detectors sensitivity, and if need be, electronically adjust the detector sensitivity as required for existing conditions within U.L. recommended limits. In addition, the system shall incorporate a "day/night" sensitivity feature.

F. Non-Lock Walk Test: The system shall include a special non-lock "walk test” mode. The walk test mode can be initiated by loop, software zone, or globally as field selected. The following reports shall be capable of being generated:

1. General results of all walk tested devices.

2. Report all un-programmed devices installed.

3. Report all programmed devices not installed.

4. Report all devices not tested.

G. Automatic Detector Test: The system shall include a special automatic detector test feature which permits reading and adjustment of the sensitivity of all intelligent detectors from the main control panel. In addition, the automatic test feature shall also permit the functional testing of any "intelligent" detector or addressable interface device individually from the main control panel. An automatic detector test shall occur automatically fourteen times each twenty- four hour period or be initiated manually from the FACP as desired. Automatic detector test sequencing shall be terminated upon receipt of a true alarm condition.

H. Special System Reports: The system shall have the ability to generate and print, upon command, system and point status reports. Selection of 'system' read status provides the operator with global system programming information. Selection of 'point' read status provides the operator with selected individual point programming data.

I. Field Programming: The system shall be 100% field programmable without the need for external computers or PROM programmers, and shall NOT require replacement of memory IC's. Systems requiring factory programming/re-programming OR REPLACEMENT OF MEMORY I.C. CHIPS shall not be acceptable. All programs shall be stored in non-volatile RAM memory. Programming shall be accomplished only after entering an appropriate and pre-selected five digit password security code. System programming mode shall not require the system to be taken off-line nor prohibit the system from performing its normal operations and routines. The system shall be capable of revising/changing programmed functions or system expansion at any time subsequent to initialization as described herein without factory modifications or factory programming. Field programming via the use of external computers may be considered provided programming can be accomplished on- site and the owner permanently furnished with required programming apparatus and software as part of this contract.

J. Event History: The main fire alarm control panel shall have the resident ability to store a minimum of 4000 events as well as a separate 1000 event alarm-only file in chronological order of occurrence. Event history shall include all system alarms, troubles, operator actions, unverified alarms, circuit/point alterations, and component failures. Events shall be time and date stamped. Events shall be stored in non-volatile buffer memory. Access to history buffer shall be secured via five digit password security code. Systems not employing event history memory storage shall be required to furnish a printer/recorder for recording system events.

K. Power Supply: The power supply shall provide all control panel and peripheral power needs with filtered power as well as regulated 24VDC power for external audio-visual devices. The audio- visual power may be increased as needed by adding additional modular expansion power supplies. All power supplies shall be designed to meet U.L. and NFPA requirements for POWER-LIMITED operation on all external signaling lines, including initiating circuits and indicating circuits. Power dedicated circuit and label as such on panels. Input power shall be 120VAC 60Hz. The power supply shall provide internal supervised batteries and automatic charger. The power supply shall provide both positive and negative ground fault supervision, battery/charger fail condition, A.C. power fail indicators. The power supply shall also provide supervision of modular expansion power supplies as may be required. Contractor shall connect the 120V circuits to the emergency circuit/panels backed up by the generator. Batteries shall have 24 hours of standby capacity and 15 minutes of alarm capacity. Battery charger shall recharge batteries from full discharge to full charge over a 24-hour period. Switching from normal power to battery power and back shall occur automatically.

2.04 VOICE COMMUNICATIONS (WHERE APPLICABLE)

A. The NOTIFIER Notifer Model NFC-50/100 or DVC with DAA Voice Command voice communications panel shall be modular in design utilizing solid state MICROPROCESSOR circuitry. The voice evacuation system shall integrate with the main fire alarm control panel. Side car voice evacuation systems are not acceptable. Voice system shall be used where required per code and local AHJ requirements.

B. Communications Controls: The communications control panel shall incorporate the following controls and indicators:

1. All call

2. General alarm

3. Audio trouble LED

4. AUDIO LEVEL LED

5. Manual tone/MESSAGE select switches with LED indicators.

6. Communications zone select switches and select indicators

7. Communications monitor speaker with volume control

8. Dynamic paging microphone

C. Paging

1. The microprocessor based one way paging system shall be provided with a means to selectively activate voice, tones or digitized messages to any or all zones in the system via electronic membrane touch-pad controls. In addition, visual indication by zone will be provided.

2. Each audio/speaker circuit will be totally supervised for opens, shorts or grounds with direct shorts prohibiting selection of the respective zone. All audio circuits shall be POWER LIMITED. Each speaker zone shall be provided with an amber trouble LED for circuit trouble conditions and an active/on LED indicator.

3. Alarm/Paging zones shall be provided as required.

D. Voice

1. The voice communications center DVC with DAA shall be a microprocessor based, supervised, multi-function, audio generator. The communications generator shall contain:

   a. Independent Voice communications CPU.

   b. Non-volatile

   c. One custom digitized message circuit.

   d. Up to four selectable tone generator/oscillators.

   e. Each sub-circuit of the communications center shall be fully supervised and failure of any tone oscillator or digital message generator shall revert the system to the default standby generator.

2. The system shall be provided with a custom field programmable digitized message.

3. The system shall provide adequate audio amplification. The system shall be capable of amplifier capacity and expansion as required. Each amplifier shall be continuously monitored electronically for proper output level. Each unit shall be equipped with diagnostic indicators. Each amplifier shall provide a minimum of 50 watts of 25 VRMS of power. Each unit shall be equipped with its own individual power/pilot LED, audio input trouble LED, battery input trouble LED, and amplifier trouble/fail LED. Provide amplification for 1/2 watt per speaker plus 25% spare capacity. Electrical Contractor shall provide and install a 120 VAC dedicated circuit to each remote amplifier cabinet (if needed).

4. Secondary cell dialer shall be Model # Starlink SLE-LTEVI Fire or owner approved equal.

2.05 FIELD DEVICES

A. Multi Criteria Smoke and Heat Detector (FCO-951 or FCO-951IV):

1. Notifier Model FAPT-851 or latest intelligent multi criteria acclimating detector shall be provided where shown on the drawings. The intelligent multi criteria Acclimate Plus and/or Clip Mode detector shall be an addressable device that is designed to monitor a minimum of photoelectric and thermal technologies in a single sensing device. The design shall include the ability to adapt to its environment by utilizing a built-in microprocessor to determine its environment and choose the appropriate sensing settings. The detector design shall allow a wide sensitivity window, no less than 1 to 4% per foot obscuration. This detector shall utilize advanced electronics that react to slow smoldering fires and thermal properties all within a single sensing device.

2. The microprocessor design shall be capable of selecting the appropriate sensitivity levels based on the environment type it is in (office, manufacturing, kitchen etc.) and then have the ability to automatically change the setting as the environment changes (as walls are moved or as the occupancy changes).

3. The intelligent multi criteria detection device shall include the ability to combine the signal of the thermal sensor with the signal of the photoelectric signal in an effort to react hastily in the event of a fire situation. It shall also include the inherent ability to distinguish between a fire condition and a false alarm condition by examining the characteristics of the thermal and smoke sensing chambers and comparing them to a database of actual fire and deceptive phenomena.

4. The detector shall be semi-flush ceiling mounted and be provided with modular detector head with twist-lock base.

B. Intelligent Duct Detector

1. Notifier model DNR series duct mounted "intelligent" photoelectric smoke detectors shall be provided where shown on the drawings. Detectors shall operate on the same principles and exhibit the same basic characteristics as area type "intelligent" photoelectric smoke sensors. The unit shall be capable of interchanging/accepting either photo-electronic or ionization type sensors. The detector shall operate in air velocities of 300 FPM to 4,000 FPM. Each detector shall interface directly to the system SLC loop without the requirement of interface zone modules.

2. The unit shall consist of a clear molded plastic enclosure with integral conduit knockouts. The unit shall be provided with clear faceplate cover to provide visual viewing of detector/sensor for monitoring sensor operation and chamber condition. The duct housing shall be provided with gasket seals to insure proper seating of the housing to the associated ductwork. Each unit's sampling tubes shall extend the width of the duct and be provided with porosity filters to reduce sensor/chamber contamination. Detectors shall be installed per NFPA 90A, and be listed with the fire alarm control panel. A remote LED shall be located on the corridor ceiling adjacent to the respective detector where detectors are not plainly visible or concealed from view.

C. Intelligent Thermal Detectors

1. Notifier Model FST-951R analog, fixed temperature, thermal detectors shall be provided where indicated on the drawings. The detectors shall use dual electronic thermostats to measure temperature levels in the chamber and shall, on command from the control panel, send data to the panel representing the analog temperature level.

2. The detectors shall provide dual alarm and power/status LED's. Status LED's shall flash under normal conditions, indicating that the detector is operational and in regular communication with the control panel. Both LED's may be placed into steady illumination by the control panel, indicating that an alarm condition has been detected. An output connection shall also be provided in the base to connect an external remote alarm LED.

3. The detector shall be semi-flush ceiling mounted and be provided with modular detector head with twist-lock base.

D. Addressable Manual Stations

1. Notifier Model NBG-12LX manual stations shall be provided where indicated on the drawings. The manual stations shall contain the intelligence for reporting address, identity, alarm and trouble to the fire alarm control panel

   a. The manual pull station shall be constructed of durable molded polycarbonate material, and shall be RED in color with raised white lettering. Stations shall be of the dual action type.

   b. Manual stations (when required), shall be located not more than 5 feet from the entrance to each exit. Additional manual stations shall be located so that the travel distance to the nearest manual station does not exceed 200 feet.

   c. Manual station heights shall be a minimum of 42” and a maximum of 48” measured vertically, from the finished floor level to the activating handle or lever.

   d. Systems using automatic smoke detection or water flow detection devices to initiate the fire alarm system, not less than one (1) manual station shall be provided to initiate a fire alarm signal. The manual station shall be located where required by the Authority Having Jurisdiction, per NFPA 101. Provide Stopper II cover on all manual stations where shown on plans.

E. Monitor Module

1. Notifier model FMM-101 addressable monitor modules shall be provided where required to interface to contact alarm devices. The monitor module shall be used to connect a supervised zone of conventional initiating devices to an intelligent SLC loop.

2. The monitor module shall provide address-setting means using rotary decimal switches. No binary coding shall be required.

F. Control Module

1. Notifier model FCM/FRM control/relay modules or approved equal shall be provided where required to provide audible alarm interface and/or relay control interface. The control module shall be used to connect a supervised zone of conventional indicating devices to an intelligent loop. The zone may be wired class A or class B - field selected. The control module may be optionally wired as dry contact (form C) relay.

2. The control module shall provide address-setting means using rotary decimal switches. No binary coding shall be required. A status LED shall be provided which shall flash under normal conditions, indicating that the control module is operational and in regular communication with the control panel. The LED shall illuminate steady when the device is actuated via the fire alarm control panel.

G. Remote LCD Alpha-Numeric Annunciators, Remote Mic with Switches

1. Provide where indicated on the drawings, a Notifier LCD-160 640 character remote LCD alpha-numeric annunciator or approved equal to annunciate all system events and duplicate the displayed status at the main FACP. The annunciator shall be a backlit eighty-character LCD display and operate via the system RS485 or RS232 serial output terminal from the main FACP. The LCD display shall automatically illuminate upon receipt of an alarm or trouble condition. The illumination source shall extinguish during normal/standby mode to conserve power. The unit shall operate from FACP 24VDC power and function during system power failure while the system resides on standby batteries. The remote LCD annunciator shall include:

   a. Integral time-date clock

   b. Time-date select switch

   c. Time-date/contrast adjust

   d. Display/step switch

   e. System reset

   f. f. System silence

   g. System acknowledge

   h. Integral trouble buzzer

   i. Point enable/disable capability

   j. Full QWERTY keypad for system programming.

2. Annunciator shall upon command display the first system alarm, last alarm, and system alarm count. The unit shall be equipped with an integral lamp test feature. The unit shall be semi flush mounted where shown.

H. Speakers/Horn (Where Applicable)

1. Speakers shall be listed under U.L. standard 1480, meet all specifications of the Life Safety Code and be capable of reproducing both tone alerts and voice communication instructions. Speakers/Horns shall be System Sensor L Series or equal by Wheelock. Speakers or approved equal shall have built in matching transformer, field selectable multiple power taps and circuitry for speaker/line supervision. Speakers shall be provided with screw terminal connection points. Speakers shall be 4" square or round with textured white decorative grill. Speakers shall be tapped to produce a minimum sound-pressure level of 87 dBA at 10 feet. Speakers shall be ceiling mounted as located on the drawings.

I. Speakers/Horns with Integral Strobe Light

1. Speakers shall be listed under U.L. standard 1480, meet all specifications of the Life Safety Code and be capable of reproducing both tone alerts and voice communication instructions. Speakers/strobe units shall be System Sensor L Series. Speakers shall have built in matching transformer, field selectable multiple power taps and circuitry for speaker/line supervision. Speakers shall be provided with screw terminal connection points. Speaker/Strobes shall be white. Each speaker/strobe shall be equipped with an integral high intensity visual alarms shall be Xenon strobe type producing a minimum of 15 candela on a 24 VDC limited energy supervised circuit. Each strobe light shall be capable of providing multi candela output. Alarm devices shall be designated to be ceiling mounted as indicated on the drawings. Signals shall operate in unison with audible alarm appliances. High intensity visual signals shall be of solid state low current design and listed to U.L. Standard 1971 All strobe lights shall be synchronized.

J. High Intensity Visual Signals

1. Provide System Sensor L Series or equal by Wheelock strobe lights were shown on the drawings. High intensity visual signals shall be installed where shown on the drawings and as may be required by the Americans with Disabilities Act (Public Law 101-336), Texas Accessibility Standards and NFPA 72, Chapter 6. Strobe lights shall be red. High intensity visual alarms shall be Xenon strobe type producing a minimum of 15 candela on a 24 VDC limited energy supervised circuit. Each strobe light shall be capable of providing multi candela output. Alarm devices shall be designated to be wall or ceiling mounted as indicated on the drawings. Signals shall operate in unison with audible alarm appliances. High intensity visual signals shall be of solid state low current design and listed to U.L. Standard 1971. All strobe lights shall be synchronized.

K. Protective Covers

1. Provide protective covers on fire alarm notification appliance devices located in multi-purpose rooms and gymnasium locker rooms. These protective covers shall be manufactured by Safety Technology International, Inc. (STI). These covers shall be provided on all devices including but not limited to audible and visual devices, and manual pull stations. The mounting of a device shall be reinforced to enable the protective covers to protect the fire alarm devices. In gymnasiums, provide wire guards or approved equal. No horns in covers.

L. Sprinkler Waterflow Switch

1. Sprinkler waterflow switches shall be installed where indicated on the drawings. Each unit shall contain one set of SPDT alarm contacts. Waterflow switches shall be provided and installed by the fire protection contractor, and connected by the fire alarm contractor.

M. Sprinkler Valve Supervisory Switch

1. Sprinkler valve supervisory switches shall be installed on each valve as indicated on the drawings. Each unit shall contain on set of SPDT contacts. Sprinkler valve supervisory switches shall be provided, installed, and adjusted by the fire protection contractor, and connected by the fire alarm contractor.

N. Auxiliary AHU Relays

1. Notifier/Air Products Model MR-101/C relays or approved equal shall be provided for HVAC and AHU control and interface. Relays shall be heavy duty type and rated up to 10 amps at 24 VDC, 60 HZ. Relays shall be provided with NEMA I dust cover assembly and be provided with SPDT contacts as well as activated LED indicator. All interface relays shall be connected to a supervised notification appliance circuit.

O. Field Charging Power Supplies

1. Provide Notifier FCPS-24S6/8 or PSE-10 power supplies with battery backup as required. Electrical Contractor shall provide a 120 VAC dedicated emergency circuit to each power supply.

P. Conventional Weatherproof Thermal Detector

1. When heat detection devices are located in harsh and/or moist environments, such as showers and similar areas, which are subject to high humidity, the following device shall be provided: Weatherproof Heat Detector 135 F Rate Compensated shall be provided. The detector shall mount in a weatherproof 4” electrical box with a ½” N.P.T. threaded hub. This detector shall be connected to an addressable monitor module.

Q. Digital Alarm Transmitter Communicator

1. Provide Digital alarm communicator shall be multi-channel UDACT-2. Provide point ID reporting to central monitoring station. (Owner will provide Analog or Digital to Analog Telephone lines cabling to the fire alarm panel, Service and Connection by owner).

R. Provide a minimum of (50) initiating points for future portable buildings where applicable. Provide (2) dedicated NAC circuits pulled to the exit point above the ceiling. Refer to floor plan for location.

S. Contractor shall provide a 120 VAC dedicated emergency circuit to each amplifier.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Wiring:

1. All wiring shall be in accordance with NFPA 72 and the National Electrical Code, Local Codes, and article 760 of NFPA Standard 70. All wiring sizes shall conform to recommendations of the equipment manufacturer, and as indicated on the engineered shop drawings.

2. Limited energy FPLP wire shall be installed provided such wire is U.L. Listed to U.L. TEST910 for such applications and is of the low smoke producing fluorocarbon type and complies with NEC Article 760 if so approved by the local authority having jurisdiction.

3. All wiring for SLC signaling circuits shall be of the twisted, low capacitance type to guard against outside RF and EMF interference and induced noise.

4. All wiring shall be run in a supervised fashion (i.e. no branch wiring or dog- legged wiring) per NFPA requirements such that any wiring disarrangement will initiate the appropriate trouble signals via the main control panel per NFPA and U.L. requirements.

5. Wiring splices shall be kept to a minimum with required splices to be made in designated terminal boxes or at field device junction boxes. Transposing or color code changes of wiring will not be permitted. End-of-line supervisory devices shall be installed with the last device on the respective circuit. Said device shall be appropriately marked designating it as the terminating device on the respective circuit.

6. No A.C. wiring or any other wiring shall be run in the same conduit as fire alarm wiring.

B. Open Wiring

1. Systems utilizing open wiring techniques with low smoke plenum cable.

2. Support wire clear of knock out panels, access panels, and maintenance spaces for equipment. Wire and cable shall be run using wire management techniques supporting cable as close as possible to within one foot of the floor or roof rafters. Wire supports shall be directly fastened to the structure on a maximum of five foot centers. Wire routing shall be parallel and perpendicular to building lines. The wire and cable shall be secured with tie wraps or carrier wire. Sagging in excess of three inches will not be allowed nor will bending of the supporting ring structure.

C. Conduit/Raceway and 120 VAC Power wiring

1. Electrical Contractor to provide conduit and raceway system and shall be installed in the mechanical, electrical and telephone rooms and as required by NFPA 70. Electrical Contractor shall provide and install all required dedicated 120 VAC power circuits for the fire alarm system including the main fire alarm panel, remote amplifier panels and remote strobe light power supplies. Contractor shall connect the 120V circuits to the emergency circuit/panels backed up by the generator.

D. Minimum Wire Sizes Shall Be as Follows:

1. Signaling Line Circuits: 18 AWG Twisted (Low Capacitance)

2. Notification Appliance Circuits: 14 AWG

3. Relay Control Circuits: 18 AWG

4. Speaker Circuits: 16 AWG Twisted/Shielded

E. All wire shall be plenum rated.

3.02 TEST AND REPORTS

A. A state licensed and factory trained technical representative of the manufacturer shall supervise the final control panel connections and testing of the system. Upon completion of the acceptance tests, the owner and/or his representatives shall be instructed in the proper operation of the system. Instruction shall be 4 hours minimum.

B. The installing contractor shall functionally test each and every device in the entire system for proper operation and response. In addition, each circuit in the system shall be fully tested for wiring supervision. Any items found not properly installed or non-functioning shall be replaced or repaired and re-tested. Provide a device list of every device and tested results in an excel format.

C. The installing contractor shall provide a complete written report on the functional test of the entire system. A copy of the test report shall be provided with maintenance manuals. The test report shall be signed and dated by the licensed fire alarm superintendent responsible for supervising the final system test and checkout.

D. The installing contractor's fire alarm technician shall test the entire system in the presence of the local authorities having jurisdiction. The contractor shall be responsible for making any changes, adjustments, or corrections as may be required by the local authorities.

E. It is the intent of these specifications and of the architect/engineer that a continued program of system maintenance be continued by the owner in compliance with NFPA Standard 72, Chapter 7. It is mandatory that the installing contractor shall provide such services and make available these services to the owner upon completion of the project.

3.03 WARRANTY

A. The fire alarm system, including labor and material, shall be free from defects in workmanship and materials, under normal use and service, for a period of one year from the date of acceptance or beneficial occupancy, whichever shall occur first. Any equipment or workmanship shown to be defective shall be repaired, replaced or adjusted during normal working hours at no cost to the owner.

B. The equipment manufacturer shall be represented by a local service organization and the name of such shall be furnished to the Owner, Architect, and Engineer.

3.04 FLOOR PLANS

A. Provide (1) electronic copy and (1) hard copy of the approved fire alarm drawings as well as a FML-009 with approved State of Texas installation tags posted at fire panel.

SECTION 31 31 16
TERMITE CONTROL

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes soil treatment with termiticide.

1.02 PREINSTALLATION CONFERENCE

A. Preinstallation Conference: Conduct conference at Project site.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include the EPA-Registered Label for termiticide products.

1.04 INFORMATIONAL SUBMITTALS

A. Product certificates.

B. Soil Treatment Application Report: Include the following:

1. Date and time of application.
1. Moisture content of soil before application.
2. Termiticide brand name and manufacturer.
3. Quantity of undiluted termiticide used.
4. Dilutions, methods, volumes used, and rates of application.
5. Areas of application.
6. Water source for application.

C. Warranties: Sample of special warranties.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: A specialist who is licensed according to regulations of authorities having jurisdiction to apply termite control treatment and products in jurisdiction where Project is located and who employs workers trained and approved by manufacturer to install manufacturer's products.

B. Regulatory Requirements: Formulate and apply termiticides and termiticide devices according to the EPA-Registered Label.

1.06 PROJECT CONDITIONS

A. Environmental Limitations: To ensure penetration, do not treat soil that is water saturated or frozen. Do not treat soil while precipitation is occurring. Comply with requirements of the EPA-Registered Label and requirements of authorities having jurisdiction.

B. Coordinate soil treatment application with excavating, filling, grading, and concreting operations. Treat soil under footings, grade beams, and ground-supported slabs before construction.

1.07 WARRANTY

A. Soil Treatment Special Warranty: Manufacturer's standard form, signed by Applicator and Contractor, certifying that termite control work, consisting of applied soil termiticide treatment, will prevent infestation of subterranean termites. If subterranean termite activity or damage is discovered during warranty period, re-treat soil and repair or replace damage caused by termite infestation.

1. Warranty Period: Five years from date of Substantial Completion.

1.08 MAINTENANCE SERVICE

A. Continuing Service: Beginning at Substantial Completion, provide 12 months' continuing service including monitoring, inspection, and re-treatment for occurrences of termite activity. Provide a standard continuing service agreement. State services, obligations, conditions, terms for agreement period, and terms for future renewal options.

PART 2 - PRODUCTS

2.01 SOIL TREATMENT

A. Termiticide: Provide an EPA-Registered termiticide, complying with requirements of authorities having jurisdiction, in an aqueous solution formulated to prevent termite infestation. Provide quantity required for application at the label volume and rate for the maximum termiticide concentration allowed for each specific use, according to product's EPA-Registered Label.

1. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. BASF Corporation, Agricultural Products.
b. Bayer Environmental Science.
c. FMC Corporation, Agricultural Products Group.
d. Syngenta.

2. Service Life of Treatment: Soil treatment termiticide that is effective for not less than five years against infestation of subterranean termites.

PART 3 - EXECUTION

3.01 APPLICATION, GENERAL

A. General: Comply with the most stringent requirements of authorities having jurisdiction and with manufacturer's EPA-Registered Label for products.

3.02 APPLYING SOIL TREATMENT

A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for moisture content of soil per termiticide label requirements, interfaces with earthwork, slab and foundation work, landscaping, utility installation, and other conditions affecting performance of termite control.

B. Proceed with application only after unsatisfactory conditions have been corrected.

C. Soil Treatment Preparation: Remove foreign matter and impermeable soil materials that could decrease treatment effectiveness on areas to be treated. Loosen, rake, and level soil to be treated except previously compacted areas under slabs and footings. Termiticides may be applied before placing compacted fill under slabs if recommended in writing by termiticide manufacturer.

1. Fit filling hose connected to water source at the site with a backflow preventer, complying with requirements of authorities having jurisdiction.

D. Application: Mix soil treatment termiticide solution to a uniform consistency. Provide quantity required for application at the label volume and rate for the maximum specified concentration of termiticide, according to manufacturer's EPA-Registered Label, to the following so that a continuous horizontal and vertical termiticidal barrier or treated zone is established around and under building construction. Distribute treatment evenly.

1. Slabs-on-Grade: Under ground-supported slab construction, including footings, building slabs, and attached slabs as an overall treatment. Treat soil materials before concrete footings and slabs are placed.
2. Foundations: Adjacent soil, including soil along the entire inside perimeter of foundation walls; along both sides of interior partition walls; around plumbing pipes and electric conduit penetrating the slab; around interior column footers, piers, and chimney bases; and along the entire outside perimeter, from grade to bottom of footing. Avoid soil washout around footings.
3. Masonry: Treat voids.
4. Penetrations: At expansion joints, control joints, and areas where slabs will be penetrated.

E. Avoid disturbance of treated soil after application. Keep off treated areas until completely dry.

F. Protect termiticide solution, dispersed in treated soils and fills, from being diluted until ground-supported slabs are installed. Use waterproof barrier according to EPA-Registered Label instructions.

G. Post warning signs in areas of application.

H. Reapply soil treatment solution to areas disturbed by subsequent excavation, grading, landscaping, or other construction activities following application.

END OF SECTION

SECTION 31 62 13.29 - SHALLOW SPREAD FOOTING FOUNDATIONS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION OF REQUIREMENTS

A. Work Included: Perform all work necessary and required for the construction of the project as indicated. Such work includes but is not necessarily limited to the furnishing and installing of spread footings as shown and noted on the drawings and specified herein, including the removal of all debris, patching of concrete walks, and backfilling.

B. Related Work in Other Sections: The following items of associated work are included in other sections of these specifications:

1. Section 03 30 00 - Cast-in-place concrete.

1.2 QUALITY CONTROL

A. Contractor's responsibility: Provide suitable access and lighting for Architect/Engineer and Owners representative to inspect the drilled pier excavations.

PART 2 - EXECUTION

2.1 PREPARATION

A. The design layout, construction and removal of debris shall be the sole responsibility of the Contractor.

B. For estimating purposes, the base bid shall be based on the spread footing depths as indicated on the structural drawings.

2.2 INSTALLATION

A. Excavation: Maintain spread footing centers throughout operation. Should spread footing excavation be carried below depth designated, fill additional excavation with concrete as specified for the spread footings. No earth backfill will be allowed in footing excavations.

B. Cleaning: Keep spread footing base thoroughly clean and free of water before concrete is placed. Protect holes from damage to avoid recleaning.

C. Reinforcement: Set in place reinforcement steel, which has already been tied. Maintain 3" minimum coverage of concrete.

END OF SECTION 316213.29

SECTION 32 16 23
SIDEWALKS

1.01 SUMMARY

A. Section includes colored concrete sidewalks.

B. Locations: In addition to steel trowel finish, provide the following concrete finishes in the corresponding location.

1. Rocksalt: At entry patio as indicated on Drawings.
2. Exposed Aggregate: At entry patio as indicated on Drawings.

C. Related Sections include:

1. Section 03 30 00 “Cast-in-Place Concrete” for general building applications of concrete.
2. Division 32 Section “Concrete Paving Joint Sealants” for joint sealants in expansion and contraction joints within decorative concrete sidewalks and in joints between decorative concrete sidewalks and adjacent construction.

1.02 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash, slag cement, and other pozzolans.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples for Initial Selection: For each type of product, ingredient, or admixture requiring color, pattern, or texture selection.

C. Samples for Verification: For each type of exposed color, pattern, or texture indicated.

D. Design Mixtures: For each decorative concrete sidewalk mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1.05 INFORMATIONAL SUBMITTALS

A. Material Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.
3. Admixtures.
4. Curing compounds.
5. Bonding agent or epoxy adhesive.
6. Joint fillers.

B. Material Test Reports: For each of the following:

1. Aggregates. Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

C. Field quality-control reports.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer of decorative concrete sidewalks systems.

B. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's “Certification of Ready Mixed Concrete Production Facilities” (Quality Control Manual - Section 3, “Plant Certification Checklist”).

C. Testing Agency Qualifications: Qualified according to ASTM C1077 and ASTM E329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups of full-thickness sections of decorative concrete sidewalks to demonstrate typical joints; surface color, pattern, and texture; curing; and standard of workmanship.
2. Build mockups of decorative concrete sidewalks in the location and of the size indicated or, if not indicated, build mockups where directed by Architect and not less than 96 inches by 96 inches.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified independent testing agency to perform preconstruction testing on decorative concrete sidewalks mixtures.

1.08 FIELD CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:

1. When air temperature has fallen to or is expected to fall below 40 deg F, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F and not more than 80 deg F at point of placement.
2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.

C. Hot-Weather Concrete Placement: Comply with ACI 301 and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.01 CONCRETE, GENERAL

A. ACI Publications: Comply with ACI 301 unless otherwise indicated.

2.02 FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.

1. Use flexible or uniformly curved forms for curves of a radius of 100 feet or less. Do not use notched and bent forms.

B. Forms for Textured Finish Concrete: Units of face design, size, arrangement, and configuration indicated. Provide solid backing and form supports to ensure stability of textured form liners.

C. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.03 STEEL REINFORCEMENT

A. Plain-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, fabricated from as-drawn steel wire into flat sheets.

B. Reinforcing Bars: ASTM A615/A615M, Grade 60; deformed.

C. Steel Bar Mats: ASTM A184/A184M; with ASTM A615/A615M, Grade 60 deformed bars; assembled with clips.

D. Plain-Steel Wire: ASTM A1064/A1064M, as drawn.

E. Joint Dowel Bars: ASTM A615/A615M, Grade 60 plain-steel bars. Cut bars true to length with ends square and free of burrs.

F. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded-wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's “Manual of Standard Practice” from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:

1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.

2.04 CONCRETE MATERIALS

A. Cementitious Materials: Use the following cementitious materials, of same type, brand, and source throughout Project:

1. Portland Cement: ASTM C 150/C 150M, gray portland cement Type I or Type II.
2. Fly Ash: ASTM C 618, Class C or Class F.

B. Normal-Weight Aggregates: ASTM C 33/C 33M, Class 4M, uniformly graded. Provide aggregates from a single source with documented service-record data of at least 10 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials.

1. Maximum Coarse-Aggregate Size: 1-1/2 inches nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

C. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
2. Retarding Admixture: ASTM C 494/C 494M, Type B.
3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
4. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.

D. Color Pigment: ASTM C 979/C 979M, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, nonfading, and resistant to lime and other alkalis.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. BASF Corporation.
b. Butterfield Color, Inc.
c. Euclid Chemical Company (The); an RPM company.
d. QC Construction Products.
e. Scofield, a Business Unit of Sika Corporation.
f. Solomon Colors, Inc.

E. Water: Potable and complying with ASTM C 94/C 94M.

2.05 CURING AND SEALING MATERIALS

A. Curing Paper: Nonstaining, waterproof paper, consisting of two layers of kraft paper cemented together and reinforced with fiber, and complying with ASTM C171.

2.06 RELATED MATERIALS

A. Joint Fillers: ASTM D 1751, asphalt-saturated cellulosic fiber in preformed strips.

B. Bonding Agent: ASTM C 1059/C 1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.

C. Epoxy-Bonding Adhesive: ASTM C 881/C 881M, two-component epoxy resin capable of humid curing and bonding to damp surfaces; of class suitable for application temperature, of grade complying with requirements, and of the following types:

1. Types I and II, nonload bearing or Types IV and V, load bearing, as required for application indicated, for bonding hardened or freshly mixed concrete to hardened concrete.

D. Polyethylene Film: ASTM D4397, 1 mil thick, clear.

2.07 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to ACI 301, for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.

1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
2. When automatic machine placement is used, determine design mixtures and obtain laboratory test results that comply with or exceed requirements.

B. Cementitious Materials: Use fly ash as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent. Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:

1. Fly Ash or Pozzolan: 25 percent.

C. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

D. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing admixture, high-range, water-reducing admixture, or plasticizing and retarding admixture in concrete as required for placement and workability.
2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

E. Concrete Mixtures: Normal-weight concrete.

1. Compressive Strength (28 Days): 3000 psi unless otherwise indicated.
2. Maximum W/C Ratio at Point of Placement: 0.45.
3. Slump Limit: 4 inches, plus or minus 1 inch.

F. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

2.08 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M. Furnish batch certificates for each batch discharged and used in the Work.

1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For concrete batches of 1 cu. yd. or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For concrete batches larger than 1 cu. yd., increase mixing time by 15 seconds for each additional 1 cu. yd..

3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixing time, quantity, and amount of water added.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase surface below concrete paving to identify soft pockets and areas of excess yielding.

1. Completely proof-roll subbase in one direction and repeat in perpendicular direction. Limit vehicle speed to 3 mph.
2. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than 15 tons.
3. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch according to requirements in Division 31 Section “Earth Moving.”

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

B. Protect adjacent construction from discoloration and spillage during application of color hardeners, release agents, stains, curing compounds, and sealers.

3.03 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.04 STEEL REINFORCEMENT INSTALLATION

A. General: Comply with CRSI's “Manual of Standard Practice” for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install welded-wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

E. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2-inch overlap to adjacent mats.

3.05 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.

1. When joining existing sidewalks, place transverse joints to align with previously placed joints unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of sidewalks and at locations where sidewalks operations are stopped for more than one-half hour unless sidewalks terminates at isolation joints.

1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of sidewalks strips unless otherwise indicated.
2. Keyed Joints: Provide preformed keyway-section forms or bulkhead forms with keys unless otherwise indicated. Embed keys at least 1-1/2 inches into concrete.
3. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.

1. Locate expansion joints at intervals of 50 feet unless otherwise indicated.
2. Extend joint fillers full width and depth of joint.
3. Terminate joint filler not less than 1/2 inch or more than 1 inch below finished surface if joint sealant is indicated.
4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows, to match jointing of existing adjacent decorative concrete sidewalks:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with grooving tool to a 1/4-inch radius. Repeat grooving of contraction joints after applying surface finishes. Eliminate grooving-tool marks on concrete surfaces.

    a. Tolerance: Ensure that grooved joints are within 3 inches either way from centers of dowels.

2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch-wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.

    a. Tolerance: Ensure that sawed joints are within 3 inches in both directions from centers of dowels.

3. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

E. Edging: After initial floating, tool edges of sidewalks, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces.

3.06 CONCRETE PLACEMENT

A. Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast-in.

B. Remove snow, ice, or frost from subbase surface and steel reinforcement before placing concrete. Do not place concrete on frozen surfaces.

C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

D. Comply with ACI 301 requirements for measuring, mixing, transporting, and placing concrete.

E. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.

F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

G. Consolidate concrete according to ACI 301 by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only

square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement and joint devices.

H. Screed sidewalks surface with a straightedge and strike off.

I. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleedwater appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

3.07 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

3.08 SPECIAL FINISHES

A. Monolithic Exposed-Aggregate Finish: Expose coarse aggregate in paving surface as follows:

1. Immediately after float finishing, spray-apply chemical surface retarder to paving according to manufacturer's written instructions.
2. Cover paving surface with plastic sheeting, sealing laps with tape, and remove when ready to continue finishing operations.
3. Without dislodging aggregate, remove mortar concealing the aggregate by lightly brushing surface with a stiff, nylon-bristle broom. Do not expose more than one-third of the average diameter of the aggregate and not more than one-half of the diameter of the smallest aggregate.
4. Fine-spray surface with water and brush. Repeat cycle of water flushing and brushing until cement film is removed from aggregate surfaces to depth required.

B. Rock-Salt Finish: After initial floating, troweling, or brooming, uniformly spread rock salt over paving surface at the rate of 5 lb/100 sq. ft.

1. Embed rock salt into plastic concrete with roller or magnesium float.
2. Cover paving surface with 1-mil- thick polyethylene sheet and remove sheet when concrete has hardened and seven-day curing period has elapsed.
3. After seven-day curing period, saturate concrete with water and broom-sweep surface to dissolve remaining rock salt, thereby leaving pits and holes.

3.09 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Comply with ACI 306.1 for cold-weather protection.

C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.

D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

E. Curing Compound: Apply immediately after final finishing. Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating, and repair damage during curing period.

3.10 SIDEWALK TOLERANCES

A. Comply with tolerances in ACI 117 and as follows:

1. Elevation: 3/4 inch.
2. Thickness: Plus 3/8 inch, minus 1/4 inch.
3. Surface: Gap below 10-foot-long, unleveled straightedge not to exceed 1/2 inch.
4. Lateral Alignment and Spacing of Dowels: 1 inch.
5. Vertical Alignment of Dowels: 1/4 inch.
6. Alignment of Dowel-Bar End Relative to Line Perpendicular to Sidewalks Edge: 1/4 inch per 12 inches of dowel.
7. Joint Spacing: 3 inches.
8. Contraction Joint Depth: Plus 1/4 inch, no minus.
9. Joint Width: Plus 1/8 inch, no minus.

3.11 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C172/C172M shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. or fraction thereof of each concrete mixture placed each day.

   a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C143/C143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C231/C231M, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is 40 deg F and below and when it is 80 deg F and above, and one test for each composite sample.

5. Compression Test Specimens: ASTM C31/C31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
6. Compressive-Strength Tests: ASTM C39/C39M; test one specimen at seven days and two specimens at 28 days.

   a. A compressive-strength test shall be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.

C. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.

D. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.

F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.

G. Decorative concrete sidewalks will be considered defective if it does not pass tests and inspections.

H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

I. Prepare test and inspection reports.

3.12 REPAIR AND PROTECTION

A. Remove and replace decorative concrete sidewalks that is broken or damaged or does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.

B. Protect decorative concrete sidewalks from damage. Exclude traffic from sidewalks for at least 14 days after placement. When construction traffic is permitted, maintain sidewalks as clean as possible by removing surface stains and spillage of materials as they occur.

C. Maintain decorative concrete sidewalks free of stains, discoloration, dirt, and other foreign material. Sweep sidewalks not more than two days before date scheduled for Substantial Completion inspections.

(a) Budget U-factors are used for software baseline calculations ONLY, and are not code requirements.
(b) Fenestration product performance must be certified in accordance with NFRC and requires supporting documentation.
(c) High albedo roof requirement options: 1) 3-year aged solar reflectance >= 0.55 thermal emittance >= 0.75, 2) 3-year aged solar reflectance index >= 64.0, 3) Initial year aged solar reflectance >= 0.70 thermal emittance >= 0.75, 4) Initial year aged solar reflectance index >= 82.0.

Envelope PASSES: Design 7% better than code

Envelope Compliance Statement

Compliance Statement: The proposed envelope design represented in this document is consistent with the building plans, specifications, and other calculations submitted with this permit application. The proposed envelope systems have been designed to meet the 2015 IECC requirements in COM*check* Version COMcheckWeb and to comply with any applicable mandatory requirements listed in the Inspection Checklist.

GENERAL NOTES

A. PROVIDE BUILDING INFORMATION SIGN IN LOBBY PER FIRE CODE.

B. PROVIDE FIRE EXTINGUISHERS IN CABINETS AS DIRECTED AND QUANTIFIED BY FIRE MARSHAL. FECs AS DEPICTED ARE A MINIMUM REQUIREMENT WITH MAX. TRAVEL DISTANCE 75' TO FEC.

C. PROVIDE AED IN CABINET AS LOCATED.

D. PROVIDE KNOX BOX LOCATIONS AND FDC SIGNAGE PER FIRE MARSHAL.

GENERAL NOTES

G-1. THE CONTRACTOR SHALL NOTIFY CITY OF RICHMOND (REFERRED TO AS THE "CITY") DIRECTOR OF PUBLIC WORKS AT LEAST 48 HOURS PRIOR TO COMMENCEMENT OF WORK AT (281) 342-0559. CONTRACTOR SHALL ATTEND A PRECONSTRUCTION MEETING WITH CITY AND THE PROJECT ENGINEER PRIOR TO INITIATING CONSTRUCTION. PRECONSTRUCTION MEETINGS SHALL BE HELD AT 600 MORTON STREET OR AT A LOCATION APPROVED BY THE DIRECTOR OF PUBLIC WORKS.

G-2. ALL PUBLIC INFRASTRUCTURE SHALL BE INSPECTED BY PUBLIC WORKS INSPECTOR(S) OR AUTHORIZED AGENTS(S). A FOLLOW-UP INSPECTION OF ALL PUBLIC INFRASTRUCTURE SHALL BE SCHEDULED WITHIN 60 DAYS OF THE INITIAL INSPECTION. A COMPLETE RE-INSPECTION WITH A NEW PUNCH LIST MAY BE REQUIRED AFTER THE 60 DAY PERIOD. THE CITY CONSTRUCTION INSPECTOR TO BE NOTIFIED A MINIMUM OF 24 HOURS, ON ALL PAVEMENT POURS, WATER, STORM AND SANITARY TESTING. TESTING WILL NOT BE DONE ON A SATURDAY, UNLESS PRIOR APPROVAL IS PROVIDED. COMPLETED WORK SHALL NOT BE BACKFILLED WITHOUT APPROVAL OF THE CITY.

G-3. CONTRACTOR MUST OBTAIN ALL PERMITS AND SUPPLY ALL BONDS REQUIRED BY THE CITY, PRIOR TO BEGINNING CONSTRUCTION. ALL REQUIRED PERMITS MUST BE LISTED ON SITE, PLACED IN A WATERPROOF ENCASEMENT.

~~G-4. UPON COMPLETION OF THE PROJECT, THE CONTRACTOR AND/OR PROJECT ENGINEER SHALL PROVIDE THE DIRECTOR OF PUBLIC WORKS AND CITY ENGINEER DETAILED, RECORD DRAWINGS IN REPRODUCTIVE AND ELECTRONIC FORMAT.~~

G-5. THE CONTRACTOR SHALL FURNISH ALL MATERIALS, EQUIPMENT AND LABOR FOR EXCAVATION, INSTALLATION AND BACKFILLING OF WATER, SANITARY AND STORM SEWER LINES AND RELATED APPURTENANCES AS SHOWN ON THE PLANS AND/OR DESCRIBED IN THE SPECIFICATIONS.

G-6. ALL MATERIALS AND WORKMANSHIP SHALL CONFORM TO THE TEXAS DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS (2004) AND REVISIONS THERETO.

(LATEST EDITION) AND REVISONS THERETO.

G-7. ALL WORK PERFORMED SHALL COMPLY WITH CURRENT NATIONAL SPECIFICATIONS AND STANDARD PRACTICES, APPROVED PROJECT PLANS AND SPECIFICATIONS AND ALL APPLICABLE CITY STANDARDS, CODES AND ORDINANCES.

G-8. ALL CONSTRUCTION TRAFFIC CONTROL IN THE PROJECT AREA SHALL MEET THE REQUIREMENTS OF THE TEXAS MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES AND SHALL BE APPROVED BY THE CITY FOR ALL PROJECTS WITHIN THE CITY LIMITS.

G-9. CONTRACTOR SHALL NOTIFY ALL UTILITY COMPANIES IN THE AREA PRIOR TO COMMENCING WORK IN ANY RIGHT-OF-WAY OR EXISTING EASEMENT. A VERIFICATION NUMBER FROM THE ONE-CALL UTILITY COORDINATING COMMITTEE IS REQUIRED.

G-10. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE LOCATIONS OF ALL EXISTING UTILITIES PRIOR TO EXCAVATION AND UNCOVER EXISTING UTILITIES AT ALL "POINTS OF CROSSING" TO DETERMINE IF CONFLICTS EXIST PRIOR TO COMMENCING ANY CONSTRUCTION. NOTIFY THE PROJECT ENGINEER, CITY ENGINEER AND DIRECTOR OF PUBLIC WORKS IMMEDIATELY OF ANY CONFLICT.

G-11. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO LOCATE SUCH UNDERGROUND FEATURES SUFFICIENTLY IN ADVANCE OF OPERATIONS TO PRECLUDE DAMAGE IN THE EVENT THAT UNDERGROUND FACILITIES NOT SHOWN ON THE DRAWINGS ARE ENCOUNTERED.

G-12. IN THE EVENT OF DAMAGE TO UNDERGROUND FACILITIES, WHETHER OR NOT IT IS SHOWN ON THE DRAWINGS, THE CONTRACTOR SHALL MAKE THE NECESSARY REPAIRS TO REPLACE THE FACILITY BACK IN SERVICE. ALL SUCH REPAIRS SHALL CONFORM TO THE REQUIREMENTS OF THE OWNER OF THE FACILITY.

G-13. THE CONTRACTOR SHALL PROVIDE SHEETING, SHORING AND BRACING NECESSARY TO PROTECT WORKMEN AND EXISTING UTILITIES DURING ALL PHASES OF CONSTRUCTION AS MAY BE REQUIRED BY O.S.H.A, FEDERAL, STATE AND LOCAL LAWS, CODES AND ORDINANCES.

G-14. CONTRACTOR SHALL COVER OPEN EXCAVATIONS WITH ANCHORED STEEL PLATES DURING NON-WORKING HOURS ALONG EXISTING ROADWAYS AND WITHIN TRAFFIC AREAS.

G-15. ALL TESTING FOR THIS PROJECT SHALL CONFORM TO THE CITY REQUIREMENTS. SHOULD ANY TEST RESULTS NOT MEET THE TESTING REQUIREMENTS, IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO REMOVE OR REPLACE SUCH MATERIALS AND INSTALLATIONS, SO THAT THE TESTING REQUIREMENTS ARE MET.

G-16. THE LOADING, UNLOADING AND HANDLING OF ALL PIPE, VALVES, HYDRANTS, FITTINGS, MANHOLES AND OTHER MATERIALS SHALL BE IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDED PRACTICES AND SHALL BE PERFORMED WITH CARE TO AVOID ANY DAMAGE TO THE MATERIALS. THE CONTRACTOR SHALL LOCATE AND PROVIDE THE NECESSARY STORAGE AREAS FOR MATERIALS AND EQUIPMENT.

G-17. THE CONTRACTOR SHALL BE RESPONSIBLE FOR SAFEGUARDING AND PROTECTING ALL MATERIAL AND EQUIPMENT STORED ON THE JOB SITE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE STORAGE OF MATERIALS IN A SAFE AND WORKMANLIKE MANNER TO PREVENT INJURIES, DURING AND AFTER WORKING HOURS, UNTIL PROJECT COMPLETION.

G-18. THE CONTRACTOR SHALL NOT UNLOAD ANY TRACK-TYPE CONSTRUCTION MACHINERY ON ANY EXISTING PAVEMENT OR CROSS OVER ANY EXISTING PAVEMENT OR CURB DURING ANY PROJECT.

G-19. IT IS THE CONTRACTOR'S RESPONSIBILITY TO SUPERVISE AND COORDINATE ALL WORK TO INSURE THE PROPER EXECUTION. ALL WORK IS TO BE ACCOMPLISHED IN A NEAT, WORKMANLIKE MANNER, AND ALL EXCESS MATERIALS, TRASH AND DEBRIS, ETC., SHALL BE REMOVED FROM THE JOB BY THE CONTRACTOR, AT HIS EXPENSE.

G-20. CONTRACTOR SHALL REMOVE DIRT AND/OR DEBRIS DEPOSITED ON EXISTING PAVEMENT DUE TO HIS CONSTRUCTION ACTIVITY ON A DAILY BASIS. ALL EQUIPMENT AND CONSTRUCTION DEBRIS SHALL BE REMOVED FROM THE SITE AT THE END OF THE PROJECT.

G-21. EXISTING ROADS, RIGHT-OF-WAYS, EASEMENTS AND PROPERTY DISTURBED DURING CONSTRUCTION SHALL BE RESTORED AS GOOD OR BETTER THAN THE CONDITION PRIOR TO STARTING THE WORK.

G-22. UNLESS OTHERWISE REQUIRED, ALL DISTURBED AREAS SHALL BE SEEDED WITH HYDROMULCH SEEDING AND PROVIDE WATERING UNTIL VEGETATION IS ESTABLISHED.

G-23. ALL EXCESS AND/OR UNSUITABLE SOIL, AND DEBRIS AND/OR WASTE MATERIALS SHALL BE REMOVED FROM THE SITE AND DISPOSED OF PROPERLY.

G-24. ADJUST MANHOLES, INLETS, FLUSHING VALVES AND WATER VALVE BOXES TO MATCH FINAL GRADE IN ACCORDANCE WITH THE REQUIREMENTS OF THE CITY.

G-25. UTILITY SERVICE LINES

1) ALL UTILITY SERVICE LINES ARE NOT SHOWN ON THE DRAWINGS. CONTRACTORS SHALL ANTICIPATE THAT SUCH SERVICE LINES EXIST AND REPAIR THEM IF DAMAGED DURING CONSTRUCTION. IT IS ALSO THE CONTRACTOR'S RESPONSIBILITY TO MAKE ARRANGEMENTS WITH THE OWNERS OF SUCH UTILITIES PRIOR TO WORKING IN THE AREA TO CONFIRM THEIR EXACT LOCATIONS AND/OR DEPTHS, AND TO DETERMINE WHETHER ANY ADDITIONAL UTILITIES OTHER THAN THOSE SHOWN ON THESE PLANS MAY BE PRESENT. THE CONTRACTOR SHALL DETERMINE IF ANY OF THESE UTILITIES ARE CLEAR, AND SHALL PRESERVE AND PROTECT ALL OF THESE UTILITIES SHOWN OR FOUND. IF CONFLICTS ARISE REGARDING PUBLIC UTILITIES, THE CONTRACTOR SHOULD IMMEDIATELY NOTIFY THE PROJECT ENGINEER.

2) UTILITY RELOCATIONS REQUIRED BY CONSTRUCTION SHALL BE PERFORMED BY THE APPROPRIATE UTILITY COMPANY. ANY RELOCATIONS OR TEMPORARY BRACING NOT DEEMED NECESSARY BY THE ENGINEER, BUT DESIRED FOR CONVENIENCE BY THE CONTRACTOR, SHALL BE PERFORMED BY THE APPROPRIATE UTILITY COMPANY AT THE CONTRACTOR'S EXPENSE.

3) TEXAS ONE CALL	1-800-245-4545	6) AT&T	281-341-4312
4) CENTERPOINT ENERGY-GAS	281-342-8881	7) COMCAST	713-462-1900
5) CENTERPOINT ENERGY-ELECTRIC	281-341-4930	8) CITY OF RICHMOND	281-342-0559

G-26. AT&T TELEPHONE

1) THE CONTRACTOR SHALL DETERMINE THE ACTUAL LOCATION OF UTILITIES BY CALLING TEXAS ONE-CALL SYSTEM AT LEAST 72 HOURS BEFORE COMMENCING WORK. CONTRACTOR AGREES TO BE FULLY RESPONSIBLE FOR ANY AND ALL DAMAGES WHICH MIGHT BE OCCASIONED BY THE CONTRACTOR'S FAILURE TO LOCATE AND PRESERVE THE UNDERGROUND UTILITIES.

2) CONTRACTOR SHALL HAND DIG WITHIN ONE (1) FOOT OF AT&T UNDERGROUND CONDUIT OR CABLE SYSTEMS.

G-27. CENTERPOINT ENERGY (ELECTRIC)

1. OVERHEAD LINES EXIST ON THE PROPERTY AND APPROXIMATE LOCATIONS ARE SHOWN ON THE DRAWINGS. CONTRACTOR SHALL VERIFY THEIR LOCATION PRIOR TO BEGINNING ANY CONSTRUCTION. TEXAS LAW, SECTION 752, HEALTH AND SAFETY CODE, FORBIDS ALL ACTIVITIES IN WHICH PERSONS OR THINGS MAY COME WITHIN SIX (6) FEET OF LIVE OVERHEAD HIGH VOLTAGE LINES. CONTRACTOR IS LEGALLY RESPONSIBLE FOR SAFETY OF CONSTRUCTION WORKERS UNDER THIS LAW TO ARRANGE FOR LINES TO BE TURNED OFF OR MOVED AND LOCATE EXISTING UNDERGROUND UTILITIES, CALL CENTERPOINT ENERGY AT LEAST 72 HOURS BEFORE COMMENCING WORK.

2. CONSTRUCTION THAT WILL REQUIRE EXCAVATION CLOSER THAN THREE (3) FEET TO CENTERPOINT FACILITIES SHALL BE BORED AND JACKED WITH THE WRITTEN APPROVAL FROM CENTERPOINT.

3. CONTRACTOR SHALL HAND DIG WITHIN ONE (1) FOOT OF CENTERPOINT ENERGY UNDERGROUND CONDUIT OR AS OTHERWISE REQUIRED BY CENTERPOINT.

G-28. CENTERPOINT ENERGY (GAS)

CAUTION: UNDERGROUND GAS FACILITIES
LOCATIONS OF CENTERPOINT ENERGY MAIN LINES (TO INCLUDE CENTERPOINT ENERGY, INTRASTATE PIPELINE, LLC. WHERE APPLICABLE) ARE SHOWN IN AN APPROXIMATE LOCATION ONLY. SERVICE LINES ARE USUALLY NOT SHOWN. OUR SIGNATURE ON THESE PLANS ONLY INDICATES THAT OUR FACILITIES ARE SHOWN IN APPROXIMATE LOCATION. IT DOES NOT IMPLY THAT A CONFLICT ANALYSIS HAS BEEN MADE. THE CONTRACTOR SHALL CONTACT THE UTILITY COORDINATING COMMITTEE AT (713) 223-4567, 1-800-669-8344 OR 811 A MINIMUM OF 48 HOURS PRIOR TO CONSTRUCTION TO HAVE MAIN AND SERVICE LINES FIELD LOCATED.

WHEN CENTERPOINT ENERGY PIPE LINE MARKINGS ARE NOT VISIBLE, CALL (713) 945-8036 OR (713) 945-8037 (7:00 A.M. TO 4:30 P.M.) FOR STATUS OF LINE LOCATION REQUEST BEFORE EXCAVATION BEGINS.

WHEN EXCAVATING WITHIN EIGHTEEN INCHES (18") OF THE INDICATED LOCATION OF CENTERPOINT ENERGY FACILITIES, ALL EXCAVATION MUST BE ACCOMPLISHED USING NON-MECHANIZED EXCAVATION PROCEDURES

WHEN CENTERPOINT ENERGY FACILITIES ARE EXPOSED, SUFFICIENT SUPPORT MUST BE PROVIDED TO THE FACILITIES TO PREVENT EXCESSIVE STRESS ON THE PIPING.
FOR EMERGENCIES REGARDING GAS LINES CALL (713) 659-3552 OR (713) 207-4200

THE CONTRACTOR IS FULLY RESPONSIBLE FOR ANY DAMAGES CAUSED BY HIS FAILURE TO EXACTLY LOCATE AND PRESERVE THESE UNDERGROUND FACILITIES.

ACTIVITIES ON OR ACROSS CENTERPOINT ENERGY FEE OR EASEMENT PROPERTY NO APPROVAL TO USE, CROSS OR OCCUPY CENTERPOINT FEE OR EASEMENT PROPERTY IS GIVEN. IF YOU NEED TO USE CENTERPOINT PROPERTY, PLEASE CONTACT THEIR SURVEYING & RIGHT OF WAY DIVISION AT (713) 207-6248 OR (713) 207-5769

G-29. COMCAST - THE CONTRACTOR SHALL NOTIFY COMCAST AT LEAST 72 HOURS BEFORE COMMENCING WORK TO LOCATE EXISTING UNDERGROUND CABLE.

G-30. ALL PIPE AND REINFORCEMENT STEEL SHALL BE KEPT FREE OF DIRT AND DEBRIS. ANY DAMAGE TO THE COATINGS OF THE VARIOUS MATERIALS MUST BE REPAIRED OR REPLACED BY THE CONTRACTOR WITH APPROVAL BY THE CITY.

G-31. CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING ADEQUATE AND POSITIVE DRAINAGE AT ALL TIMES DURING CONSTRUCTION.

G-32. NO CONNECTIONS SHALL BE MADE TO THE EXISTING WATER LINES OR SANITARY SEWERS UNTIL ALL PROPOSED LINES HAVE BEEN THOROUGHLY CLEANED, TESTED AND APPROVED BY THE CITY.

G-33. CONTRACTOR SHALL VERIFY PUBLIC INFRASTRUCTURE ALIGNMENT, CENTERLINE CURVE DATA AND STATIONING WITH APPROVED SUBDIVISION PLAT AND APPROVED PLANS.

G-34. ALL BACKFILL (INCLUDING CEMENT STABILIZED SAND) SHALL BE PLACED IN LIFTS THAT DO NOT EXCEED 8" (LOOSE), SHALL BE COMPACTED TO 95% STANDARD PROCTOR DENSITY AND BE TESTED BY A CERTIFIED TESTING LABORATORY.

G-35. ALL TRENCH BACKFILL SHALL BE TESTED AT A MINIMUM RATE OF ONE DENSITY TEST PER ONE LIFTS OF TRENCH BACKFILL PER 300 FEET OF TRENCH. TESTS SHALL BE TAKEN AT RANDOM LOCATION SELECTED BY THE LAB OR AS AS OTHERWISE REQUESTED BY THE CITY.

G-36. THIS CONSTRUCTION PROJECT THAT REQUIRES THE SWPPP, IT MUST BE INSTALLED BEFORE THE WORK BEGINS. IT MUST BE MAINTAINED THROUGHOUT THE DURATION OF THE PROJECT.

G-37. CONTRACTOR SHALL CONTACT CITY PUBLIC WORKS DEPARTMENT IMMEDIATELY IF WET SAND CONDITIONS ARE ENCOUNTERED. NO BEDDING SHALL BE INSTALLED IN WET CONDITIONS. WHEN WELL POINTING OR IN WET SAND CONDITIONS, MAINTAIN GROUND WATER 1' (FT.) BELOW BOTTOM OF TRENCH FOR A MINIMUM OF 24 HOURS AFTER BEDDING AND BACKFILL IS IN PLACE.

G-38. IN THE EVENT OF CONFLICT BETWEEN THE CITY OF RICHMOND DETAIL SPECIFICATIONS, CONSTRUCTION NOTES, OR CITY OF RICHMOND PUBLIC INFRASTRUCTURE DESIGN MANUAL, OR THE MORE STRINGENT REQUIREMENTS WILL GOVERN.

WATER DISTRIBUTION NOTES

W-1. EXCEPT AS OTHERWISE REQUIRED, WATER MAINS FOUR INCHES (4") THROUGH TWELVE INCHES (12") SHALL BE AWWA C-900, CLASS 150, DR 18. WATER MAINS LESS THAN 4 INCHES (4") DIAMETER SHALL BE PVC, ASTM D-2241, SDR-21 (PR-200), WITH RUBBER GASKET JOINTS OR APPROVED EQUAL. ALL POTABLE WATER PIPE USED IN THE PROJECT MUST MEET THE REQUIREMENTS OF AMERICAN NATIONAL STANDARDS INSTITUTE/NATIONAL SANITATION FOUNDATION STANDARD 61 (ANSI/NSF61). PIPE SHALL BE CERTIFIED TO CONFORM TO ANSI/NSF-61 AND SHALL BE MARKED "NSF-PW".

~~W-2. ALTERNATIVE WATER MAIN PIPE MATERIAL (WITH APPROVAL OF THE CITY): A) STEEL: AWWA C200, 150 PSI FOR LINES 4-INCHES TO 12-INCHES, 235 PSI FOR LINES GREATER THAN 12-INCHES. ALL PIPE COATINGS SHALL BE IN ACCORDANCE WITH AWWA C210. ALL NUTS AND BOLTS SHALL BE EPOXY COATED. B) DUCTILE IRON: AWWA C151 (ANSI A21.51) FOR LINES 4-INCHES TO 54-INCHES. PIPE SHALL BE LINED WITH POLYWRAP IN ACCORDANCE WITH AWWA C104 (ANSI A21.4).~~

W-3. INSTALLATION OF WATER MAINS SHALL BE IN ACCORDANCE WITH CURRENT AWWA APPROVED METHODS, STANDARDS AND MATERIALS, TEXAS COMMISSION ON ENVIRONMENTAL QUALITY (T.C.E.Q.) REGULATIONS AND CITY STANDARDS, CODES AND ORDINANCES.

W-4. ALL WATER MAINS SHALL HAVE A MINIMUM 3.5 FEET AND A MAXIMUM 5 FEET OF COVER WHEN CONSTRUCTED IN STREET RIGHTS-OF-WAY OR EASEMENTS, UNLESS APPROVED BY THE CITY.

W-5. FIRE HYDRANTS SHALL BE SET BEHIND BACK OF CURB AT APPROVED LOCATIONS. CENTER LINE OF FIRE HYDRANTS SHALL BE THREE (3) FEET FROM BACK OF CURB OF THE STREET UNLESS OTHERWISE REQUIRED IN THE PLANS. FIRE HYDRANTS SHALL BE INSTALLED A MINIMUM OF TEN (10) FEET FROM ALL SANITARY SEWERS AND APPURTENANCES. FIRE HYDRANTS SHALL BE LOCATED OPPOSITE PROPERTY LINES OR RIGHT-OF-WAY LINE EXTENSIONS, UNLESS OTHERWISE APPROVED BY THE CITY.

W-6. GATE VALVES, FIRE HYDRANTS AND BLOWOFFS SHALL BE COUNTER-CLOCKWISE OPENING.

W-7. ALL FITTINGS, VALVES AND FIRE HYDRANTS SHALL BE CAST IRON MECHANICAL JOINT TYPE UNLESS APPROVED IN WRITING BY THE CITY. ALL MECHANICAL JOINTS SHALL BE INSTALLED WITH MECHANICAL RESTRAINED JOINTS (EBAA IRON, INC., SERIES 2000PV OR EQUAL). NIPPLES FROM FITTING TO FITTING AT GATE VALVES SHALL BE 18" IN LENGTH.

W-8. A MINIMUM HORIZONTAL CLEARANCE OF NINE FEET (9') BETWEEN WATER MAINS AND SANITARY SEWER LINES SHALL BE MAINTAINED BY THE CONTRACTOR, EXCEPT AS APPROVED BY THE CITY.

W-9. THE CONTRACTOR SHALL PROVIDE FOR A MINIMUM OF SIX INCHES (6") CLEARANCE AT STORM SEWER AND WATER LINE CROSSINGS AND TWENTY-FOUR INCHES (24") MINIMUM CLEARANCE AT SANITARY SEWER AND WATER LINE CROSSINGS. WATER LINES SHALL BE LOCATED AT A HIGHER ELEVATION THAN THE SEWER WHEREVER POSSIBLE. WHEN NOT POSSIBLE, T.C.E.Q., "RULES AND REGULATIONS FOR PUBLIC WATER SYSTEMS", ARTICLE 290.44 WILL TAKE PRECEDENCE. IF A CONFLICT EXISTS, THE CONTRACTOR SHALL ADVISE THE DIRECTOR OF PUBLIC WORKS AND WATER SUPERINTENDENT IMMEDIATELY AND SHALL NOT CONTINUE FURTHER CONSTRUCTION WITHOUT CITY APPROVAL.

W-10. ABANDONMENT OF EXISTING WATER LINES SHALL BE PERFORMED BY THE CONTRACTOR IN ACCORDANCE WITH APPROVED PLANS OR WHEN APPROVAL FROM THE CITY PUBLIC WORKS DIRECTOR OR WATER SUPERINTENDENT IS OBTAINED IN WRITING.

W-11. TAPPING SLEEVE & VALVES ON THE EXISTING CITY WATER SYSTEM WILL BE INSTALLED BY A CITY APPROVED TAPPING CONTRACTOR.

W-12. NO CONNECTION SHALL BE MADE TO ANY EXISTING WATER LINES UNTIL THE NEW WATER LINES HAVE BEEN THOROUGHLY STERILIZED, CLEANED AND TESTED AND FINAL APPROVAL FROM THE CITY'S AUTHORIZED AGENT HAS BEEN OBTAINED IN WRITING.

W-13. ALL VALVES AND HYDRANTS SHALL BE STORED SO THAT THEY ARE PROTECTED FROM FREEZING.

W-14. ALL PRESSURE PIPE INSTALLATIONS SHALL BE TESTED FOR LEAKAGE. TEST PRESSURE SHALL BE 1.5 TIMES THE MAXIMUM DESIGN PRESSURE OR 150 PSIG, WHICHEVER IS GREATER. THE TEST SHALL HAVE A MINIMUM DURATION OF FOUR HOURS AND SHALL BE OBSERVED BY THE AUTHORIZED REPRESENTATIVE OF THE CITY PUBLIC WORKS DEPARTMENT.

W-15. STERILIZATION OF NEW WATER LINES SHALL BE DONE IN ACCORDANCE WITH AWWA C-651, LATEST EDITION. A MINIMUM OF ONE SAMPLE PER 1000 FEET OF WATER MAIN OR ONE SAMPLE PER SEPARATION SECTION OF WATER MAIN SHALL BE COLLECTED. IF THE SAMPLES FAIL TO MEET THE T.C.E.Q. DRINKING WATER STANDARD REQUIREMENTS, THE FLUSHING AND TESTING PROCESS SHALL BE REPEATED.

W-16. WATER LINES SHALL HAVE SAND EMBEDMENT TO TWELVE (12) INCHES ABOVE THE TOP OF PIPE.

W-17. WATER LINE TRENCHES UNDER PAVEMENT OR WITHIN THREE (3) FEET FROM EDGE OF PAVEMENT TO BE BACKFILLED WITH CEMENT STABILIZED SAND (2 SACKS OF CEMENT PER TON OF SAND) FROM THE TOP OF THE EMBEDMENT TO THE BASE OF PROPOSED BASE OF PROPOSED PAVING SUBGRADE LESS 6 INCHES.

W-18. ALL WATER LINE CONSTRUCTION CROSSING EXISTING ASPHALT AND/OR CONCRETE STREETS SHALL BE BORED AND JACKED, UNLESS OTHERWISE APPROVED BY THE PROJECT ENGINEER AND THE CITY.

W-19. TRENCH SAFETY SYSTEM IS REQUIRED FOR ALL WATER MAIN CONSTRUCTION.

W-20. CONCRETE THRUST BLOCKING IS REQUIRED FOR ALL VALVES, FIRE HYDRANTS AND FITTINGS.

W-21. A TRAC-HOE IS NOT A COMPACTOR. USE PROPER COMPACTING METHODS, SUCH AS, SHEEPSFOOT, JUMPING JACK, PLATE, ETC..

SANITARY SEWER CONSTRUCTION NOTES

S-1. SANITARY SEWERS SHALL BE CONSTRUCTED ACCORDING TO THESE PLANS AND SPECIFICATIONS AND THE CITY AND THE TEXAS COMMISSION ON ENVIRONMENTAL QUALITY (T.C.E.Q.) RULES AND REGULATIONS.

S-2. ALL MANHOLES SHALL BE PRECAST IN ACCORDANCE WITH DETAILS INCLUDING THE INTERIOR COATING. BRICK MANHOLES ARE NOT ALLOWED. ALL SANITARY MANHOLES SHALL BE INSTALLED WITH INFLOW PROTECTORS.

S-3. ALLOWABLE SANITARY SEWER PIPE MATERIAL:

A) GRAVITY LINES

1. POLYVINYL CHLORIDE (PVC), PIPE AND FITTINGS MEETING THE REQUIREMENTS OF ASTM D2241 (SDR 26; PR160), ASTM D1784, ASTM D3212 AND ASTM F477. FOR DEPTH LESS THAN 4 FEET AND GREATER THAN 20 FEET, INSTALL ASTM D2241 (SDR21, PR200).

2. DUCTILE IRON (D.I.P.), AWWA C-151, AWWA C-111, STANDARD CLASS 150, WITH BELL AND SPIGOT PUSH-ON JOINTS, ALL PIPE SHALL HAVE AN INTERIOR POLYETHYLENE COATING OF 40-MILS AND AN EXTERIOR POLYETHYLENE WRAP OF 8-MILS.

B) FORCE MAINS

1. PVC, 4-INCH TO 12-INCH, AWWA C900, DR18, CLASS 150, ASTM D3139, ASTM F477. (GREEN COLOR)

S-4. ALL D.I.P. SANITARY SEWER PIPES SHALL BE LINED WITH POLYWRAP AND INSTALLED WITH CATHODIC PROTECTION.

S-5. THE CONTRACTOR SHALL NOTIFY THE CITY PUBLIC WORKS DEPARTMENT AT LEAST 24 HOURS PRIOR TO PRESSURE AND DEFLECTION TESTS ON ALL GRAVITY SANITARY SEWERS. ALL TESTS SHALL BE MONITORED BY AN AUTHORIZED AGENT OF THE CITY.

S-6. ALL GRAVITY SANITARY SEWER PIPE SHALL BE LOW PRESSURE AIR TESTED AND MANHOLES VACUUM TESTED IN ACCORDANCE WITH T.C.E.Q. REQUIREMENTS. FORCE MAINS SHALL BE HYDROSTATIC TESTED AT A MINIMUM OF 150 PSI.

S-7. DEFLECTION TESTS SHALL BE PERFORMED ON ALL FLEXIBLE AND SEMI-RIGID PIPE. THE CITY MAY REQUIRE SERVICE LEADS TO BE RANDOMLY TESTED. DEFLECTION TESTS SHALL BE CONDUCTED AFTER THE FINAL BACKFILL HAS BEEN IN PLACE AT LEAST 30 DAYS. NO PIPE SHALL EXCEED A DEFLECTION OF 5%. THE TEST SHALL BE CONDUCTED USING A MANDREL HAVING AN OUTSIDE DIAMETER EQUAL TO 95% OF THE AVERAGE INSIDE DIAMETER OF THE PIPE. THE MANDREL SHALL HAVE A MINIMUM OF 9 RUNNERS WITH THE CONTACT LENGTH OF EACH RUNNER EQUAL TO OR GREATER THAN THE PIPE'S NOMINAL DIAMETER. THE TEST SHALL BE PERFORMED WITHOUT MECHANICAL PULLING DEVICES.

S-8. SANITARY SEWER MANHOLE RIMS, EXCEPT IN PAVED AREAS, SHALL BE SET 4-INCHES ABOVE FINISHED GRADE WITHIN STREET RIGHT-OF-WAY, AND 6-INCHES ABOVE FINISHED LOT GRADES WITHIN EASEMENTS. CLEAN FILL MAY BE PLACED ADJOINING THE MANHOLE AND GRADED AWAY FROM THE RIM FOR SURFACE WATER DRAINAGE.

S-9. SANITARY MANHOLES BELOW THE 100-YEAR FLOOD PLAIN (OR WHERE OTHERWISE REQUIRED) SHALL BE WATERPROOFED USING A NEOPRENE GASKET. ONLY STAINLESS STEEL SCREWS OR NUTS & BOLTS CAN BE USED TO HOLD DOWN THE COVER. A VENT PIPE EXTENDING ONE FOOT ABOVE THE FLOODPLAIN ELEVATION SHALL BE PROVIDED, UNLESS OTHERWISE APPROVED.

S-10. SANITARY LINES AND MANHOLES PARALLEL TO WATER LINES SHALL BE INSTALLED WITH AT LEAST A 9-FOOT HORIZONTAL SEPARATION (OUTSIDE TO OUTSIDE). SANITARY SEWERS INSTALLED CROSSING UNDER WATER MAIN SHALL COMPLY WITH T.C.E.Q. REQUIREMENTS.

S-11. ALL SANITARY SEWERS SHALL BE CONSTRUCTED ON A STRAIGHT ALIGNMENT AND ON A UNIFORM GRADE. GRAVITY SEWERS SHALL BE CONSTRUCTED WITH THE PIPE BELL FACING UPSTREAM. ALL 6-INCH SANITARY SERVICE LEADS SHALL BE LAID WITH A MINIMUM GRADE OF 0.70%

S-12. ALL SEWER LEADS AND STUBOUTS SHALL BE MARKED IN ACCORDANCE WITH THE DETAILS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE MARKERS IN GOOD AND PLUMB CONDITION WITH A VERTICAL ALIGNMENT. IF DAMAGED, THE CONTRACTOR SHALL REPLACE THE MARKER.

S-13. ALL SEWER LINES (INCLUDING SERVICE LEADS) ENTERING A MANHOLE AT AN ELEVATION GREATER THAN 24-INCHES ABOVE THE MANHOLE INVERT MUST BE CONSTRUCTED WITH AN EXTERIOR DROP PIPE IN ACCORDANCE WITH THE DETAILS.

S-14. STEPS IN MANHOLES ARE PROHIBITED.

S-15. CONTRACTOR SHALL PROVIDE ADEQUATE CONCRETE THRUST BLOCKING AT ALL FORCE MAIN BENDS.

S-16. AT ALL LOTS WHERE TOP OF PIPE IS GREATER THAN 8-FEET BELOW FINISHED GRADE, PROVIDE A 6-INCH SANITARY SEWER STACK OR RISER. STACKS AND RISERS SHALL BE EXTENDED TO WITHIN 6 FEET OF FINISHED GRADE. STACKS SHALL BE MARKED FOR LOCATION AS INDICATED ON THE DETAILS.

S-17. FORCE MAIN SHALL BE LAID WITH DETECTOR TAPE LAID AT 6" ABOVE THE PIPE. THE DETECTOR TAPE MUST BEAR THE LABEL "PRESSURIZED WASTEWATER" IN 1.5 INCH HIGH LETTERS, REPEATED CONTINUOUSLY, FOR THE ENTIRE LENGTH OF THE FORCE MAIN.

STORM SEWER NOTES

ST-1. ALL STORM SEWERS SHALL MEET THE REQUIREMENTS OF THE CITY, FORT BEND COUNTY AND FORT BEND COUNTY DRAINAGE DISTRICT (WHEN APPLICABLE).

ST-2. ALL STORM SEWER MANHOLE AND INLET COVERS SHALL BE LABELED "STORM SEWER" IN ACCORDANCE WITH THE DETAILS.

ST-3. ALL STORM SEWER PIPE SHALL BE REINFORCED CONCRETE PIPE, A.S.T.M. C-76, CLASS III (MINIMUM) INSTALLED, BEDDED AND BACKFILLED IN ACCORDANCE WITH THE CITY DETAILS AND FORT BEND COUNTY DRAINAGE DISTRICT CRITERIA. ALL REINFORCED CONCRETE PIPE 42-INCH DIAMETER AND GREATER SHALL HAVE WATER-TIGHT RUBBER GASKET JOINTS. CONTRACTOR MAY USE TAL-COAT OR EQUAL FOR PIPE JOINTS WITH PIPE LESS THAN 42" DIAMETER. ALL STORM SEWER SHALL BE BACKFILLED WITH SELECT FILL MATERIAL COMPACTED TO 95% STANDARD PROCTOR COMPACTION, ASTM D-698, IN ACCORDANCE WITH THE DETAILS. CONTRACTOR SHALL USE MECHANICAL ROLLER OR MECHANICAL TAMPER IN COMPACTING ALL BACKFILL FOR PROJECT.

ST-4. ALL STORM SEWER STRUCTURES SUCH AS MANHOLES AND INLETS SHALL BE BACKFILLED WITH CEMENT STABILIZED SAND. CEMENT STABILIZED SAND BACKFILL SHALL EXTEND A MINIMUM OF TWENTY-FOUR INCHES (24") FROM THE OUTSIDE WALL OF ALL STRUCTURES. (2 SACKS OF CEMENT PER TON OF SAND.)

ST-5. AREAS ADJACENT TO THE PAVEMENT SHALL BE GRADED TO POSITIVELY DRAIN TOWARD INLETS, CONCRETE CURB AND/OR ROAD DITCHES IF DISTURBED DURING CONSTRUCTION. CONTRACTOR SHALL PROVIDE MATERIALS, LABOR AND EQUIPMENT TO PERFORM ALL GRADING OPERATIONS.

ST-6. CONTRACTOR SHALL ADJUST EXISTING WATER LINE MAINS AND WATER LINE SERVICES IN CONFLICT WITH A STORM SEWER. CONTRACTOR SHALL COORDINATE THE DISRUPTION OF WATER SERVICE DURING THE WATER LINE LOWERING OPERATION WITH THE CITY PUBLIC WORKS DEPARTMENT.

ST-7. ADJUST ALL STORM SEWER MANHOLE COVERS TO MATCH FINISHED GRADE ELEVATIONS.

ST-8. ALL PRECAST CONCRETE STRUCTURES SHALL BE REINFORCED AND SHALL BE DESIGNED TO WITHSTAND AASHTO H-20 LOADINGS.

ST-9. ALTERNATIVE STORM SEWER PIPE MATERIAL (WITH APPROVAL OF THE CITY):

A) STEEL: AWWA C200, 150 PSI FOR LINES 4-INCHES TO 12-INCHES, 235 PSI FOR LINES GREATER THAN 12-INCHES. ALL PIPE COATINGS SHALL BE IN ACCORDANCE WITH AWWA C210. ALL NUTS AND BOLTS SHALL BE EPOXY COATED.

B) DUCTILE IRON: AWWA C151 (ANSI A21.51) FOR LINES 4-INCHES TO 54-INCHES. PIPE SHALL BE LINED WITH POLYWRAP IN ACCORDANCE WITH AWWA C104 (ANSI A21.4).

STREET AND PAVING CONSTRUCTION NOTES

P-1. ALL PAVING SHALL BE CONSTRUCTED ACCORDING TO THE PLANS AND SPECIFICATIONS AND CITY REQUIREMENTS.

P-2. THE CONTRACTOR SHALL NOTIFY CITY PUBLIC WORKS DEPARTMENT AT LEAST 24 HOURS PRIOR TO ANY AND ALL SUBGRADE TESTING AND CONCRETE POURS.

P-3. ALL TEMPORARY AND PERMANENT SIGNAGE MUST COMPLY WITH THE LATEST REVISION OF THE "TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES".

P-4. CONTRACTOR SHALL PROTECT ALL UTILITIES, SIDEWALKS, PAVEMENT, ETC. AND SHALL REPAIR OR REPLACE ANY FACILITIES DAMAGED DURING PAVING OR GRADING OPERATIONS.

P-5. EXISTING PAVEMENTS, CURBS, SIDEWALKS DRIVEWAYS, ETC., DAMAGED OR REMOVED DURING CONSTRUCTION SHALL BE REPLACED ACCORDING TO THE CITY STANDARDS.

P-6. ALL DISTURBED AREAS WITHIN STREET RIGHT-OF-WAY AND EASEMENTS NOT COVERED BY PAVEMENT OR STRUCTURE SHALL BE HYDRO-MULCHED AND WATERED UNTIL VEGETATION ESTABLISHMENT.

P-7. AREAS TO BE FILLED SHALL BE CLEARED AND GRUBBED, SCARIFIED AND COMPACTED TO AT LEAST 95% OF MAXIMUM DENSITY (+/- 2% OF OPTIMUM MOISTURE) PER ASTM D-698, TO A DEPTH OF 6" PRIOR TO FILL PLACEMENT. FILL MATERIAL SHALL BE PLACED IN MAXIMUM 8" THICK LIFTS (MEASURED LOOSE) AND COMPACTED TO AT LEAST 95% OF MAXIMUM DENSITY (+/- 2% OF OPTIMUM MOISTURE) PER ASTM D-698. FILL SHALL BE CLEAN EARTH AND BE FREE FROM TRASH, VEGETATION AND LARGE STONES. TEST REPORTS INDICATING COMPLIANCE WITH DENSITY REQUIREMENTS SHALL BE SUBMITTED TO THE CITY PRIOR TO PLACEMENT OF PAVEMENT.

P-8. THE SUBGRADE IS TO BE SCARIFIED AND COMPACTED TO 95% STANDARD PROCTOR DENSITY (+/- 2% OF OPTIMUM MOISTURE) PER ASTM D-698. THE SUBGRADE SHALL BE STABILIZED TO 8" DEPTH WITH A MINIMUM EIGHT PERCENT (8%) LIME BY WEIGHT OR AS REQUIRED TO ACHIEVE A STABILIZED SOIL P.I. OF 20 OR LESS. LIME REQUIREMENTS SUBGRADE SHALL EXTEND A MINIMUM OF 2-FEET BEHIND THE BACK OF ALL CURB AND BEYOND THE EDGE OF PAVEMENT.

P-9. TESTING OF FILL, SUBGRADE AND PAVEMENT TO DOCUMENT COMPLIANCE WITH THE CITY REQUIREMENTS SHALL BE COMPLETED BY A CERTIFIED (REFERENCE: THE ASSOCIATION FOR LABORATORY ACCREDITATION) TESTING LABORATORY APPROVED BY THE CITY. A COPY OF ALL TEST RESULTS SHALL BE SUBMITTED TO THE CITY PUBLIC WORKS DIRECTOR.

P-10. ALL INTERSECTION EDGE RETURN RADII SHALL BE 25 FEET ON LOCAL RESIDENTIAL AND MINOR COLLECTOR STREETS. ALL CUL-DE-SAC RETURN RADII SHALL BE 35 FEET UNLESS NOTED OTHERWISE. MINIMUM GRADES AT INTERSECTIONS AND IN CUL-DE-SACS SHALL BE 1.00% MINIMUM GRADE ON CURB AND GUTTER STREETS SHALL BE 0.30%.

P-11. PAVING JOINTS (TRANSVERSE AND LONGITUDINAL) SHALL BE IN ACCORDANCE WITH THE DETAILS.

P-12. WHEN A THICKER PAVEMENT ROADWAY INTERSECTS WITH A THINNER PAVEMENT ROADWAY, THE THICKER PAVEMENT SHALL BE CONSTRUCTED FOR THE ENTIRE INTERSECTION TO THE CURB RETURNS ON ALL INTERSECTING STREETS.

P-13. WHERE PROPOSED PAVEMENT IS TO CONNECT TO EXISTING CONCRETE PAVEMENT, THE CONNECTION SHALL BE COMPLETED IN ACCORDANCE WITH THE PAVEMENT UNDERCUT DETAIL.

P-14. SIDEWALKS SHALL BE LOCATED AS SHOWN ON THE PLANS. SIDEWALK RAMP CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE TEXAS ACCESSIBILITY STANDARDS (T.A.S.) AND CITY REQUIREMENTS.

P-15. ALL INTERSECTIONS SHALL BE CONSTRUCTED WITH SIDEWALK RAMPS IN ACCORDANCE WITH THE TEXAS ACCESSIBILITY STANDARDS, THE AMERICAN DISABILITIES ACT AND THE CITY REQUIREMENTS.

~~P-16. CONCRETE SHALL CONTAIN A MINIMUM 5-1/2 SACKS OF PORTLAND CEMENT PER CUBIC YARD OF CONCRETE WITH A MINIMUM 3500 PSI COMPRESSIVE STRENGTH AT 28 DAYS. CONCRETE SHALL HAVE A SLUMP OF 4 INCHES WITH ALLOWABLE DIFFERENCES OF 1 AND AIR CONTENT OF 4.5 PERCENT. AIR ENTRAINMENT ADMIXTURES SHALL CONFORM TO ASTM C260. FLYASH IS NOT ALLOWED.~~

P-17. CONCRETE PAVEMENT THICKNESSES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE DETAILS. REINFORCING STEEL SHALL CONFORM TO ASTM A-615, GRADE 60. A MINIMUM OF 18" LAPS ON ALTERNATE STEEL BARS SHALL BE PROVIDED. ALL REINFORCING STEEL SHALL BE SECURELY TIED AND SUPPORTED WITH BAR CHAIRS IN ACCORDANCE WITH ACI STANDARDS. ALL RE-BAR TO BE 100% TIED, OVERLAPS WILL BE DOUBLE TIED.
SPACING FOR REINFORCING STEEL SHALL BE AS FOLLOWS:

1. 7" CONCRETE PAVEMENT - #4 BAR ON 18" CENTER EACH WAY.
2. 6" CONCRETE PAVEMENT AND DRIVEWAYS - #4 BAR ON 18" CENTER EACH WAY.
3. SIDEWALKS AND CONCRETE SLOPE PAVEMENT - MINIMUM 4-1/2" THICK CONCRETE - #3 BAR ON 24" CENTER EACH WAY. (2% CROSS SLOPE MAXIMUM)

WIRE MESH IS NOT ALLOWED IN SIDEWALKS OR STREETS WITHIN THE CITY OF RICHMOND OR ITS ETJ.

P-18. CONCRETE SHALL NOT BE PLACED WHEN THE AMBIENT TEMPERATURE IS 40 DEGREES FAHRENHEIT AND FALLING. CONCRETE MAY BE PLACED IF THE AMBIENT TEMPERATURE IS 35 DEGREES AND RISING. CONTRACTOR SHALL PROVIDE AN APPROVED COVERING MATERIAL (COTTON MATS, POLYETHYLENE SHEETING, ETC.) IN THE EVENT TEMPERATURE SHOULD FALL BELOW 32 DEGREES FAHRENHEIT WITHIN 72 HOURS OF PLACING CONCRETE. NO SALT OR OTHER CHEMICALS SHALL BE ADDED TO CONCRETE TO PREVENT FREEZING. NO CONCRETE SHALL BE PLACED WHEN THE MIXTURE TEMPERATURE IS ABOVE 95 DEGREES FAHRENHEIT. CONCRETE SHALL BE PLACED WITHIN 60 MINUTES OF THE BATCH TIME.

P-19. ALL CONCRETE PLACED SHALL BE UNIFORMLY SPRAYED WITH A MEMBRANE CURING COMPOUND (TXDOT DMS-4650, TYPE 2, WHITE). CURING COMPOUND SHALL BE APPLIED IN ACCORDANCE WITH TXDOT STANDARD SPECIFICATIONS.

P-20. CONCRETE SAMPLES: CYLINDERS (SET OF 4), SLUMP AND AIR ENTRAINMENT TESTS ARE REQUIRED FOR EACH 100 CUBIC YARDS AND EACH FRACTION THEREOF. A MINIMUM OF ONE SET OF SAMPLES IS REQUIRED PER CONCRETE POUR. THE CITY RESERVES THE RIGHT TO REQUEST ADDITIONAL TESTS.

P-21. FINISHED PAVEMENT SHALL HAVE CORE SAMPLES TAKEN EVERY 750 LINEAR FEET (750'), STAGGERED ACROSS THE ROADWAY CROSS-SECTION, AND IN EVERY CUL-DE-SAC. ADDITIONAL CORE SAMPLES MAY BE REQUIRED AT THE DISCRETION OF THE CITY ENGINEER. THESE CORE SAMPLES SHALL BE TESTED TO INSURE THAT THE PAVEMENT THICKNESS MEETS THE REQUIRED PROJECT THICKNESS.

P-22. PROPER TESTING AND LABORATORY DOCUMENTATION IS REQUIRED. FAILURE TO MEET THE MINIMUM PAVEMENT REQUIREMENTS WILL RESULT IN THE REJECTION OF PAVEMENT. IMMEDIATE REMOVAL AND REPLACEMENT OF SUBSTANDARD PAVEMENT SECTIONS WILL BE NECESSARY TO SATISFY THESE REQUIREMENTS.

P-23. CRACKS 1/16 INCH OR LARGER ARE NOT ACCEPTABLE IN NEW PAVEMENT. CRACKS 1/16 INCH OR LESS WILL BE ADDRESSED AN INDIVIDUAL BASIS, SUBJECT TO APPROVAL OR REJECTION.

P-24. STREET NAME SIGNS SHALL BE LOCATED AT ALL INTERSECTIONS. CONTRACTOR SHALL VERIFY STREET NAME WITH RECORDED PLAT. STOP SIGNS AND OTHER TRAFFIC SIGNAGE SHALL BE PLACED IN ACCORDANCE WITH THE PLANS AND THE "TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES."

P-25. A DOUBLE-REFLECTORIZED BLUE TRAFFIC PAVEMENT MARKER SHALL BE PLACED ONE FOOT OFFSET OF THE PAVEMENT CENTERLINE ON FIRE HYDRANT SIDE, AT ALL FIRE HYDRANT LOCATIONS, BY THE PAVING CONTRACTOR. FIRE HYDRANTS LOCATED AT INTERSECTIONS SHALL HAVE A MARKER PLACED ON EACH STREET.

P-26. ALL PAVEMENT MARKINGS SHALL BE REFLECTORIZED, PERMANENT PREFABRICATED PAVEMENT MARKINGS MEETING THE MINIMUM REQUIREMENTS OF TxDOT, DMS-8240, TYPE A OR B, INSTALLED IN ACCORDANCE WITH TxDOT STANDARD SPECIFICATION ITEM 668. CENTERLINE PAVEMENT MARKINGS, STOP BARS AND MISCELLANEOUS MARKINGS SHALL HAVE A MINIMUM THICKNESS OF 90 MILS. LANE DELINEATION AND ROAD EDGE PAVEMENT MARKINGS SHALL HAVE A MINIMUM THICKNESS OF 60 MILS. ALL PAVEMENT MARKINGS SHALL BE INSTALLED WITH DOUBLE ADHESIVE AS REQUIRED BY THE CITY. OUTSIDE THE CITY (IN THE ETJ) COMPLY WITH FORT BEND COUNTY REQUIREMENTS.

P-27. ALL DRIVEWAYS SHALL BE LOCATED TO AVOID EXISTING CURB INLET STRUCTURES.

P-28. CONCRETE MIX DESIGN SHALL BE SENT TO THE CITY FOR APPROVAL WITH A MINIMUM OF 72 HOURS BEFORE THE FIRST CONCRETE POUR.

P-29. VEHICLES OF ALL TYPES ARE PROHIBITED FROM DRIVING ON NEW PAVEMENTS THREE (3) DAYS AFTER THE PLACING OF CONCRETE AND UNTIL THE CONCRETE HAS REACHED A MINIMUM OF 3500 PSI.

P-30. THE SUBGRADE SURFACE SHALL BE SMOOTH AND IN CONFORMITY WITH LINES & GRADES ON THE PLANS. WHEN THE SUBGRADE FAILS TO MEET DENSITY REQUIREMENTS OR SHOULD IT LOSE THE REQUIRED STABILITY, DENSITY, OR FINISH, IT SHALL BE REWORKED IN ACCORDANCE WITH TxDOT SUBARTICLE 260.4:

(7) "REWORKING A SECTION", WHICH MAY REQUIRE AN ADDITIONAL 25% OF THE SPECIFIED LIME AMOUNT.

P-31. FLOODING OF THE STREETS SHALL OCCUR 24 HOURS PRIOR TO THE INITIAL INSPECTION.

P-32. SUBGRADE DENSITIES SHALL BE RETAKEN IN THE EVENT OF A 1 INCH (1") OR GREATER RAINFALL OR IN THE EVENT THE AMBIENT AIR TEMPERATURE FALLS BELOW 32 DEGREES FAHRENHEIT FOR GREATER THAN THREE HOURS. SUBGRADE DENSITIES SHALL BE RETAKEN IF CONCRETE HAS NOT BEEN PLACED WITHIN 14 CALENDAR DAYS FROM FINAL COMPACTION.

SPECIAL NOTES

SN-1. BEFORE THE INITIAL WALK-THROUGH IS SCHEDULED,

SN-2. NEGATIVE BACTERIOLOGICAL RESULTS FOR PUBLIC WATER LINES MUST BE SUBMITTED TO PUBLIC WORKS.

SN-3. SATISFACTORY MANDREL, HYDROSTATIC, SANITARY, AND MANHOLE VACUUM TESTS, MUST BE COMPLETED.

SN-4. THE STORM SYSTEM MUST BE COMPLETELY CLEANED FOR A LAMP INSPECTION BEFORE OR THE DAY OF THE WALK-THROUGH FOR ACCEPTANCE.

SN-5. THE MANHOLES, GRATES, VALVES AND HYDRANTS PROPERLY ADJUSTED/PAINTED TO THE CITY OF RICHMOND'S COLOR CODE.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY WATER DISTRIBUTION SYSTEM GENERAL CONSTRUCTION NOTES

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
WATER DISTRIBUTION SYSTEM
GENERAL CONSTRUCTION NOTES

1. This water distribution system must be constructed in accordance with the current Texas Commission on Environmental Quality (TCEQ) Rules and Regulations for Public Water Systems 30 Texas Administrative Code (TAC) Chapter 290 Subchapter D. When conflicts are noted with local standards, the more stringent requirement shall be applied. Construction for public water systems must always, at a minimum, meet TCEQ's Rules and Regulations for Public Water Systems.

2. An appointed engineer shall notify in writing the local TCEQ's Regional Office when construction will start. Please keep in mind that upon completion of the water works project, the engineer or owner shall notify the commission's Water Supply Division, in writing, as to its completion and attest to the fact that the work has been completed essentially according to the plans and change orders on file with the commission as required in 30 TAC §290.39(h)(3).

3. All newly installed pipes and related products must conform to American National Standards Institute/National Sanitation Foundation (ANSI/NSF) Standard 61-G and must be certified by an organization accredited by ANSI, as required by 30 TAC §290.44(a)(1).

4. Plastic pipe for use in public water systems must bear the National Sanitation Foundation Seal of Approval (NSF pw-G) and have an ASTM design pressure rating of at least 150 psi or a standard dimension ratio of 26 or less, as required by 30 TAC §290.44(a)(2).

5. No pipe which has been used for any purpose other than the conveyance of drinking water shall be accepted or relocated for use in any public drinking water supply, as required by 30 TAC §290.44(a)(3).

6. Water transmission and distribution lines shall be installed in accordance with the manufacturer's instructions. However, the top of the water line must be located below the frost line and in no case shall the top of the water line be less than 24 inches below ground surface, as required by 30 TAC §290.44(a)(4).

7. Pursuant to 30 TAC §290.44(a)(5), the hydrostatic leakage rate shall not exceed the amount allowed or recommended by the most current AWWA formulas for PVC pipe, cast iron and ductile iron pipe. Include the formulas in the notes on the plans.

a. The hydrostatic leakage rate for polyvinyl chloride (PVC) pipe and appurtenances shall not exceed the amount allowed or recommended by formulas in America Water Works Association (AWWA) C-605 as required in 30 TAC §290.44(a)(5). Please ensure that the formula for this calculation is correct and most current formula is in use;

$$Q = \frac{LD\sqrt{P}}{148{,}00}$$

Where:

Q = the quantity of makeup water in gallons per hour,
L = the length of the pipe section being tested, in feet,
D = the nominal diameter of the pipe in inches, and
P = the average test pressure during the hydrostatic test in pounds per square inch (psi).

b. The hydrostatic leakage rate for ductile iron (DI) pipe and appurtenances shall not exceed the amount allowed or recommended by formulas in America Water Works Association (AWWA) C-600 as required in 30 TAC §290.44(a)(5). Please ensure that the formula for this calculation is correct and most current formula is in use;

$$L = \frac{SD\sqrt{P}}{148{,}00}$$

Where:

L = the quantity of makeup water in gallons per hour,
S = the length of the pipe section being tested, in feet,
D = the nominal diameter of the pipe in inches, and
P = the average test pressure during the hydrostatic test in pounds per square inch (psi).

8. Projects constructed on or after January 4, 2014 must comply with changes to the Safe Drinking Water Act that reduce the maximum allowable lead content of pipes, pipe fittings, plumbing fittings, and fixtures to 0.25 percent.

9. The system must be designed to maintain a minimum pressure of 35 psi at all points within the distribution network at flow rates of at least 1.5 gallons per minute per connection. When the system is intended to provide firefighting capability, it must also be designed to maintain a minimum pressure of 20 psi under combined fire and drinking water flow conditions as required by 30 TAC §290.44(d).

10. The contractor shall install appropriate air release devices in the distribution system at all points where topography or other factors may create air locks in the lines. All vent openings to the atmosphere shall be covered with 16-mesh or finer, corrosion resistant screening material or an acceptable equivalent as required by 30 TAC §290.44(d)(1).

11. Pursuant to 30 TAC §290.44(d)(4), accurate water meters shall be provided. Service connections and meter locations should be shown on the plans.

12. Pursuant to 30 TAC §290.44(d)(5), sufficient valves and blowoffs to make repairs. The engineering report shall establish criteria for this design.

13. Pursuant to 30 TAC §290.44(d)(6), the system shall be designed to afford effective circulation of water with a minimum of dead ends. All dead-end mains shall be provided with acceptable flush valves and discharge piping. All dead-end lines less than two inches in diameter will not require flush valves if they end at a customer service. Where dead ends are necessary as a stage in the growth of the system, they shall be located and arranged to ultimately connect the ends to provide circulation.

14. The contractor shall maintain a minimum separation distance in all directions of nine feet between the proposed waterline and wastewater collection facilities including manholes and septic tank drainfields. If this distance cannot be maintained, the contractor must immediately notify the project engineer for further direction. Separation distances, installation methods, and materials utilized must meet 30 TAC §290.44(e)(1-4) of the current rules.

15. Pursuant to 30 TAC §290.44(e)(5), the separation distance from a potable waterline to a wastewater main or lateral manhole or cleanout shall be a minimum of nine feet. Where the nine-foot separation distance cannot be achieved, the potable waterline shall be encased in a joint of at least 150 psi pressure class pipe at least 18 feet long and two nominal sizes larger than the new conveyance. The space around the carrier pipe shall be supported at five-foot intervals with spacers or be filled to the springline with washed sand. The encasement pipe shall be centered on the crossing and both ends sealed with cement grout or manufactured sealant.

16. Pursuant to 30 TAC §290.44(e)(6), fire hydrants shall not be installed within nine feet vertically or horizontally of any wastewater line, wastewater lateral, or wastewater service line regardless of construction.

17. Pursuant to 30 TAC §290.44(e)(7), suction mains to pumping equipment shall not cross wastewater mains, wastewater laterals, or wastewater service lines. Raw water supply lines shall not be installed within five feet of any tile or concrete wastewater main, wastewater lateral, or wastewater service line.

18. Pursuant to 30 TAC §290.44(e)(8), waterlines shall not be installed closer than ten feet to septic tank drainfields.

19. Pursuant to 30 TAC §290.44(f)(1), the contractor shall not place the pipe in water or where it can be flooded with water or sewage during its storage or installation.

20. Pursuant to 30 TAC §290.44(f)(2), when waterlines are laid under any flowing or intermittent stream or semi-permanent body of water the water main shall be installed in a separate watertight pipe encasement. Valves must be provided on each side of the crossing with facilities to allow the underwater portion of the system to be isolated and tested.

21. The contractor shall disinfect the new water mains in accordance with AWWA Standard C-651 and then flush and sample the lines before being placed into service. Samples shall be collected for microbiological analysis to check the effectiveness of the disinfection procedure which shall be repeated if contamination persists. A minimum of one sample for each 1,000 feet of completed water line will be required or at the next available sampling point beyond 1,000 feet as designated by the design engineer, in accordance with 30 TAC §290.44(f)(3).

DETENTION SUMMARY:

DETENTION FOR THIS SITE (3.107 ACRES) WAS PROVIDED IN A REGIONAL DETENTION POND CONSTRUCTED AROUND 2013. THE DETENTION POND IS LOCATED ALONG RABBS BAYOU NEAR THE INTERSECTION OF GOLFVIEW DRIVE AND PAR LANE ABOUT 0.40 MILES SOUTH OF THE SITE. THE DRAINAGE STUDY "DRAINAGE IMPACT INVESTIGATION OF THE PROPOSED FORT BEND COUNTY JUSTICE CENTER AND NEARBY ROADWAY IMPROVEMENTS, FORT BEND COUNT, TEXAS" WAS PERFORMED BY CIVIL SYSTEMS ENGINEERING, INC. THE ORIGINAL REPORT IS DATED 05/20/2021, AND WAS UPDATED. ADDITIONAL DETENTION FOR THE FORT BEND IT BUILDING SITE IS REQUIRED TO OFFSET THE DIFFERENCE BETWEEN PREVIOUS DESIGN CRITERIA AND CURRENT DESIGN CRITERIA.

-PREVIOUS DESIGN CRITERIA

SITE DESIGNATED AS COMMERCIAL RESERVE.

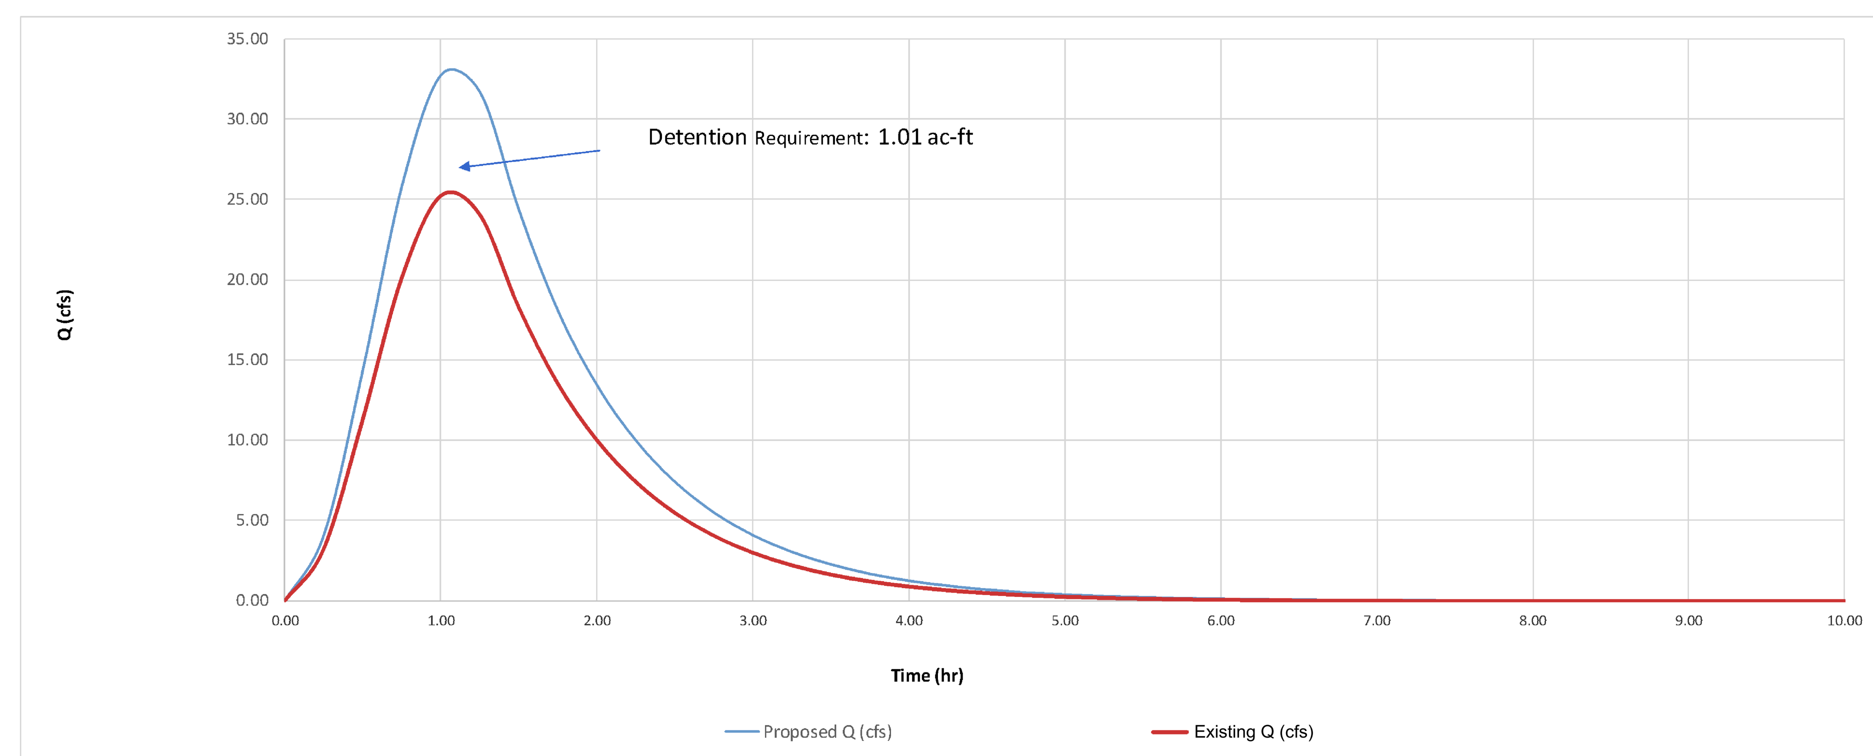
C = 1.25 X 0.71 = 0.888
INTENSITY-100 YR = 9.277 IN/HR
Q-100 YR = 0.888 X 9.277 X 3.107= 25.60 CFS

-CURRENT DESING CRITERIA

C= 1.25 X 0.71 = 0.888
INTENSITY-100 YR = 12.091 IN/HR
Q-100 YR = 0.888 X 12.091 X 3.107 = 33.36 CFS

DETENTION SUMMARY:

USING THE SMALL WATERSHED HYDROGRAPH METHODOLOGY (FORT BEND COUNTY DRAINAGE DISTRICT DRAINAGE CRITERIA MANUAL (REVISED 2011) SECTION 2.5 "HYDROGRAPH DEVELOPMENT FOR SMALL WATERSHEDS", THE DETENTION REQUIRED FOR THE SITE TO OFFSET THE THE DIFFERENCE BETWEEN THE PREVIOUS DESIGN CRITERIA AND THE CURRENT DESIGN CRITERIA IS 1.01 ACRE FEET OF DETENTION



HYDROGRAPH

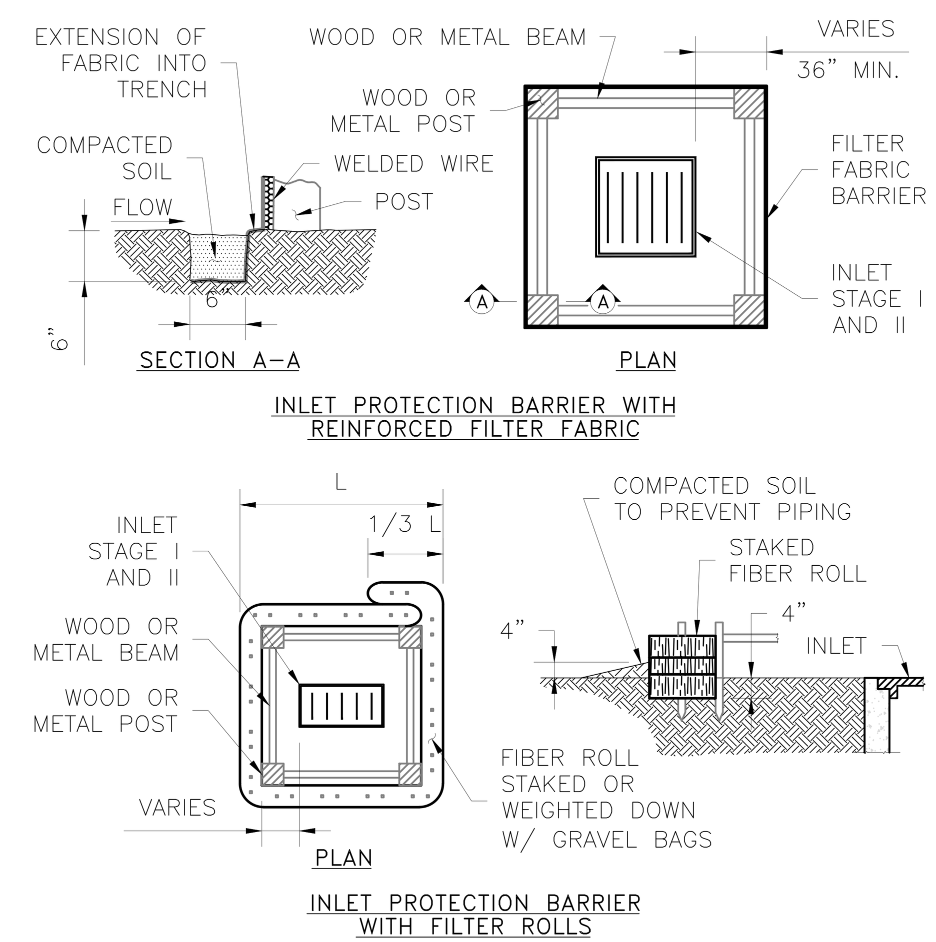
REINFORCED FILTER FABRIC BARRIER

RFB

SYMBOL

GENERAL NOTES:

1. SECURELY FASTEN MESH FENCING TO POSTS WITH STAPLES OR TIE WIRES.
2. SECURELY FASTEN FILTER FABRIC TO MESH FENCING.
3. WHEN TWO SECTIONS OF FILTER FABRIC ADJOIN EACH OTHER, OVERLAP 6 INCHES AT A POST, FOLD TOGETHER, AND ATTACH TO A POST.
4. REMOVE SEDIMENT DEPOSITS WHEN SILT REACHES ONE-THIRD OF THE HEIGHT OF THE FENCE IN DEPTH.



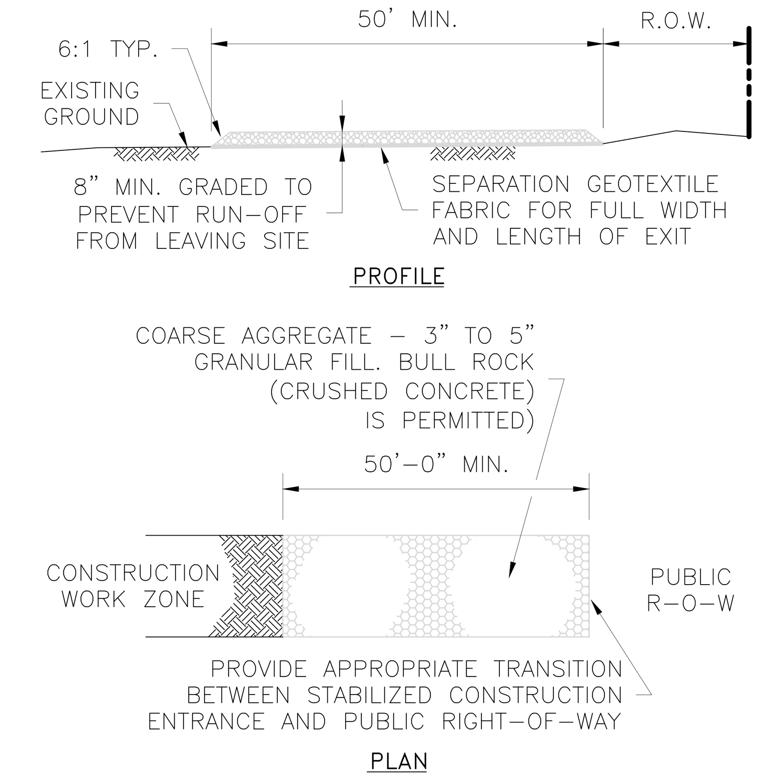
INLET PROTECTION BARRIERS FOR STAGE I INLETS

IPB-I

SYMBOL

GENERAL NOTES:

1. FIBER ROLLS WILL BE UTILIZED ONLY WHEN SITE CONDITIONS DO NOT PERMIT THE USE OF FILTER FABRIC BARRIER, AND AS APPROVED BY THE ENGINEER.



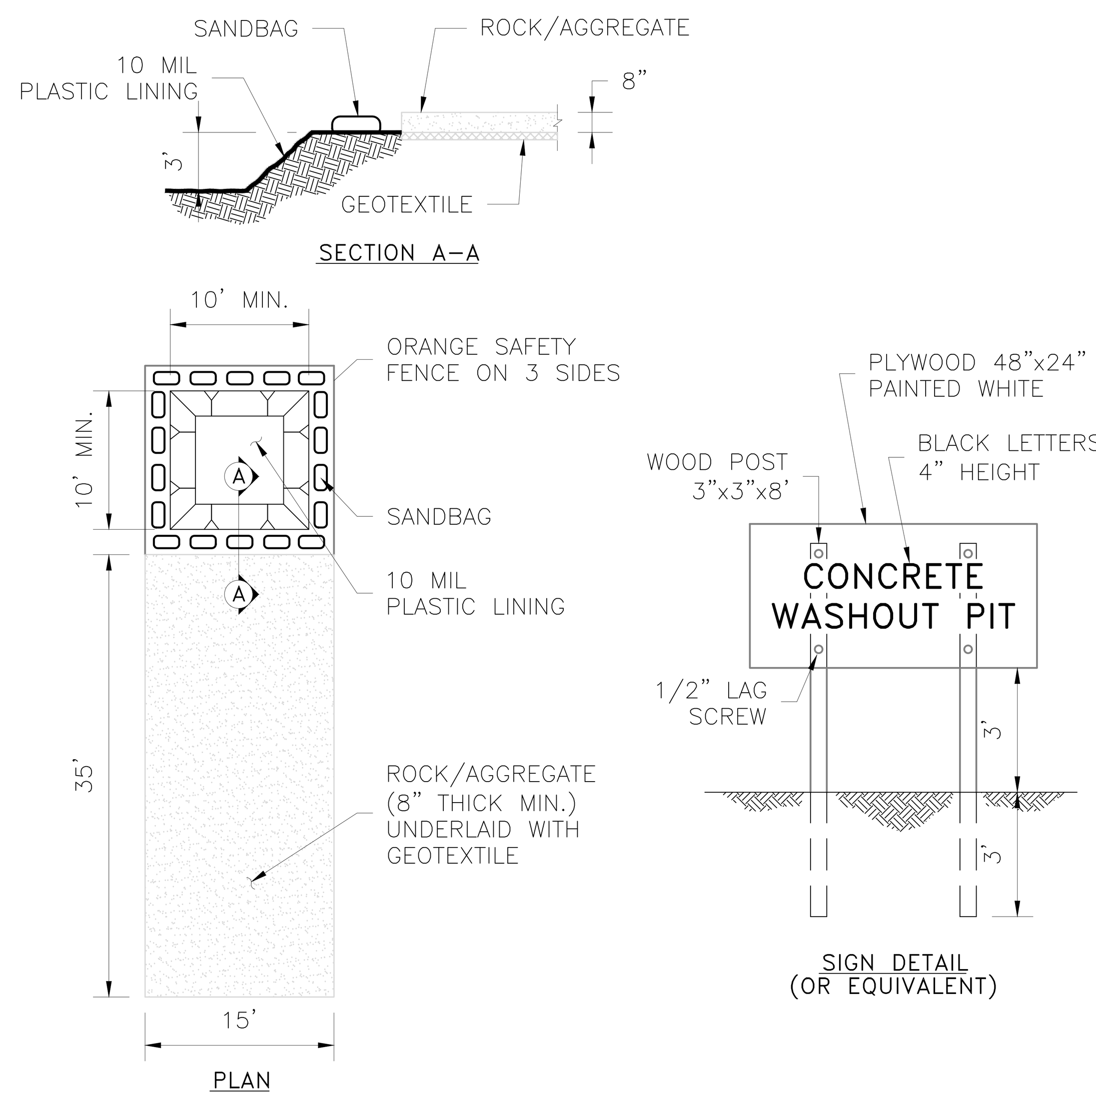
STABILIZED CONSTRUCTION ACCESS

SC-1

SYMBOL

GENERAL NOTES:

1. MINIMUM LENGTH IS AS SHOWN ON CONSTRUCTION DRAWINGS OR 50 FEET, WHICHEVER IS MORE.
2. CONSTRUCT AND MAINTAIN CONSTRUCTION EXIT WITH CONSTANT WIDTH ACROSS ITS LENGTH, INCLUDING ALL POINTS OF INGRESS OR EGRESS.
3. UNLESS SHOWN ON THE CONSTRUCTION DRAWINGS, STABILIZATION FOR OTHER AREAS WILL HAVE THE SAME AGGREGATE THICKNESS AND WIDTH REQUIREMENTS AS THE STABILIZED CONSTRUCTION EXIT.
4. WHEN SHOWN ON THE CONSTRUCTION DRAWINGS, WIDEN OR LENGTHEN STABILIZED AREA TO ACCOMMODATE A TRUCK WASHING AREA. PROVIDE OUTLET SEDIMENT TRAP FOR THE TRUCK WASHING AREA.
5. PROVIDE PERIODIC TOP DRESSING WITH ADDITIONAL COARSE AGGREGATE TO MAINTAIN THE REQUIRED DEPTH OR WHEN SURFACE BECOMES PACKED WITH MUD.
6. PERIODICALLY TURN AGGREGATE TO EXPOSE A CLEAN DRIVING SURFACE.
7. MINIMUM 14' WIDTH FOR ONE WAY TRAFFIC AND 20' WIDTH FOR TWO WAY TRAFFIC.



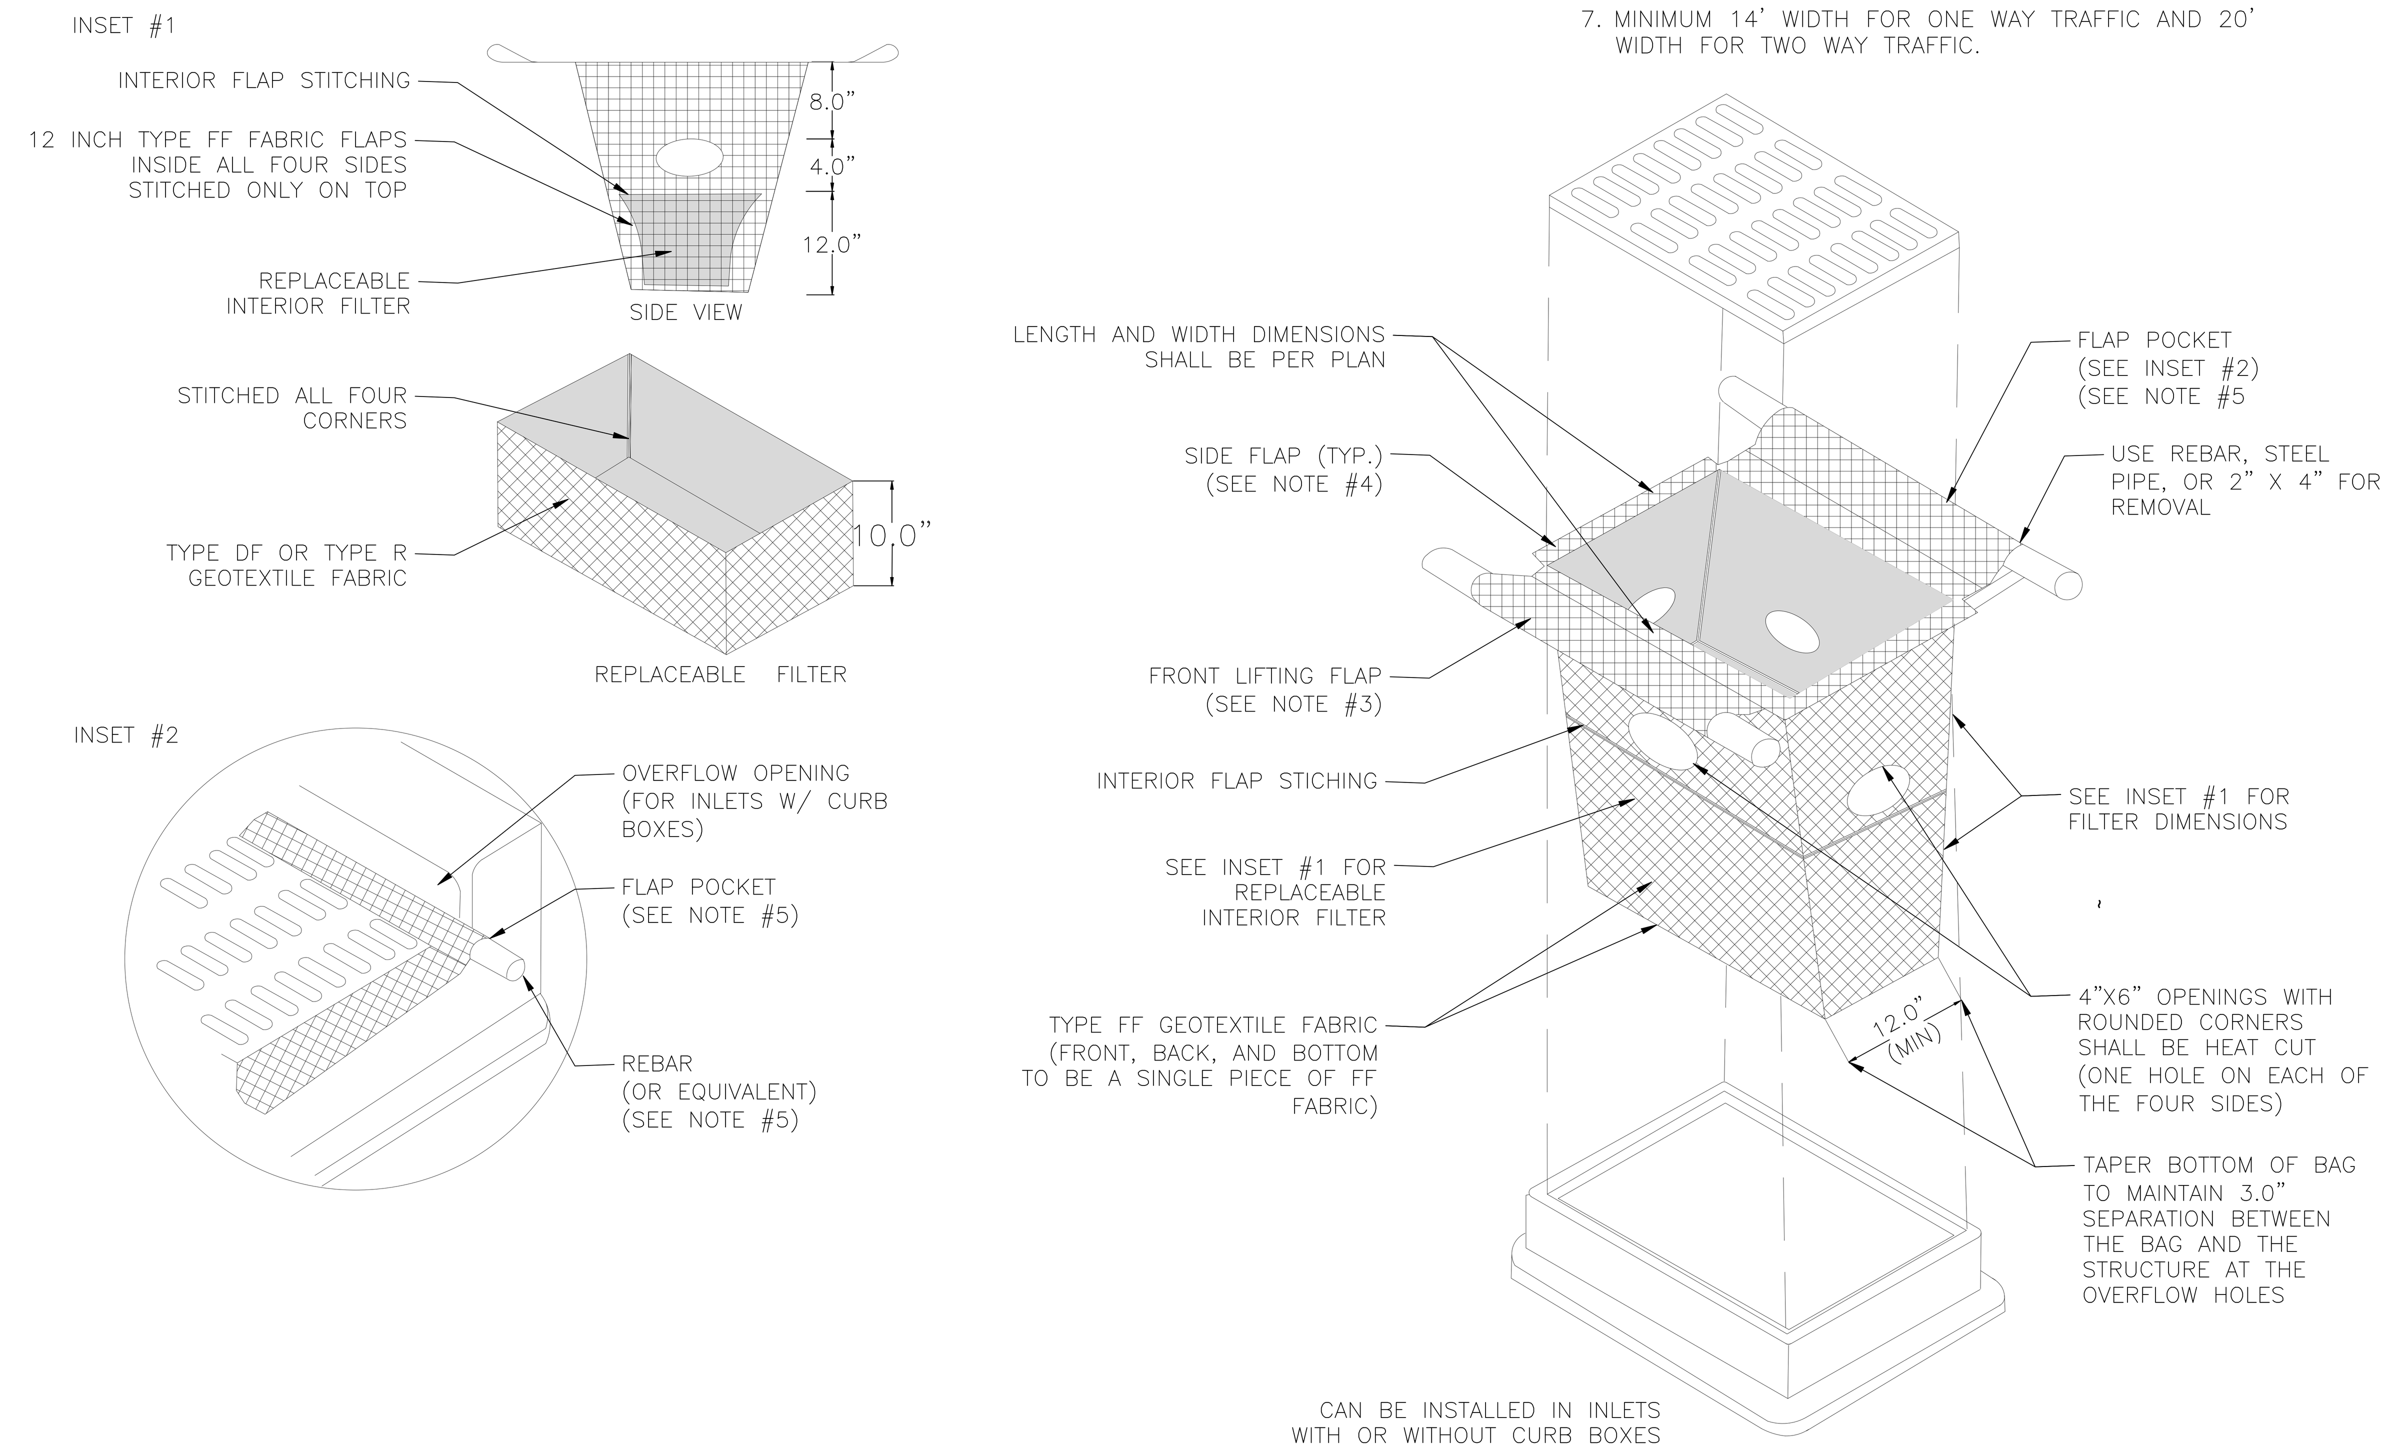
CONCRETE TRUCK WASHOUT AREA

CTW

SYMBOL

GENERAL NOTES:

1. POST A SIGN READING "CONCRETE WASHOUT PIT" NEXT TO THE PIT.
2. VERBALLY INSTRUCT THE CONCRETE TRUCK DRIVERS WHERE THE PIT IS AND TO WASHOUT THEIR TRUCKS IN THE PIT AND NOWHERE ELSE.
3. UPON THE CONCRETE SETTING UP (CURING, DRYING OUT), THE CONCRETE WASTE SHALL BE REMOVED FROM THE PROJECT SITE AND DISPOSED OF PROPERLY BY THE CONTRACTOR. AFTER REMOVAL OF THE CONCRETE WASTE, THE WASHOUT PIT SHALL BE FILLED WITH CLEAN FILL MATERIAL AND COMPACTED TO IN-SITU CONDITIONS, OR AS DIRECTED BY THE PROJECT SPECIFICATIONS.
4. CONCRETE WASHOUT PITS SHALL NOT BE LOCATED DIRECTLY ADJACENT TO, NOR AT ANY TIME DRAIN INTO THE STORM SEWER SYSTEM OR ANY OTHER SWALE, DITCH, OR WATERWAY.
5. CONSTRUCT ENTRY ROAD AND BOTTOM OF WASHOUT AREA TO SUPPORT EXPECTED LOADINGS FROM TRUCKS EQUIPMENT.



NOTES

1. TAPER BOTTOM OF BAG TO MAINTAIN THREE INCHES OF CLEARENCE BETWEEN THE BAG AND THE STRUCTURE. MEASURED FROM THE BOTTOM OF THE OVERFLOW OPENING TO THE STRUCTURE WALL.
2. GEOTEXTILE FABRIC TYPE FF FOR FLAPS, TOP AND BOTTOM OF OUTSIDE OF FILTER BAG, FRONT, BACK AND BOTTOM OF FILTER BEING ONE PIECE.
3. FRONT LIFTING FLAP IS TO BE USED WHEN REMOVING AND MAINTAINING FILTER BAG.
4. SIDE FLAPS SHALL BE A MAXIMUM OF TWO INCHES LONG. FOLD THE FABRIC OVER AND REINFORCE WITH MULTIPLE STITCHES.
5. FLAP PROCKETS SHALL BE LARGER ENOUGH TO ACCEPT WOOD 2"X4". THE REBAR, STEEL PIPE, OR WOOD SHALL BE INSTALLED IN THE REAR FLAP AND SHALL NOT BLOCK THE TOP HALF OF THE CURB FACE OPENING.

MAINTENANCE NOTES:

1. WHEN REMOVING OR MANTAINING INLET PROTECTION, CARE SHALL BE TAKEN SO THAT THE SEDIMENT TRAPPED IN THE FABRIC DOES NOT FALL INTO THE STRUCTURE. MATERIAL THAT HAS FALLEN INTO THE INLET SHALL BE IMMEDIATELY REMOVED.

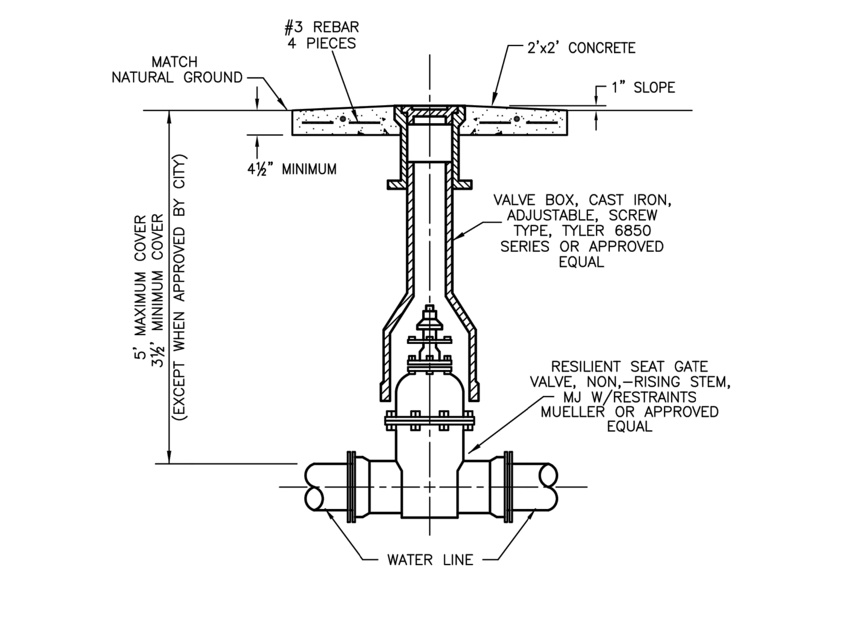
16"	38"	27"	21"	27"	12"	24"	24"	30"	20"	54"

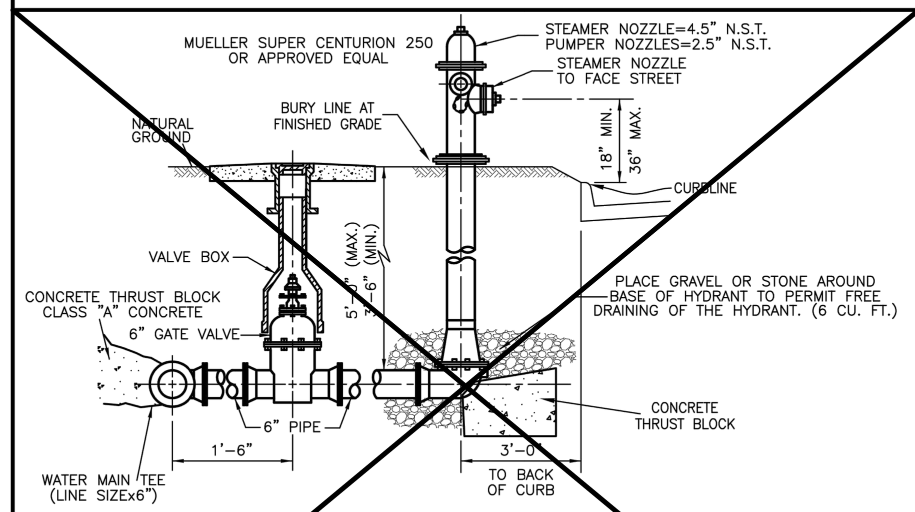
NOTES:
1. THRUST BLOCKS AT TRENCH FACE MUST HAVE A MINIMUM BEARING SURFACE OF 1.0 SQ. FOOT AND THE LEAST DIMENSION SHALL BE NO SMALLER THAN 1.5 TIMES PIPE DIAMETER, BUT NOT LESS THAN 1.0 FT.
2. THRUST BLOCKS SHALL BE PACKED AT ALL FITTINGS.
3. ALL FITTINGS SHALL BE M.J. RESTRAINED JOINT (EBAA IRON, SERIES 2000PV, OR APPROVED EQUAL).

2. THRUST BLOCK



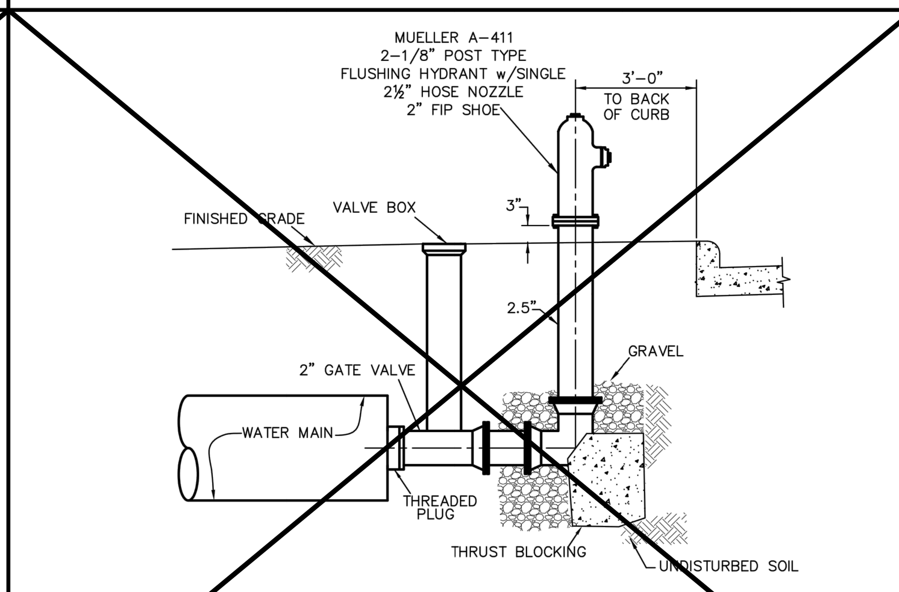
NOTES:
1. PROVIDE OPERATING NUT EXTENSION, AS NEEDED, TO APPROXIMATELY THREE (3) FEET BELOW FINISHED GRADE.
2. VALVE BOX SHALL NOT TRANSMIT ANY LOAD DIRECTLY TO THE VALVE OR PIPE.
3. GATE VALVES SHALL BE COUNTER–CLOCKWISE OPEN.
4. TAPPING VALVES ARE NOT ALLOWED WHEN TAP IS SAME SIZE AS THE EXISTING MAIN EXCEPT WHEN APPROVED BY PUBLIC WORKS.

3. GATE VALVE AND BOX



NOTES:
1. 5/8" ALL–THREAD IS TO BE USED TO TIE VALVE TO TEE AND VALVE TO HYDRANT.
2. PROVIDE MECHANICAL RESTRAINED JOINTS (EBBA IRON, SERIES 2000PV, OR APPROVED EQUAL).
3. PAINT ALL FIRE HYDRANT BARRELS SILVER. PAINT BONNET AND CAPS IN ACCORDANCE WITH CITY OF RICHMOND REQUIREMENTS BASED ON FLOW CAPACITIES. (COLORS: BLUE–1500 GPM AND ABOVE; GREEN–1000 GPM TO 1499 GPM; ORANGE–500 GPM TO 999 GPM; RED–LESS THAN 500 GPM).

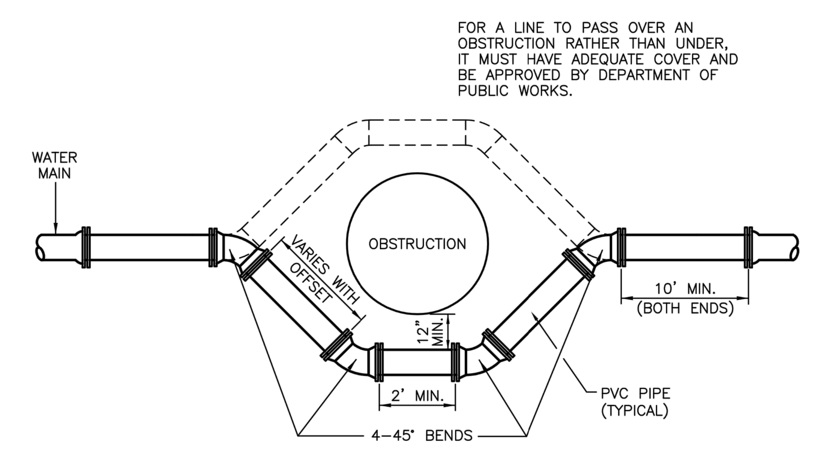
4. FIRE HYDRANT



NOTE:
1. ON OPEN–DITCH ROADWAYS, SET THE FLUSHING HYDRANTS WITHIN 3 FEET OF ROAD RIGHT–OF–WAY LINE.
2. PAINT ALL FLUSH VALVES SILVER.

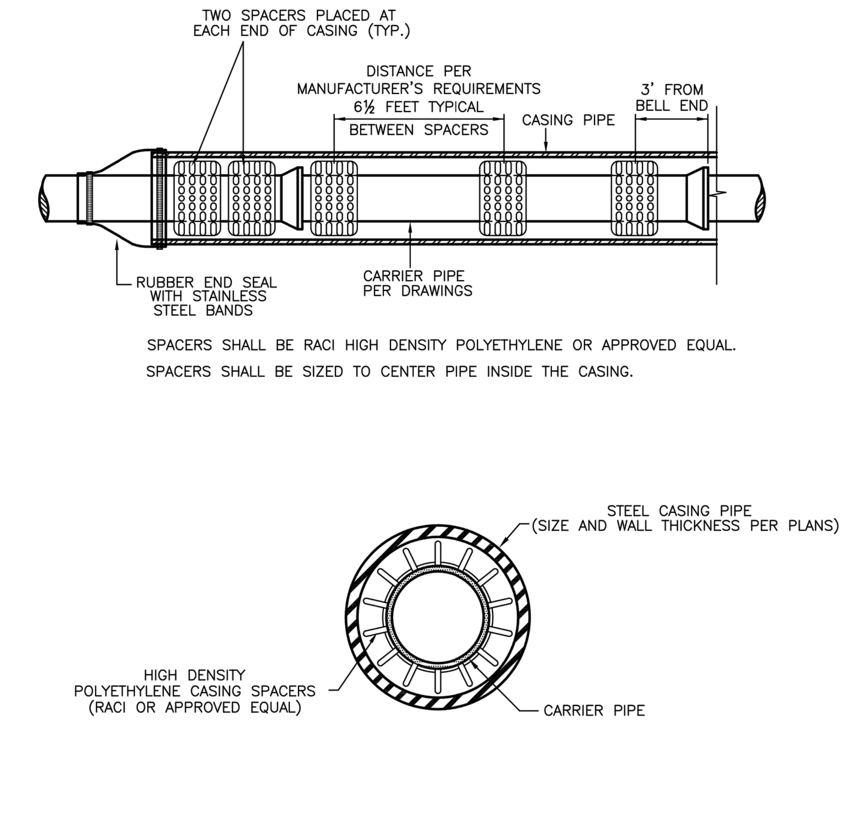
5. 2" BLOWOFF VALVE ASSEMBLY

FOR A LINE TO PASS OVER AN OBSTRUCTION RATHER THAN UNDER, IT MUST HAVE ADEQUATE COVER AND BE APPROVED BY DEPARTMENT OF PUBLIC WORKS.



NOTES:
1. OFFSET ASSEMBLIES SHALL BE CONSTRUCTED WHEN THE PIPE DEPTH EXCEEDS 8 FEET AND WHEN THE LINE WILL BE CONSTRUCTED WITH A DEPTH GREATER THAN 6 FEET AT A FIRE HYDRANT OR SERVICE LEAD.
2. PIPE–AWWA C900 DR–18, 150 PSI WITH INTEGRAL PVC JOINT.
3. FITTINGS–DUCTILE IRON EPOXY LINED AND COATED, MECHANICAL RESTRAINED JOINT (EBAA IRON, SERIES 2000PV, OR APPROVED EQUAL).
4. PROVIDE 2–5/8" ALL–THREAD RODS BETWEEN ALL FITTINGS.

6. WATER PIPE OFFSET ASSEMBLY



SPACERS SHALL BE RACI HIGH DENSITY POLYETHYLENE OR APPROVED EQUAL.

SPACERS SHALL BE SIZED TO CENTER PIPE INSIDE THE CASING.

NOTES:
1. CASING SPACERS SHALL BE USED TO INSTALL THE CARRIER PIPE INSIDE THE ENCASEMENT PIPE TO PROVIDE SUPPORT AROUND THE PERIPHERY OF THE PIPE. MINIMUM CLEARANCE BETWEEN MAXIMUM O.D. OF CARRIER PIPE AND I.D. OF CASING SHALL BE ONE INCH.
2. SPACERS SHALL BE PROJECTION TYPE, WITH A MINIMUM NUMBER OF PROJECTIONS AROUND THE CIRCUMFERENCE EQUAL TO THE NUMBER OF DIAMETER INCHES OF THE CARRIER PIPE. CASING SPACERS SHALL BE TOTALLY NON–METALLIC SPACERS CONSTRUCTED OF INTERLOCKING PREFORMED SECTIONS OF HIGH DENSITY POLYETHYLENE. SPACERS SHALL BE ISO 9002 CERTIFIED FOR STRENGTH AND QUALITY.
3. THE ENDS OF THE CASING SHALL BE SEALED USING PWM MODEL 1 WA WRAP AROUND END SEAL MADE OF 1/8" THICKNESS RUBBER AND STAINLESS STEEL BANDS, OR APPROVED EQUAL.

Specifications

CONCRETE – Class 1 concrete with design strength of 4500 psi at 28 days. Unit is of monolithic construction at floor and first stage of wall with sectional riser to required depth. Gross empty weight of approximately 9,000 pounds.

REINFORCEMENT – Grade 60 reinforced. Steel rebar conforming to ASTM A615 on required centers or equal.

STEEL COVER – 1/4" steel skid-resistant floor plate welded to 3" angle frame with (2) 3"x2-3/8" I beam supports.

Notes:

Backflow assembly shall be factory assembled complete with concrete vault and be tested prior to setting in excavation. Manufacturer shall provide certified engineering data and buoyancy calculation.

1. DOUBLE CHECK DETECTOR ASSEMBLY

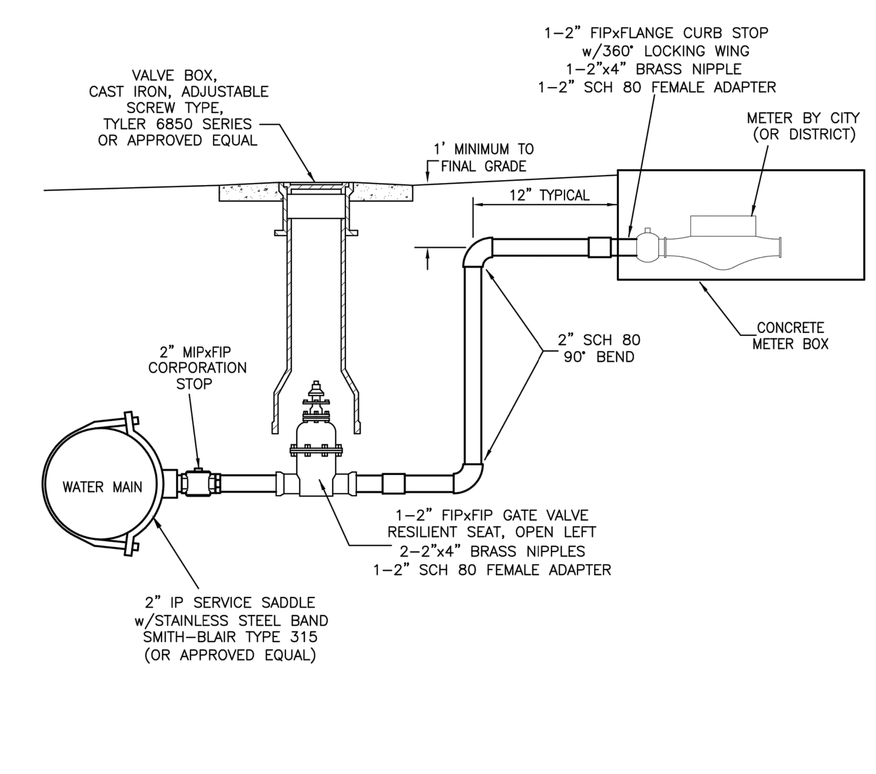
REINFORCEMENT – Grade 60 reinforced. Steel rebar conforming to ASTM A615 on required centers or equal.

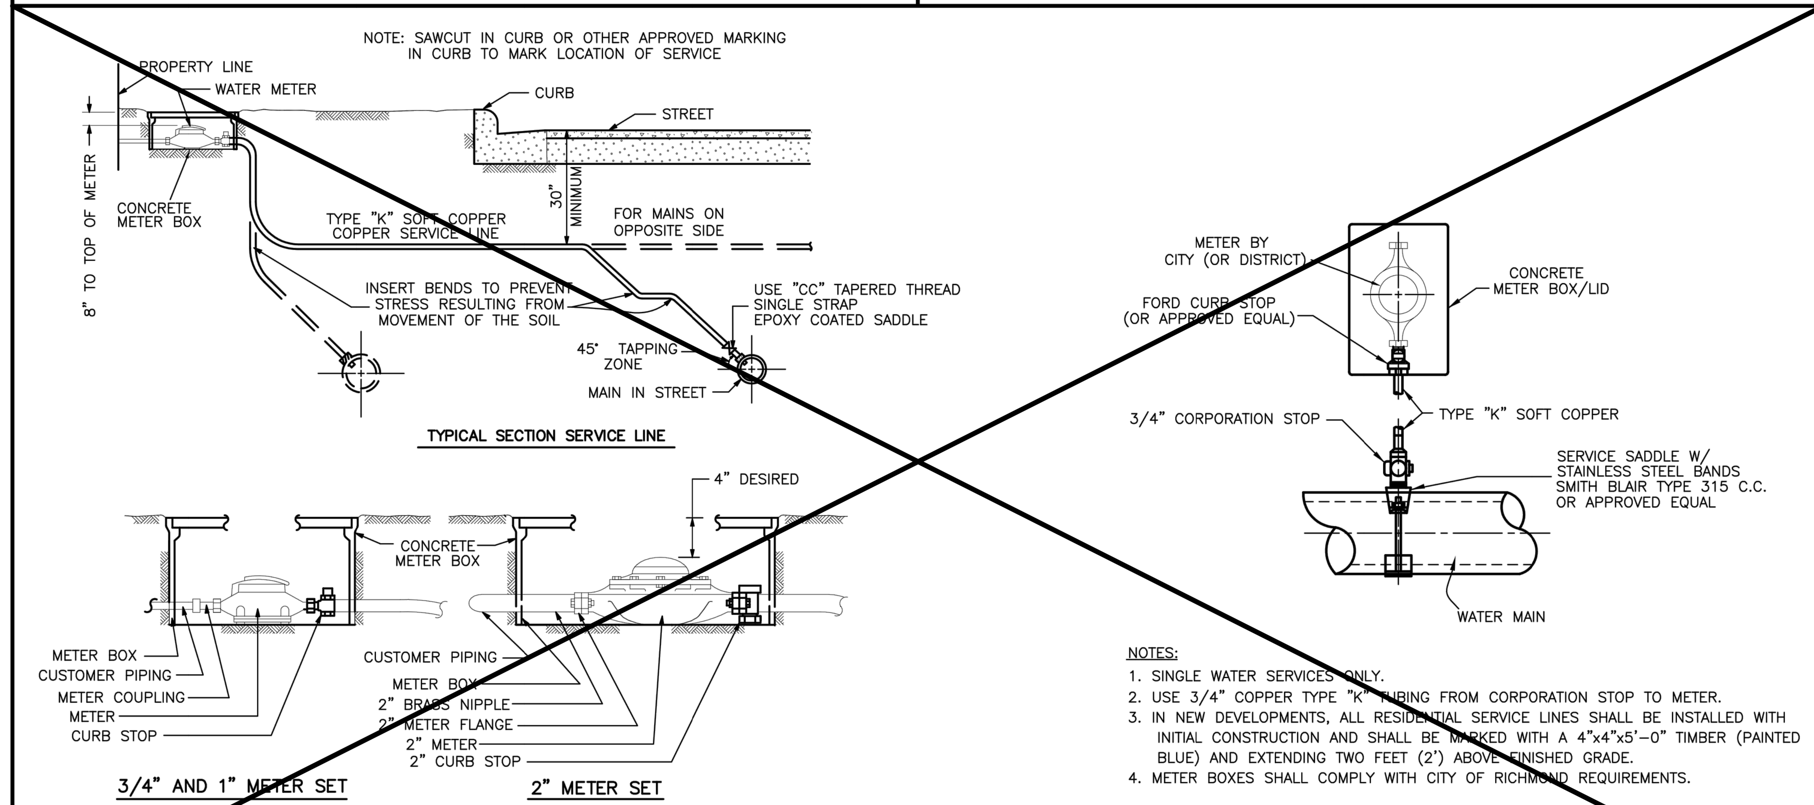
STEEL COVER – 1/4" steel skid-resistant floor plate welded to 3" angle frame with (2) 3"x3" angle supports (300 psf).

2. DOMESTIC TURBINE WATER METER ASSEMBLY



NOTE:
USE ONLY 2" SCH 80 PVC PIPE AND FITTINGS

3. 2" WATER SERVICE CONNECTION



NOTES:

1. SINGLE WATER SERVICES ONLY.
2. USE 3/4" COPPER TYPE "K" TUBING FROM CORPORATION STOP TO METER.
3. IN NEW DEVELOPMENTS, ALL RESIDENTIAL SERVICE LINES SHALL BE INSTALLED WITH INITIAL CONSTRUCTION AND SHALL BE MARKED WITH A 4"x4"x5'-0" TIMBER (PAINTED BLUE) AND EXTENDING TWO FEET (2') ABOVE FINISHED GRADE.
4. METER BOXES SHALL COMPLY WITH CITY OF RICHMOND REQUIREMENTS.

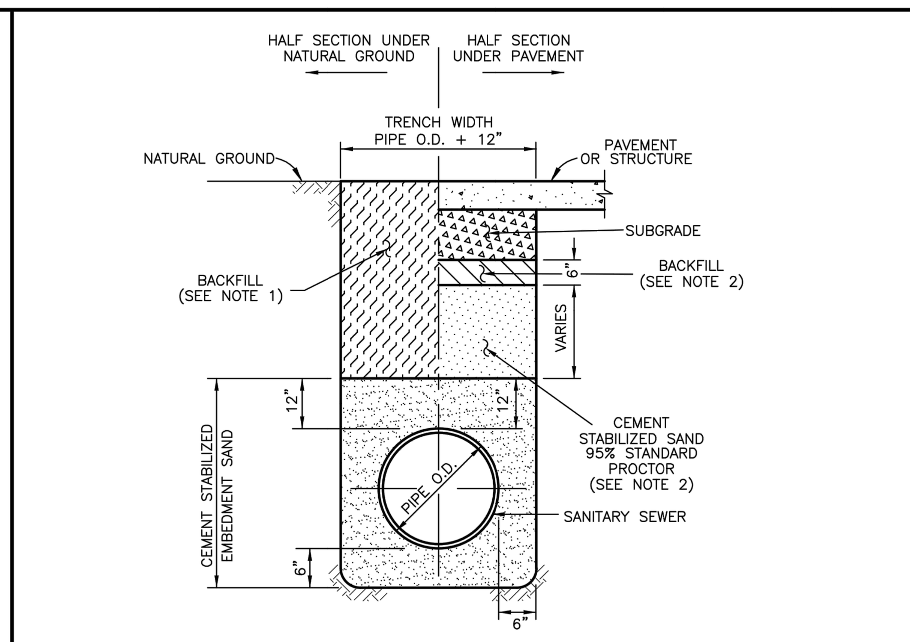
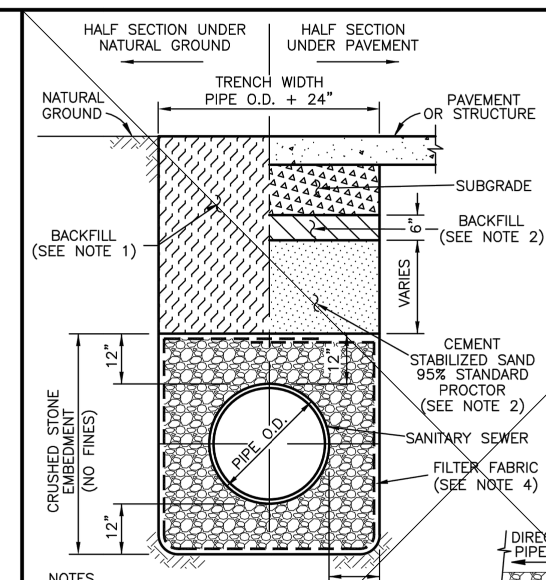
1. MANHOLE FRAME AND COVER



NOTES

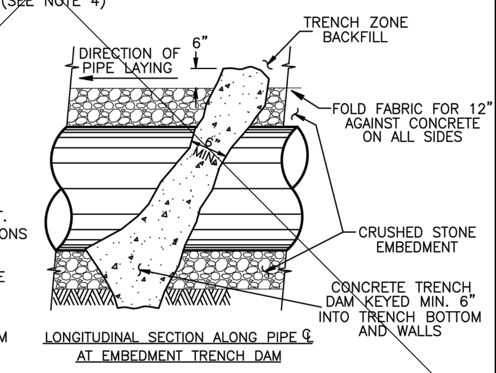
1. BACKFILL SHALL BE NATIVE SOIL, FREE OF DEBRIS, PLACED IN LIFTS, 8" THICK OR LESS, COMPACTED TO 95% STANDARD PROCTOR DENSITY, (CONTRACTOR TO USE PROPER COMPACTION EQUIPMENT TO ACHIEVE DESIRED DENSITY.) EXCEPT AS REQUIRED BELOW.
2. BACKFILL UNDER AND WITHIN 3 FEET OF DRIVEWAYS AND PUBLIC STREETS SHALL BE CEMENT STABILIZED SAND (2 SACKS OF CEMENT PER TON OF SAND), EXCEPT THE TOP 6" SHALL BE NATIVE SOIL, FREE OF DEBRIS. ALL BACKFILL UNDER PAVING SHALL BE COMPACTED TO 95% STANDARD PROCTOR DENSITY.
3. TRENCH SHORING, IN ACCORDANCE WITH OSHA, SHALL BE INSTALLED AS REQUIRED.

2. SANITARY SEWER BEDDING



NOTES

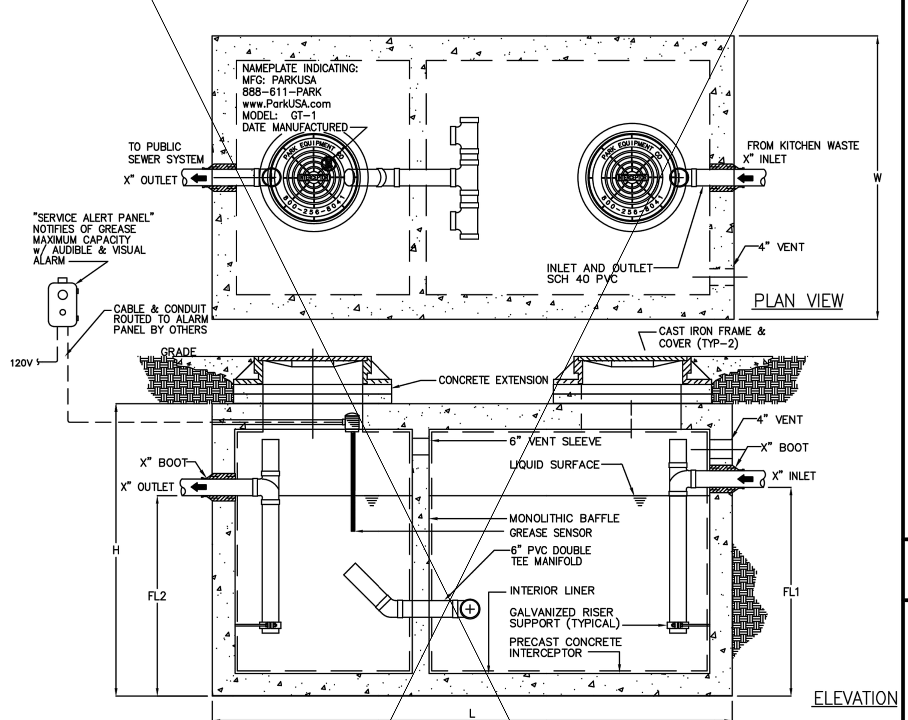
1. BACKFILL SHALL BE NATIVE SOIL, FREE OF DEBRIS, PLACED IN LIFTS, 8" THICK OR LESS, COMPACTED TO 95% STANDARD PROCTOR DENSITY, EXCEPT AS REQUIRED BELOW.
2. BACKFILL UNDER AND WITHIN 3 FEET OF DRIVEWAYS AND PUBLIC STREETS SHALL BE CEMENT STABILIZED SAND (2 SACKS OF CEMENT PER TON OF SAND), EXCEPT THE TOP 6" SHALL BE NATIVE SOIL, FREE OF DEBRIS. ALL BACKFILL UNDER PAVING SHALL BE COMPACTED TO 95% STANDARD PROCTOR DENSITY.
3. TRENCH SHORING, IN ACCORDANCE WITH OSHA, SHALL BE INSTALLED AS REQUIRED.
4. FILTER FABRIC, ARMCO TREVIRA S1115 OR EQUAL, 18" LAP AT ALL EDGES.

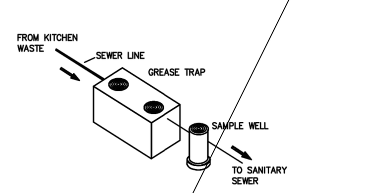


NOTES

1. TRENCH DAM MAY BE FORMED OR UNFORMED, ACTUAL SHAPE OF CONCRETE TRENCH DAM OR CROSS SECTION MAY BE DETERMINED IN FIELD, MEETING MINIMUM THICKNESS AND KEY DEPTH REQUIREMENTS.
2. TRENCH DAM SHALL BE PLACED AT LEAST 5 FT. AWAY FROM ANY STRUCTURE. SEE SPECIFICATIONS FOR OTHER REQUIREMENTS.
3. PLACE TRENCH DAMS AT THE MIDPOINT OF LINE SEGMENTS LONGER THAN 100 FEET BETWEEN MANHOLES.
4. TRENCH DAM CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 2500 PSI.

3. SANITARY SEWER BEDDING FOR WET CONDITIONS





TYPICAL APPLICATIONS INCLUDE COMMERCIAL AND INDUSTRIAL FOOD SERVICE KITCHENS WHERE EXCESSIVE GREASE MAY INTERFERE WITH THE PROPER DRAINAGE OF THE SEWER SYSTEM. THE GREASE INTERCEPTOR IS GENERALLY BURIED BELOW GRADE FOR GRAVITY FLOW SEWER SYSTEMS. A SAMPLE WELL IS UTILIZED ON THE OUTLET SIDE FOR SAMPLING BY THE LOCAL WATER AUTHORITY.

GREASE INTERCEPTOR SCHEDULE

MODEL NO.	CAPACITY USGal	GREASE CAP. (LBS)	EMPTY WT (LBS)	LENGTH L	WIDTH W	HEIGHT H	INLET FL1	OUTLET FL2

GT–4000	4,000	9,300	38,100	16'–0"	8'–6"	7'–0"	5'–9"	5'–6"

OTHER SIZES ARE AVAILABLE. CONTACT US FOR MORE INFORMATION

SPECIFICATIONS

CONCRETE: CLASS I/II CONCRETE WITH DESIGN STRENGTH OF 4500 PSI AT 28 DAYS. UNIT IS OF MONOLITHIC CONSTRUCTION AT FLOOR, FIRST STAGE OF WALL AND BAFFLE WITH SECTIONAL RISER TO REQUIRED DEPTH. (MONOLITHIC BAFFLE REQUIRED, SLIDE-IN TYPE IS NOT ACCEPTABLE)

REINFORCEMENT: GRADE 60 REINFORCED WITH STEEL REBAR CONFORMING TO ASTM A615 ON REQUIRED CENTERS OR EQUAL.

C.I. CASTINGS: MANHOLE FRAMES, COVERS OR GRATES ARE MANUFACTURED OF GREY CAST IRON CONFORMING TO ASTM A48 CLASS 30. MANHOLE SHALL BE NOMINAL 24 INCH DIAMETER AND BE TRAFFIC DUTY.

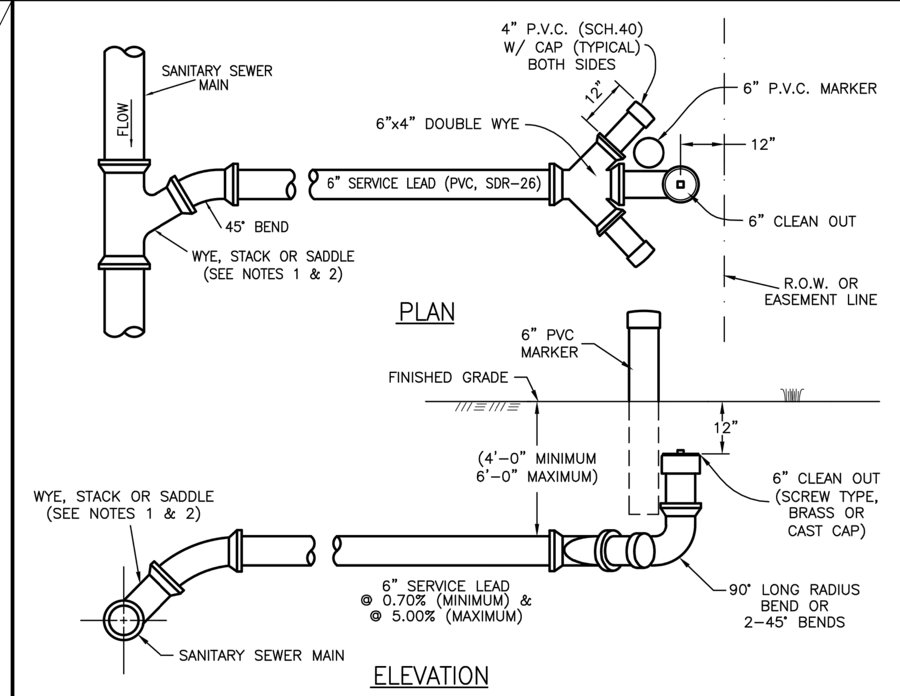
ENGINEERING DATA

THE GREASE INTERCEPTOR IS STRUCTURALLY & HYDRAULICALLY ENGINEERED TO CONFORM TO UPC/IPC AND REGIONAL PLUMBING CODES RECOMMENDED IN MOST CITIES. CONSULT WITH LOCAL AUTHORITIES FOR SPECIFIC APPLICATION REQUIREMENTS.

SHOP DRAWINGS SHALL INCLUDE COMPLETE STRUCTURAL & BOUYANCY CALCULATIONS CERTIFIED BY A LICENSED PROFESSIONAL ENGINEER UPON REQUEST.

CONSULT WITH PARK EQUIPMENT COMPANY FOR EXACT EXCAVATION DIMENSIONS & SHIPPING INFORMATION.

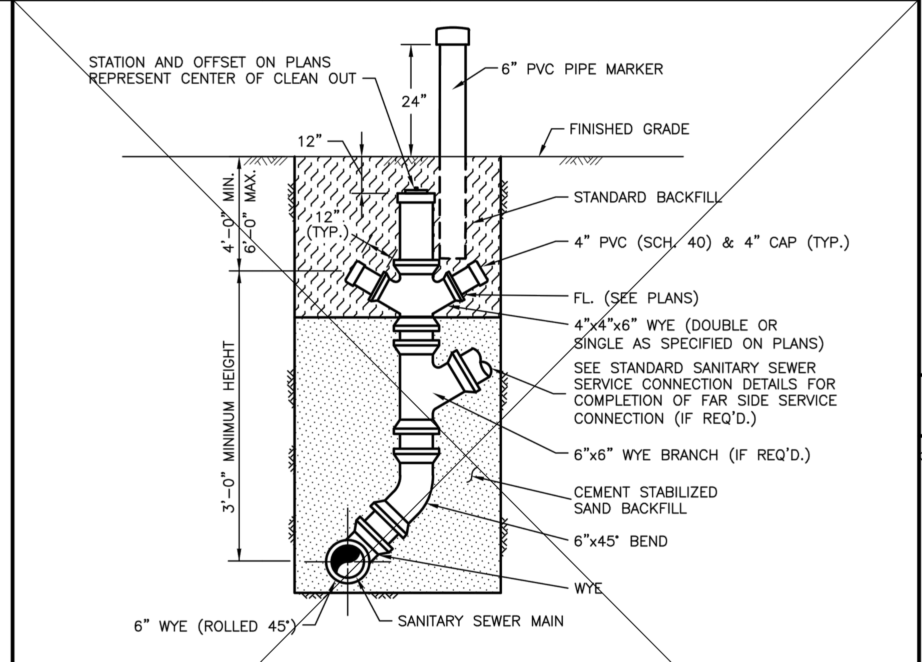
4. GREASE TRAP



NOTES:

1. FOR NEW CONSTRUCTION "IN-LINE" WYES OR SERVICE STACKS SHALL BE USED FOR SERVICE CONNECTIONS TO SANITARY SEWERS.
2. FOR SERVICE CONNECTIONS ON EXISTING SANITARY SEWERS, PROPER SIZED SADDLES AND DRILLED TAP SHALL BE USED.
3. PROVIDE DOUBLE SERVICE CONNECTION WHERE POSSIBLE.
4. DELETE DOUBLE WYE ON SINGLE CONNECTION.
5. PROVIDE CEMENT STABILIZED BEDDING AND BACKFILL PER DETAILS.
6. 6" PVC MARKER (WITH SOLVENT WELD CAP) SHALL EXTEND FROM ADJOINING THE WYE TO 2'-0" ABOVE FINISHED GRADE.

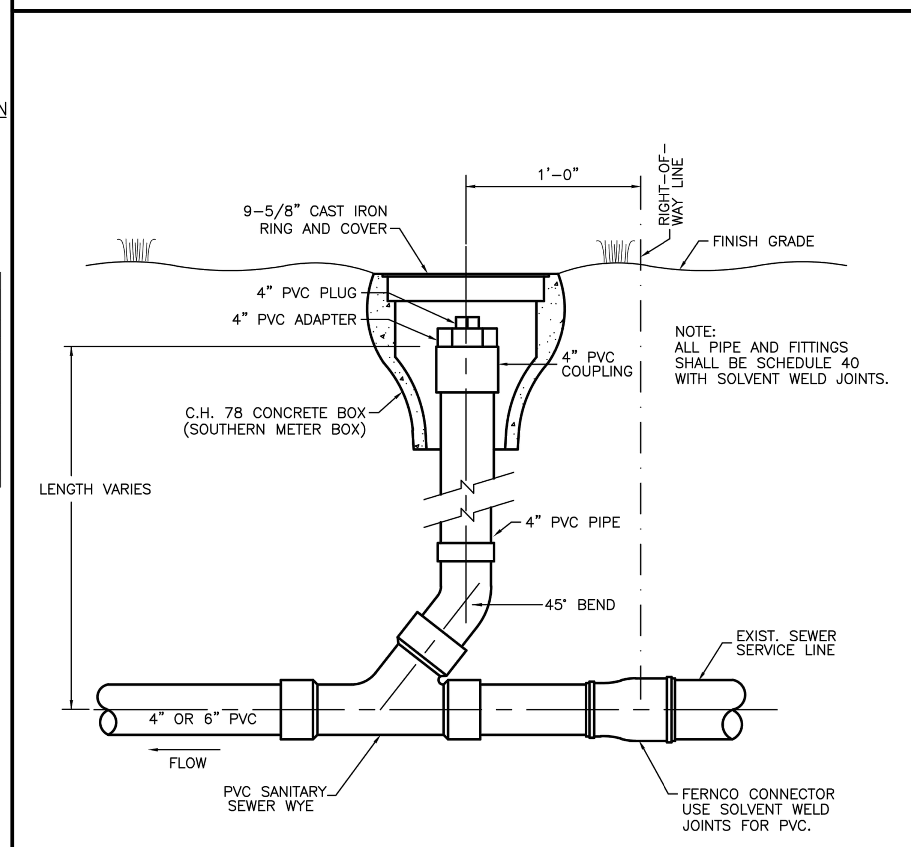
5. SANITARY SEWER SERVICE CONNECTION



NOTES:

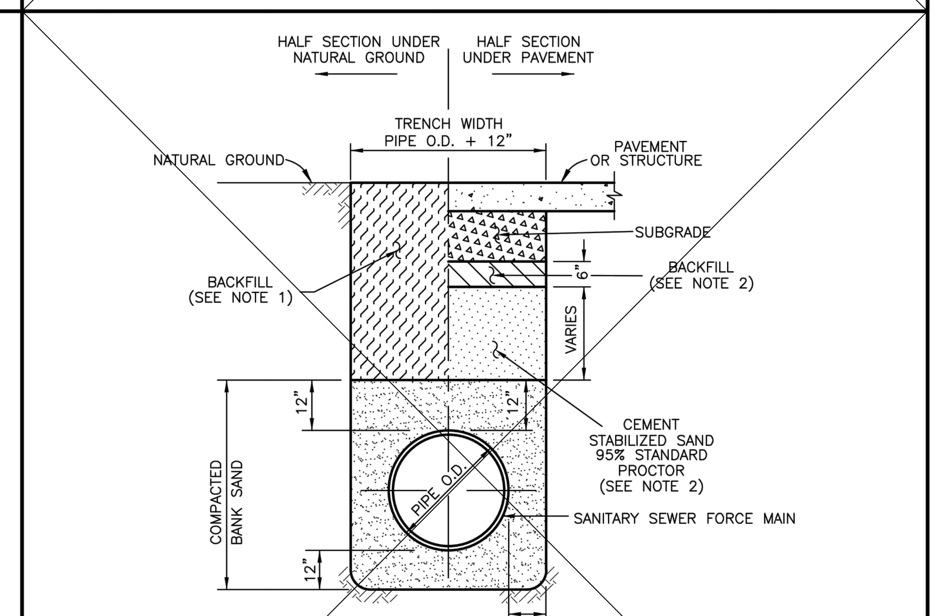
1. ALL STACK CONNECTIONS SHALL BE "IN-LINE" FITTINGS.
2. NO STACKS TO BE CONSTRUCTED ON EXISTING SANITARY SEWER LINES; LINES GREATER THAN 12' DEEP OR IN WET TRENCH CONDITIONS.
3. ALL FITTINGS TO BE PVC, SDR-26.
4. 6" PVC MARKER (WITH SOLVENT WELD CAP) SHALL EXTEND FROM ADJOINING THE WYE TO 2'-0" ABOVE FINISHED GRADE.

6. SANITARY SEWER STACK



NOTE:
ALL PIPE AND FITTINGS SHALL BE SCHEDULE 40 WITH SOLVENT WELD JOINTS.

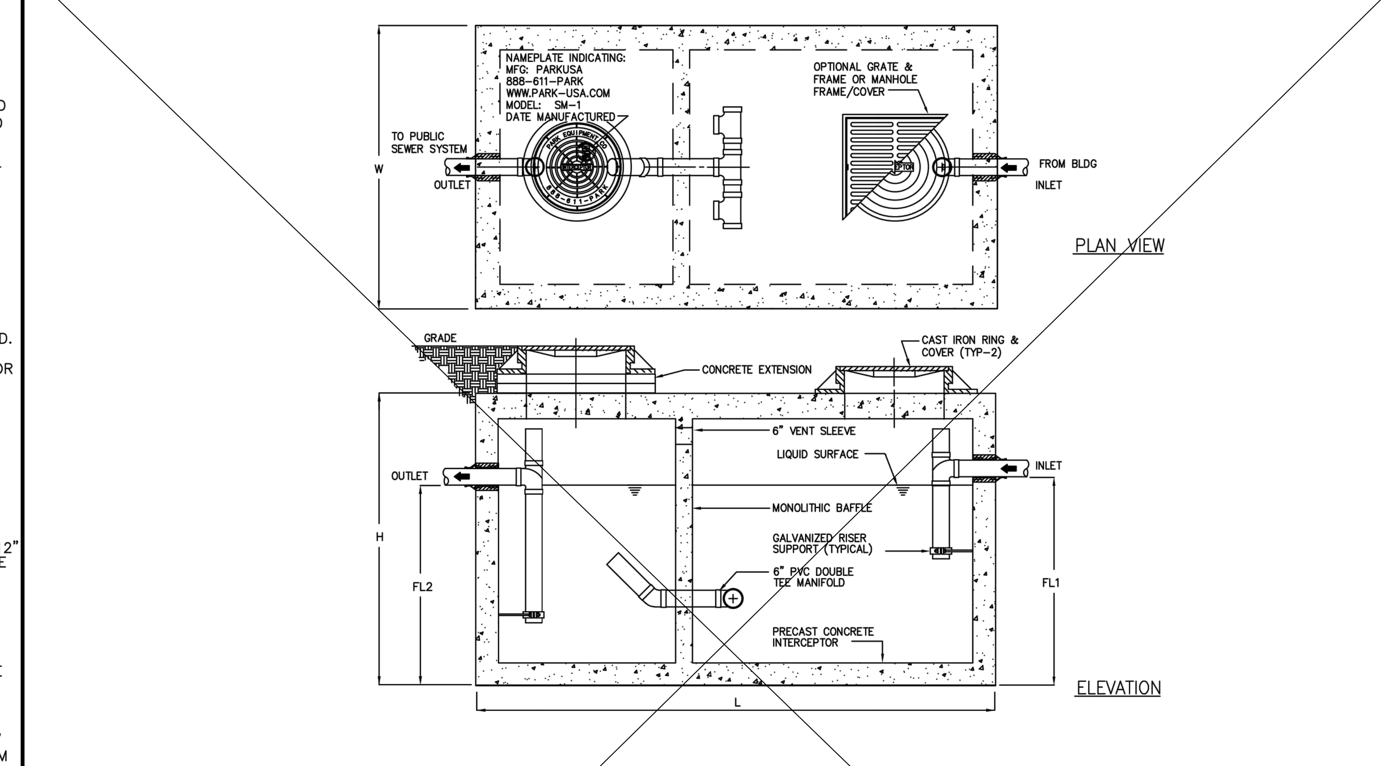
7. SERVICE LINE CLEANOUT ASSEMBLY

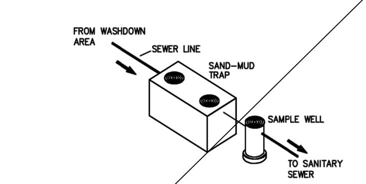


NOTES

1. BACKFILL SHALL BE NATIVE SOIL, FREE OF DEBRIS, PLACED IN LIFTS, 8" THICK OR LESS, COMPACTED TO 95% STANDARD PROCTOR DENSITY, (CONTRACTOR TO USE PROPER COMPACTION EQUIPMENT TO ACHIEVE DESIRED DENSITY.) EXCEPT AS REQUIRED BELOW.
2. BACKFILL UNDER AND WITHIN 3 FEET OF DRIVEWAYS AND PUBLIC STREETS SHALL BE CEMENT STABILIZED SAND (2 SACKS OF CEMENT PER TON OF SAND), EXCEPT THE TOP 6" SHALL BE NATIVE SOIL, FREE OF DEBRIS. ALL BACKFILL UNDER PAVING SHALL BE COMPACTED TO 95% STANDARD PROCTOR DENSITY.
3. TRENCH SHORING, IN ACCORDANCE WITH OSHA, SHALL BE INSTALLED AS REQUIRED.
4. ALL EXCAVATED MATERIAL WITH A P.I. OF 12 OR LESS MAY BE USED AS BACKFILL WITH FIELD APPROVAL BY THE CITY.

8. SANITARY SEWER FORCE MAIN BEDDING





TYPICAL APPLICATIONS INCLUDE COMMERCIAL AND INDUSTRIAL LAUNDRY FACILITIES WHERE EXCESSIVE SAND & MUD MAY INTERFERE WITH THE PROPER DRAINAGE OF THE SEWER SYSTEM. THE SAND-MUD INTERCEPTOR IS GENERALLY BURIED BELOW GRADE FOR GRAVITY FLOW SEWER SYSTEMS. A SAMPLE WELL IS UTILIZED ON THE OUTLET SIDE FOR SAMPLING BY THE LOCAL WATER AUTHORITIY.

SAND-MUD INTERCEPTOR SCHEDULE

SWB–244	24"	4"	34"	11"
SWB–246	24"	6"	34"	9"

NOTES

1. SAMPLING WELL MUST BE INSTALLED UNDER A SEPARATE PLUMBING PERMIT.
2. USE 15" T&G R.C.P. FOR INSTALLATION 6'-0" DEEP AND LESS.
3. USE 24" T&G R.C.P. FOR INSTALLATION GREATER THAN 6'-0" DEEP. (STD RING AND M.H. COVER REQUIRED).
4. SAMPLING WELL MUST BE SET IN A CIRCULAR OR SQUARE CONCRETE PAD (1'-0" GREATER THAN OUTSIDE DIAMETER OF PIPE).
5. INSIDE INSTALLATION NOT PERMITTED, WHERE OUTSIDE INSTALLATION IS POSSIBLE.
6. INSTALLATION INSIDE BLDG MUST BE POURED IN PLACE (15"MIN) NO CONCRETE PIPE IS PERMITTED, (AIR-TIGHT COVER REQUIRED).
7. LAWN INSTALLATION MUST BE 4" ABOVE FINISHED GRADE.
8. DRIVE & SIDEWALK INSTALLATION MUST BE BROUGHT TO FINISHED GRADE.
9. TO BE INSTALLED ON PRIVATE PROPERTY, IN AN ACCESSIBLE LOCATION TO CITY PERSONNEL.

SPECIFICATIONS

CONCRETE: Class I/II concrete with design strength of 4500 PSI at 28 days. Unit is of monolithic construction at floor and first stage of wall with sectional riser to required depth.

C.I. CASTINGS: Cast iron frames and grates are manufactured of grey cast iron conforming to ASTM A48-76 Class 30, Heavy-Duty AASHTO H-20

KEY PLAN

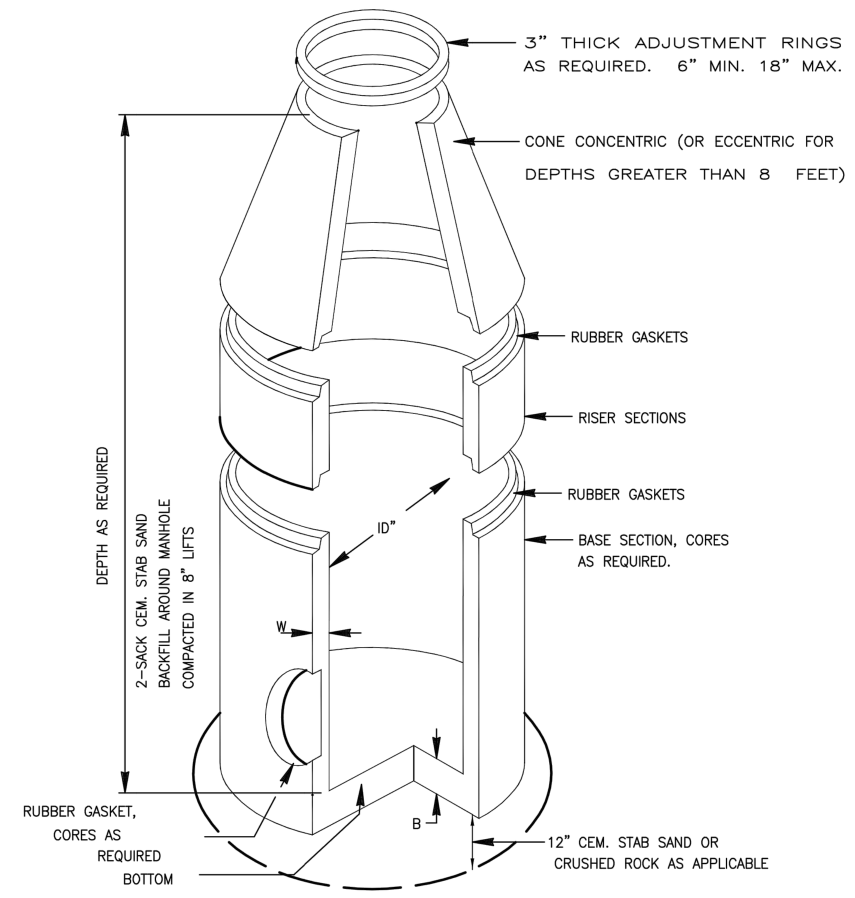
NOTES:

1. PRECAST CONCRETE RINGS SHALL BE PROVIDED FOR A COMBINED ADJUSTMENT HEIGHT OF AT LEAST 6". THE TOTAL HEIGHT OF THE ADJUSTMENT RINGS SHALL NOT EXCEED 12".
2. MANHOLE WALL THICKNESS FOR DEPTH EXCEEDING 12'-0" SHALL BE DETERMINED TO MEET AASHTO H-20 LOADING AND SOIL CONDITIONS OR AS OTHERWISE REQUIRED. MINIMUM THICKNESS 5".
3. MANHOLE DROP AND INTERSECTING PIPES SHALL BE INSTALLED WHEN CALLED FOR IN PLAN AND PROFILE DRAWING AND WHEN THE DROP ON INCOMING PIPE IS GREATER THAN 24".
4. NO INTERNAL DROPS PERMITTED, UNLESS APPROVED BY CITY.
5. SEAT MANHOLE FRAME USING AN APPROVED SEALANT.
6. ECCENTRIC PRECAST CONCRETE MANHOLE RISER SHALL BE USED, FOR DEPTHS GREATER THAN 8'.
7. OMIT CEMENT MORTAR WHEN MANHOLE IS LOCATED IN PAVED AREAS.
8. MINIMUM STEEL REINFORCING IN THE PRECAST CONCRETE BASE SHALL BE #5 @ 8" CENTERS EACH WAY.
9. PRECAST CONCRETE MANHOLES TO MEET ASTM C-478, CURRENT.
10. ALL JOINTS SHALL BE SEALED WITH RUBBER GASKETS (ASTM C443) OR APPROVED EQUAL.
11. BASE SHALL INCLUDE A 12" THICK CEMENT STABILIZED SAND BASE BENEATH THE STRUCTURE. ALTERNATE: USE CRUSHED STONE AND FILTER FABRIC IN WET TRENCH CONDITIONS.
12. BACKFILL AROUND MANHOLE & DROP CONNECTION WITH 2 SACKS OF CEMENT PER TON OF SAND (100 P.S.I. MINIMUM).
13. USE STANDARD CAST IRON FRAME AND COVER WITH THE WORDS "SANITARY – CITY OF RICHMOND".
14. MINIMUM 4000 P.S.I. CONCRETE TO BE USED FOR CAST-IN-PLACE (C.I.P.) CONCRETE BASE.
15. GROUT INSIDE AND OUTSIDE OF EXTENSION RING(S) AND FRAME.
16. ALL INTERIOR SURFACES SHALL BE COATED WITH IPAGARD EPOXY, THANECOAT FE100 OR APPROVED EQUAL, APPLIED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATION (40 MIL MINIMUM THICKNESS)
17. MANHOLES SHALL BE CONSTRUCTED USING PRECAST REINFORCED CONCRETE MANHOLE SECTIONS, CONE AND BOTTOM. BRICK WILL NOT BE ALLOWED.
18. MANHOLE INVERT TO BE CUT INTO OR ADD TO MANHOLE BASE WHEN A SERVICE CONNECTION IS ADDED.

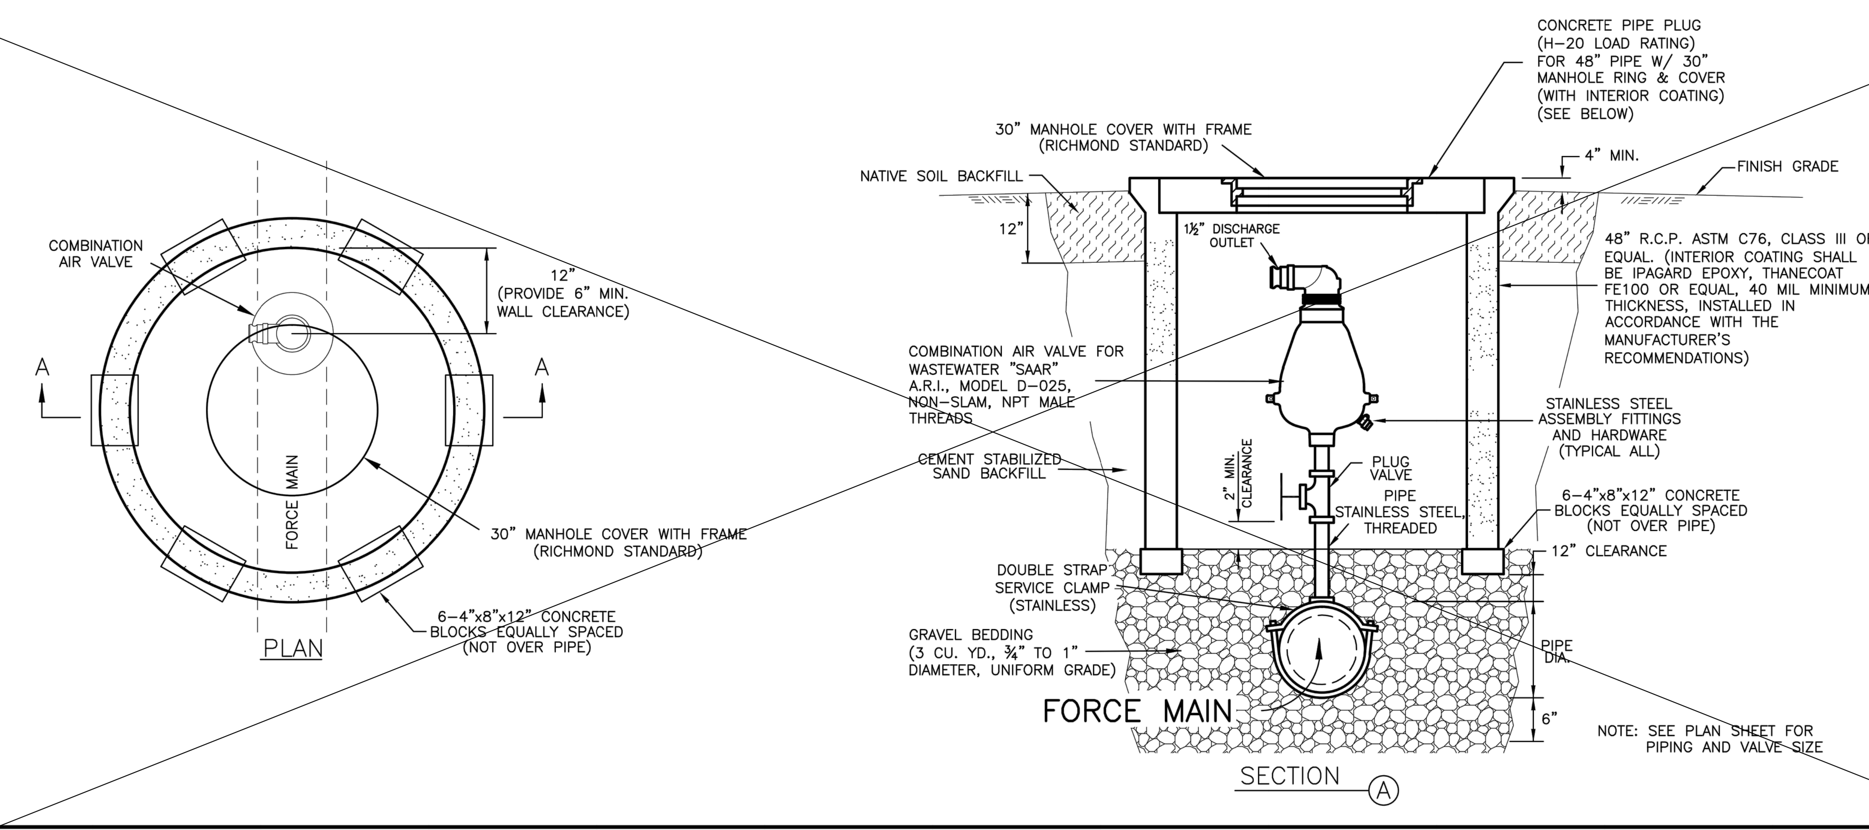
1. SANITARY SEWER MANHOLE



NOTES

1. LIFTING INSERTS AS REQUIRED.
2. ALL JOINTS SHALL BE SEALED WITH APPROVED RUBBER GASKET.
3. STRUCTURE TO BE PLACED ON 12" STABILIZED BASE.
4. C.S.S. SHALL BE BROUGHT TO WITHIN 2-FT OF TOP OF MANHOLE.
5. PRE-CAST MANHOLE SHALL BE IN COMPLIANCE WITH APPROVED PRODUCT LIST.
6. THANE COAT SHALL BE IN COMPLIANCE WITH APPROVED PRODUCT LIST.
7. INVERTS SHALL COMPLY WITH C.O.M.C., INFRASTRUCTURE DESIGN MANUAL SPECIFICATIONS.
8. INFLOW PROTECTORS REQUIRED ON ALL SANITARY MANHOLES.
9. REFER TO SANITARY MANHOLE LIDS, C.S.S. NOTES, MODIFIED BEDDING DETAILS AND NOTES.

2. PRECAST SANITARY MANHOLE



3. SEWERAGE AIR RELEASE VALVE MANHOLE

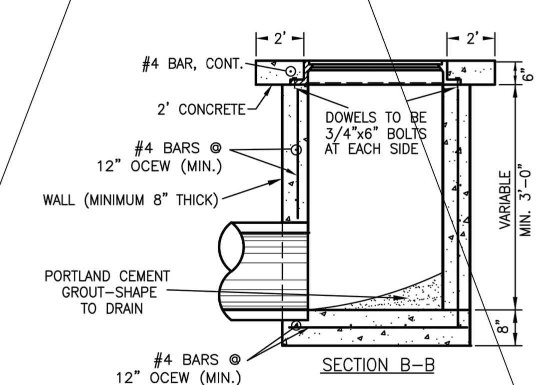
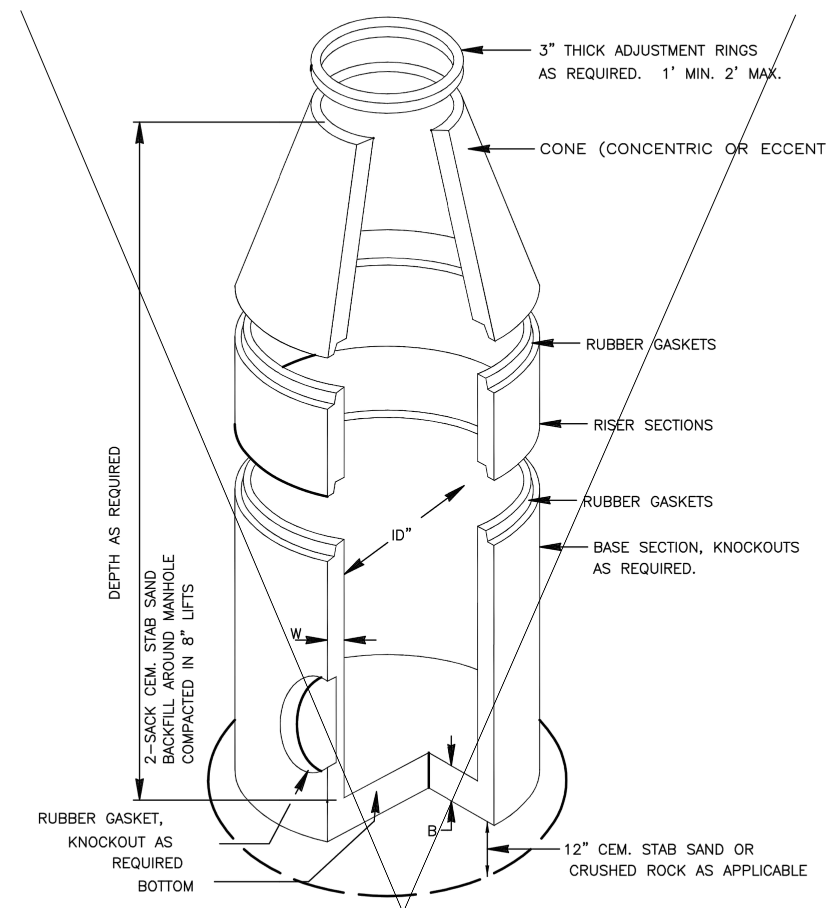
1. INLETS TO BE PRECAST OR CAST IN PLACE ONLY.



3. TYPE 'A' INLET



SPECIFICATIONS:

CONCRETE: CLASS 1 CONCRETE WITH A DESIGN STRENGTH OF 4500 PSI AT 28 DAYS. RATES FOR H–20 LOADING.

REINFORCEMENT: STRUCTURAL REINFORCEMENT CONFORMING TO ASTM–C–478.

C.I. CASTINGS: CAST IRON FRAMES AND GRATES ARE MANUFACTURED OF GREY CAST IRON CONFORMING TO ASTM A48–76 CLASS 35.

DIMENSIONS AND WEIGHTS

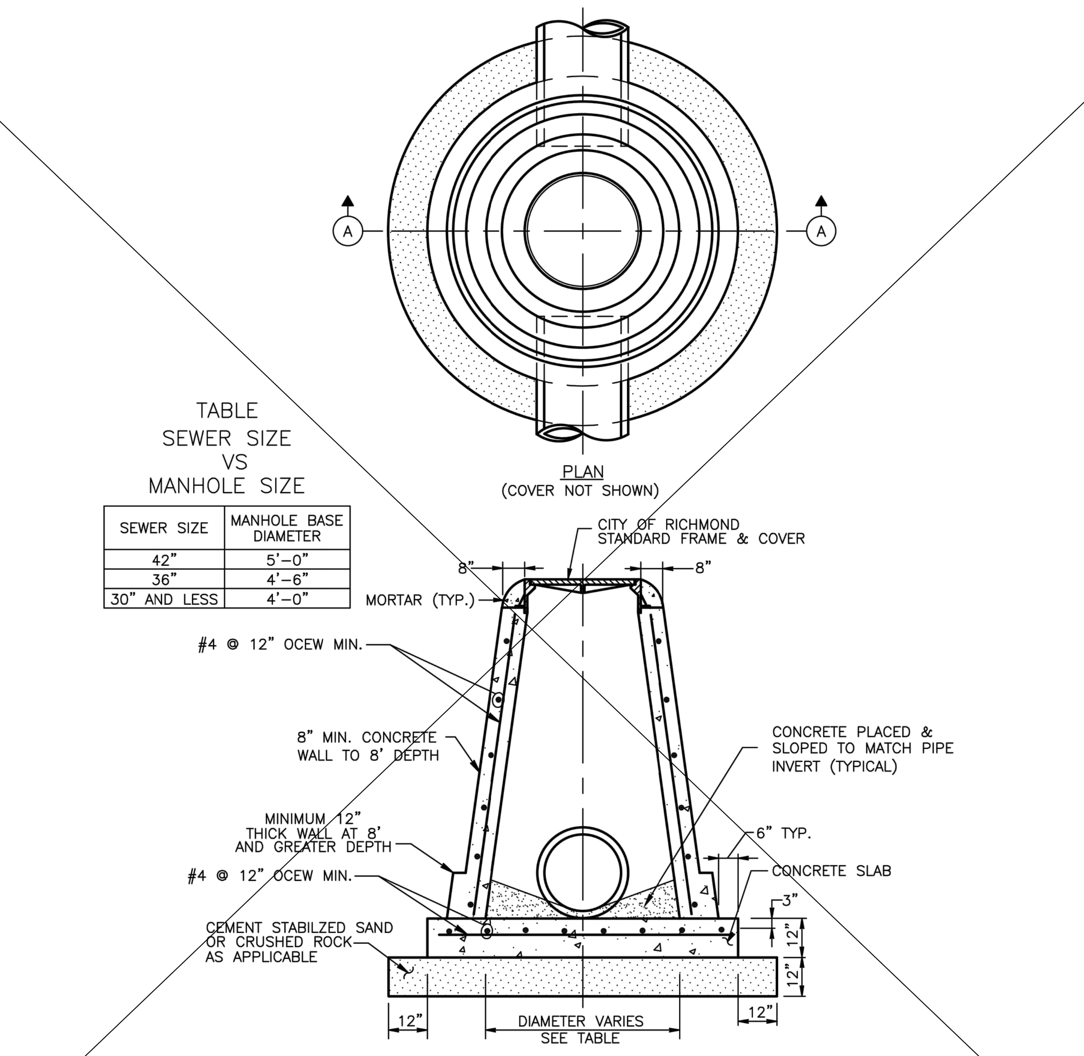
I.D. SIZE (in)	W (in)	B (in)	RISER WT/LF (lb)
48	5	6	868
60	6	8	1300
72	7	8	1811
96	9	8	3090

NOTES
1. LIFTING INSERTS AS REQUIRED.
2. ALL JOINTS SHALL BE SEALED WITH APPROVED RUBBER GASKET
3. STRUCTURE TO BE PLACED ON 12" STABILIZED BASE.
4. C.S.S. SHALL BE BROUGHT TO WITHIN 2–FT OF TOP OF MANHOLE.

4. PRECAST CONCRETE MANHOLE

TABLE
SEWER SIZE
VS
MANHOLE SIZE

SEWER SIZE	MANHOLE BASE DIAMETER
42"	5'–0"
36"	4'–6"
30" AND LESS	4'–0"



NOTES:
1. ALL BACKFILL WITHIN 2 FEET OF THE MANHOLE AND WITHIN 4 FEET OF THE TOP RIM ELEVATION SHALL BE CEMENT STABILIZED SAND (SEE BEDDING DETAIL).
2. BACKFILL UNDER AND WITHIN 3 FEET OF PAVING SHALL MEET THE BACKFILL REQUIREMENTS FOR STORM SEWERS.
3. MANHOLE TO BE PRECAST OR CAST IN PLACE. BRICK MAY ONLY BE USED WITH CITY APPROVAL.

5. MANHOLE TYPE "C" FOR 42" DIA. R.C.P. AND SMALLER

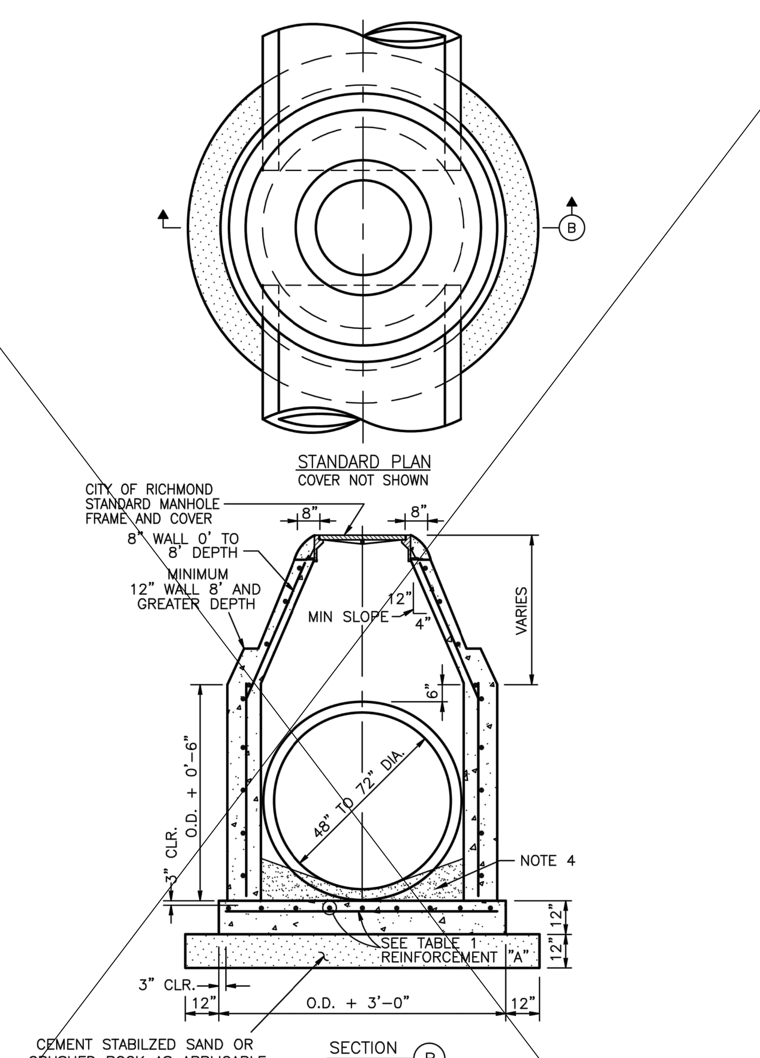


TABLE 1
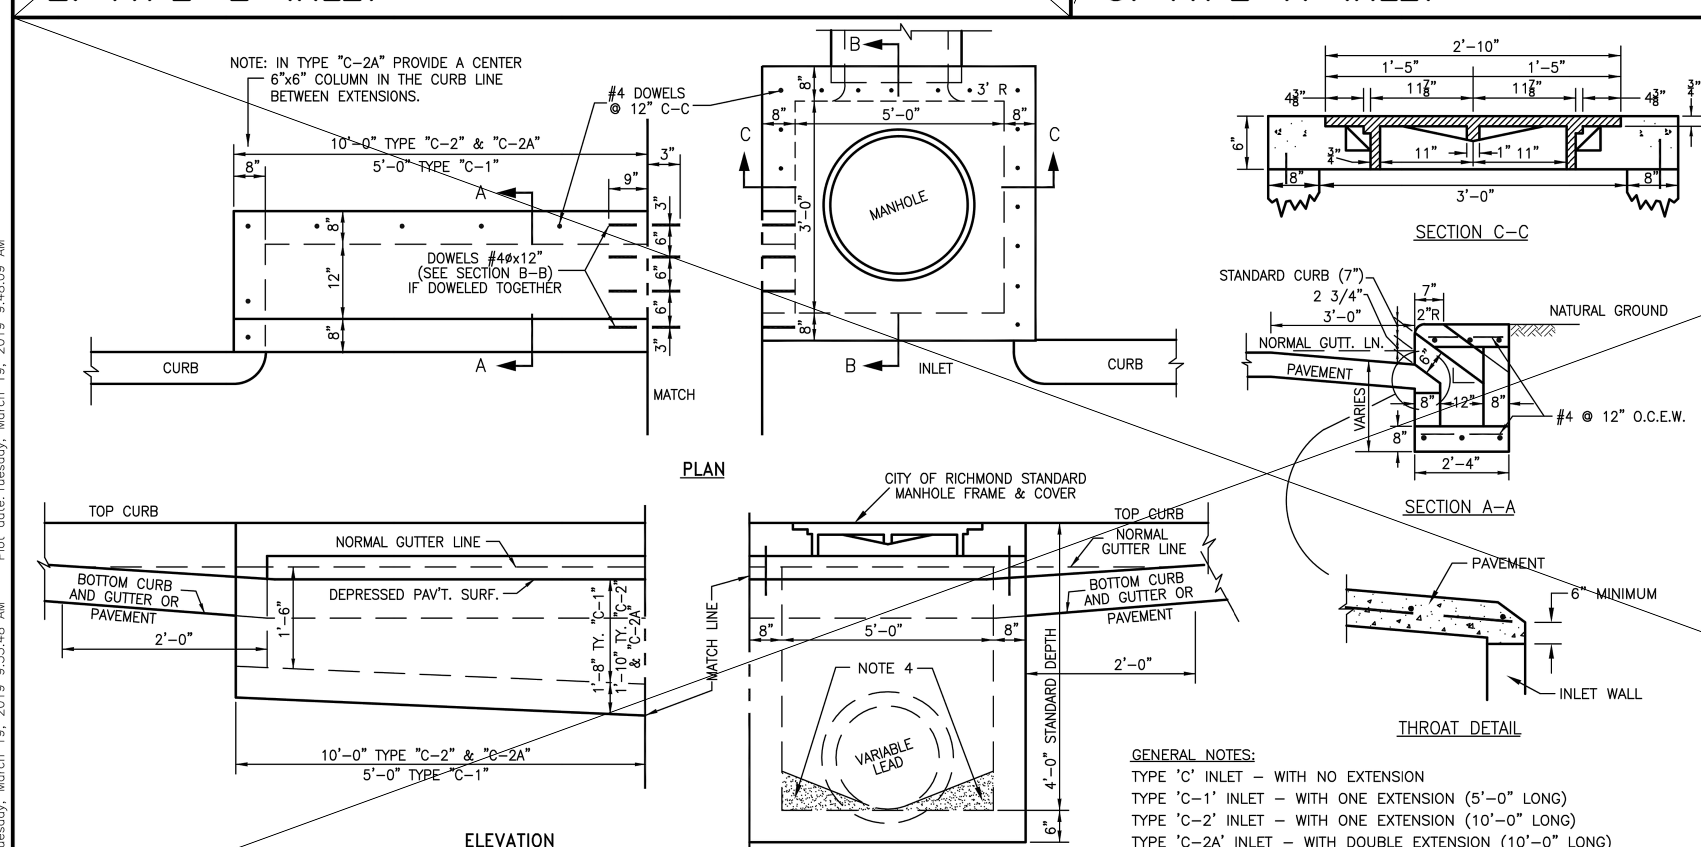
DATA FOR VARIOUS PIPE DIAMETERS

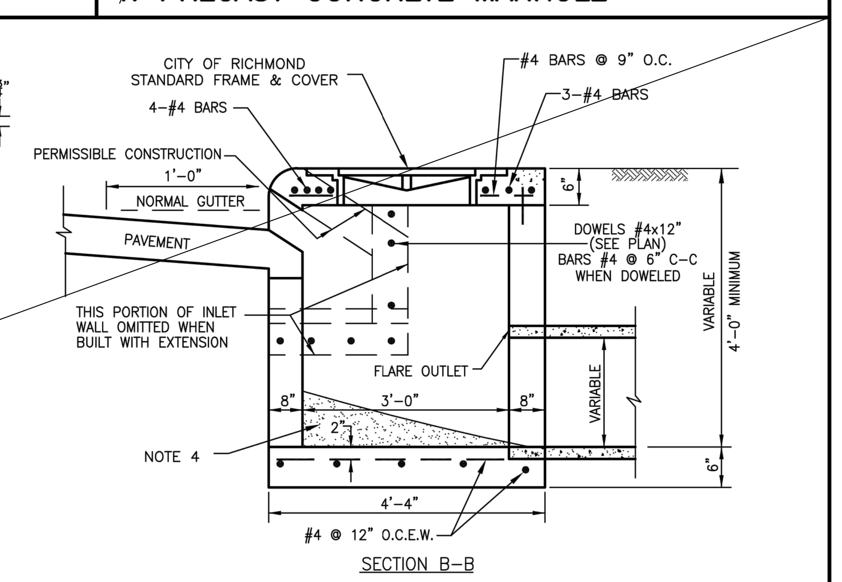
PIPE DIA. (INCHES)	MIN. DEPTH	REINFORCEMENT ("A")	REINFORCEMENT ("B")
48"	8'–0"	#5 @ 12 E.W.	2–#6
54"	9'–4"	#5 @ 10 E.W.	2–#6
60"	10'–7"	#5 @ 8 E.W.	2–#7
66"	11'–10"	#5 @ 7 E.W.	2–#7
72"	13'–2"	#5 @ 6 E.W.	2–#7

NOTES:
1. ALL BACKFILL WITHIN 2 FEET OF THE MANHOLE AND WITHIN 4 FEET OF THE TOP RIM ELEVATION SHALL BE CEMENT STABILIZED BACKFILL (SEE BEDDING DETAIL).
2. BACKFILL UNDER AND WITHIN 3 FEET OF PAVING SHALL MEET THE BACKFILL REQUIREMENTS FOR STORM SEWERS.
3. PORTLAND CEMENT GROUT TO MATCH INVERT OF PIPE.
4. CAST IN PLACE ONLY. BRICK MAY ONLY BE USED WITH CITY APPROVAL.

7. TYPE "C" MANHOLE FOR 48" TO 72" DIA. R.C.P.



GENERAL NOTES:
TYPE 'C' INLET – WITH NO EXTENSION
TYPE 'C–1' INLET – WITH ONE EXTENSION (5'–0" LONG)
TYPE 'C–2' INLET – WITH ONE EXTENSION (10'–0" LONG)
TYPE 'C–2A' INLET – WITH DOUBLE EXTENSION (10'–0" LONG)



NOTES:
1. FOR TYPE 'C–2A' INLETS PROVIDE A CENTER 6"x6" COLUMN IN THE CURB LINE BETWEEN ALL EXTENSIONS.
2. CEMENT STABILIZED SAND BACKFILL SHALL BE PLACED A MINIMUM OF 6 INCHES BELOW INLET AND A MINIMUM OF 12 INCHES AROUND INLET TO THE TOP OF STAGE 1 STRUCTURE.
3. ALTERNATIVE REINFORCED CONCRETE WALLS SHALL BE A MINIMUM OF 6" THICK WITH #4 @ 9" O.C.
4. CONCRETE PLACED AND SHAPED TO DRAIN.
5. PRECAST OR CAST IN PLACE ONLY.

6. TYPE 'C' INLET

GENERAL CONSTRUCTION NOTES:

1. ALL CAST CONCRETE BASES SHALL HAVE #4 REBAR @ 12" C–C EW.
2. CONCRETE SHALL BE 3500 PSI MIN.
3. USE C.S.S. BEDDING AS PER DETAILS 2 SK, COMPACTED 8" LIFTS (MAX.), TO 95% STANDARD.

NOTE:

STORM MANHOLES AND INLETS SHALL BE PRECAST CONCRETE. POURED IN PLACE, REINFORCED CONCRETE STRUCTURES MAY BE SUBSTITUTED WHEN THE PROPOSED CONSTRUCTION DETAIL IS SUBMITTED BY THE DESIGN ENGINEER FOR APPROVAL BY THE CITY.

A 4000 psi COLLAR IS REQUIRED TO BRIDGE A 3" OR LARGER GAP, DEFFLECTION OR CONNECTION OF DIFFERENT SIZE PIPES. THE COLLAR WILL BE 6" THICK 2 FT WIDE MIN. WITH #4 REBAR DOWELED INTO THE PIPE AND STRUCTURE. FOR A PIPE CONNECTION TO A MANHOLE OR BOX, THE COLLAR WILL BE 1 FOOT WIDE ON THE OUTSIDE OF THE STRUCTURE AND SEALED SMOOTHLY ON THE INSIDE OF THE STRUCTURE WITH NON–SHRINK GROUT.

NOTES:

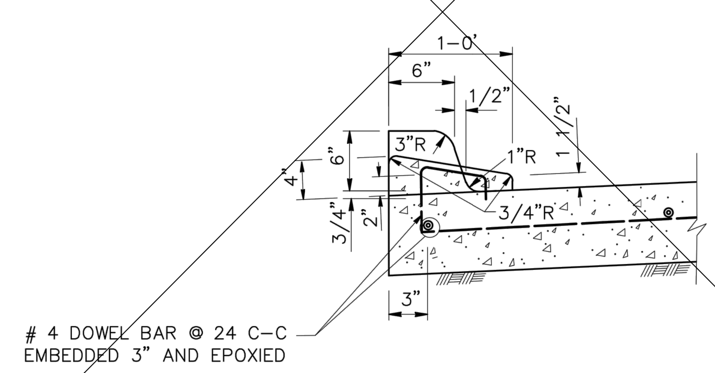
1.) #3 RE-BAR STIRRUPS TO BE PLACED AT INTERVALS OF 2' (FT) C-C.
2.) #4 RE-BAR LONGITUDINAL SHALL BE TIED TO EACH STIRRUP
3.) MOUNTABLE CURB ONLY ALLOWED ON ≤ 41' (FT), UNDIVIDED, RESIDENTIAL ROADWAYS WITHIN SUBDIVISIONS.

1. 4"X12" MOUNTABLE CONCRETE CURB

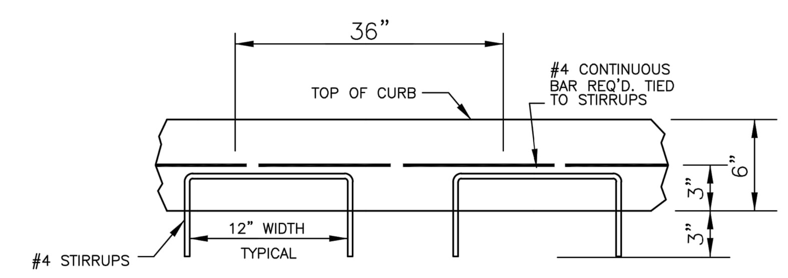
4"x12" MOUNTABLE CONCRETE CURB AND TRANSITION CURB NOTES:

1. 6-INCH CONCRETE CURB TO BE CONSTRUCTED ON ALL ESPLANADES, ISLANDS AND NON-RESIDENTIAL STREETS. RESIDENTIAL STREETS MAY BE CONSTRUCTED WITH EITHER 6-INCH CONCRETE CURB OR 4-INCH x 12-INCH CONCRETE CURB AS NOTED ON PLANS.
2. ALL 4-INCH x 12-INCH CONCRETE CURBS TO BE POURED SEPARATE FROM PROPOSED CONCRETE PAVEMENT.
3. TRANSITIONS FROM 6-INCH CONCRETE CURB TO 4-INCH x 12-INCH CONCRETE CURB TO BE ACCOMPLISHED WITHIN 5 FEET (TYP.), UNLESS OTHERWISE SHOWN. REINFORCING STEEL AS SHOWN IN "4-INCH x 12-INCH TRANSITION CURB" DETAIL IS TO BE INSTALLED.

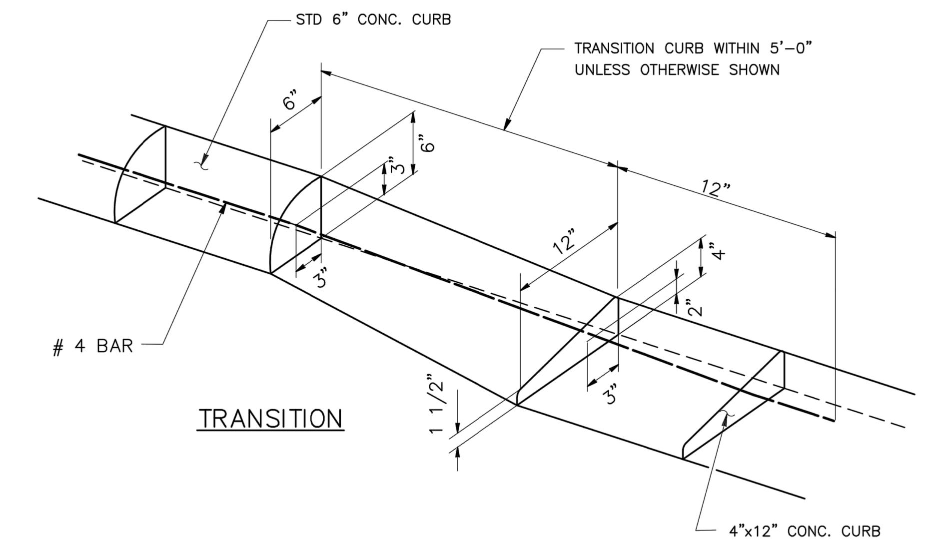
NOTES FOR DETAILS 1 & 2



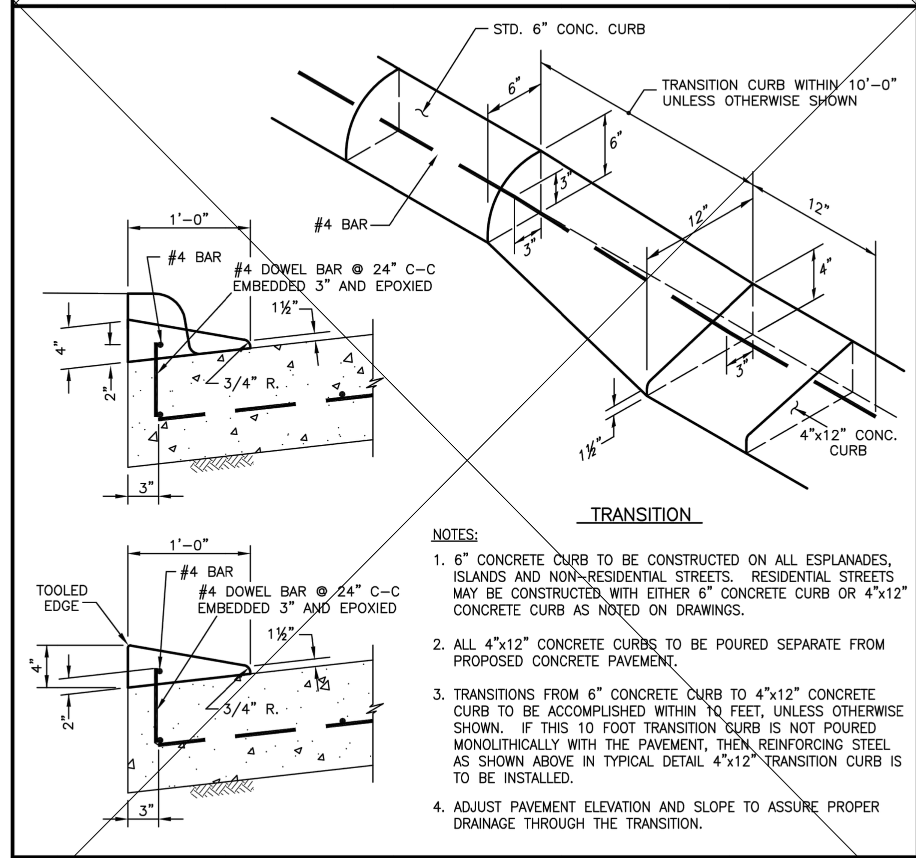
2. 4"X12" TRANSITION CURB



3. TYPICAL CONCRETE CURB REINFORCING



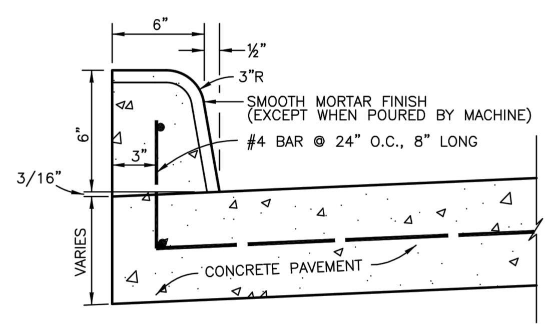
4. TYPICAL CURB TRANSITION



NOTES:

1. 6" CONCRETE CURB TO BE CONSTRUCTED ON ALL ESPLANADES, ISLANDS AND NON-RESIDENTIAL STREETS. RESIDENTIAL STREETS MAY BE CONSTRUCTED WITH EITHER 6" CONCRETE CURB OR 4"x12" CONCRETE CURB AS NOTED ON DRAWINGS.
2. ALL 4"x12" CONCRETE CURBS TO BE POURED SEPARATE FROM PROPOSED CONCRETE PAVEMENT.
3. TRANSITIONS FROM 6" CONCRETE CURB TO 4"x12" CONCRETE CURB TO BE ACCOMPLISHED WITHIN 10 FEET, UNLESS OTHERWISE SHOWN. IF THIS 10 FOOT TRANSITION CURB IS NOT POURED MONOLITHICALLY WITH THE PAVEMENT, THEN REINFORCING STEEL AS SHOWN ABOVE IN TYPICAL DETAIL 4"x12" TRANSITION CURB IS TO BE INSTALLED.
4. ADJUST PAVEMENT ELEVATION AND SLOPE TO ASSURE PROPER DRAINAGE THROUGH THE TRANSITION.

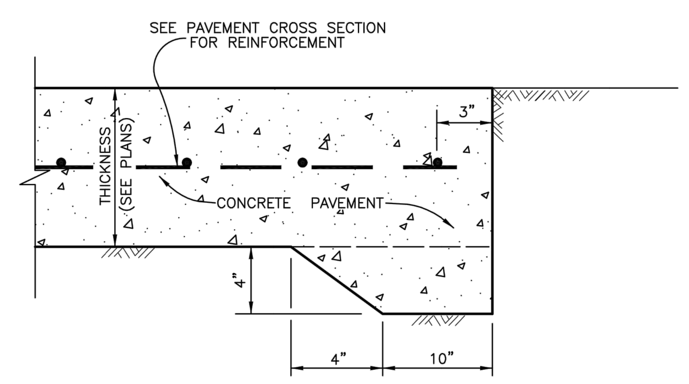
5. 4"X12" TRANSITION CURB



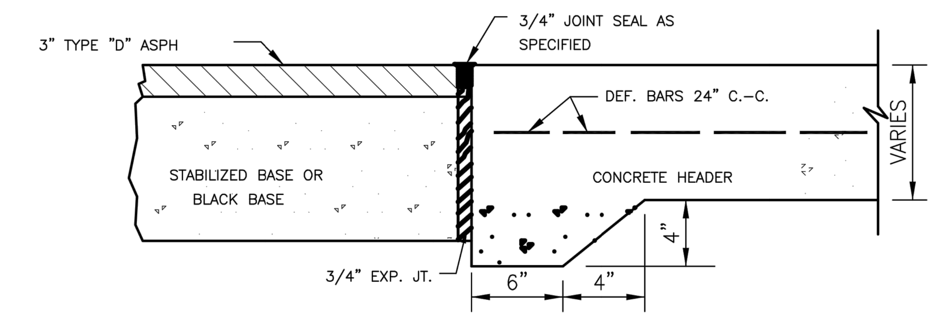
NOTES:

1. MORTAR FINISH NOT REQUIRED WHEN CURB IS POURED BY A MACHINE, BUT CURB SHALL HAVE THE SAME OUTSIDE DIMENSIONS.
2. WHEN CONCRETE CURB IS TO BE PLACED ON EXISTING CONCRETE BASE, USE #4 DEFORMED BARS, 8" LONG, 24" O.C., DOWELLED, AND SET IN QUICK SETTING CEMENT GROUT.
3. REDWOOD EXPANSION JOINTS SHALL BE INSTALLED AT ALL PAVEMENT EXPANSION JOINTS.

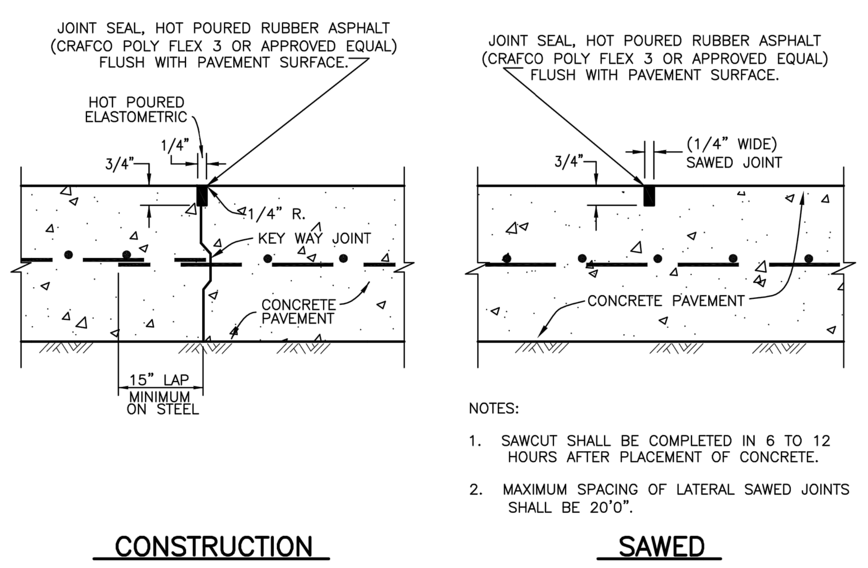
6. CONCRETE CURB



7. PAVEMENT HEADER



8. PAVEMENT HEADER FOR CONNECTING CONCRETE TO ASPHALT

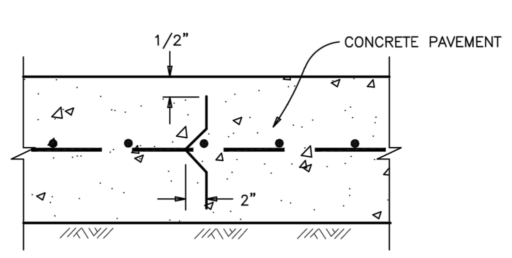


NOTES:

1. SAWCUT SHALL BE COMPLETED IN 6 TO 12 HOURS AFTER PLACEMENT OF CONCRETE.
2. MAXIMUM SPACING OF LATERAL SAWED JOINTS SHALL BE 20'0".

SAWED

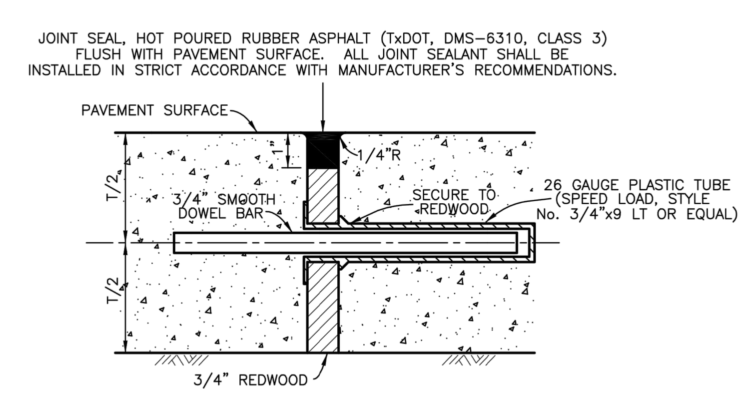
9. PAVEMENT JOINTS



NOTES:

1. THE LOCATION OF DEFORMED STRIPS MAY BE VARIED, WITH THE APPROVAL OF THE CITY. MAXIMUM LONGITUDINAL SPACING FOR DEFORMED STRIPS SHALL BE 14'-0". DEFORMED METAL STRIPS SHALL BE PLACED VERTICALLY ALONG A STRAIGHT ALIGNMENT.

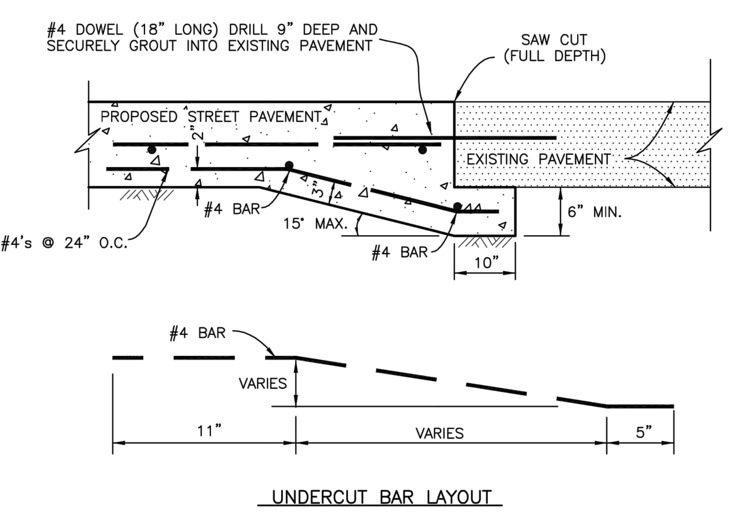
10. DEFORMED METAL STRIP



NOTES:

1. EXPANSION JOINT TO BE PLACED AT THE END OF EACH CURB RADIUS AND SPACED A MAXIMUM OF 60'-0" APART.
2. STAKES FOR TRANSVERSE JOINTS SHALL NOT BE PLACED CLOSER THAN 6" TO A LONGITUDINAL JOINT. THE TOP OF EACH STAKE SHALL NOT BE LESS THAN 2" BELOW THE FINISHED SURFACE.
3. DOWEL SHALL BE SECURED IN A HORIZONTAL ALIGNMENT PRIOR TO POURING CONCRETE.
4. INSTALL BACKER RODS (TxDOT, DMS-6310) IN ACCORDANCE WITH SEALANT MANUFACTURER'S RECOMMENDATIONS.
5. NO EXPANSION JOINT SHALL BE INSTALLED WITHIN TWO FEET (2') FROM AN INLET OPENING.

11. DOWEL TYPE EXPANSION JOINT



UNDERCUT BAR LAYOUT

NOTES:

1. PAVEMENT UNDERCUT TO BE USED WHEN NO SUBGRADE STABILIZATION EXIST UNDER EXISTING PAVEMENT.

12. PAVEMENT UNDERCUT

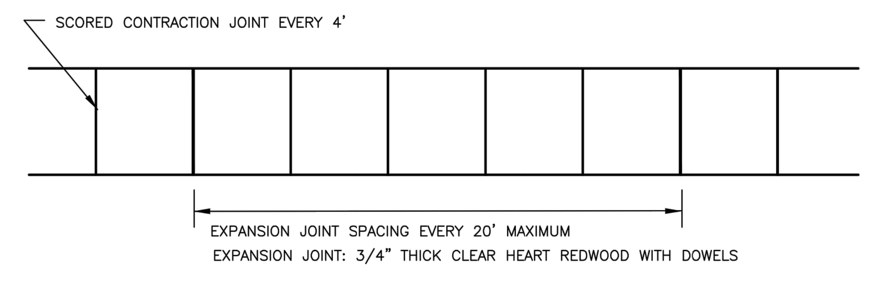
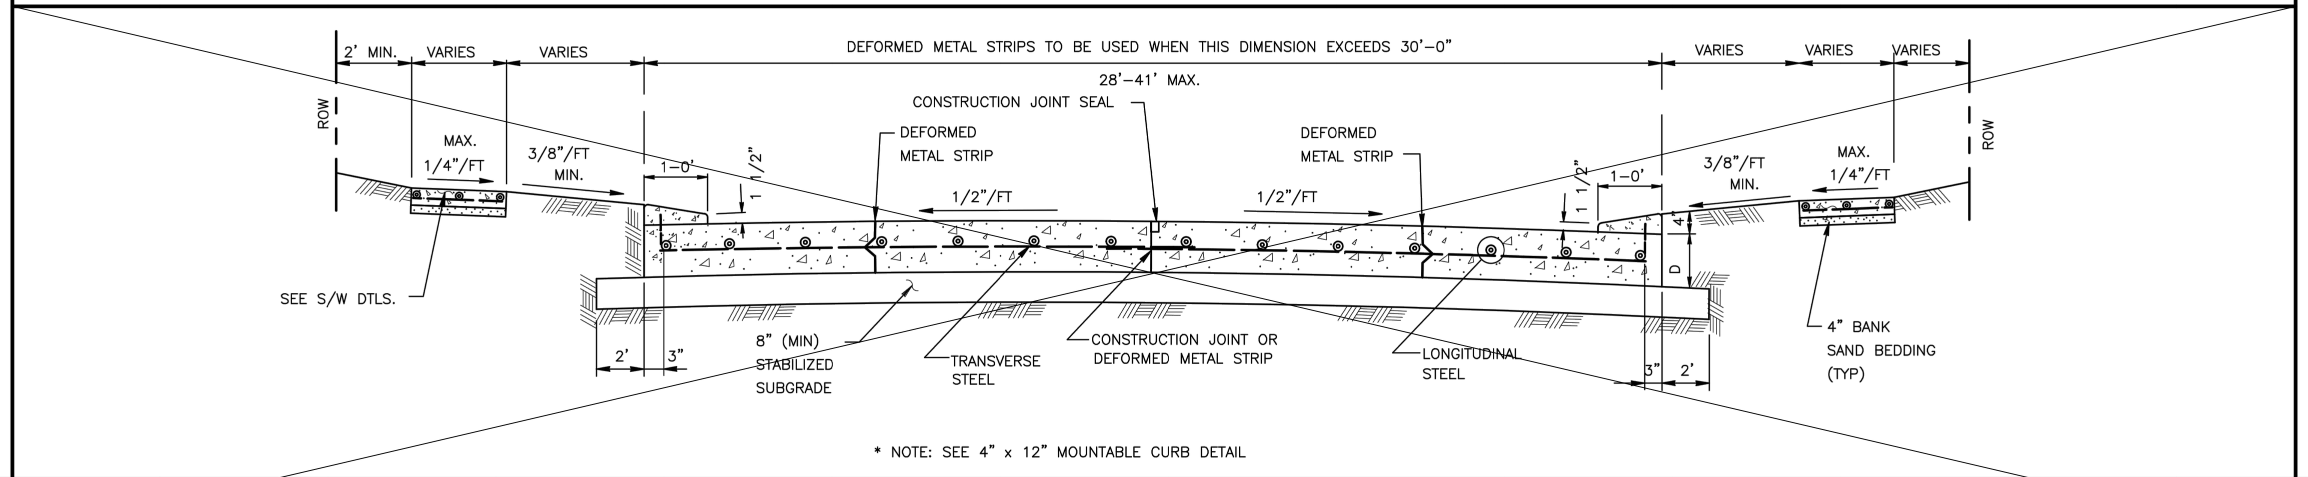
NOTES:
1. CONCRETE SHALL CONTAIN A MINIMUM OF FIVE AND ONE HALF (5½) SACKS OF CEMENT PER CUBIC YARD OF CONCRETE. 3500 P.S.I. @ 28 DAYS.
2. TIE TO EXISTING STEEL IN CONNECTION TO EXISTING WALK.
3. FINISH CONCRETE IN ACCORDANCE WITH CITY REQUIREMENTS – LIGHT BROOM FINISH.
4. SCORED CONTRACTION JOINTS AT 4'-0" O.C. EXPANSION JOINT EVERY 20'-0" O.C.
5. MAXIMUM SLOPE ALONG LENGTH OF SIDEWALK AT ANY LOCATION IS 5%. MAXIMUM SLOPE ACROSS SIDEWALK AT ANY LOCATION IS 2%.
6. SIDEWALK THICKNESS AND REINFORCEMENT SHALL MATCH DRIVEWAY REQUIREMENTS WITHIN THE LIMITS OF A DRIVEWAY.
7. WIDTH MAY BE REDUCED TO 4'-0" IF A SIDEWALK PEDESTRIAN PLAN IS INCLUDED IN THE PLANS SHOWING 5'-0"x5'-0" PASSING AREAS AT A MAXIMUM SPACING OF 200 FEET.

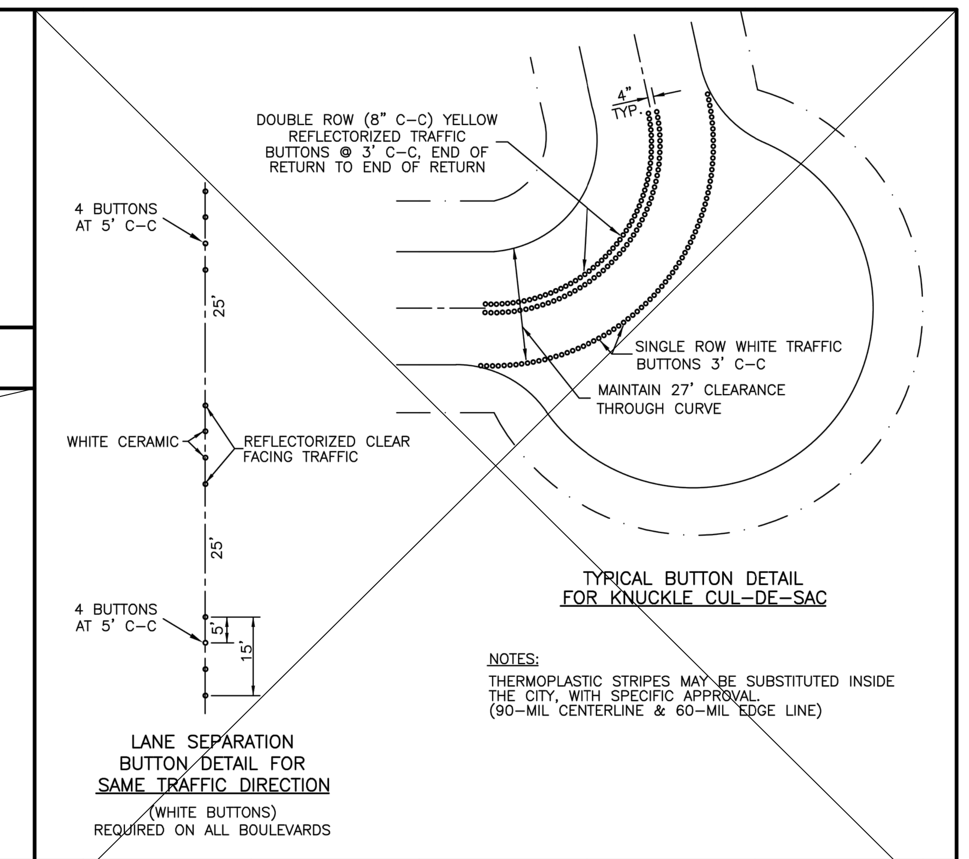
1. CONCRETE SIDEWALK



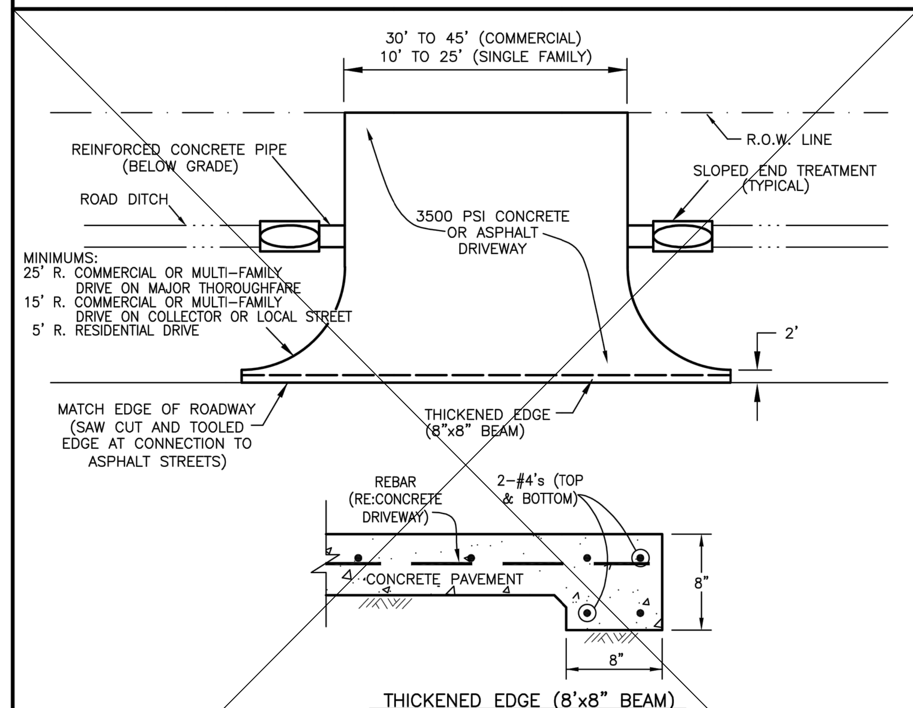
2. SIDEWALK JOINT DETAILS



3. TYPICAL SINGLE ROADWAY SECTION FOR CONCRETE PAVEMENT WITH 4"X12" CURB

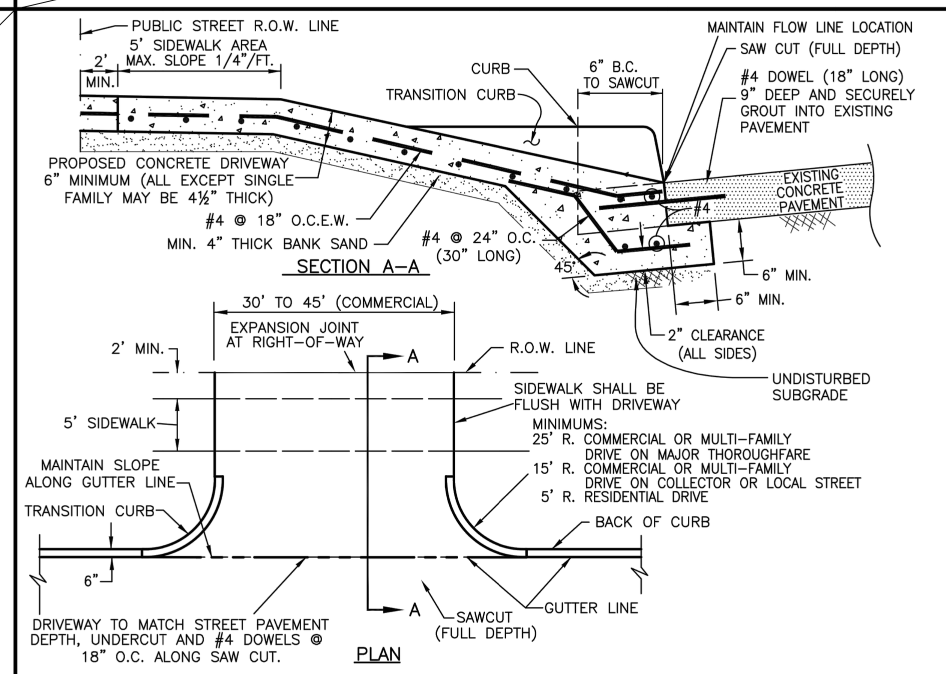


4. TRAFFIC MARKINGS



NOTES:
1. CULVERT DIAMETER SHALL BE A MINIMUM OF 15" (IN CITY ONLY) OR 24" (IN ETJ).
2. SLOPED END TREATMENTS SHALL BE INSTALLED ON ALL CULVERTS. SLOPED END TREATMENTS ON CULVERTS WITHIN COLLECTOR OR RESIDENTIAL STREET RIGHT-OF-WAYS SHALL HAVE A MINIMUM SLOPE OF 3 TO 1. SLOPED END TREATMENTS ON CULVERTS WITHIN MAJOR THOROUGHFARE RIGHT-OF-WAYS SHALL HAVE A MINIMUM SLOPE OF 6 TO 1.
3. USE C/S #1.

5. DRIVEWAY WITH OPEN DITCH



DRIVEWAY NOTES:
1. SAW CUT & BREAKOUT NO MORE THAN 48 HOURS PRIOR TO PROPOSED CONCRETE PLACEMENT.
2. UNACCEPTABLE SUBGRADE SHALL BE OVEREXCAVATED AND REPLACED WITH CONCRETE.
3. EDGE ALL SIDES WITH EDGING TOOL AND BROOM FINISH.
4. PROVIDE BARRICADES AND TRAFFIC WARNING DEVICES DURING CONSTRUCTION.
5. PORTLAND CEMENT CONCRETE CONTAIN A MINIMUM 5½ SACKS PER CUBIC YARD (3500 P.S.I. AT 28 DAYS).
6. REINFORCING SHALL BE ASTM A-615 GRADE WITH 10" MINIMUM OVERLAP AT JOINTS.
7. COMPACT SUBGRADE TO 95% OF STANDARD PROCTOR DENSITY (+/- 2% OF OPTIMUM MOISTURE).
8. EXTEND EXPANSION JOINT FROM STREET TO THE RIGHT-OF-WAY.

NOTES:-

1. RAMP SHOULD BE LOCATED AS SHOWN ON CIVIL SITE SHEETS.
2. DETECTABLE WARNING SURFACE,CONSISTING OF RAISED,TRUNCATED DOMES, SHALL BE INSTALLED ON THE RAMP.ROWS OF TACTILE DOME TREATMENT SHOULD BE ORIENTATED PARALLEL WITH THE CENTER LINE OF RAMP. THE SAME DETECTABLE WARNING SURFACE PATTERN AND COLOR SHALL BE USED THROUGHOUT THE PROJECT.DETECTABLE WARNING SURFACES SHALL CONTRAST VISUALLY WITH ADJACENT WALKING SURFACES, EITHER LIGHT-ON-DARK OR DARK-ON-LIGHT.
3. DETECTABLE WARNING SURFACES MUST BE FULLY ADA COMPLIANT.
4. DETECTABLE WARNING SURFACE MUST MAINTAIN A SLIP RESISTANCE WITH A FA-VALUE EQUAL TO OR GREATER THAN 8.0 AND A WATER ABSORPTION RATE OF LESS THAN 1%. THE DETECTABLE WARNING SURFACE SHALL NOT ALLOW WATER TO ACCUMULATE.
5. DETECTABLE WARNING INSTALLED INTO FRESH CONCRETE SHALL BE WITHOUT VOIDS AND UTILIZING AN ANCHORING SYSTEM APPROVED BY THE ENGINEER.
6. DETECTABLE WARNING INSTALLED INTO FRESH CONCRETE SHALL BE WITHOUT VOIDS AND UTILIZING AN ANCHORING SYSTEM APPROVED BY THE ENGINEER.
7. DETECTABLE WARNING SURFACE SHALL BE A MINIMUM OF 24" IN DEPTH IN THE DIRECTION OF PEDESTRIAN TRAVEL AND EXTEND FULL WIDTH OF THE RAMP. DETECTABLE WARNING SURFACES SHALL BE LOCATED SO THAT THE EDGE NEAREST THE CURB LINE IS 6"MIN TO 10"MAX FROM THE DETECTABLE WARNING SURFACE.
8. TRUNCATED DOMES IN A DETECTABLE WARNING SURFACE SHALL HAVE A BASE DIAMETER OF 0.9 INCH MIN AND 1.4 INCHES MAX, A TOP DIAMETER OF 50 PERCENT OF THE BASE DIAMETER MIN TO 65 PERCENT OF THE BASE DIAMETER MAX, AND A HEIGHT OF 0.2 INCH. TRUNCATED DOMES SHALL HAVE A CENTER-TO-CENTER SPACING OF 1.6 INCHES MINIMUM AND 2.4 INCHES MAXIMUM, AND A BASE-TO-BASE SPACING OF 0.65 INCH MIN, MEASURED BETWEEN THE MOST ADJACENT DOMES ON A SQUARE GRID.

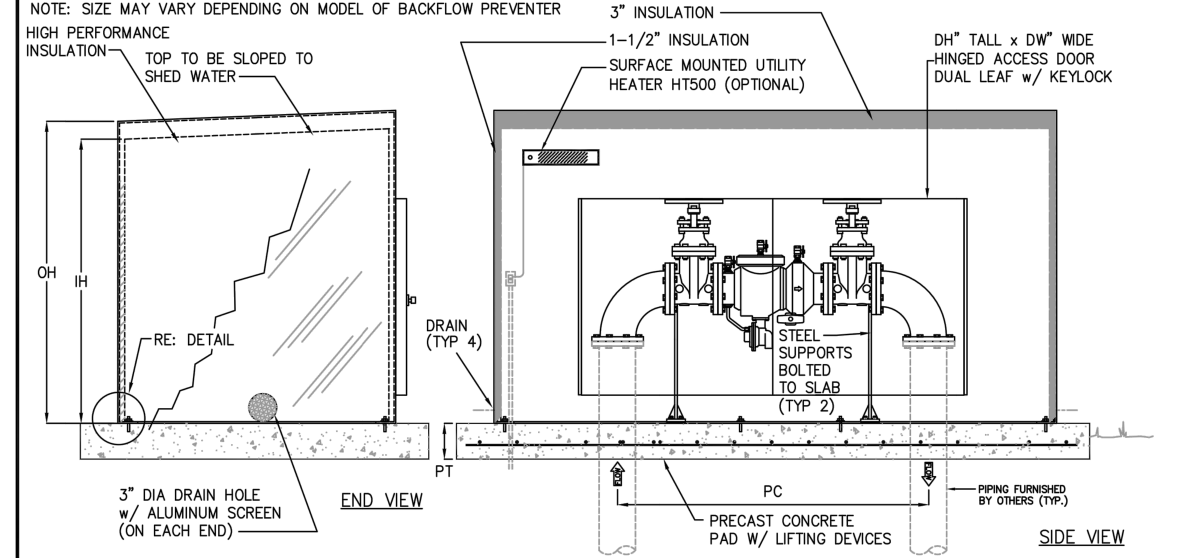
NOTE: SIZE MAY VARY DEPENDING ON MODEL OF BACKFLOW PREVENTER



Specifications

GENERAL
The Model ERP aluminum enclosure is pre engineered to provide protection to backflow preventers, meters, pumps, and other devices installed above ground. These water conveying devices are subject to freezing and vandalism. The enclosure is designed to be installed over the equipment after installation. The enclosure is equipped with access doors to provide adequate access to the equipment.

CONSTRUCTION
The enclosure shall be manufactured from all new materials. The exterior shall be fabricated with 0.090 aluminum, continuously welded. The access door(s) shall be of like material and hinged with a continuous hinge. The door shall be equipped with a 3-point locking mechanism. The interior of the enclosure shall be structurally lined with high performance, non-wicking insulation.

HEATER
Interior heaters (if required) shall be thermostatically controlled and be mounted to the interior wall of the enclosure. A GFI receptacle shall be provided by others to provide power to the electric heater.

Specifications

CONCRETE: Class I/II concrete with design strength of 4500 PSI at 28 days.

REINFORCEMENT: Grade 60 reinforced. Steel rebar conforming to ASTM A615 on required centers or equal.

Typical Applications

RP devices are used to protect against high hazard (toxic) fluids in water services to industrial plants, hospital facilities, morgues, mortuaries, and chemical plants. They are also used in irrigation systems, boiler feed, water lines and other installations requiring maximum protection.

Engineering Data

The backflow assembly shall be factory assembled on pad & hydrostatically tested prior to delivery. Field excavation & preparation shall be complete prior to delivery. Pipe, valves and fittings of the assembly shall be approved by one or more of the following associations:

FM AWWA UL UPC AMERICAN SOCIETY OF SANITARY ENGINEERING ASSE NPCA CERTIFIED PLANT

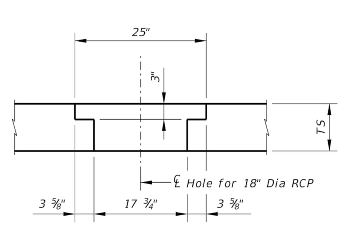
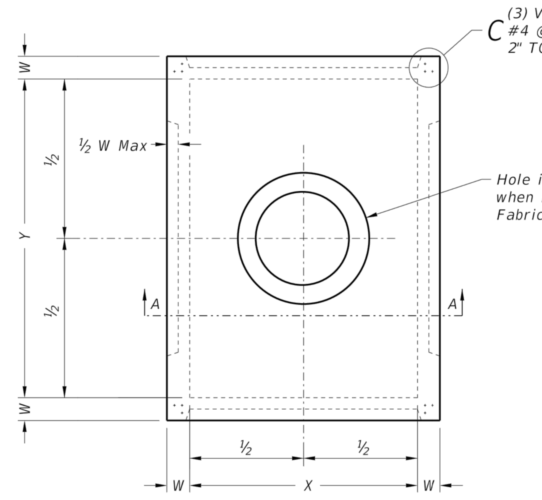
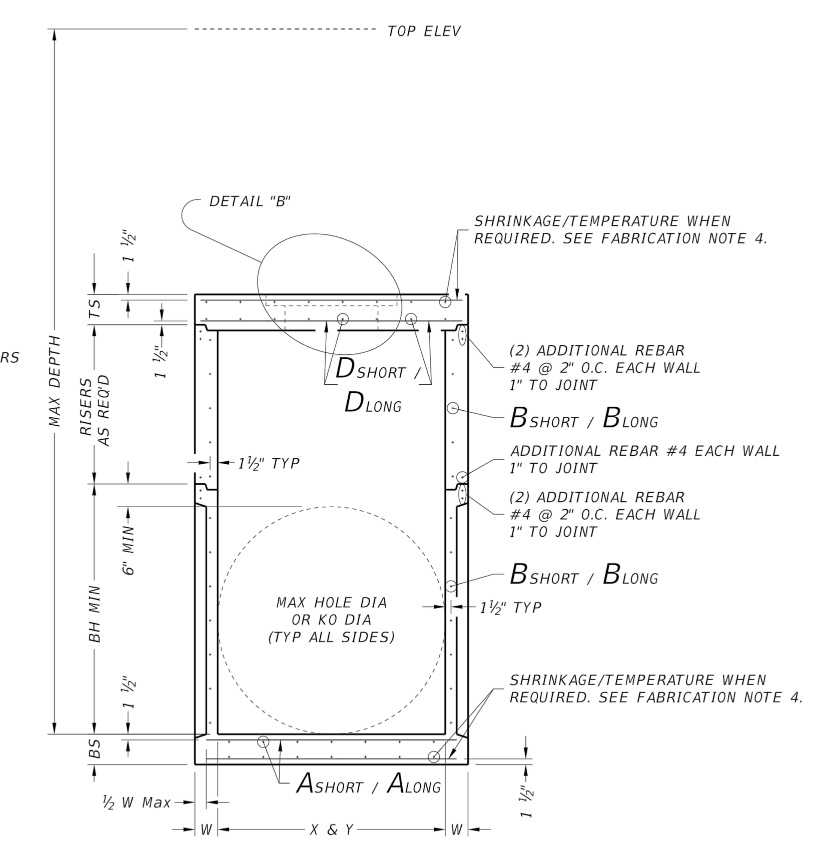
PM . | DRN . | ENG . | DWG. NO. RPE-1 | REV. A
DATE 2018



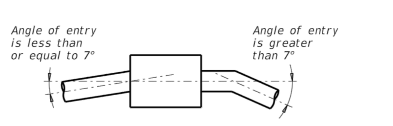
DETAIL "B"



PLAN VIEW



SECTION A-A



PIPE CONNECTION DETAIL

Connect pipes within 7° of normal to PJB wall. If necessary, use pipe elbow or curved approach alignment to stay within this limit.

FABRICATION NOTES:
1. Provide Class "H" concrete in accordance with Item 421 and having a minimum compressive strength of 5,000 psi.
2. Provide Grade 60 reinforcing steel or equivalent area of WWR.
3. Provide typical clear cover of 1 ½" to reinforcing steel at interior or exterior walls.
4. Walls or slabs with a thickness of 8" or greater require shrinkage and temperature reinforcing steel. Provide steel area = 0.11 in²/ft each way.
5. No substitution is allowed for vertical and horizontal #4 bars in corners.
6. Manufacture base and risers to nearest 3" increment.
7. Design tongue and groove joints for full closure on both shoulders. Minimum spigot depth is ¾".
8. Provide lifting devices in conformance with Manufacturer's recommendations.
9. See sheet PDD for sizes, dimensions, and reinforcing steel not shown.
10. Provide hole in below grade slab only when PJB is installed with inlet type PDD.

INSTALLATION NOTES:
1. Inverts (benching) to be provided by Contractor. Concrete or mortar used for invert is subsidiary to junction box.
2. Seal tongue and groove joints with preformed or bulk mastic in conformance with Manufacturer's recommendations. Tongue and groove joints may be grouted no more than 1" between each section, or ½ the joint depth, whichever is greater.
3. Do not grout rubber gasket joints without Manufacturer's recommendation.
4. For right pipe, cut hole in thin wall panel (KO) 6" Max, 2" Min larger than pipe OD.
5. For flexible pipe, consult boot/seal Manufacturer's specification for placement tolerance and hole size. Center pipe in hole and install boot/seal per Manufacturer's specification.

GENERAL NOTES:
1. Precast Junction Box consists of base slab, base unit, risers (as required) and below grade slab. See sheet PDD for sizes.
2. Designed according to ASTM C913.
3. Payment for junction box is per Item 465 "Junction Boxes, Manholes, and Inlets" by type and size.

Cover dimensions are clear dimensions, unless noted otherwise.

** Unless otherwise indicated.

FABRICATION NOTES:
1. Maximum spacing of reinforcement is 8".
2. At manufacturer's option, provide cast or cored holes or thin wall panels (KO) to the maximum diameter shown for each. When no penetration is required, it is acceptable to provide a wall with no sectional reduction.

GENERAL NOTES:
1. Precast Junction Box consists of base slab, base unit, risers (as required), and below grade slab. See sheet PJB for details.
2. Precast Base consists of base slab, base unit, risers (as required), reducing slab (as required), and reduced risers (as required). See sheet PB for details.
3. Min Height shown is for stock base units. Use stock base units whenever practical. Smaller height base units can be used in special installation circumstances, when noted elsewhere in the plans. Absolute minimum height of base units is 2'-6".

PROJECT NUMBER: 2319

SHEET NUMBER

C6.09

Special Notes for Protection of Existing Trees:

1. Tree protection fencing shall be installed to eliminate activities detrimental to trees including but not limited to the following:

   a. Soil compaction in the critical root zones resulting from heavy equipments, vehicular or excessive pedestrian traffic or storage of equipments or materials.
   b. Root disturbance due to cuts, fills, or trenching works.
   c. Wounds to exposed roots, trunks or limbs by mechanical equipments.
   d. Other activities such as chemical storage, cement truck cleaning, fire, etc. are not acceptable or allowed around existing trees designated to remain on site.

2. Location and types of tree protection devices:
   a. Tree protection devices are to be installed to completely surround the critical root zones (tree dripline) of ail trees to be preserved.

   b. Tree protection fencing shall consists of chain link fencing or accepted substitutes (orange colored fabric mesh membrane). In addition to fencing, where tree trunks are in jeopardy of being damaged by equipments, 2x4 inch boards may be required to be strapped around the trunks of trees.

   c. Tree protection fence may be installed around a grouping of existing trees for better control.

3. All tree protection fencing shall be installed prior to any clearing, grubbing or grading. Tree protection fences must remain in functioning condition throughout all phases of the site development/construction.

4. The contractor shall provide Class One Tree works for ail trees designated to remain on the project site. Work shall include required root pruning; removal of dead/dying branches, trimming/thinning out of tree branches; repair of tree cavities and other tree damages. Trees shall be fertilized annually. A 3-1-1 ratio of nitrogen, phosphorus and potassium containing slow release, non-burning nitrogen should be applied according to manufacturer's instructions.
5. All existing trees to remain shall be maintained bv a certified tree arborist.

6. During construction, no excess soil, additional fill, equipment, liquids or construction debris shall be placed inside the protective barrier, upon the root protection zone, nor shall any soil be removed from within the barrier.

7. The proposed finished grade and elevation of land within the root protection zone of any tree to be preserved shall not be raised or lowered more than one inch. Welling and retaining methods are allowed outside the root protection zone and shall be done in conformance with the Texas A & M University, Extension Landscape Horticulture, Protecting Existing Landscape Trees from Construction Damage Due to Grade Changes", Everett E. Janne and Douglas F. Welch, PhD, authors.

Landscape Requirements:

1. Perform all work in accordance with all applicable laws, codes, and regulations required by authorities having jurisdiction over such work and provide all inspections and permits required by Federal, State, and local authorities in supply, transportation, and installation of materials.

2. The contractor shall be responsible for the verification of all underground utility lines (telephone, gas, water, electrical, cable, TV, etc.) and all overhead utility easements prior to start of any planting works.

3. All plant materials shall possess the following minimum qualities:
   a. Plants shall be nursery grown in accordance with good horticultural practices under climatic conditions similar to those of the project for at least twelve months.
   b. All plants shall be heavy, symmetrical, tightly knit, so trained or favored for development and appearance as to be superior in form, number of branches, compactness, and symmetry.
   c. Plants shall be sound, healthy and vigorous, well branched, and densely foliated when in leaf. They shall be free of disease, insects, pests, eggs, or larvae.
   d. All plants shall be true of species and variety and shall conform to measurements (caliper size, trunk heights, spread) as specified on the drawings.
   e. Container grown stock when specified shall have grown in the container in which delivered for at least six months, but not over two years. Samples must prove no rootbound conditions exist.
   f. Caliper measurements shall be taken at a point on the trunk six inches (6") above natural ground line for trees up to four inches (4") in caliper.
   g. All trees shall be staked by a minimum of two metal "T" stakes for single trunk trees and three stakes for all multi-trunk trees.

4. Planting mix shall be thoroughly mixed in the following proportions:
   a. Prepared soil as backfill for shade and ornamental trees shall be: 5 part clay loam topsoil + 2 part compost + 1 part sharp sand + 4 Lbs. Commercial fertilizer per CY Or 10 Lbs. Organic fertilizer.
   b. Prepared soil as backfill for shrubs and groundcovers and seasonal colors shall be: 1 part enriched mulch + 1 part compost bark mulch + 1 part enriched topsoil + 1 part No. 1 Bank Sand + 3 Lbs. Time- released fertilizer, 14-14-14 per CY or 8 Lbs. Organic fertilizer.

5. Excavation work and Surface drainage works shall conform to the following requirements:
   a. Test drainage of plant beds and plant pits by filling with water twice in succession. Conditions permitting the retention of water for more than 24 hours shall be brought to the attention of the Owner.
   b. Work shall include the final responsibility for proper surface drainage of planted areas. Any obstructions on the site, or prior work done by another part, which precludes establishing proper drainage shall be brought to the attention of the Owner in writing.
   c. Excavate each tree hole 18" deep plus the depth of the tree container size (15 gal. Or 30 gal. Or 65 gal. Or 100 gal.).
   d. Excavate entire shrub bed to a depth of 8" plus the depth of the shrub container size (5 gal.) unless noted as being pit planted on landscape legend.
   e. Excavate entire groundcover bed to a depth of 6" plus the depth of the groundcover container size (4" pot or 1 gal.).

6. Additional work requirements on landscape areas:
   a. Prior to installation of any planting works (trees, shrubs,groundcover and grass works); apply "Round Up" in all planting areas to eradicate all weed growths on site.
   b. **ADD ALTERNATE:** Install weed control barriers in all trees, shrub and groundcover planting areas. Weed barrier fabric shall be back polypropylene sheet 27 mils thick, 4 oz/s.y. grab tensile strength per ASTM D-4632; 90 lbs. (machine direction) 50 lbs.(cross machine direction). Provide DeWitt "Weed Barrier" or approved substitute.
   c. Use **"Shovel Edge"** to separate all plant beds from grass areas.
   d. Spread a minimum two inch layer of pine bark mulch overall shrub and groundcover bed areas.

7. Landscape maintenance work by the Landscape Contractor after final acceptance shall include the following:
   a. The maintenance period shall commence upon inspection and approval at Final Acceptance and shall be for a period of Sixty Days (60).
   b. The landscape contractor shall coordinate the watering program for all the landscape work with the Owner.
   c. Maintenance of new plantings shall consist of watering, cultivating, weeding, mulching, restaking, tightening and repair of guys; resetting plants for proper grades or upright position, and furnishing and application of pesticides/herbicides; sprays, and invigorants as are necessary to keep plantings free of insects and disease and in a thriving condition.

8. Warranty Periods, Plant Guarantees, and Replacements:
   a. Planting supplied shall be warranted to remain alive and healthy for a period of twelve months (12) after the date of Final Acceptance by Owner. Plants in an impaired, dead, or dying condition after initial acceptance or within 12 months shall be removed and replaced immediately to the satisfaction of the Owner.

Grass Hydromulching Work Requirements:

1. Grass works:
   a. Seed which has become wet, moldy and otherwise damaged in transit or in storage will not be acceptable.
   b. All grass seed shall be fresh, re-cleaned grass seed of the latest crop, mixed in the following proportions by weight and meeting the accepted standards of pure live seed content, purity and germination.
   c. Grass seed shall have the following minimum ratio:
      Summer Mix:
      Cynodon Dactylon (Hulled Common Bermuda Grass) 85% pure live seed at 75 Lbs. Pure live seed per acre.
      Winter Mix:
      Cynodon Dactylon (Unhulled - Common Bermuda Grass) 85% pure live seed at 75 Lbs. Pure live seed per acre. Annual Rye Grass or equal, 85% pure live seed at 175 Lbs. Pure live seed per acre.
2. Slurry Mix Component per Acre shall be Wood cellulose fiber mulch = 2,000 pounds + Grass Seed as specified + fertilizer (13-13-13) 800 pounds.
3. Hydromulched seeding on Prepared finished grades:
   a. Install and spread out a minimum of one inch layer of topsoil over all areas to be hydromulched.
   b. Bed preparation: Immediately after the finished grade has been approved, begin hydroseeding operation to reduce excessive weed growth and erosion.
   c. Apply seed, fertilizer and mulch by spraying them on the previously prepared seedbeds in the form of an aqueous mixture and by using the methods and equipment described herein.
   d. Particular care shall be exercised by the contractor to insure that the application is made uniformly and at the prescribed rate and to guard against miss and overlapped areas.
   e. Where slope of areas to be grassed exceed a 3:1 H:V; an erosion control fabric shall be installed prior to hyromulching process.
4. Maintenance:
   a. Maintenance shall consist of weeding, fertilizing, insect control, watering, replanting, mowing, maintaining of existing grades and repair of any erosion damages.
   b. Guarantee growth and coverage of hydromulch planting shall be a minimum on ninety five percent 95% of the area planted will be covered with specified planting after sixty days with no bare spots visible.
   c. Watering: Coordinate with the Owner to properly operate irrigation system to assure a regular, deep watering program.
5. Inspection and Final Acceptance:
   Final acceptance of lawn establishment shall mean that hydroseed areas are Ninety Five percent 95% uniform coverage of grass in excess of one inch height. No bare spots will be acceptable.

Landscape Legend:

Symbolic Name	Quantities (Verify)	Botanical Name	Common Name	Size and Plant Requirements
EX	14			Existing Trees to be fence protected. The services of a certified arborist shall be engaged to provide tree work services to include canopy pruning, root pruning, tree fertilization and all other work required to safeguard existing trees in anticipation of upcoming construction work.
RO	31	Quercus Buckleyi	Texas Red Oak	3.5" cal. 65 gal. container; 12' to 14' ht.
PM	16	Platanus Mexicana	Mexican Sycamore	3.5" cal. 65 gal. container; 12' to 14' ht.
LI	5	Lagerstroemia Indica	Basham Pink Crepemyrtles	3.5" cal. 65 gal. container; 10' to 12' ht. multi trunk.
AH	4	Ilex Opaca	American Holly	3.5" cal. 65 gal. container; 10' to 12' ht. Single trunk. Tree form.
DW	770	Myrica Pusila	Dwarf Waxmyrtles	5 gal. planted at 36" o.c. triangularly spaced
LF	1146	Leucphyllum Frutescens	Silver Cloud Texas Sage	5 gal. planted at 36" o.c. triangularly spaced.
DR	60	Rosa Drift Red	Drift Red Roses	5 gal. planted at 30" o.c. triangularly spaced.
FL	287	Daniella Tasmanica	Variegated Flax Lily	1 gal. planted at 24" o.c. triangularly spaced.
MC	428	Muhlenbergia Capillaris	Pink Muhly	1 gal. planted at 24" o.c. triangularly spaced.
LP	15	Loropetalum Chinenses	Purple Pixie Loropetalum	5 gal. planted at 30" o.c. triangularly spaced.
Grass	Verify SF.	Cynodon Dactylon	Common Bermuda	**Hydromuch** for all areas within limits of the project + all right of way areas. All areas to be grassed shall be cleaned up of all construction debris prior to find grading works. All areas to be fine graded to adhere to civil grading/drainage plan.
Edge	Verify LF.	Proposed 12" wide maintenance band to be constructed along building edge.		Excavate a 12" wide channel to a depth of 3". Compact subgrade and slope away from building. Install geotextile filter fabric membrane over entire channel and fill channel with Black Star crushed granite. Use Permaloc aluminum edge as restraint.
Black Star	Verify SF.	Areas around building to be with Black Star crushed granite.		Excavate entire noted areas to be a depth of 3" minimum. Compact and slope areas away from building. Install Geotextile filter fabric membrane over excavated areas areas prior to installing Black Star crushed granite.

Owner's Responsibility For Maintenance
Client acknowledges and agrees that proper Project maintenance is required after the Project is complete. A lack of or improper maintenance in areas such as, but not limited to, operation and maintenance of automatic irrigation system, all site drainage and all planting materials maintenance may result in damage to property or persons. Client further acknowledges that he is solely responsible for the results of any lack of or improper maintenance.

Landscape Contractor's Responsibilities:
All drainage (surface and subsurface) of all landscape areas within the project limits shall be the responsibility of the installing landscape contractor and landscape maintenance company. All grading of areas along all building areas must absolutely have positive slope away from building. In no case shall any plant bed be constructed along edge of building that will impede water flow away from building. If planting beds are located at edges of building, landscape contractor shall make sure that these areas drain properly (surface and subsurface-wise). Contractor shall install moisture barrier along building as necessary to keep water from penetrating underneath building slab.

"REFER TO FINISHED GRADES SHOWN ON PROJECT CIVIL GRADING PLAN. IT WILL REPRESENT FINAL ELEVATIONS. CARE SHOULD BE TAKEN BY THE LANDSCAPE CONTRACTOR NOT TO INCREASE THESE FINISHED GRADES WITH LANDSCAPING OR OTHER ALTERATIONS. THE THICKNESS OF SOD, GRASS AND LANDSCAPING MATERIALS SHOULD BE DEDUCTED FROM THE FINISHED GRADE ELEVATIONS IN THESE CIVIL GRADING PLANS IN ORDER TO DETERMINE THE GROUND ELEVATIONS DURING CONSTRUCTION."

L1.1

Irrigation General Notes:

1. ALL materials and equipment shall conform to all applicable State of Texas, City and County codes.
2. The irrigation contractor shall be responsible for securing all permits prior to actual work on site.
3. The intent of the 100% coverage of all landscape areas.
4. Prior to commencement of work, the irrigation contractor shall contact the Owner to coordinate all required inspections.
5. Extreme care shall be exercised in excavating and working near existing utility easements. The irrigation contractor shall be responsible for the verification of all utility locations (telephone, TV, gas electrical, water, cable, etc.). The irrigation contractor shall be responsible for all damages inflicted on any and all utility lines.
6. The Irrigation contractor shall at all times protect his work from damage and theft and replace all damaged or stolen parts at his expense until receipt of the Certificate of Substantial Completion from the Owner.
   The Irrigation contractor shall flush and adjust the system for optimum performance. This shall include regulating the pressure at each valve to obtain the optimum operating pressure for each system.
7. Use glue joints in mainline passing through sleeves under pavement. PVC sleeves shall be Schedule 40 and shall extend 24" out of the nearest existing pavement areas for easy location. The irrigation contractor shall be responsible for coordinate all sleeve locations on the project site with the Owner and/or general contractor.
8. The irrigation contractor shall also comply to these additional special requirements to the irrigation system shall include the following.
   a. All mainlines shall have a minimum of 18" of cover **(Sch. 40 PVC Pipe.)**.
   b. All lateral and sub-main pipe to have a minimum of 12" of cover **(Sch. 40 PVC Pipe.)**.
   c. No rocks, boulders or other extraneous materials shall be used for backfilling of trenches.
   d. All pipes to be installed as per manufacturer's specifications.
   e. All threaded joints to be coated with Teflon tape or Liquid Teflon.
   f. All lines to be thouroughly flushed before installation of any sprinkler heads.
   g. Sprinkler and related equipments shall be installed as per manufacturer's specification.
   h. No electrical connections shall be made in the field except at a valve control box or another valve box specifically for connections.
   i. All 24 volt wire shall be No. 12UF/UL for common wire and No. 14 UF/UL for control wires, direct burial shall be solid copper.
   j. The irrigation contractor shall be responsible for proper coverage of areas to be watered; i.e. adjust heads with insufficient coverage due to blockage by existing or proposed site features or sizing down sprinkler heads to avoid excessive overthrow.
   k. The irrigation contractor shall refer to landscape planting plan to keep sprinkler equipments and accessory materials from interfering with proper planting; i.e. Verify rootball size for planting; configuration of shrub/groundcover beds, etc.
   l. The irrigation contractor shall provide expansion coils at each wire connection in valve box (wrap around 3/4" pipe 12 times).
   m. The irrigation contractor shall utilize appropriate automatic drain device where low head drainage may occur.
   n. All sprinkler heads shall be mounted on swing joints unless otherwise noted.
   o. The irrigation contractor shall install a separate common for each controller.
   p. 24 Volt wire shall be color coded: Common shall be white and Control red.
   q. The irrigation contractor shall install manufacturer's recommended grounding equipment for power supply and valve output with (2) 5/8" copper clad ground rods.
   r. The irrigation contractor shall install manufacturer's recommendation on fault ground and lightning protection.
   s. The irrigation contractor shall furnish the owner with the following : 2 wrenches for disassembling and adjusting each type of sprinkler heads and valves + 2 keys for the automatic controller +2 quick coupler keys with matching hose swivels.
   t. The irrigation contractor shall add extension risers to pop up sprinklers when needed for proper coverage. Coordinate with landscape contractor as to where risers for sprinkler heads are required.
   u. The irrigation contractor shall install sprinkler equipments 12" from all buildings foundations and install sprinklers 4" from any curbs or walkways.
   v. The irrigation backflow prevention device shall be installed within areas of proposed shrub plantings. The purpose of this is to keep the device screened from view.
9. The entire irrigation system (labor and materials) shall be guaranteed and warranted for a period of one year. The warranty period shall commence upon final acceptance by Owner of all landscape and irrigation works.
10. The irrigation contractor for the project must be licensed to do business within the State of Texas , as required by TCEQ."
11. This irrigation plan is diagrammatic only. Irrigation contractor shall provide final irrigation design layout plan complete with licensed irrigator's seal and signature. All applicable design calculations shall be shown on this irrigation plan to comply with all TCEQ requirements.

		Gate Valve		
		One (1) 2" WATER METER Supplied and installed by irrigation contractor for the irrigation system. Water meter to be installed as per city and county codes.	Verify point of connection.	
		One (1) 2" FEBCO PEB & 2" ISOLATION VALVE to be installed as per city and county code by irrigation contractor. Install **BPDI Guardshack Enclosure GS-3.3** to protect backflow devices. Verify location on site.		
		Rainbird 33 DRC quick coupling valve (valves to be installed below grade inside valve box)	Total **(7)** field located on site.	
		One (1) Rainbird ESP 24 LXME Irrigation controller. Verify location and coordinate electrical requirements for controller with General contractor and / or owner. Install **Rainbird Rain Sensors** within close proximity of controller location. Verify location with Owner.		
		Pressure Line shall be **2"** sch. 40 PVC pipe. Install "Thrust Blocks" as required. Install appropriate Gate Valves where noted.		
		6" Sch. 40 PVC irrigation sleeves unless noted as 4" on plan. Verify location of all sleeves on project site.		
		1/2" Sch. 40 PVC non pressure line. 3/4" Sch. 40 PVC non pressure line. 1" Sch. 40 PVC non pressure line. 1-1/2" Sch. 40 PVC non pressure line.		
		Sequence of Irrigation Valve Size of Irrigation Valve

DESIGN DISCLAIMER:

This irrigation drawing is a preliminary layout. It is a diagrammatic representation for purpose of providing a basic depiction of the scope of coverage, initial valve zoning, with head type and placement. The Irrigation drawing does not provide necessary zone flow, hydraulic calculations to determine Design Pressure. These are defined in Texas Administrative Code *§§344.61 Minimum Standards for Design of the Irrigation Plan* , and required by the T.C.E.Q for a complete Irrigation Plan and for Permit and Construction. It will be the responsibility of the installing licensed irrigator or irrigator-in-charge, to use information provided on this Preliminary Irrigation drawing, to provide a final Irrigation Plan meeting all standards as required by T.C.E.Q, Signed and Sealed.

Wong & Associates, Inc. shall not be responsible and accepts no liability for design failure, inaccurate head layout, incorrect hydro-zoning, pipe sizing, zone flow or hydraulic calculations, irrigation equipment, or aspects of the preliminary design drawing not in compliance with local irrigation regulations. The irrigation contractor shall be ultimately responsible for the final design, installation and proper operation of the irrigation system.

Disclaimer

Wong & Associates, Inc. shall not be responsible for the operation and/or maintenance of this irrigation system, once the date of final acceptance by the owner is established. All grades and elevations on the project shall be set by the project civil engineer. The Owner shall be responsible for the monitoring and the maintaining of the irrigation system. Monthly moisture sensor tests of all sprinkler zones around all building pads and on entire property, shall be performed by the Owner to ensure that no over-watering and/or any irrigation system leaks are present. The irrigation contractor shall be responsible for providing all guarantee and warranties for the irrigation system. The irrigation contractor shall be ultimately responsible for the installation and proper operation of the irrigation system.

3. STRUCTURAL CONCEPT, STANDARDS AND LOADS

A. DESIGN CONCEPT:

THE STRUCTURE AS SHOWN HAS BEEN DESIGNED IN ACCORDANCE WITH THE BUILDING CODE REQUIREMENTS AND DESIGN STANDARDS TO SUPPORT THE FINAL BUILDING SERVICE LOADS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING ADDITIONAL SUPPORTS FOR THE STRUCTURE IF NECESSITATED BY THE CONSTRUCTION SEQUENCE OR METHODS OF FABRICATION, HANDLING, ERECTION, AND OTHER CONSTRUCTION OPERATIONS.

B. BUILDING CODES AND DESIGN STANDARDS:

1. INTERNATIONAL BUILDING CODE, 2018 EDITION.
2. AMERICAN SOCIETY OF CIVIL ENGINEERS (ASCE); MINIMUM DESIGN LOADS FOR BUILDINGS AND OTHER STRUCTURES, ASCE 7-10, AS AMENDED.
3. AMERICAN CONCRETE INSTITUTE (ACI), BUILDING CODE REQUIREMENTS FOR REINFORCED CONCRETE, ACI 318, AS AMENDED.
4. AMERICAN INSTITUTE OF STEEL CONSTRUCTION (AISC), MANUAL OF STEEL CONSTRUCTION, 13TH EDITION (ASD), 2005, AS AMENDED.
5. AMERICAN WELDING SOCIETY (AWS).
6. STEEL JOIST INSTITUTE (SJI), STANDARD SPECIFICATIONS FOR OPEN WEB STEEL JOISTS AND JOIST GIRDERS.
7. STEEL DECK INSTITUTE (SDI), DESIGN MANUAL FOR COMPOSITE DECKS, FORM DECKS, ROOF DECKS, AND CELLULAR METAL FLOOR DECK WITH ELECTRICAL DISTRIBUTION.
8. AMERICAN IRON AND STEEL INSTITUTE (AISI) "SPECIFICATION FOR THE DESIGN OF COLD FORMED STEEL STRUCTURAL MEMBERS", LATEST EDITION.

C. GRAVITY LOADS:

SUPERIMPOSED LOADS ARE GIVEN IN POUNDS PER SQUARE FOOT (PSF).

BUILDING AREA	DEAD LOAD (PSF)	LIVE LOAD (PSF)
1. SLAB ON GRADE	0	100
2. 2ND AND 3RD FLOOR OFFICES	10	65*
3. ELEVATOR LOBBY	10	100
4. ELEVATED FLOOR CORRIDORS	10	80
5. STAIRS	10	100
6. ROOF	20	20
7. MECHANICAL AREAS	10	150(**)
7. STORAGE	10	125

*INCLUDES AN ALLOWANCE OF 15 PSF FOR PARTITION WEIGHT
**EQUIPMENT WEIGHT IF LARGER

D. LATERAL DESIGN LOADS:

1. WIND LOADS FOR AN ULTIMATE WIND SPEED OF **146** MPH 3-SECOND GUST, WITH EXPOSURE **C** AND A RISK CATEGORY **IV** (ASCE 7-10 METHOD)

2. COMPONENT AND CLADDING PRESSURES ARE AS FOLLOWS:

TYPE	TRIBUTARY AREA	PRESSURES (PSF)		
		CORNER	PERIMETER	FIELD
WALLS	10 FT^2	+54 , -71	-	+54 , -58
ROOF	10 FT^2	+54 , -122	+54 , -122	+24 , -93
PARAPET	10 FT^2	+161 , -109	-	+161 , -95
WALLS	100 FT^2	+46 , -56	-	+46 , -50
ROOF	100 FT^2	+46 , -96	+46 , -96	+19 , -73
PARAPET	100 FT^2	+126 , -85	-	+126 , -79

a. RE: IBC **2018** FOR DESCRIPTION OF CORNER, PERIMETER & FIELD.

b. POSITIVE PRESSURES ARE PRESSURES ACTING TOWARD THE BUILDING.

c. NEGATIVE PRESSURES ARE PRESSURES ACTING AWAY FROM THE BUILDING.

d. VALUES ABOVE ARE FOR ULTIMATE WIND PRESSURES. THE ASD FACTOR FOR NOMINAL PRESSURES IS 0.6.

e. THE CORNER ZONE IS DEFINED AS ANY WALL DISTANCE WITHIN **8'-3"** OF ANY CORNER OF THE BUILDING (**a = 8'-3"**)

E. SEISMIC CRITERIA:

1. IMPORTANCE FACTOR: 1.5
2. RISK CATEGORY: IV
3. MAPPED SPECTRAL RESPONSE ACCELERATIONS:
   a. Ss: 0.07
   b. S1: 0.04
4. SITE CLASS: .... E
5. SPECTRAL RESPONSE COEFFICIENTS:
   a. SDS: 0.106
   b. SD1: 0.107
6. SEISMIC DESIGN CATEGORY: .... B
7. BASIC SEISMIC FORCE-RESISTING SYSTEM: "TBD" (EX: STRUCTURAL STEEL SYSTEMS NOT SPECIFICALLY DESIGNED FOR SEISMIC RESISTANCE)
8. DESIGN BASE SHEAR: 0.010W
9. SEISMIC RESPONSE COEF. (Cs): 0.010
10. RESPONSE MODIFICATION FACTOR (R): 8

F. GROUND SNOW LOADS: 5 PSF

G: SPECIAL LOADS:

1. STAIR TREADS, RAILING AND GUARDRAILS:

ITEM	REQUIRED CAPACITY
TREADS	300 POUNDS AT CENTER
TOP RAILS	50 PLF HORIZONTALLY (DISTRIBUTED)
OTHER RAILS, FILLERS & CONNECTIONS	50 PSF HORIZONTALLY (DISTRIBUTED)
HAND RAILS	200 POUNDS ANY DIRECTION

2. PIPE LOADS WITH WATER:

SIZE	WEIGHT MAX.	SPACING OF HANGERS
4" DIA.	17 PLF	10'-0"
6" DIA.	32 PLF	10'-0"
8" DIA.	50 PLF	10'-0"
10" DIA.	75 PLF	5'-0"
12" DIA.	102 PLF	5'-0"

VALUES ASSUME SCHEDULE 40 STEEL PIPE

4. GENERAL NOTES FOR CONSTRUCTION

A. CONSTRUCTION METHODS, PROCEDURES AND SEQUENCES ARE THE RESPONSIBILITY OF THE CONTRACTOR AND THE CONTRACTOR SHALL TAKE ALL THE NECESSARY MEANS TO MAINTAIN AND PROTECT THE STRUCTURAL INTEGRITY OF ALL CONSTRUCTION AT ALL STAGES.

B. THESE NOTES APPLY TO STRUCTURAL DOCUMENTS SEALED BY THE STRUCTURAL ENGINEER AND ARE INTENDED TO BE COMPLEMENTARY TO AND USED IN CONJUNCTION WITH THE PLANS AND SPECIFICATIONS, INCLUDING THOSE PREPARED BY OTHER DISCIPLINES. CONTRACTOR SHALL REPORT ANY DISCREPANCIES TO THE ARCHITECT/STRUCTURAL ENGINEER IMMEDIATELY. ANY SUCH DISCREPANCIES SHALL BE RESOLVED TO THE MORE STRINGENT REQUIREMENTS, UNLESS OTHERWISE AUTHORIZED BY THE STRUCTURAL ENGINEER.

C. ANY DISCREPANCIES ON THE STRUCTURAL DOCUMENTS SHALL BE IMMEDIATELY BROUGHT TO THE ATTENTION OF THE ARCHITECT/STRUCTURAL ENGINEER PRIOR TO SUBMISSION OF BIDS OR PROPOSALS, OR IF NOT REASONABLE DISCERNABLE DURING PREPARATION OF BIDS AND PROPOSALS, BEFORE COMMENCING THE WORK IN QUESTIONS. NO CHANGE ORDER CONSIDERATION WILL BE GIVEN TO CHANGES FOR WHICH THE ARCHITECT AND/OR ENGINEER WERE NOT CONTACTED PRIOR TO CONSTRUCTION OF THE AFFECTED ITEM.

D. CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONSTRUCTION, INCLUDING EXISTING WORK, PRIOR TO COMMENCING WORK. ANY DISCREPANCIES SHALL BE REPORT IMMEDIATELY TO THE ARCHITECT/STRUCTURAL ENGINEER.

E. ALL PROPOSED SUBSTITUTIONS MUST BE EQUAL OR BETTER AND SHALL BE REVIEWED BY THE ARCHITECT/ENGINEER PRIOR TO ANY PERTINENT WORK AND PRIOR TO THE AWARD OF THE CONTRACT.

F. NOT ALL OPENINGS AND OTHER COMPONENTS THAT ARE REQUIRED HAVE BEEN SHOWN IN THE STRUCTURAL DRAWINGS. COORDINATE WITH THE ARCHITECTURAL, MECHANICAL, PLUMBING AND ELECTRICAL DRAWINGS TO DETERMINE WHERE OPENINGS ARE REQUIRED. SIZES OF ALL CHASES, INSERTS, OPENINGS, SLEEVES, FINISHES, DEPRESSIONS, PADS AND OTHER PROJECT REQUIREMENTS. FLOOR PLAN WILL BE FURNISHED FOR THAT PURPOSE.

G. THE CONTRACTOR IS RESPONSIBLE FOR REVIEWING THE MECHANICAL, ELECTRICAL, PLUMBING AND ARCHITECTURAL DRAWINGS TO DETERMINE WHERE OPENINGS ARE REQUIRED IN REINFORCED CONCRETE BEAMS, SLABS AND WALLS.

H. THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS, DETAILING ALL THE OPENINGS, INCLUDING ADDED REINFORCEMENT AS SHOWN ON THE TYPICAL WALL, SLAB AND BEAM OPENING DETAILS FOR REVIEW.

I. ADDITIONAL REINFORCEMENT ABOVE THAT SHOWN IN THE TYPICAL SLAB AND BEAM OPENING DETAILS MAY BE REQUIRED AND WILL BE REVIEWED ON THE SHOP DRAWINGS.

J. USE THE MANUFACTURER'S CERTIFIED DRAWINGS AND SPECIFICATIONS FOR THE EQUIPMENT ANCHORAGE AND DETAILS.

K. ALL CONSTRUCTION JOINTS SHOWN ON THE STRUCTURAL DRAWINGS SHALL BE INCORPORATED INTO THE CONTRACTOR. ADDITIONAL CONSTRUCTION JOINTS TO FACILITATE CONSTRUCTION SHALL BE LOCATED AND DETAILED ON THE SHOP DRAWINGS FOR REVIEW.

L. HORIZONTAL CONSTRUCTION JOINTS SHALL NOT BE PERMITTED IN BEAMS UNLESS SHOWN ON THE STRUCTURAL DRAWINGS.

M. ALL CONSTRUCTION AND CONTROL JOINTS FOR BEAMS WHICH ARE EXPOSED TO VIEW ARE TO BE LOCATED TO COINCIDE WITH THE ARCHITECTURAL RUSTICATION JOINTS AS SHOWN ON THE BUILDING ELEVATION SHEETS OR AS REVIEWED IN WRITING.

N. SHOP DRAWINGS

1. THE TERM "SHOP DRAWINGS" INCLUDES FABRICATION, MANUFACTURING, ERECTION AND SETTING DRAWINGS, BROCHURES, CERTIFICATES, AND PRODUCT DATA DESCRIBING MATERIALS AND EQUIPMENT. SHOP DRAWINGS SHALL INCLUDE ALL PERTINENT INFORMATION REQUIRED FOR THE ENGINEER TO FULLY EVALUATE THE MATERIALS BEING REPRESENTED BY THE SUBMITTAL INCLUDING THE PHYSICAL PROPERTIES, DIMENSIONS, LOCATIONS AND METHOD OF INSTALLATION.

2. SHOP DRAWINGS WILL BEAR THE REVIEW STAMP OF THE CONTRACTOR INDICATING THAT HE HAS REVIEWED THE DRAWINGS FOR CONFORMANCE WITH THE CONTRACT DOCUMENTS; COORDINATED ITEMS INCLUDED IN THE SUBMITTAL WITH RELATED ITEMS; AND VERIFIED AND COORDINATED DIMENSIONS.

3. REPRODUCTIONS OF THE ENGINEERING DRAWINGS WILL NOT BE ACCEPTABLE AS SHOP DRAWINGS.

4. ANY SHOP DRAWING NOT CONFORMING TO THESE REQUIREMENTS WILL BE CAUSE FOR REJECTION AND WILL BE RETURNED WITHOUT ANY FURTHER ACTION.

5. STRUCTURAL SUBMITTALS REQUIRED FOR APPROVAL INCLUDE, BUT ARE NOT LIMITED TO:

CONCRETE ACCESSORIES (MANUFACTURERS PRODUCT DATA)
STEEL REINFORCING
CONCRETE MIX DESIGN
CONTROL JOINT LAYOUT
CONCRETE MATERIAL CERTIFICATES
STRUCTURAL STEEL FRAMING
STRUCTURAL STEEL CONNECTION CALCULATIONS
STEEL ROOF DECK
COLD FORMED METAL FRAMING
COLD FORMED METAL FRAMING CALCULATIONS
MISC. STEEL FABRICATIONS

6. DELEGATED STRUCTURAL DESIGN OF COMPONENTS:

A. SEE APPLICABLE SECTIONS OF GENERAL NOTES FOR THE APPROPRIATE DESIGN RESPONSIBILITIES OF THE SUPPLIER AND IT'S LICENSED ENGINEER

P. GENERAL FRAMING NOTES:

1. FOR ALL MISCELLANEOUS STEEL SHOWN ON ARCHITECTURAL AND NOT SHOWN ON STRUCTURAL DRAWINGS, ASSUME THE FOLLOWING AS A MINIMUM AND CONFIRM FINAL ASSUMPTIONS WITH STRUCTURAL ENGINEER:
   EQUAL LEG ANGLES = L4X4X5/16
   LLV ANGLES = L6X4X5/16
   CHANNELS = C6X8.2
   SQUARE TUBE = HSS6X6X3/8
   LSV TUBE = HSS12X8X1/2
   ROUND TUBE = 6" STD PIPE
   WIDE FLANGE = W14X22
   STEEL PLATE = 3/8" THICK

5. STRUCTURAL STEEL

A. ROLLED SHAPES:

1. ALL STRUCTURAL STEEL FOR ALL THE HORIZONTAL FRAMING MEMBER SHALL CONFORM TO ASTM A992, GRADE 50, UNLESS OTHERWISE NOTED

2. ALL STRUCTURAL STEEL FOR HOLLOW STRUCTURAL SECTIONS SHALL CONFORM TO ASTM A500, GRADE B WITH A MINIMUM YIELD OF 46 KSI, UNLESS OTHERWISE NOTED.

3. ALL STRUCTURAL STEEL FOR PIPE SHALL CONFORM TO ASTM A53, TYPE E OR S, GRADE B, UNLESS OTHERWISE NOTED.

4. ALL STRUCTURAL STEEL FOR ANGLES, PLATES AND MISCELLANEOUS STEEL SHALL CONFORM TO ASTM A36, UNLESS OTHERWISE NOTED.

5. ALL EXPOSED STEEL TO BE HOT DIPPED GALVANIZED.

B. CONNECTIONS

1. THE DESIGN OF STRUCTURAL STEEL CONNECTIONS IS THE RESPONSIBILITY OF THE CONTRACTOR AND THE STEEL FABRICATOR. THE DESIGN OF THE CONNECTION SHALL BE PERFORMED BY A REGISTERED PROFESSIONAL ENGINEER EMPLOYED BY THE STEEL FABRICATOR. THE DETAILS AND CALCULATIONS SHALL INCLUDE, BUT NOT LIMITED TO, THE FOLLOWING:

A. ALL WELD SIZES AND LENGTHS
B. ALL BOLT SIZES, LOCATIONS, QUANTITIES AND GRADES
C. ALL PLATE AND ANGLE SIZES, THICKNESS AND DIMENSIONS
D. ALL WORK POINT LOCATIONS AND RELATED INFORMATION

2. PROVIDE STANDARD BOLTED CONNECTIONS CONFORMING TO AISC BOLTED CONNECTIONS, USING ASTM A325 OR A490 BOLTS, FOR THE BEAM END SHEARS INDICATED IN THE DOCUMENTS. PROVIDE MINIMUM OF TWO BOLTS FOR ALL CONNECTIONS.

3. ALL WELDED CONNECTIONS SHALL CONFORM TO AWS UNLESS OTHERWISE NOTED.

4. SURVEY ALL PLANS, DETAILS, SECTIONS, SCHEDULES AND SPECIFICATIONS FOR SPECIAL CONNECTIONS.

5. UNLESS OTHERWISE NOTED AND/OR SPECIFIED, ALL BEAM CONNECTIONS SHALL BE DESIGNED TO SUPPORT 1/2 THE TOTAL UNIFORM LOAD FOR THE APPLICABLE MEMBER SIZE AND SPAN AS DETERMINED BY THE TABLES FOR ALLOWABLE UNIFORM LOADS ON BEAM IN THE **14TH** EDITION OF THE AMERICAN INSTITUTE OF STEEL CONSTRUCTION MANUAL OF STEEL CONSTRUCTION (ASD)

6. WHERE BEAMS ARE TO RECEIVE HEADED SHEAR CONNECTORS, DESIGN THOSE BEAM CONNECTIONS FOR THE REACTION SHOWN. IF REACTIONS ARE NOT SHOWN, DESIGN THE CONNECTIONS TO SUPPORT 40 PERCENT OF THE MAXIMUM WEB SHEAR, V, FOR THE APPLICABLE MEMBER SIZE AS DETERMINED BY THE TABLES FOR ALLOWABLE UNIFORM LOADS ON BEAMS IN THE **14TH** EDITION OF THE AISC MANUAL

7. MOMENT CONNECTIONS SHOWN SHALL BE DESIGNED TO FULLY DEVELOP THE SECTION IN FLEXURE AND TO SUPPORT 1/2 THE TOTAL UNIFORM LOAD FOR SHEAR AS DESCRIBED IN NOTE 5 ABOVE.

8. WHERE FILLET WELD IS NOT SHOWN ON DETAIL, ITS SIZE SHALL BE ASSUMED TO BE THE PLATE THICKNESS OF THE THINNEST PIECE MINUS 1/16"

C. WELDS

1. CONFORM TO "CODE FOR WELDING IN BUILDING CONSTRUCTION" BY THE AMERICAN WELDING SOCIETY, LATEST EDITION.

2. WELDS ON INDICATED ON DRAWINGS ARE TO BE FILLET ALL AROUND AS PRESCRIBED BY AISC SPECIFICATION, PROVIDE WELDING OF CONTINUOUS MEMBERS OF 2 INCHES OF 3/16" INCH FILLET STITCH WELDS AT 12 INCHES OC, STAGGERED EACH SIDE, UNLESS OTHERWISE NOTED.

3. FIELD PAINT ALL WELDS W/ "GALVILITE" BY Z.R.C. OR APPROVED EQUAL ARC WELDING ELECTRODES.

4. METAL DECK - E60XX
STRUCTURAL STUDS - E6022 OR E6011, 3/32" RODS.
ALL OTHER - E70XX LOW HYDROGEN, 250 DEGREE MIN. OVEN TEMP.

5. SIZE - ALL FILLETS ARE 1/16" LESS THAN MINIMUM THICKNESS TO BE WELDED

6. PROVIDE ULTRASONIC INSPECTION BY THE TESTING LABORATORY FOR ALL WELDS INDICATED AS PENETRATION WELDS.

D. HEADED SHEAR CONNECTORS

1. ALL HEADED SHEAR CONNECTORS SHALL BE 3/4 IN. DIAMETER STUDS x 4 1/2 IN. LONG AFTER WELDING AND SHALL CONFORM TO ASTM A108 UNLESS OTHERWISE NOTED.

2. PLACE MAXIMUM NUMBER OF STUDS IN A SINGLE ROW PATTERN AND THE BALANCE IN A DOUBLE ROW PATTERN AS NECESSARY TO SATISFY THE AISC SPACING REQUIREMENT.

E. OPEN WEB STEEL JOISTS:

1. AS APPLICABLE FOR THE OPEN WEB STEEL JOIST TYPE INDICATED ON THE DRAWINGS, CONFORMING TO SJI OR AISC, WHICHEVER IS MORE STRINGENT.

2. PROVIDE JOIST BRIDGING IN ACCORDANCE WITH SJI.

3. DESIGN ROOF JOISTS USING GOVERNING LOAD COMBINATIONS WITH UPLIFT PRESSURES INDICATED ON COMPONENT AND CLADDING PRESSURES TABLE.

F. STEEL DECK:

TYPE 1

1. PROVIDE COMPOSITE STEEL DECK 2" DEEP FORMED FROM 18 GAUGE STEEL SHEETS AND CONFORMING TO ASTM A653, STRUCTURAL STEEL (SS), GRADE 33, GALVANIZED WITH COATING DESIGNATION G60.

2. PROVIDE COMPOSITE STEEL DECK WITH THE FOLLOWING MINIMUM SECTION PROPERTIES:

a. MOMENT OF INERTIA: I=0.559 INCHES ^{4}/FOOT WIDTH
b. SECTION MODULUS: Sp=0.495 INCHES ^{3}/FOOT WIDTH
c. SECTION MODULUS: Sn=0.504 INCHES ^{3}/FOOT WIDTH

3. ATTACH COMPOSITE STEEL DECK TO STEELS SUPPORTS WITH 5/8" DIA. PUDDLE WELDS AND SHEAR CONNECTORS, 36/4 PATTERN. REFER TO PLANS FOR NUMBERS AND ARRANGEMENT OF SHEAR CONNECTORS. ATTACH SIDE LAPS WITH #10 SCREWS @ 18" OC.

4. REINFORCE 3 1/2" CONCRETE OVER DECK W/ 4x4 - W4.0 x W4.0. TOTAL THICKNESS = 5 1/2".

TYPE 2

1. PROVIDE STEEL ROOF DECK 1 1/2" DEEP TYPE B 20 GAUGE STEEL SHEETS AND CONFORMING TO ASTM A653, STRUCTURAL STEEL (SS), GRADE 33, GALVANIZED COATING DESIGNATION G60.

2. PROVIDE STEEL ROOF DECK WITH THE FOLLOWING MINIMUM SECTION PROPERTIES:

a. MOMENT OF INERTIA: I =0.201 INCHES^4 /FOOT WIDTH
b. SECTION MODULUS: Sp =0.234 INCHES^3 /FOOT WIDTH
c. SECTION MODULUS: Sn =0.247 INCHES^3 /FOOT WIDTH

3. ATTACH STEEL ROOF DECK TO STEEL SUPPORTS AND AT SIDE LAPS AS FOLLOWS:

a. POWDER-ACTUATED FASTENERS:

SUPPORTS: "HILTI" X-HSN24 AND "HILTI" X-ENP-19L15, 36/7 PATTERN
SIDELAP: #12 "TEK" @ 12" O.C. MAXIMUM

b. SCREWS:

SUPPORTS: #12 "TEK" SCREWS, 36/7 PATTERN
SIDELAP: #12 "TEK" @ 12" O.C. MAXIMUM

F. STAIR NOTES:

1. ALL STEEL PAN STAIRS SHALL BE DESIGNED, MANUFACTURED, AND INSTALLED BY THE STRUCTURAL STEEL CONTRACTOR. THE STAIR MANUFACTURER SHALL BE RESPONSIBLE FOR THE COMPLETE INSTALLATION OF THEIR PRODUCT, INCLUDING ALL ACCESSORIES AND CONNECTIONS. STAIRS SHALL BE DESIGNED FOR ALL LOADING CONDITIONS REQUIRED BY THE GOVERNING BUILDING CODES IN ADDITION TO ANY SPECIFIC LOADINGS SHOWN ON THE DRAWINGS. THE DESIGN, MANUFACTURE AND INSTALLATION OF ALL STEEL PAN STAIRS SHALL BE IN ACCORDANCE WITH THE SPECIFICATIONS OF THE AMERICAN INSTITUTE OF STEEL CONSTRUCTION, LATEST EDITION.

2. STAIR DESIGN CALCULATIONS, PREPARED AND SEALED BY A LICENSED STRUCTURAL ENGINEER SHALL BE SUBMITTED FOR REVIEW ALONG WITH THE NECESSARY SHOP DRAWINGS. SUBMITTALS WILL BE REVIEWED FOR INFLUENCE AND/OR LOAD APPLICATION TO THE SUPPORTING STRUCTURE, ONLY.

3. ALL STRUCTURAL STEEL PERMANENTLY EXPOSED TO THE ELEMENTS SHALL RECEIVE ONE COAT OF APPROVED SHOP PAINT, IN ADDITION TO FIELD PAINT AS SPECIFIED IN THE ARCHITECTURAL SPECIFICATIONS.

6. CONCRETE

A. CONCRETE SCHEDULE:

BUILDING COMPONENT	28 DAY CYLINDER COMPRESSIVE STRENGTH POUNDS PER SQUARE INCH(PSI)					
	NORMAL WEIGHT			MAX AGGREGATE SIZE (IN)	SLUMP (IN)	W/C RATIO
	3000	3500	4000			
1. SPREAD FOOTING	●			1 1/2"	5-7	0.55
2. SLAB-ON-GRADE		●		1"	4-6	0.50
3. SLAB-ON-DECK		●		1"	4-6	0.50
4. GRADE BEAMS AND PLINTHS		●		1"	4-6	0.50
5. ALL OTHER CONCRETE	●			1"	4-6	0.52

B. PROVIDE DEFORMED NEW BILLET STEEL BARS CONFORMING TO ASTM A615, GRADE 60. ALL REINFORCING STEEL SHALL BE SECURELY HELD IN PLACE; PROVIDE ADDITIONAL BARS OR STIRRUPS FOR SUPPORT AS REQUIRED.

C. WELDED WIRE FABRIC SHALL CONSIST OF FLAT SHEETS AND SHALL CONFORM TO ASTM A185, WITH A MINIMUM YIELD STRENGTH OF 65.0 KSI

D. PROVIDE FULL EMBEDMENT WITH STANDARD 90 DEGREE HOOKS FOR ALL DOWELS. IF NOT OTHERWISE SPECIFIED, THE DOWEL SIZE AND SPACING SHALL BE THE SAME AS THE MAIN REINFORCING.

E. WHEN REINFORCING STEEL IN GRADE BEAMS, WALLS, SLABS AND BEAMS, IS NOTED AS CONTINUOUS, SPLICE REINFORCING STEEL ONLY WHEN UNAVOIDABLE DUE TO STOCK LENGTHS. STAGGER ALL SPLICES A MINIMUM OF 4'-0". ADJACENT BAR SPLICES ARE NOT ACCEPTABLE.
LOCATE THE TOP BAR SPLICES WITHIN THE MIDDLE HALF OF THE SPAN AND LOCATE THE BOTTOM BAR SPLICES AT SUPPORTS OR BETWEEN SUPPORTS AND 1/3 SPAN POINT, UNLESS NOTED OTHERWISE ON PLANS, DETAILS OR SCHEDULES.

F. PROVIDE INTERIOR AND EXTERIOR HORIZONTAL LAPPED CORNER BARS AT ALL CORNERS TO MATCH THE SIZE, TYPE AND SPACING OF THE WALL AND GRADE BEAM HORIZONTAL REINFORCING.

G. UNLESS SPECIFICALLY NOTED, SCHEDULED OR DETAILED OTHERWISE, PROVIDE DEVELOPMENT LENGTH FOR REINFORCING IN CONCRETE COMPONENTS IN ACCORDANCE WITH THE SCHEDULE IN NOTE H. BELOW. THIS SCHEDULE SHALL APPLY TO ALL DEVELOPMENT LENGTHS NOT OTHERWISE NOTED, DETAILED OR SCHEDULED IN THE DRAWINGS OR SPECIFICATIONS.

H. REINFORCING BAR DEVELOPMENT LENGTHS (Ld) IN INCHES FOR VARIOUS CONCRETE STRENGTHS IN POUNDS PER SQUARE INCH (PSI). TOP BARS ARE DEFINED AS HORIZONTAL REINFORCING SO PLACED IN A MEMBER THAT MORE THAN 12 INCHES OF CONCRETE IS CAST BELOW THE BAR. ALL OTHER CONDITIONS ARE CONSIDERED BOTTOM BARS FOR DEVELOPMENT AND SPLICE LENGTH PURPOSES.

BAR SIZE GRADE 60	Ld FOR TOP BARS 28 DAY CYLINDER CONCRETE STRENGTH (PSI)				Ld FOR BOTTOM BARS 28 DAY CYLINDER CONCRETE STRENGTH (PSI)			
	3000/3500	4000	5000	6000	3000/3500	4000	5000	6000
#3	22	19	17	16	17	15	13	12
#4	29	25	23	21	22	19	17	16
#5	36	31	28	26	28	24	22	20
#6	43	37	34	31	33	29	26	24
#7	63	54	49	45	48	42	38	34
#8	72	62	56	51	55	48	43	39
#9	81	70	62	57	62	54	48	44
#10	89	78	69	63	69	60	53	49
#11	98	85	76	70	76	66	59	54

1. WHEN TWO BARS OF DIFFERENT SIZES ARE LAPPED, THE SMALLER SIZE SHALL GOVERN THE LAP LENGTH UNLESS SPECIFICALLY NOTED.

2. WELDED OR MECHANICAL SPLICES CAPABLE OF DEVELOPING 125% OF THE BAR YIELD STRENGTH MAY BE USED IN LIEU OF THE LAPS. SUCH SPLICES MAY BE EITHER FULL BUTT WELDS OR SERIES "C CADWELDS OR EQUAL."

J. AT LAP SPLICES, PROVIDE LAP SPLICE LENGTHS FOR REINFORCING BARS 1.3 TIMES THE Ld SHOWN IN TABLE IN NOTE H ABOVE.

K. THE GENERAL NOTES, LAP LENGTHS OR DETAILS PERTAINING TO REINFORCING STEEL AS SHOWN ON THE DETAIL SHEETS OR OTHER SCHEDULES SHALL SUPERSEDE THE NOTES SHOWN ON THIS SHEET.

L. PROVIDE THE FOLLOWING COVER FOR CAST-IN-PLACE CONCRETE REINFORCING.

1. UNFORMED SURFACES IN CONTACT WITH EARTH: 3 INCHES

2. UNFORMED SURFACES OVER MOISTURE BARRIER: 2 INCHES

3. FORMED SURFACES EXPOSED TO EARTH OR WEATHER

a. #6 AND LARGER: 2 INCHES
b. #5 AND SMALLER: 1 1/2" INCHES

4. FORMED SURFACES NOT EXPOSED TO EARTH OR WEATHER
a. SLABS AND WALLS: 3/4 INCHES
b. BEAMS AND COLUMNS 1 1/2 INCHES

7. EXCAVATION, BACKFILLING & FOUNDATIONS

A. A GEOTECHNICAL EXPLORATION OF SUBSURFACE CONDITIONS, CONTAINING TEST BORINGS, LABORATORY TEST, ENGINEERING ANALYSIS AND FOUNDATION RECOMMENDATIONS, PERFORMED BY **ALPHA TESTING, LLC** DATED **AUGUST 15, 2023**, PROPOSAL NO. **99528** IS AVAILABLE FOR REVIEW.

B. MAINTAIN PROPER SITE DRAINAGE DURING CONSTRUCTION SO THAT PONDING OF WATER DOES NOT OCCUR IN THE BUILDING AREA.

C. SUB-GRADE PREPARATION .

1. PERFORM DEMOLITION OF EXISTING STRUCTURES AS REQUIRED BY THE GEOTECHNICAL REPORT. THE ENTIRE VOLUME OF THE EXCAVATIONS CREATED BY DEMOLITION AND REMOVAL OF EXISTING STRUCTURES SHOULD BE BACKFILLED WITH ENGINEERED (SELECT) FILL THAT IS PROPERLY PLACED AND COMPACTED.

2. EXCAVATE EXISTING SOILS AS REQUIRED TO REMOVE ALL EXISTING VEGETATION, ROOTS AND DELETERIOUS MATERIALS FROM THE PROPOSED BUILDING AREA, AND AS REQUIRED BY GEOTECHNICAL REPORT. THE CLEARING SHOULD EXTEND BEYOND THE BUILDING EDGES. ONCE ROUGH GRADE IS ESTABLISHED, THE EXPOSED SURFACE SHOULD BE PROOF-ROLLED. ANY SOFT POCKETS OF SOFT OR WEAK SOILS ENCOUNTERED SHOULD BE REMOVED. BUILD BUILDING PAD AS REQUIRED BY GEOTECHNICAL REPORT.

3. BUILDING PAD UNDER SLAB ON GRADE SHALL BE PREPARED TO PROVIDE AN OWNER APPROVED PVR OF 1" OR LESS BASED ON RECOMMENDATIONS IN THE PROJECT GEOTECHNICAL REPORT.

D. FOUNDATIONS HAVE BEEN DESIGNED FOR ALLOWABLE PRESSURE OF **DRILLED / FOOTING SCHEDULE SHEET**.

E. REFER TO THE GEOTECHNICAL EXPLORATION FOR ADDITIONAL INFORMATION.

8. INDEPENDENT TESTING LABORATORY & SPECIAL INSPECTIONS

A. A GEOTECHNICAL EXPLORATION OF SUBSURFACE CONDITIONS, CONTAINING TEST BORINGS, LABORATORY TEST, ENGINEERING ANALYSIS AND FOUNDATION RECOMMENDATIONS, PERFORMED BY **ALPHA TESTING, LLC** DATED **AUGUST 15, 2023** , PROPOSAL NO. **99528** IS AVAILABLE FOR REVIEW.

B. EMPLOYMENT OF A TESTING LABORATORY IN NO WAY RELIEVES THE CONTRACTOR OF ANY OBLIGATION TO PERFORM WORK IN ACCORDANCE WITH THE CONTRACT DOCUMENTS.

C. CONTRACTOR RESPONSIBILITIES:

1. DELIVER TO LABORATORY AT DESIGNATED LOCATION ADEQUATE SAMPLES OF MATERIALS PROPOSED TO BE USED WHICH REQUIRE TESTING, TOGETHER WITH PROPOSED MIX DESIGNS.
2. COOPERATE WITH LABORATORY PERSONNEL AND PROVIDE ACCESS TO WORK AND TO MANUFACTURER'S FACILITIES.
3. PROVIDE INCIDENTAL LABOR AND FACILITIES TO PROVIDE ACCESS TO WORK TO BE TESTED, TO OBTAIN AND HANDLE SAMPLES AT THE SITE OR AT SOURCE OF PRODUCTS TO BE TESTED, TO FACILITATE TEST AND INSPECTIONS AND FOR STORAGE AND CURING OF TEST SAMPLES.
4. NOTIFY LABORATORY OF MATERIAL SOURCES AND FURNISH NECESSARY QUANTITIES OF REPRESENTATIVE SAMPLES OF MATERIALS PROPOSED FOR USE WHICH ARE REQUIRED TO BE TESTED.
5. NOTIFY ARCHITECT AND LABORATORY 24 HOURS PRIOR TO EXPECTED TIME FOR OPERATIONS REQUIRING INSPECTION AND TESTING SERVICES.
6. ADVISE LABORATORY IN A TIMELY FASHION TO COMPLETE REQUIRED INSPECTION AND TESTING PRIOR TO SUBSEQUENT WORK BEING PERFORMED.
7. PAY FOR ALL SUBSEQUENT RE-TESTING OF PRODUCTS OR SYSTEMS FOUND TO BE DEFECTIVE OR OTHERWISE NOT IN ACCORDANCE WITH SPECIFICATION REQUIREMENTS. REMOVE REJECTED PRODUCTS AND REPLACE WITH PRODUCTS OF SPECIFIED QUALITY.

D. SPECIAL INSTRUCTIONS:

1. THE OWNER SHALL EMPLOY ONE OR MORE SPECIAL INSPECTOR(S) TO PROVIDE INSPECTIONS DURING CONSTRUCTION ON THE TYPES OF CONSTRUCTION LISTED IN THIS SECTIONS. THE SPECIAL INSPECTOR SHALL BE A QUALIFIED PERSON WHO SHALL DEMONSTRATE COMPETENCE TO THE INSPECTIONS BEING PERFORMED TO THE SATISFACTION OF THE ENGINEER OF RECORD AND THE BUILDING OFFICIAL. THE SPECIAL INSPECTOR SHALL HAVE EXPERIENCE WITH AT LEAST FIVE OTHER PROJECTS SIMILAR IN NATURE.
2. THE PURPOSE OF THE INSPECTIONS SHALL BE TO ENFORCE COMPLIANCE WITH THE CONSTRUCTION DRAWINGS, SPECIFICATIONS, GEOTECHNICAL REPORT AND THE **2018** INTERNATIONAL BUILDING CODE, SECTION 1704.
3. THE FOLLOWING ITEMS REQUIRE INSPECTION BY THE SPECIAL INSPECTOR:

REFERENCED STANDARD	FREQUENCY
STRUCTURAL / REINFORCING STEEL:	
HIGH STRENGTH BOLTING	
BEARING TYPE CONNECTIONS	PERIODIC
SLIP CRITICAL CONNECTIONS	CONTINUOUS
WELDING OF STRUCTURAL STEEL	
FULL PENETRATION GROOVE WELDS	CONTINUOUS
MULTI-PASS FILLET WELDS	CONTINUOUS
SINGLE-PASS FILLET WELDS > 5/16"	CONTINUOUS
SINGLE-PASS FILLET WELDS <=5/16"	PERIODIC
FLOOR AND DECK WELDS	PERIODIC
WELDING OF REINFORCING STEEL	
WELDABILITY OF STEEL, OTHER THE ASTM A706	PERIODIC
SHEAR REINFORCEMENT	CONTINUOUS
OTHER REINFORCEMENT	PERIODIC
INSPECTION OF STEEL FRAME AND JOISTS	
DETAILS SUCH AS BRACING AND STIFFENING	PERIODIC
MEMBERS SIZES AND LOCATION	PERIODIC
APPLICATION OF CONNECTION DETAIL	PERIODIC
CONCRETE CONSTRUCTION	
REINFORCING STEEL	PERIODIC RANDOMLY @ 20%
CONCRETE MIX DESIGN	PERIODIC EACH CONCRETE POUR
SAMPLING OF FRESH CONCRETE	CONTINUOUS (SEE NOTE 1)
MAINTENANCE OF SPECIFIED CURING TEMPS AND TECHNIQUES	PERIODIC EACH POUR
INSPECTION OF CONCRETE PLACEMENT FOR PROPER APPLICATION TECHNIQUES	CONTINUOUS
INSPECTION OF MAINTENANCE OF SPECIFIED CURING TEMPERATURE AND TECHNIQUES	PERIODIC
DRILLED & EPOXIED ANCHORS	EACH APPLICATION (SEE NOTE 2)
INSPECT FORMWORK FOR SHAPE, LOCATION AND DIMENSIONS	PERIODIC
SOILS (SLAB-ON-GRADE):	
VISUAL OBSERVATIONS	PERIODIC
PROOF ROLLING OBSERVATION	CONTINUOUS
MOISTURE CONDITIONING & RECOMPACTION	CONTINUOUS OR PERIODIC, 1 DENSITY TEST FOR EACH 2,000 SF
DURING FILL PLACEMENT	CONTINUOUS OR PERIODIC
EVALUATION OF IN PLACE DENSITY FILL	CONTINUOUS OR PERIODIC
PIERS:	
OBSERVE DRILLING OPERATIONS AND COMPLETE RECORD OF DRILLING	CONTINUOUS
VERIFY PLACEMENTS LOCATIONS AND PLUMBNESS, LENGTH, EMBEDMENT AND ADEQUATE BEARING STRENGTH CAPACITY CONFIRM PIER DIAMETER, REINFORCING STEEL - RE CONCRETE ABOVE	CONTINUOUS
FOOTINGS:	
OBSERVE EXCAVATION OPERATIONS AND COMPLETE RECORD OF EXCAVATION	CONTINUOUS
VERIFY PLACEMENTS LOCATIONS AND PLUMBNESS, LENGTH, EMBEDMENT AND ADEQUATE BEARING STRENGTH CAPACITY CONFIRM FOOTING DIMENSIONS, REINFORCING STEEL - RE CONCRETE ABOVE	CONTINUOUS

NOTES:

1. PROVIDE A SET OF 4 FOR EVERY 75 CY OF BUT NOT LESS THAN 1 / 5,000 SF OF SLAB OR WALL SURFACE AREA. MONITOR SLUMP AND AIR CONTENT OF CONC. AND NOTIFY DELIVERY DRIVER IF SLUMP DEVIATES MORE THAN 1" FROM SPEC'D VALUE.
2. ALL DRILLED AND EPOXIED ANCHORS (REBAR, BOLTS, THREADED RODS ETC.) SHALL BE PULL TESTED TO 110% FOR NO LESS THAN 3 MIN.
3. ADDITIONAL TESTS AT THE CONTRACTOR'S EXPENSE WILL BE PERFORMED TO DETERMINE COMPLIANCE OF REPLACED OR ADDITIONAL WORK WITH SPECIFIED REQUIREMENTS.
4. CORRECT DEFICIENCIES IN WORK THAT TEST REPORTS AND INSPECTIONS INDICATE DO NOT COMPLY WITH THE CONTRACT DOCUMENTS.
5. PROVIDE THE ENGINEER OF RECORD (EOR) COPIES OF ALL SPECIAL INSPECTIONS SO A SPECIAL INSPECTIONS REPORT CAN BE PREPARED FOR OBTAINING A CERTIFICATE OF OCCUPANCY.

9. COLD-FORMED METAL FRAMING:

A. PROVIDE COLD-FORMED METAL FRAMING, INCLUDING TRUSSES, STUDS, JOIST, TRACK, RUNNERS, LINTELS, CLIP ANGLES, REINFORCEMENTS, SHOES, BLOCKING, AND BRIDGING, COMPLETE WITH ALL FASTENERS, AND ACCESSORIES NEEDED FOR A COMPLETE AND FINISHED INSTALLATION.

B. THE STRUCTURAL DRAWINGS INDICATE THE GENERAL CONFIGURATION OF FRAMING FOR TYPICAL CONDITIONS ONLY. FINAL CONFIGURATION OF DETAILS AS WELL AS ALL SUPPLEMENTARY FRAMING TO OBTAIN THE ROOF PROFILES SHOWN ON THE PLANS SHALL BE AS DETERMINED BY DESIGN.

C. COLD-FORMED METAL FRAMING SHALL BE DESIGNED IN ACCORDANCE WITH AMERICAN IRON AND STEEL INSTITUTE (AISI) PUBLICATION: "SPECIFICATION FOR DESIGN OF COLD-FORMED STEEL STRUCTURAL MEMBERS", LATEST EDITION. PROVIDE STEEL FOR RAFTERS. JOISTS, STUDS AND ACCESSORIES CONFORMING TO ASTM A1003, GRADE 50, STRUCTURAL QUALITY STEEL SHEET FORMED TO 'C' SHAPES, UNPUNCHED WITH STIFFENED FLANGES.

D. ALL STRUCTURAL MEMBERS SHALL BE FORMED FROM CORROSION-RESISTANT STEEL, CORRESPONDING TO THE REQUIREMENTS OF ASTM A446, GRADE C, WITH A MINIMUM YIELD STRENGTH OF 50 KSI FOR STUDS AND JOISTS AND GRADE A, 33KSI, FOR RUNNERS. ALL STRUCTURAL MEMBERS SHALL BE ZINC COATED MEETING ASTM A525, G-60, OR EQUIVALENT. TYPICAL.

E. FASTENING OF COMPONENTS SHALL BE WITH SELF-DRILLING SCREWS OR BY WELDING. SCREWS AND WELDS SHALL BE OF SUFFICIENT SIZE TO ENSURE THE STRENGTH OF THE CONNECTION. ALL WELDS SHALL BE TOUCHED-UP WITH A ZINC-RICH PAINT.

F. SUBMIT SHOP DRAWINGS FOR ALL FRAMING PREPARED UNDER THE SUPERVISION OF A REGISTERED PROFESSIONAL ENGINEER, AND CALCULATIONS, SIGNED AND SEALED BY SAID ENGINEER, FOR REVIEW PRIOR TO ERECTION OF ANY COLD-FORMED METAL FRAMING.

SHOP DRAWINGS SUBMITTED FOR REVIEW SHALL CONTAIN THE FOLLOWING FOR EACH:

- **A.** COMPLETE ERECTION DRAWINGS SHOWING LOCATION AND SPACING OF ALL FRAMING MEMBERS.
- **B.** SIZE AND GAGE OF ALL FRAMING MEMBERS.
- **C.** DETAIL DRAWINGS OF ALL PREFABRICATED ASSEMBLIES.
- **D.** LOADING CONDITIONS USED IN DESIGN.
- **E.** CALCULATED FORCES FOR ALL MEMBERS.
- **F.** ANCHORAGE DETAILS, CONNECTION DETAILS, SLICE DETAILS, TEMPORARY AND PERMANENT BRACING.

G. TEMPORARY BRACING, WHERE REQUIRED, SHALL BE PROVIDED UNTIL ERECTION IS COMPLETE.

H. THE INFORMATION PROVIDED SHALL TAKE INTO ACCOUNT AND SHOW ALL SPECIAL DESIGN, FRAMING AND CONNECTION REQUIREMENTS SUCH AS AT CONCENTRATED LOADS, UNBALANCED OR UNSYMMETRICAL LOAD CONDITIONS, AND OTHER NON-TYPICAL FRAMING DETAILS.

I. SPLICES IN FRAMING COMPONENTS, OTHER THAN RUNNER TRACK, SHALL NOT BE PERMITTED.

J. BLOCKING SHALL BE PROVIDED AT SUPPORTS WHERE JOISTS ARE NOT OTHERWISE RESTRAINED FROM ROTATION.

K. ABUTTING LENGTHS OF RUNNER TRACK SHALL BE BUTT-WELDED, SPLICED OR EACH LENGTH SECURELY ANCHORED TO A COMMON STRUCTURAL ELEMENT. RUNNER TRACK SHALL BE SECURELY ANCHORED TO THE SUPPORTING STRUCTURE.

L. PROVIDE MEMBERS WITH THE FOLLOWING MINIMUM SECTION PROPERTIES:

SECTION	MINIMUM THICKNESS	Ix (MOMENT OF INERTIA	Sx (SECTION MODULUS)	FY (YIELD STRENGTH)
6" TYPICAL JOISTS, RAFTERS	0.056 INCHES	2.83 INCHES ^{4}	0.95 INCHES ^{3}	50 KSI
6" EXTERIOR STUDS	0.056 INCHES	2.31 INCHES ^{4}	0.95 INCHES ^{3}	50 KSI
3 5/8" INTERIOR STUDS	0.045 INCHES	0.71 INCHES ^{4}	0.39 INCHES ^{3}	33 KSI
RUNNER TRACK	0.045 INCHES	2.49 INCHES ^{4}	0.81 INCHES ^{3}	33 KSI

M. MEMBER PERFORMANCE:

1. RAFTERS AND HEADERS: VERTICAL DEFLECTION IS LIMITED TO 1/240 OF THE SPAN.
2. STUDS: HORIZONTAL DEFLECTION IS LIMITED TO 1/240 OF THE SPAN (TYPICAL); FOR BRICK VENEER 1/600 OF THE SPAN.

11. LOOSE VENEER LINTEL SCHEDULE

MASONRY OPENING	SIZE	DETAIL
LESS THAN 4'-0"	L 3 1/2 x 3 1/2 x 1/4	L
4'-0" BUT LESS THAN 5'-0"	L 4 x 4 x 1/4	L
5'-0" BUT LESS THAN 6'-0"	L 5 x 3 1/2 x 1/4 LLV	L
6'-0" BUT LESS THAN 7'-0"	L 6 x 3 1/2 x 5/16 LLV	L
7'-0" BUT LESS THAN 8'-6"	L 6 x 4 x 5/16 LLV	L

NOTE:
PROVIDE 8" MINIMUM BEARING EACH END FOR STEEL LOOSE LINTELS. ONE ANGLE SHALL BE PROVIDED FOR EACH WYTHE OF BRICK. SEE ARCHITECTURAL DRAWINGS FOR LOCATIONS. HOT DIP GALVANIZE ALL LINTELS AFTER FABRICATION.

9. 3/4" DIA. HEADED SHEAR STUDS @ 12" OC MINIMUM ON ALL BEAMS/GIRDERS AT COMPOSITE DECK.
10. SLAB ON DECK REINFORCING 4" X 4" W4 X W4 WELDED WIRE MESH.
11. PROVIDE CONTINUOUS SHEET METAL CLOSURES AT SLAB OPENINGS AND SLAB EDGES AND CONTINUOUS DECK CLOSURES AT DECK ENDS.
12. AT INTERIOR WINDOWS / STOREFRONT GREATER THAN 10'-0" LONG, PROVIDE HSS10X6X1/2 PER DETAIL 1, 8, & 9 /S502. GC TO COORDINATE ALL LOCATIONS WITH ARCH.
13. BEAMS SUBJECT TO MOMENT CONNECTIONS AND RUNNING PARALLEL TO FLOOR BEAMS, PROVIDE L3X3X1/4 KICKERS AT 5'-0" OC FROM BEAM BOTTOM FLANGES TO ADJACENT BEAM TOP FLANGES.
14. AT DECK CHANGE DIRECTION, STEEL FABRICATOR TO PROVIDE ANY NECESSARY CLOSURE PLATES.

STEEL ROOF FRAMING NOTES:

1. ALL ELEVATIONS ARE RELATIVE TO DATUM ELEVATION.
2. " DECK / TYPE 2 " (EXAMPLE) INDICATES ROOF DECK SPAN DIRECTION AND DECK TYPE 2.
   TOS ELEVATION AT ROOF DECKS ARE AT BOD, TYP, UON.
   FOR DECK TYPE INFORMATION **RE: 7 / S101**
3. COORDINATE LOCATIONS AND SIZES OF ALL CHASES AND PENETRATIONS WITH MEP. COORDINATE EXACT LOCATION OF ALL MEP UNITS WITH MEP. FOR FRAMING AROUND ROOF OPENINGS **RE: 7 / S504**
4. FOR ELEVATOR SUPPORT DETAILS **RE: 7 / S502** & **RE: 6 / S502**
5. FOR BRACE ELEVATIONS AND DETAILS **RE: S801**.

   G.C. TO COORDINATE FINAL PIPE RUN LOCATIONS WITH MEP DRAWINGS
   ALL PIPE RUNS INDICATED IN THE STRUCTURAL DRAWINGS ARE FOR REFERENCE ONLY.
   FOR ADDITIONAL INFORMATION **RE: 14 / S504** & **RE: 15 / S504**
6. AT ROOF, PROVIDE (AS REQUIRED) RIDGE AND VALLEY PLATES, COLUMN CLOSURES, CANT. STRIPS, SUMP PLATES AT PIPING PENETRATIONS AND RECESSED SUMP PANS AT ROOF DRAINS. PROVIDE SUPPLEMENTAL FRAMING AT OPENINGS AS REQUIRED FOR SUPPORT OF METAL DECK. OPENINGS SHALL BE COORDINATED WITH ARCHITECTURAL AND MECHANICAL DRAWINGS.
7. ALL EXPOSED STEEL TO BE HOT DIPPED GALVANIZED.
8. JOISTS SUPPORTING RTU UNITS TO BE KCS JOISTS MATCHING THE SAME K-JOIST SIZE OR LARGER ADJACENT TO IT.
9. AT DECK CHANGE DIRECTION, STEEL FABRICATOR TO PROVIDE ANY NECESSARY CLOSURE PLATES.
10. WHERE K-JOISTS AND LH-JOISTS BEAR ON THE SAME BEAM, K-JOIST SEAT TO MATCH LH-JOIST SEAT.
11. ROOF BEAMS ADJACENT TO CAMBERED LONG SPAN JOISTS TO BE CAMBERED TO MAINTAIN PROPER DECK BEARING, STEEL FABRICATOR TO COORDINATE WITH JOIST MANUFACTURER.
12. BEAMS SUBJECT TO MOMENT CONNECTIONS, PROVIDE L3X3X1/4 AT 6'-0" OC FROM BEAM BOTTOM FLANGES TO ADJACENT JOIST OR BEAM TOP FLANGES.
13. GC TO COORDINATE WITH THE ELEVATOR SUBMITTAL TO DETERMINE THE EXACT SHAFT OPENING SIZES AND THE SLAB EDGE DIMENSIONS.

SPREAD FOOTING GENERAL NOTES

1. A GEOTECHNICAL REPORT IS AVAILABLE FOR REVIEW **RE: 6 / S101**

2. THE INDEPENDENT TESTING LABORATORY SHALL CONFIRM THE ALLOWABLE SOIL BEARING CAPACITY IN THE FIELD AT THE ELEVATION DESIGNATED AS THE PLANE OF BEARING FOR THE FOOTING.
   a. ALLOWABLE BEARING PRESSURE OF 6,000 PSF

3. THE INDEPENDENT TESTING LABORATORY SHALL INSPECT THE BOTTOM AND SIDES OF THE FOOTING PRIOR TO PLACING REINFORCING AND CONCRETE.

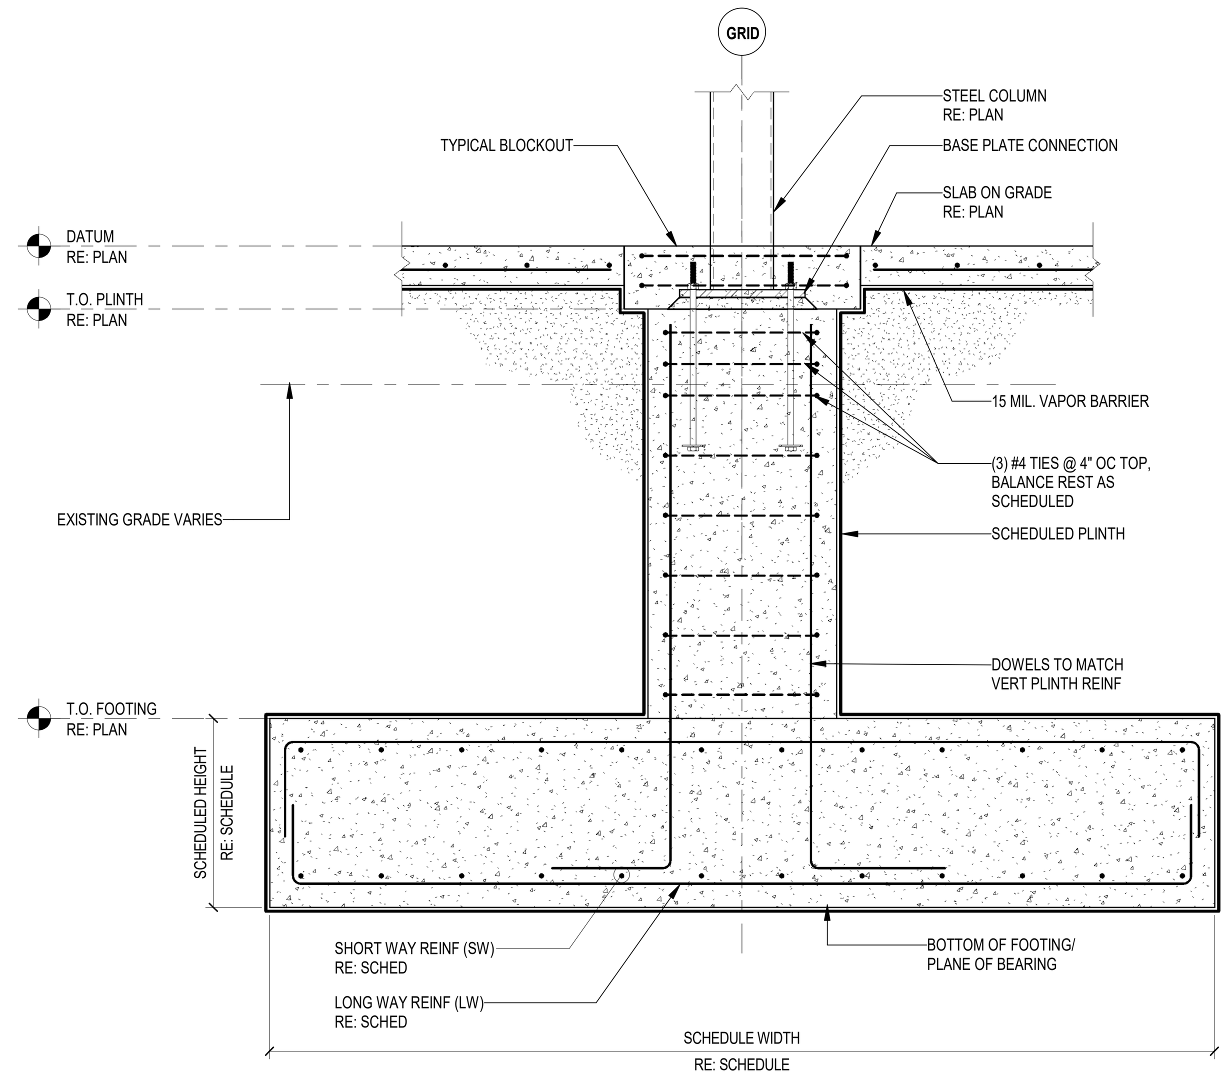
4. CENTER ALL FOOTINGS UNDER THEIR COLUMNS AND WALLS, U.O.N.

5. PUMP OUT ANY STANDING WATER AND IMMEDIATELY PLACE REINFORCING STEEL AND CONCRETE.

6. PROVIDE NEW DEFORMED BILLET REINFORCING STEEL FOR FOOTINGS CONFORMING TO ASTM A615, GRADE 60.

7. UNIFORMLY DISTRIBUTE ALL SCHEDULE REINFORCING.

SPREAD FOOTING DETAILS



PLINTH SCHEDULE

MARK	PLINTH TYPE	REINFORCING		REMARKS
		VERTICAL	TIES

"n"	L (INCHES)	ALLOWABLE BOLT CAPACITY (KIPS)	ALLOWABLE WELD CAPACITY (KIPS)
2	5 1/2"	37	48
3	8 1/2"	56	77
4	11 1/2"	74	100
5	14 1/2"	93	122
6	17 1/2"	111	143
7	20 1/2"	130	160
8	23 1/2"	148	180
9	26 1/2"	167	198
10	29 1/2"	186	215

NOTES:

1. REFER TO AISC - MANUAL OF STEEL CONSTRUCTION (SECTION 1).

2. ALLOWABLE WELD CAPACITY IS BASED UPON A BEAM WEB THICKNESS OF 1/2" FOR A36 MATERIAL AND 3/8" FOR ASTM A572, GRADE 50 MATERIAL. REDUCE THIS CAPACITY PROPORTIONALLY FOR A LESSER WEB THICKNESS.

3. THE SUPPORTING PLATE CAPACITY SHALL BE BASED UPON AN ALLOWABLE LOAD PER BOLT OF 65 KIPS PER INCH OF PLATE THICKNESS FOR A36 MATERIAL OR 73 KIPS PER INCH OF PLATE THICKNESS FOR ASTM A572, GRADE 50 MATERIAL. FOR BEAM CONNECTIONS ON TWO SIDES, THE SUM OF THE LOADS PER BOLT SHALL BE CONSIDERED.

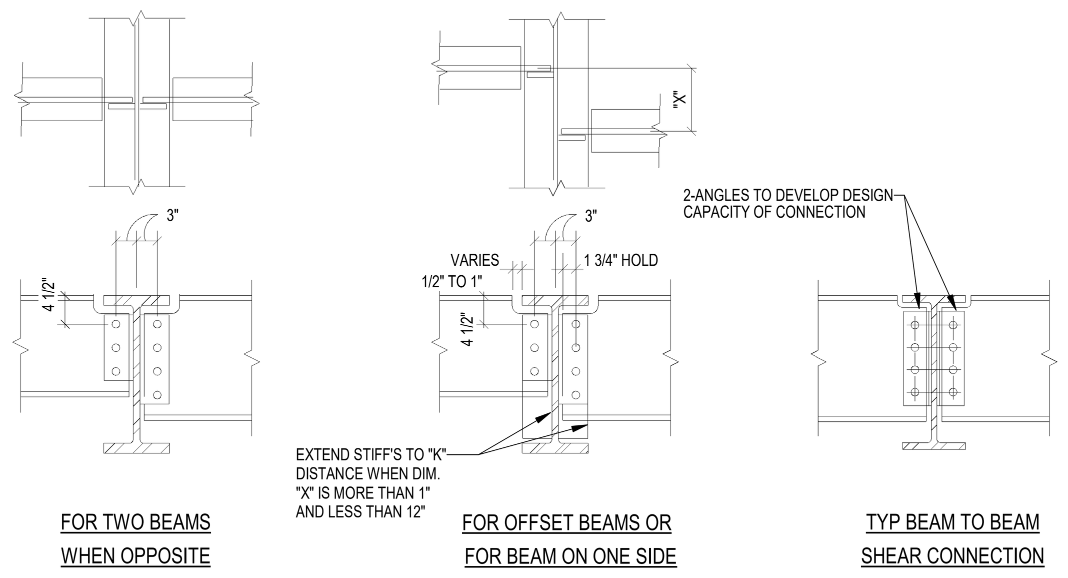
4. FOR COPED BEAM CONNECTIONS, THE CAPACITY OF THE NET SHEAR AREA OF THE WEB SHALL BE VERIFIED.

5. THE CAPACITY OF THE CONNECTION SHALL BE THE LESSER VALUE OF THE ALLOWABLE BOLT CAPACITY, ALLOWABLE WELD CAPACITY, SUPPORTING PLATE CAPACITY OR THE WEB NET SHEAR AREA CAPACITY.

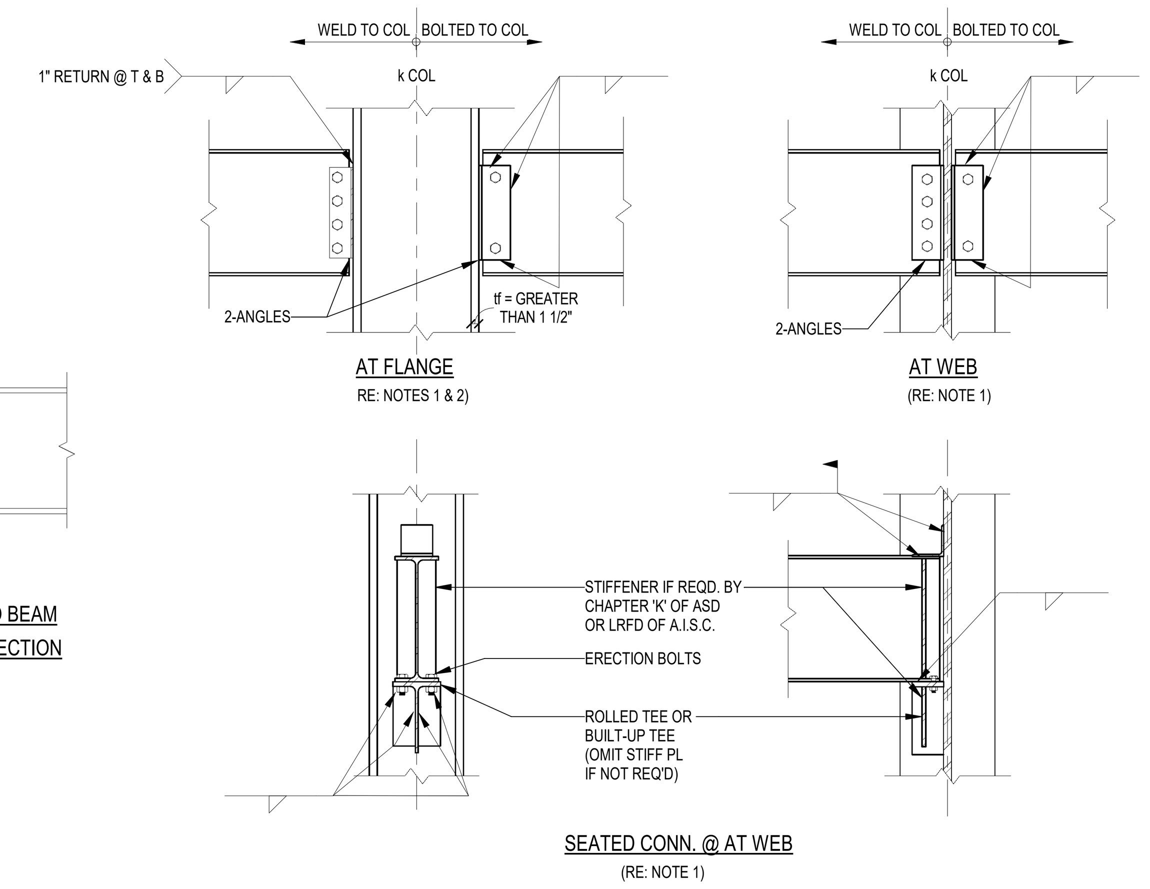
6. THE MINIMUM NUMBER OF ROWS OF BOLTS SHALL BE AS FOLLOWS:

W10 & W12	2 ROWS
W14 & W16	3 ROWS
W18, W21, & W24	4 ROWS
W27 & W30	5 ROWS
W33 & W36	6 ROWS

3/4" Ø A325 BOLTS - BEARING CONN. - STANDARD HOLES



NOTES:-
1. BOTH THE WELDS & THE BOLTS TO BE DESIGNED FOR MOMENT CAUSED BY ECCENTRICITY BETWEEN WELD GROUP & BOLT CENTERLINE.
2. END REACTION TO BE DETERMINED PER GENERAL NOTES SHEET OR AS SHOWN ON PLANS.



NOTES:

1. CONN. TO BE ADEQUATE FOR AXIAL BRACING FORCE = 1% OF WORKING COLUMN LOAD IN ADDITION TO END REACTION DETERMINED PER STEEL GENERAL NOTES SHEET (U.N.O. ON DWG.) ALLOWABLE STRESS CAN BE INCREASED 1/3 FOR THIS CONDITION. COLUMN LOAD WILL BE FURNISHED OR CAN BE DETERMINED FROM AISC MANUAL FOR FLOOR TO FLOOR HEIGHT.

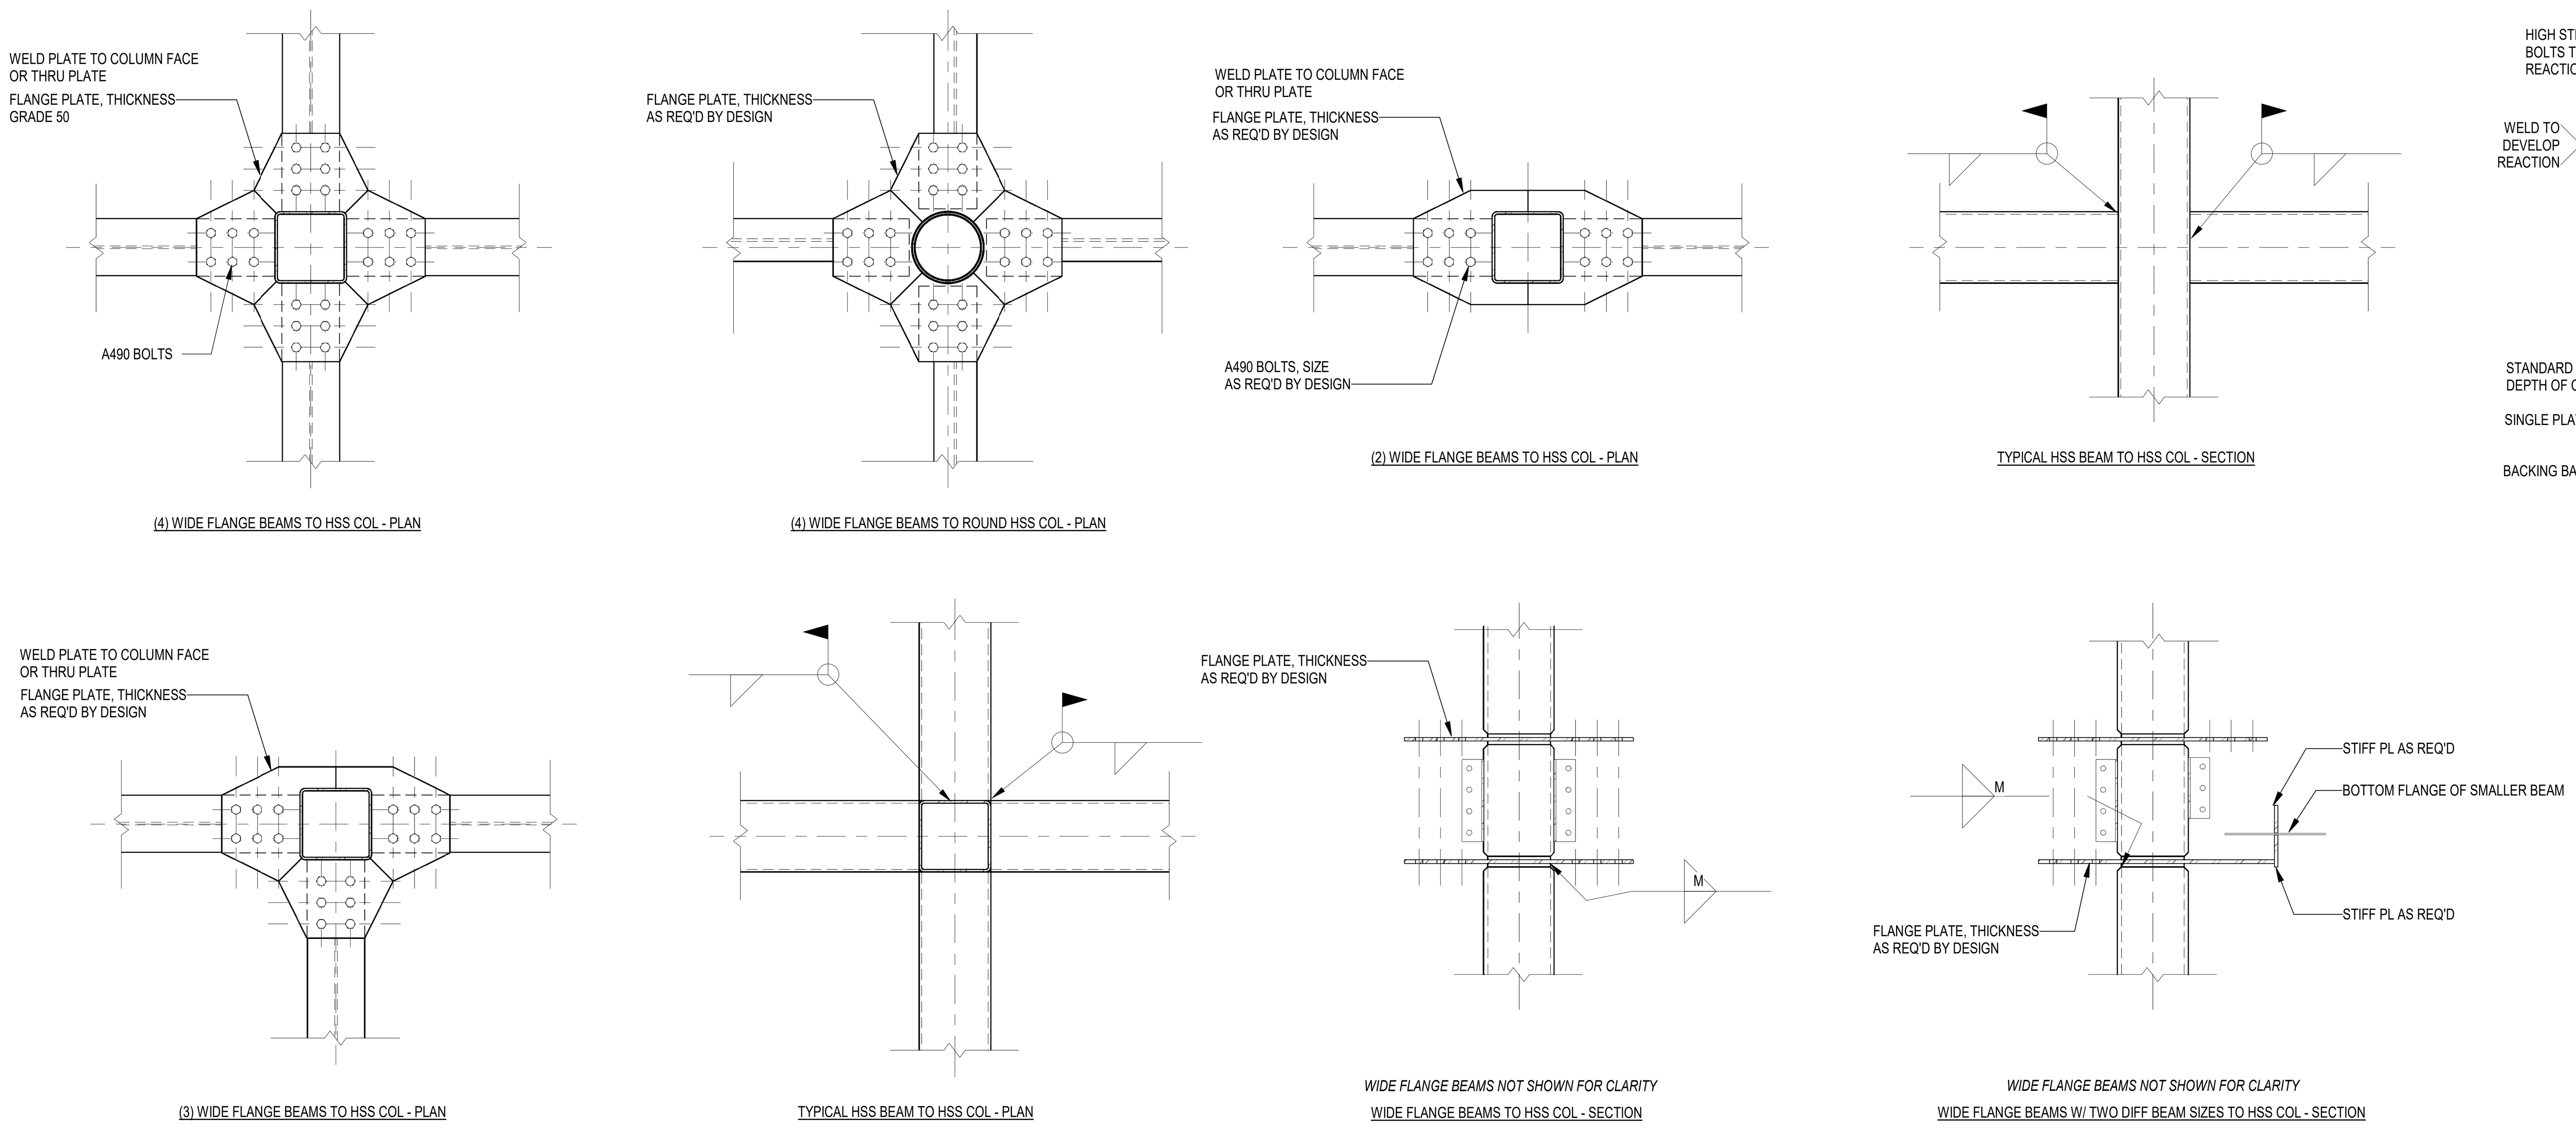
2. SINGLE PLATE CONNECTION IS ALLOWED ONLY WHEN AXIAL FORCE BRACING THE COLUMN IS LESS THAN 20 KIPS. THE DESIGN OF SINGLE PLATE CONNECTION WITH AXIAL FORCE LESS THAN 20 KIPS. SHOULD BE SUBSTANTIATED BY CALCULATION AND IS SUBJECT TO ENGINEER'S APPROVAL.

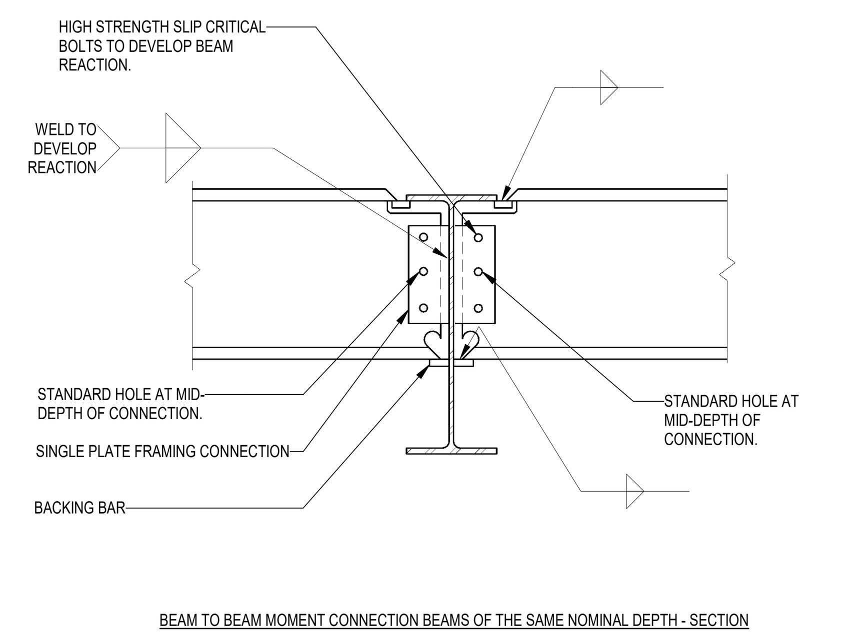
3/4" Ø A325 BOLTS - BEARING CONN. - STANDARD HOLES

1 STANDARD BEAM CONNECTION
3/4" = 1'-0"

2 BEAM CONNECTION DETAILS
3/4" = 1'-0"

3 TYPICAL BEAM TO COLUMN CONN. @ FLANGE & WEB
N.T.S.





NOTES:

1. BOLTS IN WEB CONNECTION SHALL BE SNUG TIGHTENED PRIOR TO WELDING OF FLANGES.

2. SLIP-CRITICAL BOLTED CONNECTION IN WEB USING A325 BOLTS IN HORIZONTAL SHORT-SLOTTED HOLES U.N.O. RESISTANCE BY BOLTS TO SHEAR SHALL BE BY FRICTION, PROPORTIONED USING THE STANDARD HOLE VALUE ON A CLASS "A" SURFACE.

3. REFER TO SPECIFICATIONS FOR CONNECTION DESIGN CRITERIA.

4. PROVIDE PREDESIGNED SHEAR CONNECTIONS AS SHOWN IN AISC LRFD MANUAL WHERE APPLICABLE.

5. IF MOMENT IS SHOWN ON DRAWINGS, PARTIAL PENETRATION WELD TO DEVELOP MOMENT CAN BE USED IN LIEU OF CJP WELD. FOR THIS CASE, WELD SHALL BE REQUIRED TO DEVELOP THE BEAM FLANGE
FORCE COMPUTED AS FOLLOWS: Pu = (Mu)/(0.95D).
WHERE: Mu = DESIGN MOMENT (KIP-IN).
D = BEAM DEPTH (INCHES).
Pu = BEAM FLANGE FORCE (KIPS).

6. ALL MOMENT CONNECTIONS DETAILS SHOWN IN THIS SHEET ARE FOR REFERENCE ONLY TO SHOW THE INTENT OF THE DESIGN. STEEL FABRICATOR TO DETERMINE/DESIGN ALL REQUIRED BOLTING, PLATES WELDING TO REINFORCE BEAMS AND COLUMNS AS NEEDED TO ACHIEVE 100% BEAM CAPACITY AND PROVIDE SIGNED SEALED CALCULATIONS BY LICENSED ENGINEER IN STATE OF TEXAS TO EOR FOR REVIEW.

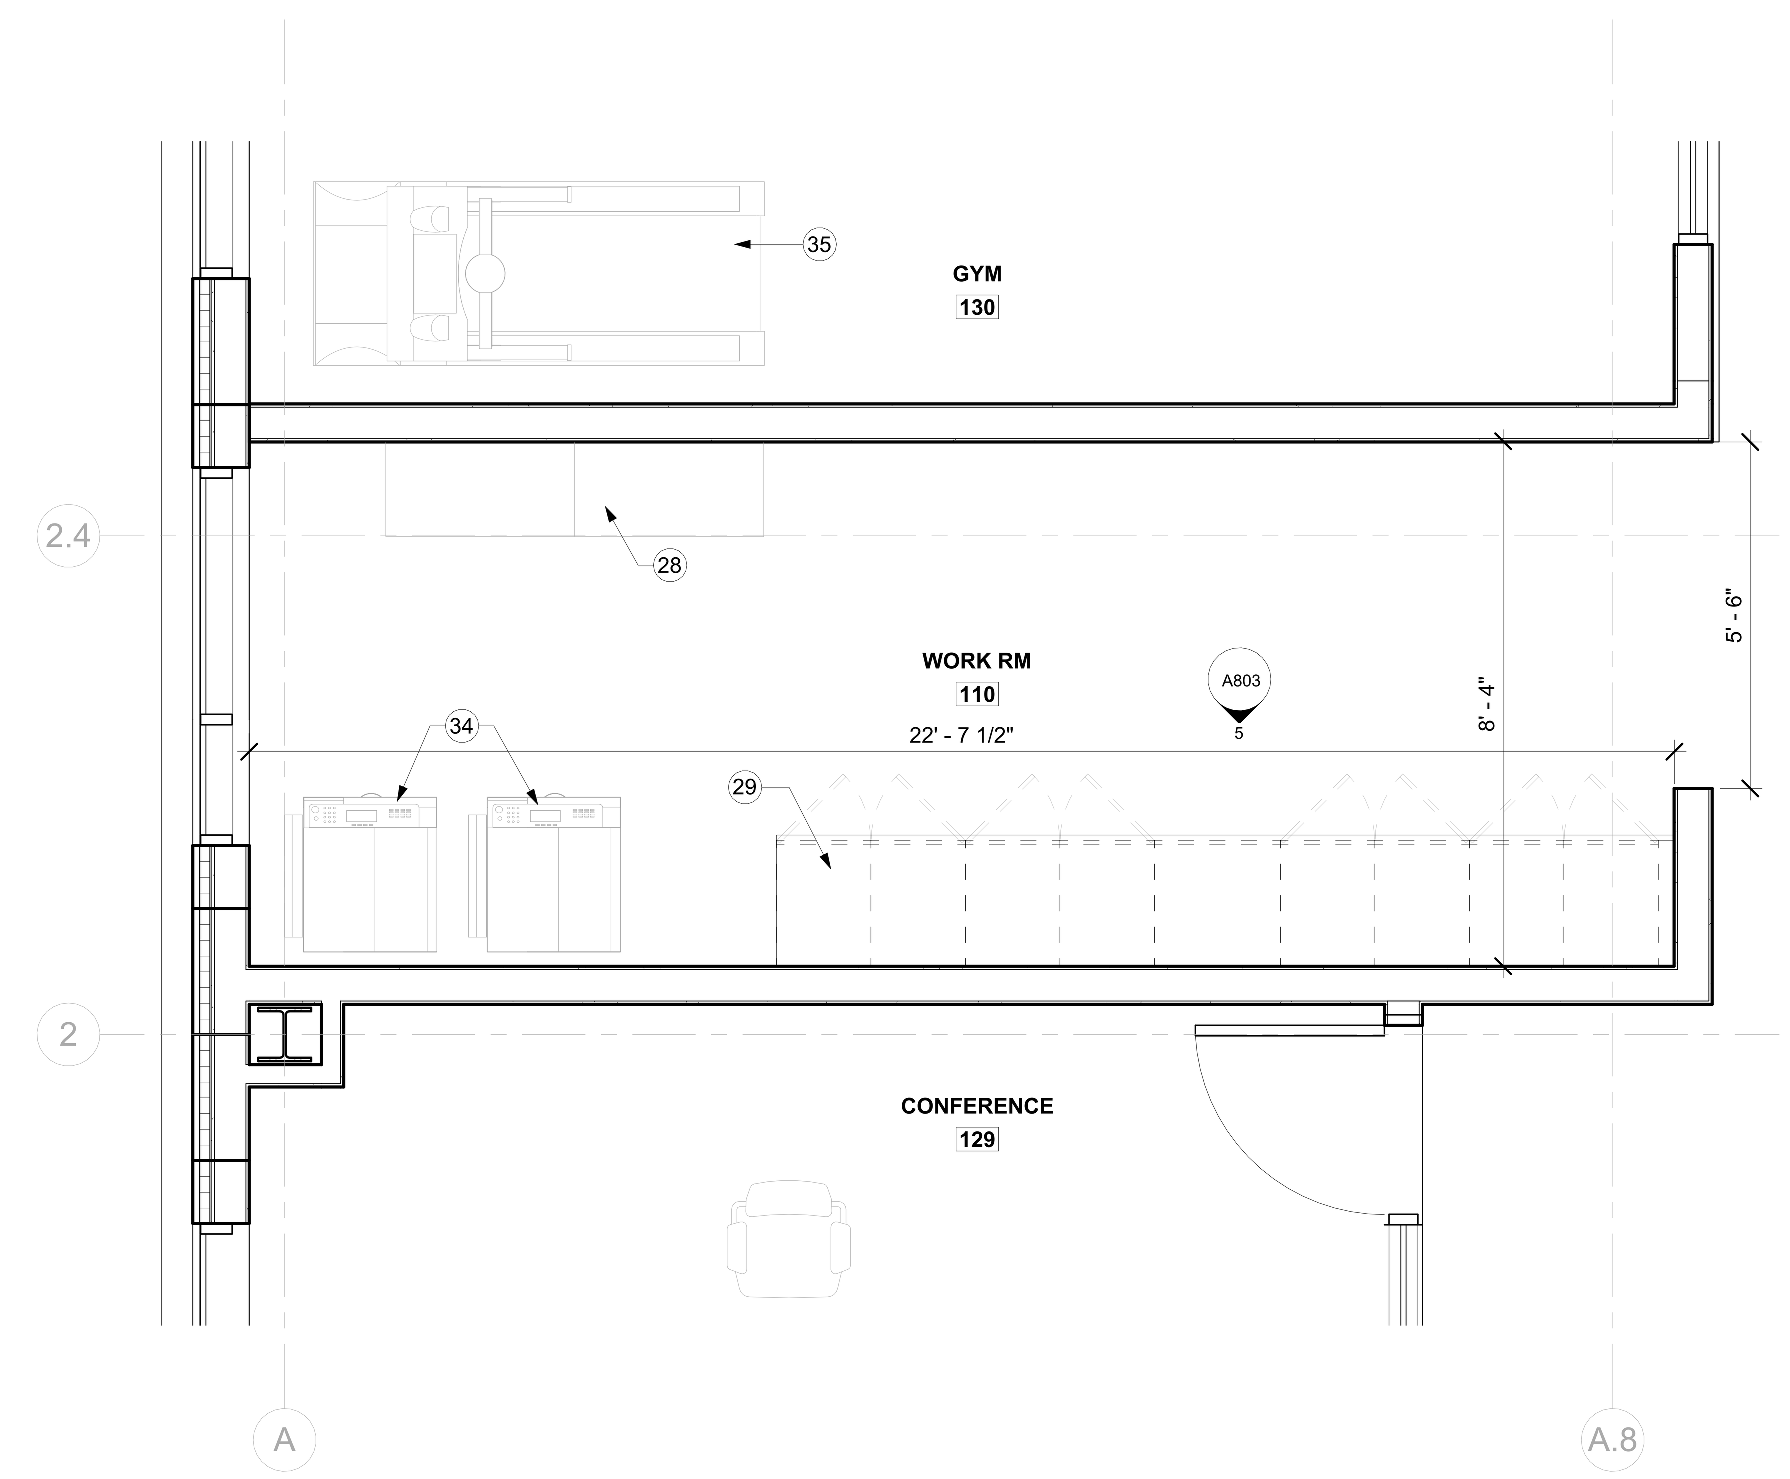
13 A417 ENLG PLAN: WORK ROOM 331
SCALE : 1/2" = 1'-0"



5 A417 ENLG PLAN: WORK ROOM 110
SCALE : 1/2" = 1'-0"

GENERAL NOTES: RESTROOMS & BREAK ROOMS

A. FINISH SCHEDULE & LEGEND REFER TO A900 & A901.

B. WALL PARTITION TYPES REFER TO A950.

C. RESTROOMS AT OFFICE BUILDING, PERIMETER WALLS (GYP & METAL STUD) TO GO TO UNDERSIDE OF DECK AND PROVIDE ACOUSTICAL BATT INSULATION.

D. COORDINATE INSTALLATION OF REQUIRED BLOCKING AND STABALIZING FOR FIXTURES.

E. THE STRUCTURAL STRENGTH OF GRAB BARS AT ACCESSIBLE WATER CLOSETS SHALL COMPLY WITH TEXAS ACCESSIBILTY STANDARDS 2012.

CEILING FINISH & LIGHTING:

- CEILING FINISH = BRUSHED STAINLESS STEEL
- LIGHTING = STANDARD LED ROUND SPOT DOWNLIGHTS

BASIS OF DESIGN: SCHINDLER 3300 / CAPACITY 3500 LBS

CORNERS AND SKIRTING:

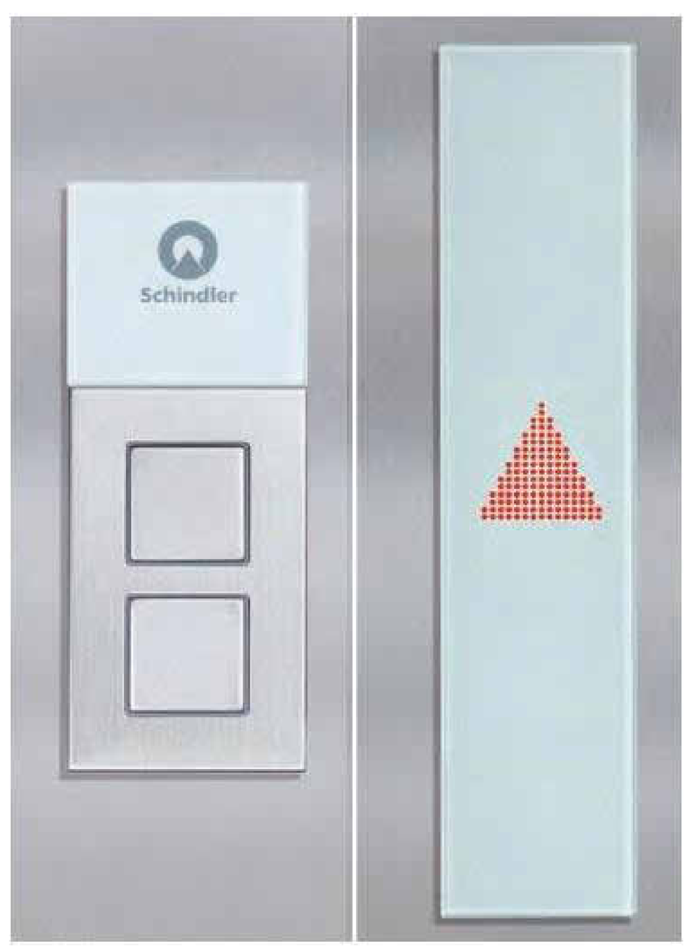
- ANODIZED ALUMINUM, GREY

BASIS OF DESIGN: SCHINDLER 3300 / CAPACITY 3500 LBS

HANDRAIL:

- RECTANGULAR CUT END, BRUSHED STAINLESS STEEL

BASIS OF DESIGN: SCHINDLER 3300 / CAPACITY 3500 LBS



HALL FIXTURES:

- STANDARD CALL BUTTONS AND CALL INDICATOR

BASIS OF DESIGN: SCHINDLER 3300 / CAPACITY 3500 LBS

LANDING DOORS FINISH:

- DOORS FINISH = STAINLESS STEEL

BASIS OF DESIGN: SCHINDLER 3300 / CAPACITY 3500 LBS

WALL FINISH AND FLOOR FINISH:

- WALL FINISH = POWDER COATED PAINT WALLS IN EDMONTON WHITE
- FLOOR FINISH = LASSA WHITE PORCELAIN TILE (PT-2)
- NOTE: ELEVATOR FLOOR NEEDS TO BE RECESSED TO ACCOMODATE CUSTOM FLOORING

BASIS OF DESIGN: SCHINDLER 3300 / CAPACITY 3500 LBS

GENERAL NOTES: INTERIOR ELEVATIONS

A. THE GENERAL CONTRACTOR SHALL CONFIRM ALL DIMENSIONAL, ARCHITECTRUAL AND M.E.P. REQUIREMENTS AS CONFIGURED IN THESE DOCUMENTS.

B. ALL INTERIOR DIMENSIONS ARE MEASURED FROM FINISH FACE TO FINISH FACE UNLESS NOTED OTHERWISE. REFER TO THE ANNOTATION SYMBOL LEGEND AT SHEET G0.00 FOR TYPICAL DOOR PLACEMENT ON THE WALL THAT DOES NOT HAVE A DIMENSION PLACEMENT.

C. REFER TO FLOOR PLANS A110 THRU A112 AND REFLECTED CEILING PLANS A120 THRU A122 FOR ADDITIONAL INFORMATION.

D. FOR DOOR AND WINDOW TYPES REFER TO DOOR SCHEDULE (A600) AND WINDOW SCHEDULES (A610 THRU A620).

E. FOR PLUMBING FIXTURES REFER TO PLUMBING DRAWINGS.

F. FOR ROOM FINISHES REFER TO FINISH SCHEDULE (A900 - A901) AND FINISH PLANS (A910 THRU A912).

G. THE GENERAL CONTRACTOR IS TO NOTIFY ARCHITECT IF FLOOR PENETRATIONS CONFLICT WITH STRUCTURAL ELEMENTS, DUCTWORK, ETC. PRIOR TO PROCEEDING WITH WORK.

H. CLOSE ALL JOINTS BETWEEN PLUMBING FIXTURES, ACCESSORIES AND DISSIMILAR MATERIALS WITH SEALANT (I.E. SINKS AND ACCESSORIES TO WALL).

I. PARTITIONS:
   - FOR PARTITION TYPE DETAILS REFER TO SHEET A950.
   - DO NOT SCALE DRAWINGS, DIMENSIONS GOVERNING. DIMENSIONS ARE TO FACE OF FINSIHED PARTITION UNLESS NOTED OTHERWISE (GYPSUM BOARD SURFACE, NOT THE STUD).
   - GYPSUM BOARD ABOVE THE CEILING TO BE TAPED AND FLOATED ONLY.
   - INSTALL WATER RESISTANT GYPSUM BOARD (5/8") AT ALL PLUMBING CHASES.
   - PROVIDE BRACING ABOVE CEILING HEIGHT PARTITIONS WHEN LONG UNBRACED WALL LENGTHS OCCUR, AND AT ALL DOOR AND GLAZED OPENING JAMBS IN ACCORDANCE WITH MANUFACTURER'S SPECIFICATIONS.

J. THE GENERAL CONTRACTOR IS RESPONSIBLE FOR BRACING AND BLOCKING OF WALLS RECEIVING MILLWORK, SHELVING, EQUIPMENT, ETC. ALL WOOD BLOCKING, GROUNDS, ROUGH BUCKS AND MISCELLANEOUS BLOCKING IS TO BE FIRE-RETARDANT TREATED.

K. THE GENERAL CONTRACTOR SHALL CONFIRM ALL OWNER FURNISHED OWNER INSTALLED (O.F.O.I.) AND OWNER FURNISHED CONTRACTOR INSTALLED (O.F.C.I.) ITEMS WITH THE ARCHITECT AND THE OWNER PRIOR TO CONTRACTION.

GENERAL NOTES: INTERIOR ELEVATIONS

A. THE GENERAL CONTRACTOR SHALL CONFIRM ALL DIMENSIONAL, ARCHITECTRUAL AND M.E.P. REQUIREMENTS AS CONFIGURED IN THESE DOCUMENTS.

B. ALL INTERIOR DIMENSIONS ARE MEASURED FROM FINISH FACE TO FINISH FACE UNLESS NOTED OTHERWISE. REFER TO THE ANNOTATION SYMBOL LEGEND AT SHEET G0.00 FOR TYPICAL DOOR PLACEMENT ON THE WALL THAT DOES NOT HAVE A DIMENSION PLACEMENT.

C. REFER TO FLOOR PLANS A110 THRU A112 AND REFLECTED CEILING PLANS A120 THRU A122 FOR ADDITIONAL INFORMATION.

D. FOR DOOR AND WINDOW TYPES REFER TO DOOR SCHEDULE (A600) AND WINDOW SCHEDULES (A610 THRU A620).

E. FOR PLUMBING FIXTURES REFER TO PLUMBING DRAWINGS.

F. FOR ROOM FINISHES REFER TO FINISH SCHEDULE (A900 - A901) AND FINISH PLANS (A910 THRU A912).

G. THE GENERAL CONTRACTOR IS TO NOTIFY ARCHITECT IF FLOOR PENETRATIONS CONFLICT WITH STRUCTURAL ELEMENTS, DUCTWORK, ETC. PRIOR TO PROCEEDING WITH WORK.

H. CLOSE ALL JOINTS BETWEEN PLUMBING FIXTURES, ACCESSORIES AND DISSIMILAR MATERIALS WITH SEALANT (I.E. SINKS AND ACCESSORIES TO WALL).

I. PARTITIONS:

- FOR PARTITION TYPE DETAILS REFER TO SHEET A950.
- DO NOT SCALE DRAWINGS, DIMENSIONS GOVERNING. DIMENSIONS ARE TO FACE OF FINSIHED PARTITION UNLESS NOTED OTHERWISE (GYPSUM BOARD SURFACE, NOT THE STUD).
- GYPSUM BOARD ABOVE THE CEILING TO BE TAPED AND FLOATED ONLY.
- INSTALL WATER RESISTANT GYPSUM BOARD (5/8") AT ALL PLUMBING CHASES.
- PROVIDE BRACING ABOVE CEILING HEIGHT PARTITIONS WHEN LONG UNBRACED WALL LENGTHS OCCUR, AND AT ALL DOOR AND GLAZED OPENING JAMBS IN ACCORDANCE WITH MANUFACTURER'S SPECIFICATIONS.

J. THE GENERAL CONTRACTOR IS RESPONSIBLE FOR BRACING AND BLOCKING OF WALLS RECEIVING MILLWORK, SHELVING, EQUIPMENT, ETC. ALL WOOD BLOCKING, GROUNDS, ROUGH BUCKS AND MISCELLANEOUS BLOCKING IS TO BE FIRE-RETARDANT TREATED.

K. THE GENERAL CONTRACTOR SHALL CONFIRM ALL OWNER FURNISHED OWNER INSTALLED (O.F.O.I.) AND OWNER FURNISHED CONTRACTOR INSTALLED (O.F.C.I.) ITEMS WITH THE ARCHITECT AND THE OWNER PRIOR TO CONTRACTION.

SCALE : 3/4" = 1'-0"

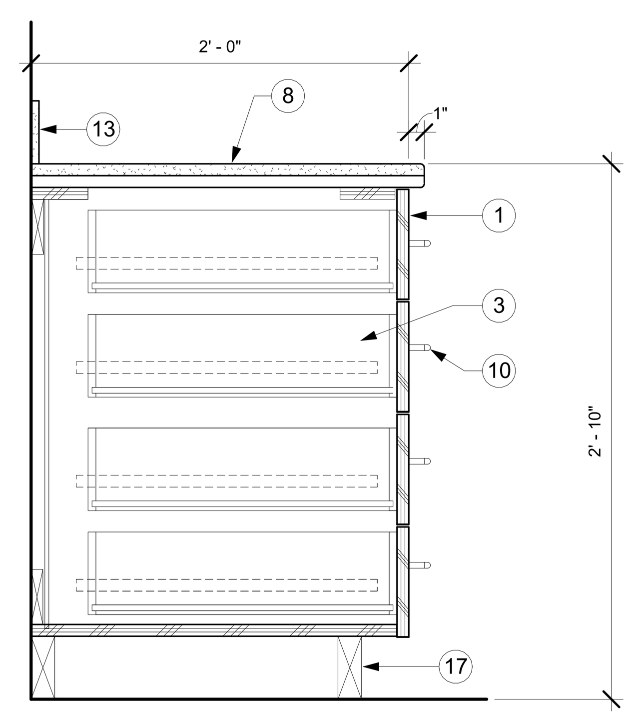
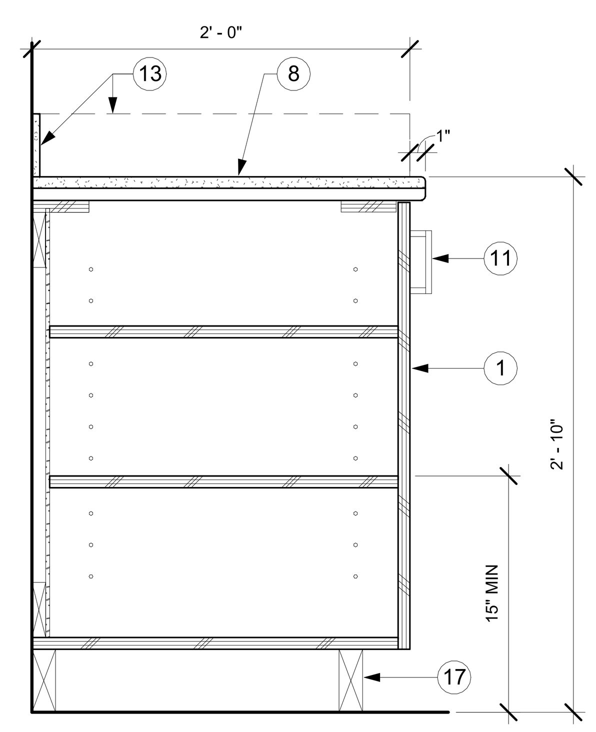
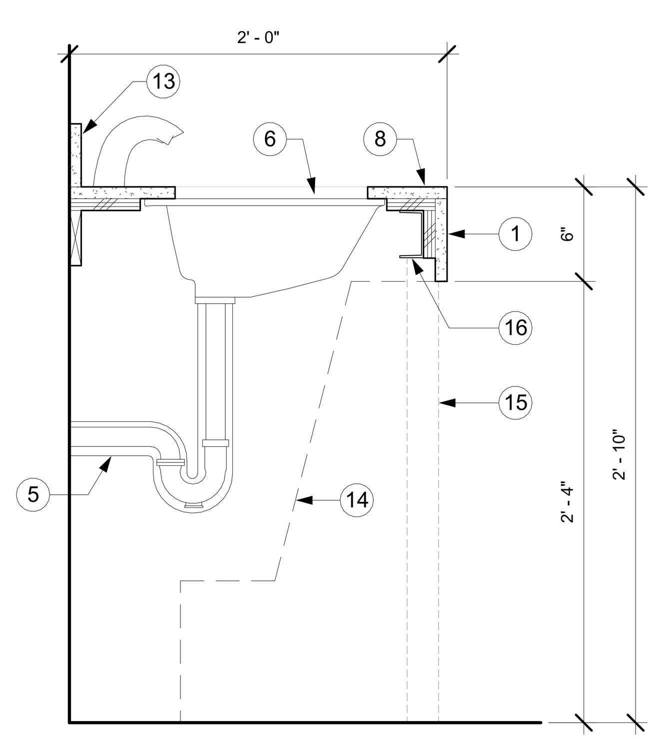
7 A804 SECTION: UPPER CABINET
SCALE : 1 1/2" = 1'-0"



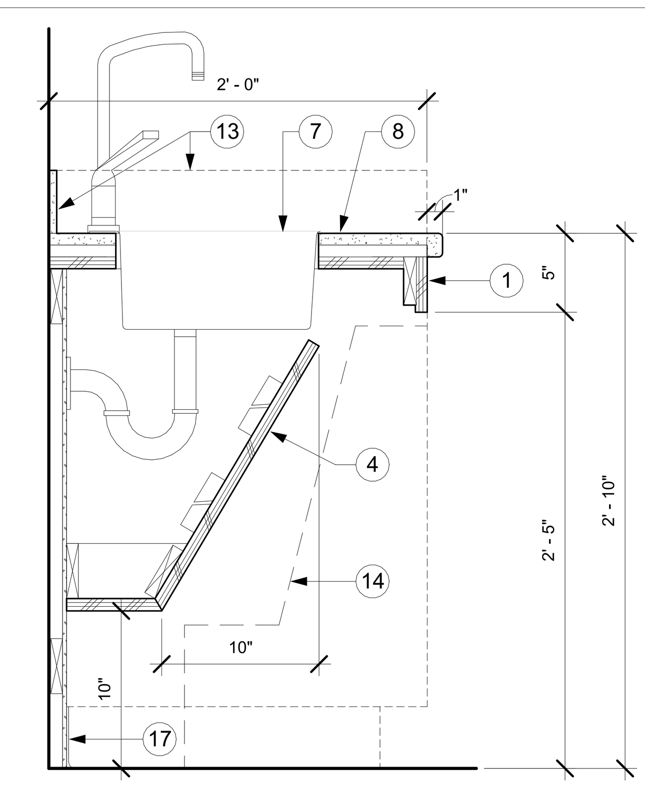
10 A804 SECTION: BASE CABINET w/ DRAWERS
SCALE : 1 1/2" = 1'-0"



6 A804 SECTION: BASE CABINET
SCALE : 1 1/2" = 1'-0"



9 A804 SECTION: RESTROOM SINK
SCALE : 1 1/2" = 1'-0"



5 A804 SECTION: BASE CABINET @ SINK
SCALE : 1 1/2" = 1'-0"

GENERAL NOTES: CASEWORK

A. REFER TO INTERIOR ELEVATIONS ON TO IDENTIFY THE ROOM AND WALL ON WHICH THE CABINETRY IS LOCATED. COORDINATE CABINETRY LOCATIONS WITH FLOOR PLANS.

B. SPECIALIZED CABINET SECTIONS ONLY ARE KEYED OR NOTED ON CABINET ELEVATIONS. OTHER CABINET SECTIONS ILLUSTRATE TYPICAL CONSTRUCTION AND NOT EVERY DOOR AND /OR DRAWER VARIATION IS SHOWN.

C. PROVIDE FINISHED END PANELS AND /OR END RETUNS AT OPEN ENDED CABINETRY(INCLUDING KNEE SPACES).

D. PROVIDE PLASTIC LAMINATE CLAD TRIM AND FILLER PANELS WHERE EQUIPMENT IS LOCATED WITHIN CABINET UNITS.

E. GENERAL CONTRACTOR TO SUBMIT SHOP DRAWINGS FOR ALL CASEWORK FOR ARCHITECT TO REVIEW PRIOR TO FABRICATION.

F. PROVIDE BLOCKING WITHIN PARTITION FOR ALL CABINETRY ATTACHED TO WALLS. SEE SECTION DETAILS FOR ATTACHMENT DETAILS.

G. FILE DRAWERS ARE NOTED ON ELEVATIONS.

H. CABINET UNIT DEPTH IS AS SHOWN ON SECTION, U.N.O. ON ELEVATIONS.

I. PROVIDE BOTTOM CLOSURE FOR FILLER PANELS AT TOE SPACES AND AT BOTTOM OF UPPER WALL CABINETS TO CLOSE OFF ALL CONCEALED OPENINGS (I.E., KEEP VERMIN OUT).

J. AT THE BOTTOM OF INDIVIDUAL UPPER CABINET UNITS, ALLOW FOR CONTINUOUS RUNS OF UNDER CABINET LIGHTS; REFER TO ARCHITECTURAL AND ELECTRICAL DRAWINGS FOR LOCATIONS.

K. ALL WOOD TO BE FIRE TREATED.

L. ALL DOORS AT DRAWER FACES TO BE FLUSH WITH THE FACE OF FILLER PANELS AT SCRIBES. PROVIDE FILLER PANELS, WALL SCRIBES, FINISH FURR DOWNS AND ALL OTHER COMPONENTS FLUSH WITH FACES OF DOORS AND DRAWERS.

M. ALL CASEWORK DIMENSIONS ARE TO BE FIELD VERIFIED PRIOR TO FABRICATION.

N. ALL WOOD GRAIN LAMINATE TO BE INSTALLED WITH GRAIN RUNNING VERTICALLY, U.N.O. ON ELEVATIONS.

O. FINISHED END SUPPORT PANEL EDGES TO BE EDGE BANDED.

P. ALL BASE CABINET TOE KICK FACES TO BE FINISHED WITH SCHEDULED PLASTIC LAMINATE.

KEY NOTES: CASEWORK 1

1 BASE CABINET
2 WALL CABINET

GENERAL NOTES: FINISHES

A. ALL EXPOSED SCREW HEADS SHALL MATCH ADJACENT SURFACES UNLESS NOTED OTHERWISE. ALL GRILLES, REGISTERS, ACCESS DOORS, SPEAKERS, COVER PLATES, FIRE EQUIPMENT CABINETS AND ALL OTHER APPLIED DEVICES SHALL MATCH COLOR OF ADJACENT SURFACE UNLESS NOTED OTHERWISE.

B. FLOOR FINISH CHANGES SHALL HAVE THRESHOLDS OR REDUCERS STRIPS.

C. ALL FLOOR MATERIAL TO BE INSTALLED USING MANUFACTURERS' RECOMMENDED METHODS AND PRODUCTS.

D. FOR ALL PAINT REFER TO FINISH LEGEND.

E. ALL SURFACES SHOULD BE PROPERLY SEALED. REFER TO FINISH LEGEND FOR WALL PAINT LEVEL GRADE FINISH.

F. CONTRACTOR TO SUBMIT SAMPLES OF ALL FINISHES TO ARCHITECT FOR APPROVAL PRIOR TO ORDERING PRODUCT.

G. FLOORING CONTRACTOR IS RESPONSIBLE FOR INSPECTION OF SLAB CONDITION PRIOR TO INSTALLING FLOORING MATERIALS.

H. RUBBER BASE SHALL HAVE PRE-FORMED CORNERS (INSIDE AND OUTSIDE). ALL LENGTHS OF BASE SHALL BE A MINIMUM OF 12".

I. ALL RUBBER BASE TO BE COVE AT CARPET AND STRAIGHT AT LVT.

J. REFER TO ELEVATIONS AND ROOM FINISH SCHEDULE FOR ADDITIONAL FINISH INFORMATION INCLUDING ALL WALL FINISHES.

LVT-1
- PRODUCT TYPE: WOOD PLANK LUXURY VINYL TILE
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: RESIDE 6 mil HEARTH 94140
- MANUFACTURER: SHAW CONTRACT GROUP
- LOCATION: REFER TO DRAWINGS

TILE FINISH:

PT-1
- PRODUCT TYPE: PORCELAIN TILE
- PRODUCT SIZE: 12" x 24"
- ORIENTATION: REFER TO DRAWINGS
- COLLECTION: TRAVERTINE VEINCUT
- COLOR NAME: TRAVERTINE VEINCUT SILVER
- PRODUCT NUMBER: SKU T06TRAVSI1224FH
- MANUFACTURER: EMSER TILE
- LOCATION: FLOOR AT RESTROOMS

PT-2
- PRODUCT TYPE: GLAZED AND THIN TILE PORCELAIN
- PRODUCT SIZE: 47" x 110"
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: LASSA WHITE
- PRODUCT NUMBER: SKU V21LASSWH47110M
- MANUFACTURER: EMSER TILE
- LOCATION: FLOOR AT LOBBY 100

PT-3
- PRODUCT TYPE: GLAZED PORCELAIN TILE
- PRODUCT SIZE: 12" x 24"
- ORIENTATION: REFER TO DRAWINGS
- COLLECTION: CASSERO II
- COLOR NAME: WHITE
- PRODUCT NUMBER: SKU F23CASSWH1224
- MANUFACTURER: EMSER TILE
- LOCATION: WALLS AT RESTROOMS

PT-4
- PRODUCT TYPE: GLAZED PORCELAIN TILE
- PRODUCT SIZE: 7" x 16"
- ORIENTATION: REFER TO DRAWINGS
- COLLECTION: TUBAGE
- COLOR NAME: BRONZE
- PRODUCT NUMBER: SKU W21TUBABZ0716
- MANUFACTURER: EMSER TILE
- LOCATION: RESTROOMS | WALL ACCENT TILE BEHIND MIRROR

PT-5
- PRODUCT TYPE: GLAZED PORCELAIN AND RECYCLED GLASS MOSAIC
- PRODUCT SIZE: 12" X 12" HEXAGON MOSAIC
- ORIENTATION: REFER TO DRAWINGS
- COLLECTION: CONFETTI II
- COLOR NAME: BRONZE
- PRODUCT NUMBER: SKU F45DUNHBU1223
- MANUFACTURER: EMSER TILE
- LOCATION: FLOOR IN SHOWERS

FLOOR FINISH: RECESSED GRILLE MAT

MAT
- PRODUCT TYPE: 3/4" RECESSED GRILLE MAT - WITH CARPET SCRAPE HD CARPET INSERTS
- PRODUCT SIZE: REFER TO DRAWINGS
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: TBD FROM STANDARD RANGE
- RAIL FINISH: MILL
- MANUFACTURER: AMERICAN FLOOR MATS
- LOCATION: VESTIBULE

WALL BASE

RB-1
- PRODUCT TYPE: RUBBER BASE
- PRODUCT SIZE: 4" H x LENGTH
- COLOR NAME: TO MATCH ADJACENT WALL
- MANUFACTURER: ROPPE
- NOTES: STRAIGHT BASE AT LVT

RB-2
- PRODUCT TYPE: RUBBER BASE
- PRODUCT SIZE: 4" H x LENGTH
- COLOR NAME: TO MATCH ADJACENT WALL
- MANUFACTURER: ROPPE
- NOTES: COVE BASE AT CARPET

WB-1
- PRODUCT TYPE: APPLIED WOOD BASE
- PRODUCT SIZE: 4" H x LENGTH
- COLOR NAME: TO MATCH ADJACENT WALL
- MANUFACTURER: XXX

TB-1
- PRODUCT TYPE: GLAZED PORCELAIN TILE
- PRODUCT SIZE: 3" H x LENGTH
- PRODUCT NUMBER: SKUF23CASSWH03125B
- COLOR NAME: CASSERO II - WHITE
- MANUFACTURER: EMSER TILE

WALL FINISH: WALL COVERINGS

WC-1
- PRODUCT TYPE: NON-WOVEN BACKED VINYL
- PRODUCT SIZE: 54" WIDTH
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: GRANITE
- PRODUCT NUMBER: SKUDG1240
- MANUFACTURER: MDC INTERIOR SOLUTIONS
- LOCATION: REFER TO DRAWINGS

WC-2
- PRODUCT TYPE: NON-WOVEN BACKED VINYL
- PRODUCT SIZE: 50" WIDTH
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: BURNISH - DARK GREY
- PRODUCT NUMBER: 6678-802
- MANUFACTURER: DESIGNTEX
- LOCATION: REFER TO DRAWINGS

WC-3
- PRODUCT TYPE: NON-WOVEN BACKED VINYL
- PRODUCT SIZE: 50" WIDTH
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: BURNISH - ROSE
- PRODUCT NUMBER: 6678-301
- MANUFACTURER: DESIGNTEX
- LOCATION: REFER TO DRAWINGS

WC-4
- PRODUCT TYPE: NON-PHTHALATE VINYL
- PRODUCT SIZE: 52" WIDTH
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: TOMATO
- PRODUCT NUMBER: 399600-004
- MANUFACTURER: MAHARAM
- LOCATION: REFER TO DRAWINGS

WALL PANELS:

WP-1
- PRODUCT TYPE: PVC
- PRODUCT SIZE: 19.63" H X 19.63" W
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: SATIN HUNT CLUB GREEN
- PRODUCT NUMBER: SKU: FRUM9195
- MANUFACTURER: EKENA MILLWORK
- LOCATION: LOBBY RECEPTION BACKWALL

FABRICS:

FB-1
- PRODUCT TYPE: TEK-WALL 1002
- PRODUCT SIZE: 54" WIDTH
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: HERITAGE
- PRODUCT NUMBER: 399594-013
- MANUFACTURER: MAHARAM
- LOCATION: TRAINING ROOM PANELFOLD

FB-2
- PRODUCT TYPE: NON-LIT SUSPENDED ACOUSTIC PANEL
- PRODUCT SIZE: 8'-0" LENGTH
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: XXX
- PRODUCT NUMBER: XXX
- MANUFACTURER: LESCO
- LOCATION: BULLPENS

PLASTER:

PLAS-1
- PRODUCT TYPE: PLASTER
- COLOR NAME: SKIMCOAT
- MANUFACTURER: XXX
- LOCATION: STAIR 3 AND LOADING DOCK SOFFIT

COLUMN COVER:

CC-1
- PRODUCT TYPE: STAINLESS ROUND METAL COLUMN COVER
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: XXX
- MANUFACTURER: XXX
- LOCATION: LOADING DOCK

METAL PANEL FINISH:

MP-1
- PRODUCT TYPE: ALUMINUM COMPOSITE PANELS
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: DRIFTWOOD MICA
- MANUFACTURER: ALUCOBOND
- LOCATION: EXTERIOR WALLS FIELD

MP-2
- PRODUCT TYPE: ALUMINUM COMPOSITE PANELS
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: PLATINUM MICA
- MANUFACTURER: ALUCOBOND
- LOCATION: EXTERIOR WALLS ACCENT

MP-3
- PRODUCT TYPE: ALUMINUM COMPOSITE PANELS
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: ANODIC SATIN MICA
- MANUFACTURER: ALUCOBOND
- LOCATION: EXTERIOR WALLS ACCENT

MP-4
- PRODUCT TYPE: ALUMINUM COMPOSITE PANELS
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: MOONSTONE METALLIC
- MANUFACTURER: ALUCOBOND
- LOCATION: EXTERIOR WALLS ACCENT

MP-5
- PRODUCT TYPE: ALUMINUM COMPOSITE PANELS
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: RUSTIC WALNUT
- MANUFACTURER: ALUCOBOND
- LOCATION: EXTERIOR WALLS EYEBROW CANOPY

MP-6
- PRODUCT TYPE: ALUMINUM COMPOSITE PANELS
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: DRIFTWOOD MICA
- MANUFACTURER: ALUCOBOND
- LOCATION: EXTERIOR COPING AND FLASHING

MP-2P
- PRODUCT TYPE: ALUMINUM COMPOSITE PANELS PERFORATED
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: PLATINUM MICA
- MANUFACTURER: ALUCOBOND
- LOCATION: EXTERIOR STAIR 3 WALLS ACCENT

MP-3P
- PRODUCT TYPE: ALUMINUM COMPOSITE PANELS PERFORATED
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: ANODIC SATIN MICA
- MANUFACTURER: ALUCOBOND
- LOCATION: EXTERIOR STAIR 3 WALLS ACCEN

MP-4P
- PRODUCT TYPE: ALUMINUM COMPOSITE PANELS PERFORATED
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: MOONSTONE METALLIC
- MANUFACTURER: ALUCOBOND
- LOCATION: EXTERIOR STAIR 3 WALLS ACCENT

MP-7P
- PRODUCT TYPE: METAL PANELS PERFORATED
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: BRUSHED BRONZE - BERRIDGE
- MANUFACTURER: XXX
- LOCATION: INTERIOR LOBBY FINS

MP-8P
- PRODUCT TYPE: CORRUGATED METAL PANELS PERFORATED
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: PERFORATED ROOFING - PERFORATED WESTERN RIB GALVALUME 16 GA
- MANUFACTURER: XXX
- LOCATION: EXTERIOR FENCING

MP-9P
- PRODUCT TYPE: METAL PANELS PERFORATED
- PRODUCT SIZE: XXX
- ORIENTATION: REFER TO DRAWINGS
- COLOR NAME: BERRIDGE OR STAINLESS STEEL SIMILAR TO MP-8P
- MANUFACTURER: ALUCOBOND
- LOCATION: STAIRS 2 & 3 GUARDRAILS

METALS:

AL-1
- PRODUCT TYPE: BRUSHED ALUMINUM
- PRODUCT SIZE: REFER TO DRAWINGS
- COLOR NAME: WHITE POWDER COAT
- MANUFACTURER: XXX
- LOCATION: REFER TO DRAWINGS

AL-2
- PRODUCT TYPE: BRUSHED ALUMINUM
- PRODUCT SIZE: REFER TO DRAWINGS
- SHAPE: U SHAPED
- COLOR NAME: WHITE POWDER COAT
- MANUFACTURER: XXX
- LOCATION: REFER TO DRAWINGS

AL-3
- PRODUCT TYPE: BRUSHED ALUMINUM
- PRODUCT SIZE: REFER TO DRAWINGS
- SHAPE: END CAP (L-SHAPE)
- COLOR NAME: WHITE POWDER COAT
- MANUFACTURER: XXX
- LOCATION: REFER TO DRAWINGS

GLAZING: EXTERIOR

- GL1 = 1" VISION INSULATED COLOR # 1
- GL1T = 1" VISION INSULATED TEMPERED COLOR # 1
- GL2 = 1" SPANDREL INSULATED COLOR # 2
- GL10 = 1" VISION INSULATED COLOR # 3
- GL10T = 1" VISION INSULATED TEMPERED COLOR # 3
- GL11 = 1" VISION INSULATED COLOR # 4

GLAZING: INTERIOR

- GL3T = 1/4" VISION TEMPERED
- GL4R = 1/4" VISION FIRE-RATED
- GL5T = 1/4" FROSTED TEMPERED
- GL6T = 1/4" VISION TEMPERED FILM

GENERAL NOTES: FINISHES

A. ALL EXPOSED SCREW HEADS SHALL MATCH ADJACENT SURFACES UNLESS NOTED OTHERWISE. ALL GRILLES, REGISTERS, ACCESS DOORS, SPEAKERS, COVER PLATES, FIRE EQUIPMENT CABINETS AND ALL OTHER APPLIED DEVICES SHALL MATCH COLOR OF ADJACENT SURFACE UNLESS NOTED OTHERWISE.

B. FLOOR FINISH CHANGES SHALL HAVE THRESHOLDS OR REDUCERS STRIPS.

C. ALL FLOOR MATERIAL TO BE INSTALLED USING MANUFACTURERS' RECOMMENDED METHODS AND PRODUCTS.

D. FOR ALL PAINT REFER TO FINISH LEGEND.

E. ALL SURFACES SHOULD BE PROPERLY SEALED. REFER TO FINISH LEGEND FOR WALL PAINT LEVEL GRADE FINISH.

F. CONTRACTOR TO SUBMIT SAMPLES OF ALL FINISHES TO ARCHITECT FOR APPROVAL PRIOR TO ORDERING PRODUCT.

G. FLOORING CONTRACTOR IS RESPONSIBLE FOR INSPECTION OF SLAB CONDITION PRIOR TO INSTALLING FLOORING MATERIALS.

H. RUBBER BASE SHALL HAVE PRE-FORMED CORNERS (INSIDE AND OUTSIDE). ALL LENGTHS OF BASE SHALL BE A MINIMUM OF 12".

I. ALL RUBBER BASE TO BE COVE AT CARPET AND STRAIGHT AT LVT.

J. REFER TO ELEVATIONS AND ROOM FINISH SCHEDULE FOR ADDITIONAL FINISH INFORMATION INCLUDING ALL WALL FINISHES.

GENERAL NOTES: PARTITIONS

01 FIRE RESISTANT GYPSUM BOARD:
- FIRE RATED PARTITION CONSTRUCTION MUST CONFORM TO GYPSUM ASSOCIATION (GA) DESIGNS, UNDERWRITERS LABORATORY (UL) TESTED DESIGNS OR OTHER TESTS APPROVED BY GOVERNING CODE AUTHORITIES. FIRE ASSEMBLY DESIGN NUMBERS (I.E., GA WP 1200, UL U465) NOTED ON PARTITION DETAILS SHALL BE FOLLOWED WHEN A FIRE RATED ASSEMBLY IS INDICATED.
- WHEN FIRE RATED PARTITIONS INTERSECT NON-RATED PARTITIONS, CARRY FIRE RATED ASSEMBLY THROUGH NON-RATED CONSTRUCTION.
- CUTOUTS FOR ELECTRICAL DEVICES ON OPPOSITE SIDES OF PARTITIONS IN SAME STUD SPACE IS NOT ALLOWED.
- PROVIDE UL SYSTEM PENETRATION AT PENETRATIONS AND TERMINATIONS IN ACCORDANCE WITH DIVISION 7.
- PROVIDE FIRE STOPPING AND FIRE SAFING AT TOP OF PARTITION TERMINATIONS TO COMPLY WITH FIRE RATING ASSEMBLY AND EXTEND RATING TO STRUCTURAL DECK ABOVE.

02 INSTALL BACKING PLATES AT ALL WALL MOUNTED RAILINGS, TOILET AND SERVICE ACCESSORIES, WALL MOUNTED CASEWORK OR MILLWORK, SYSTEM FURNITURE LOCATIONS AND WALL MOUNTED DOOR BUMPERS. ALSO, PROVIDE BACKING PLATES BEHIND GYPSUM BOARD AT ALL LOCATIONS WHERE HORIZONTAL WOOD TRIM IS TO BE APPLIED.

03 ALL CORRIDOR PARTITIONS TO BE CONSTRUCTED TO RESIST THE PASSAGE OF SMOKE OR TO MEET THE REQUIRED RATING.

04 PROVIDE DEFLECTION OF STRUCTURE AT TERMINATIONS OF PARTITION WITH STRUCTURE ABOVE IN ACCORDANCE TO DIVISIONS 4 AND 9.

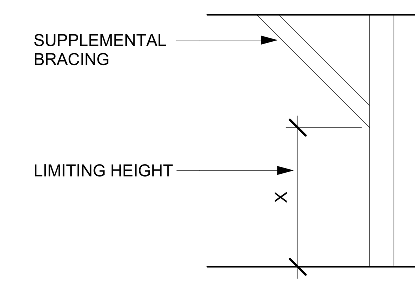
05 PROVIDE MOISTURE RESISTANT GYPSUM BOARD ON ALL WALLS IN ALL TOILETS, HOUSEKEEPING ROOMS, SOILED UTILITY ROOMS AND ALL PARTITIONS SCHEDULED TO RECEIVE CERAMIC TILE IN "NON WET" AREAS. REFER TO FINISH SCHEDULES AND FLOOR PLANS FOR LOCATION OF THESE WALLS. IN ADDITION, MOISTURE RESISTANT BOARD WILL BE USED BEHIND AND WITHIN 24" ON EITHER SIDE ADJACENT TO ALL PLUMBING FIXTURES AND DRINKING FOUNTAINS.

06 AT CHASE WALLS, THE SIDE WITH PLUMBING FIXTURES, PROVIDE LARGER (GUAGE AND SPACING) AS REQUIRED TO SUPPORT FIXTURES.

07 UNDERWRITERS LABORATORY AND OTHER TESTING AGENCY DESIGNATIONS INDICATED FOR FIRE RESISTIVE CONSTRUCTION ARE GIVEN FOR PURPOSES OF DESCRIBING CONSTRUCTION REQUIREMENTS ONLY AND NOT INTENDED TO LIMIT MANUFACTURERS OF MATERIALS. COMPLY WITH THE CONSTRUCTION REQUIREMENTS OF THE INDICATED DESIGN.

08 S.T.C. RATING SHOWN FOR SOUND WALLS ARE BASED ON LABORATORY TESTED ASSEMBLIES AND DO NOT NECESSARILY INDICATE THE ACTUAL S.T.C. RATING OF THE COMPLETED WORK.

09 LIMITING HEIGHTS INDICATED GIVE THE MAXIMUM UNSUPPORTED HEIGHT FOR THAT PARTITION TYPE BASED ON A DEFLECTION CRITERIA RATIO OF L / 240. WHERE FLOOR TO STRUCTURE HEIGHT OF PARTITION EXCEEDS THE INDICATED LIMITING HEIGHT, PROVIDE SUPPLEMENTAL BRACING TO THE STRUCTURE OVERHEAD AS REQUIRED TO MAINTAIN DEFLECTION RATIO WITHIN L / 240.



FOR PARTITIONS WITH "BRITTLE" FINISHES, SUCH AS PLASTER AND CERAMIC TILE, DESIGN PARTITION SYSTEM TO MAINTAIN DEFLECTION RATION WITHIN L / 360.

SUSPENDED CEILINGS SHALL NOT BE CONSIDERED AS BRACING.

GENERAL NOTES: PARTITIONS

01 FIRE RESISTANT GYPSUM BOARD:
- FIRE RATED PARTITION CONSTRUCTION MUST CONFORM TO GYPSUM ASSOCIATION (GA) DESIGNS, UNDERWRITERS LABORATORY (UL) TESTED DESIGNS OR OTHER TESTS APPROVED BY GOVERNING CODE AUTHORITIES. FIRE ASSEMBLY DESIGN NUMBERS (I.E., GA WP 1200, UL U465) NOTED ON PARTITION DETAILS SHALL BE FOLLOWED WHEN A FIRE RATED ASSEMBLY IS INDICATED.
- WHEN FIRE RATED PARTITIONS INTERSECT NON-RATED PARTITIONS, CARRY FIRE RATED ASSEMBLY THROUGH NON-RATED CONSTRUCTION.
- CUTOUTS FOR ELECTRICAL DEVICES ON OPPOSITE SIDES OF PARTITIONS IN SAME STUD SPACE IS NOT ALLOWED.
- PROVIDE UL SYSTEM PENETRATION AT PENETRATIONS AND TERMINATIONS IN ACCORDANCE WITH DIVISION 7.
- PROVIDE FIRE STOPPING AND FIRE SAFING AT TOP OF PARTITION TERMINATIONS TO COMPLY WITH FIRE RATING ASSEMBLY AND EXTEND RATING TO STRUCTURAL DECK ABOVE.

02 INSTALL BACKING PLATES AT ALL WALL MOUNTED RAILINGS, TOILET AND SERVICE ACCESSORIES, WALL MOUNTED CASEWORK OR MILLWORK, SYSTEM FURNITURE LOCATIONS AND WALL MOUNTED DOOR BUMPERS. ALSO, PROVIDE BACKING PLATES BEHIND GYPSUM BOARD AT ALL LOCATIONS WHERE HORIZONTAL WOOD TRIM IS TO BE APPLIED.

03 ALL CORRIDOR PARTITIONS TO BE CONSTRUCTED TO RESIST THE PASSAGE OF SMOKE OR TO MEET THE REQUIRED RATING.

04 PROVIDE DEFLECTION OF STRUCTURE AT TERMINATIONS OF PARTITION WITH STRUCTURE ABOVE IN ACCORDANCE TO DIVISIONS 4 AND 9.

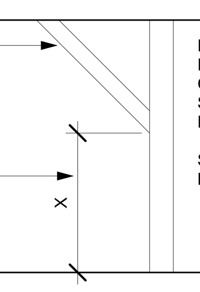
05 PROVIDE MOISTURE RESISTANT GYPSUM BOARD ON ALL WALLS IN ALL TOILETS, HOUSEKEEPING ROOMS, SOILED UTILITY ROOMS AND ALL PARTITIONS SCHEDULED TO RECEIVE CERAMIC TILE IN "NON WET" AREAS. REFER TO FINISH SCHEDULES AND FLOOR PLANS FOR LOCATION OF THESE WALLS. IN ADDITION, MOISTURE RESISTANT BOARD WILL BE USED BEHIND AND WITHIN 24" ON EITHER SIDE ADJACENT TO ALL PLUMBING FIXTURES AND DRINKING FOUNTAINS.

06 AT CHASE WALLS, THE SIDE WITH PLUMBING FIXTURES, PROVIDE LARGER (GUAGE AND SPACING) AS REQUIRED TO SUPPORT FIXTURES.

07 UNDERWRITERS LABORATORY AND OTHER TESTING AGENCY DESIGNATIONS INDICATED FOR FIRE RESISTIVE CONSTRUCTION ARE GIVEN FOR PURPOSES OF DESCRIBING CONSTRUCTION REQUIREMENTS ONLY AND NOT INTENDED TO LIMIT MANUFACTURERS OF MATERIALS. COMPLY WITH THE CONSTRUCTION REQUIREMENTS OF THE INDICATED DESIGN.

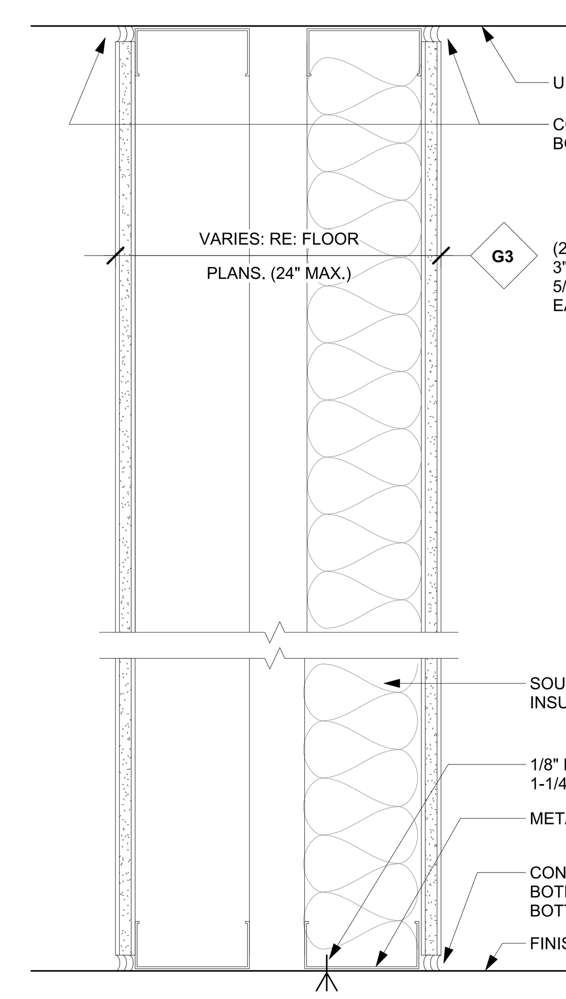
08 S.T.C. RATING SHOWN FOR SOUND WALLS ARE BASED ON LABORATORY TESTED ASSEMBLIES AND DO NOT NECESSARILY INDICATE THE ACTUAL S.T.C. RATING OF THE COMPLETED WORK.

09 LIMITING HEIGHTS INDICATED GIVE THE MAXIMUM UNSUPPORTED HEIGHT FOR THAT PARTITION TYPE BASED ON A DEFLECTION CRITERIA RATIO OF L / 240. WHERE FLOOR TO STRUCTURE HEIGHT OF PARTITION EXCEEDS THE INDICATED LIMITING HEIGHT. PROVIDE SUPPLEMENTAL BRACING TO THE STRUCTURE OVERHEAD AS REQUIRED TO MAINTAIN DEFLECTION RATIO WITHIN L / 240.



FOR PARTITIONS WITH "BRITTLE" FINISHES, SUCH AS PLASTER AND CERAMIC TILE, DESIGN PARTITION SYSTEM TO MAINTAIN DEFLECTION RATION WITHIN L / 360.

SUSPENDED CEILINGS SHALL NOT BE CONSIDERED AS BRACING.



25 GUAGE METAL STUDS AT 16" O.C. WITH ONE LAYER OF 5/8" GYPSUM BOARD EACH SIDE AND ACOUSTICAL INSULATION FULL HEIGHT.

PARTITION TYPE	LIMITING HEIGHT	FIRE RATING	S.T.C. RATING

SCALE : 1/2" = 1'-0"

FIRE PROTECTION NOTES

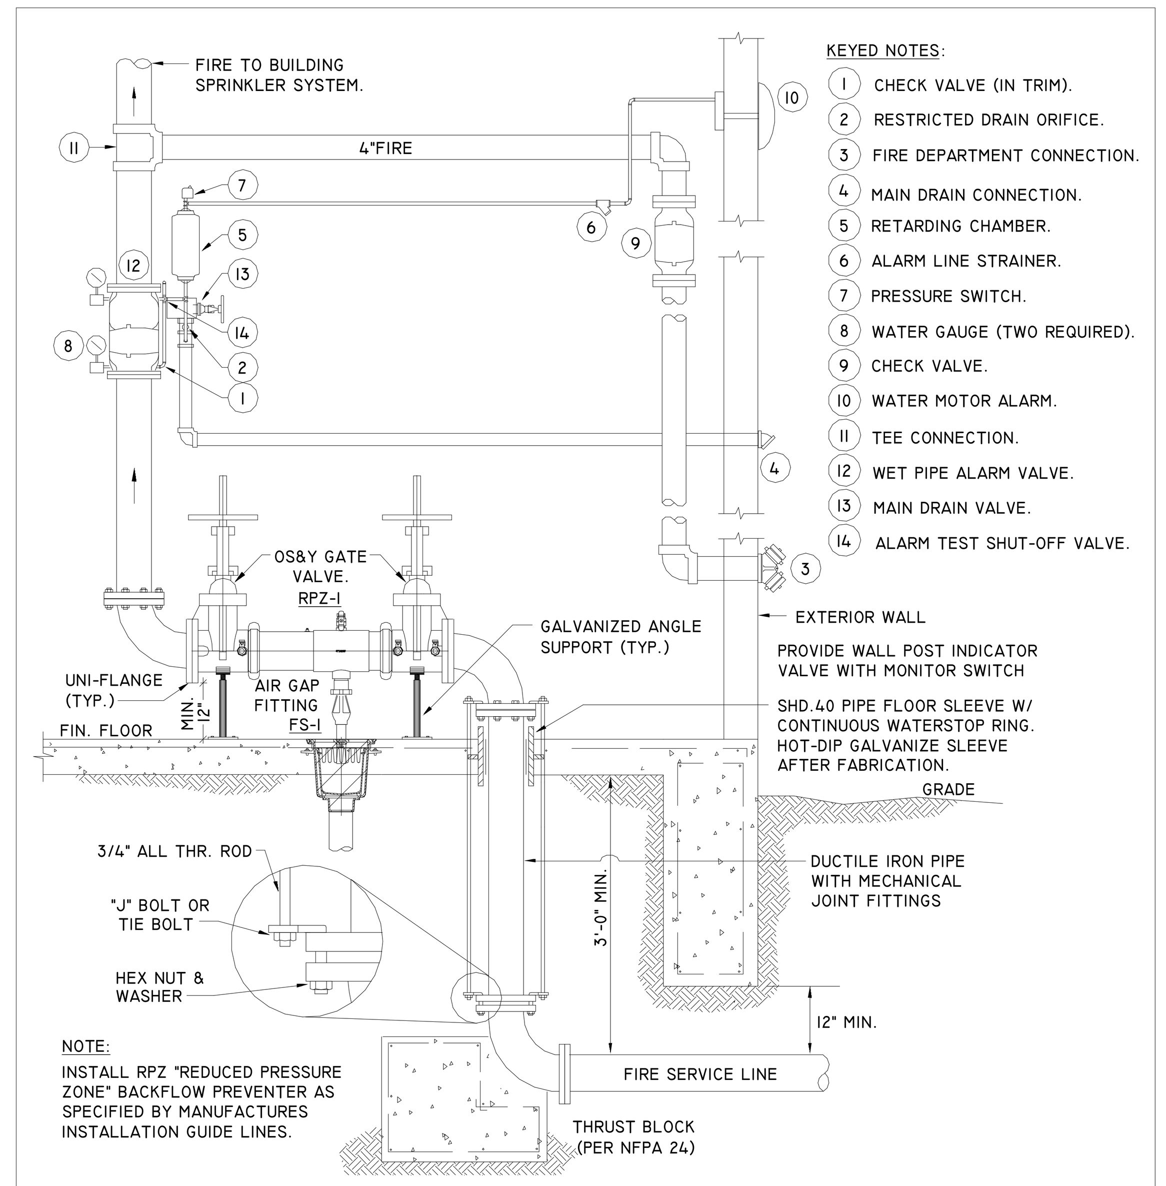
1. CONTRACTOR SHALL PROVIDE THE HYDRAULIC DESIGN BY A QUALIFIED FIRE PROTECTION ENGINEER IN STATE OF TEXAS. THE CONTRACTOR SHALL SUPPLY AND INSTALL THE SPRINKLER SYSTEM FOR THE ENTIRE AREA, IN ACCORDANCE WITH NFPA 13, NFPA 13R AND CITY OF RICHMOND FIRE DEPARTMENT. CONTRACTOR SHALL BE RESPONSIBLE TO COORDINATE THE WORK WITH ALL OTHER SERVICES INCLUDING, BUT NOT LIMITED TO MECHANICAL, ELECTRICAL, PLUMBING, STRUCTURE AND ARCHITECTURE SERVICES.
2. BEFORE INSTALLING ANY SPRINKLER ROWS AND HEADS, COORDINATE WITH OTHER SERVICES AND EQUIPMENT LOCATIONS.
3. MAIN ENTRY PIPING LINE INDICATED ON DRAWINGS IS SHOWN AS GENERAL GUIDE AND DOES NOT REPRESENT ACTUAL BID DOCUMENTS. CONTRACTOR SHALL BE RESPONSIBLE FOR A COMPLETE SYSTEM DESIGN AND INSTALLATION OF ALL THE FACILITY.
4. SPRINKLER SYSTEM SHALL BE WET PIPE SYSTEM FOR INDOOR AREA CO-ORDINATED WITH FIRE AND DETECTION SYSTEM FOR INTERLOCK. IN ACCORDANCE WITH CODE REQUIRED HAZARD PROTECTION.
5. ALL FIRE PROTECTION PIPING EXPOSED SHALL BE PAINTED RED.

NOTE:

SPRINKLER SHOP DRAWINGS AND HYDRAULIC CALCULATIONS PREPARED BY A LICENSED SPRINKLER CONTRACTOR (TEXAS RME) SHALL BE SUBMITTED TO THE FIRE LOCAL MARSHALL AND OWNER'S INSURANCE CARRIER FOR REVIEW AND APPROVAL, NO WORK SHALL BEGIN UNTIL THE APPROVAL OF BOTH AUTHORITIES INDICATED ABOVE.

RPZ SCHEDULE

MARK	DESCRIPTION	SIZE OF CONNECTION					REMARKS
		TRAP	SS	SV	CW	HW	
RPZ-1	REDUCED PRESSURE ZONE ASSEMBLY	-	-	-	4"	-	957Z-OSY WATTS, THE REDUCED PRESSURE ZONE ASSEMBLY SHALL CONSIST OF TWO INDEPENDENT TORSION SPRING CHECK MODULES, A DIFFERENTIAL PRESSURE RELIEF VALVE LOCATED BETWEEN AND BELOW THE TWO MODULES, TWO DRIP TIGHT SHUTOFF VALVES, AND REQUIRED TORSION SPRING CHECK MODULES AND RELIEF VALVE SHALL BE CONTAINED WITH A SLEEVE ACCESSIBLE SINGLE HOUSING CONSTRUCTED FROM 304 (SCHEDULE 40) STAINLESS STEEL PIPE WITH GROOVE END CONNECTIONS. TORSION SPRING CHECKS SHALL HAVE REPLACEABLE ELASTOMER DISCS AND IN OPERATION PRODUCE DRIP TIGHT CLOSURE AGAINST THE REVERSE FLOW OF LIQUID CAUSED BY BACKPRESSURE OR BACKSIPHONAGE. ASSEMBLY SHALL BE A WATTS REGULATOR COMPANY SERIES 957, 957N, 957Z.



KEYED NOTES:

1. CHECK VALVE (IN TRIM).
2. RESTRICTED DRAIN ORIFICE.
3. FIRE DEPARTMENT CONNECTION.
4. MAIN DRAIN CONNECTION.
5. RETARDING CHAMBER.
6. ALARM LINE STRAINER.
7. PRESSURE SWITCH.
8. WATER GAUGE (TWO REQUIRED).
9. CHECK VALVE.
10. WATER MOTOR ALARM.
11. TEE CONNECTION.
12. WET PIPE ALARM VALVE.
13. MAIN DRAIN VALVE.
14. ALARM TEST SHUT-OFF VALVE.

NOTE:
INSTALL RPZ "REDUCED PRESSURE ZONE" BACKFLOW PREVENTER AS SPECIFIED BY MANUFACTURES INSTALLATION GUIDE LINES.

PIPING MATERIALS

1. **SANITARY WASTE AND VENT PIPING** (BELOW GRADE)
SCHEDULE 40 PVC, CONFORM TO ASTM D-1785 SOIL AND WASTE VENT PIPING. FITTINGS SHALL BE COMPATIBLE MATERIAL WITH SOLVENT CEMENT TYPE JOINTS.

2. **SANITARY WASTE AND VENT PIPING** (ABOVE SLAB ONLY)
PIPE: CAST IRON ASTM A 74, HUBLESS, SERVICE WEIGHT.

JOINTS: NO HUB, ASTM C 564 NEOPRENE GASKETS AND STANDARD STAINLESS STEEL CLAMP AND SOLID SHIELD ASSEMBLIES CONSTRUCTED OF TYPE 300 SERIES STAINLESS STEEL. CLAMP ASSEMBLIES SHALL CONFORM TO FM 1680 WHERE REQUIRED BY THE ADMINISTRATIVE AUTHORITY.

FITTINGS: CAST IRON, ASTM A 888 DRAINAGE PATTERN.

3. **STORM DRAINAGE** (BELOW GRADE)
SCHEDULE 40 PVC, CONFORM TO ASTM D-1785 SOIL AND WASTE VENT PIPING. FITTINGS SHALL BE COMPATIBLE MATERIAL WITH SOLVENT CEMENT TYPE JOINTS.

STORM DRAINAGE (ABOVE SLAB ONLY)
PIPE: CAST IRON ASTM A 74, HUBLESS, SERVICE WEIGHT.

JOINTS: NO HUB, ASTM C 564 NEOPRENE GASKETS AND STANDARD STAINLESS STEEL CLAMP AND SOLID SHIELD ASSEMBLIES CONSTRUCTED OF TYPE 300 SERIES STAINLESS STEEL. CLAMP ASSEMBLIES SHALL CONFORM TO FM 1680 WHERE REQUIRED BY THE ADMINISTRATIVE AUTHORITY.

FITTINGS: CAST IRON, ASTM A 888 DRAINAGE PATTERN.

4. **DOMESTIC WATER**
TYPE "L" COPPER TUBING WITH WROUGHT COPPER FITTINGS AND 95/5 (TIN/ANTIMONY) SOLDER JOINTS.

GENERAL NOTES

BOOK SPECIFICATION SUPERCEDE ANY NOTES BELOW

1. THESE DRAWINGS ARE SCHEMATIC IN NATURE AND ARE NOT INTENDED TO SHOW ALL OFFSETS. INSTALL PIPING AS CLOSE AS POSSIBLE TO LOCATIONS SHOWN. WHERE INTERFERENCE'S WITH COMPONENTS OF OTHER TRADE'S WORK (STRUCTURAL FOUNDATIONS OR OTHER BUILDING ELEMENTS) REQUIRE ROUTINGS AND LOCATIONS THAT VARY FROM THOSE SHOWN, THE CONTRACTOR SHALL OBTAIN PROJECT ENGINEER'S APPROVAL PRIOR TO INSTALLATION. NO ADDITIONAL COST SHALL BE GRANTED FOR THESE CHANGES.
2. BEFORE BEGINNING EXCAVATIONS OR DEMOLITION OF ANY NATURE WHATSOEVER, CONTRACTOR SHALL LOCATE ALL SERVICES AND UTILITIES OCCURRING WITHIN THE BOUNDS OF THE PROJECT. THE CONTRACTOR SHALL THEN PROCEED WITH CAUTION IN HIS WORK SO THAT NO UTILITY OR LINE SERVING AREAS THAT ARE TO REMAIN BE DAMAGED WITH A RESULTANT LOSS OF SERVICE. VERIFY THE SOURCE AND SERVICE OF EACH AND EVERY LINE ENCOUNTERED AND RECORD SERVICE, SIZE AND LOCATION ON RECORD DRAWINGS.
3. ROUGH-IN PLUMBING PIPING USING DIMENSIONS SHOWN ON ARCHITECTURAL DRAWINGS. LOCATION OF ALL PIPING SHALL ALLOW INSTALLATION OF FIXTURES WITHOUT THE NEED TO FURR-OUT WALLS.
4. PROVIDE CLEANOUTS IN EXCESS OF THOSE SHOWN WHICH ARE REQUIRED BY THE PLUMBING CODE. CONTRACTOR SHALL PROVIDE A COVER STATING WHAT SYSTEM IT IS SERVING. <u>(CLEANOUT SANITARY, CLEANOUT GREASE WASTE, CLEANOUT ACID WASTE.)</u>
5. INDIVIDUAL FIXTURE SUPPLY AND DRAIN SERVICES ARE NOT SHOWN DUE TO DRAWING SPACE LIMITATIONS. THIS CONTRACTOR SHALL PROVIDE ALL SERVICES FOR A COMPLETE FIRST CLASS INSTALLATION.
6. FURNISH AND INSTALL ALL NECESSARY VALVES, TRAPS, GAUGES, STRAINERS, UNIONS, ETC. FOR EACH PIECE OF EQUIPMENT HAVING PLUMBING CONNECTIONS TO FACILITATE PROPER FUNCTIONING AND SERVICING.
7. SEAL ALL PENETRATIONS THROUGH RATED WALLS, FLOORS AND CEILINGS WITH A UL LISTED ASSEMBLY TO PROVIDE A RATING EQUAL TO OR GREATER THAN THE RATING OF THE WALL, FLOOR OR CEILING.
8. EACH CONTRACTOR SHALL VISIT THE SITE AND ASCERTAIN FOR HIMSELF THE CONDITIONS TO BE MET THERE IN IMPLEMENTING HIS WORK AND MAKE DUE PROVISIONS FOR THE SAME. IT IS ASSUMED THAT THE CONTRACTOR HAS VISITED THE PREMISES AND THAT HIS COST ESTIMATE COVERS ALL NECESSARY LABOR AND MATERIALS TO PROPERLY ACCOMPLISH HIS WORK. FAILURE ON THE PART OF THE CONTRACTOR TO COMPLY WITH THIS REQUIREMENT SHALL NOT BE CONSIDERED JUSTIFICATION FOR OMISSIONS OR FAULTY WORK OR FOR THE PAYMENT OF ADDITIONAL COMPENSATION.
9. FIELD VERIFY EXISTING AND FUTURE GRADES WITHIN AREAS WHERE WORK IS BEING DONE.
10. VERIFY EXACT LOCATION OF EQUIPMENT PRIOR TO INSTALLATION OF FLOOR DRAINS AND FLOOR SINKS. RELOCATION DUE TO MISPLACEMENT SHALL BE AT CONTRACTORS EXPENSE.
11. PROVIDE A KEYED ACCESS PANELS FOR ALL VALVES AND APPARATUSES THAT REQUIRE MAINTENANCE.
12. A WATER HAMMER ARRESTOR SHALL BE INSTALLED FOR ALL SINGLE AND MULTIPLE FIXTURE BRANCH LINES. WATER HAMMER ARRESTORS SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S SPECIFICATIONS AND CONFORM TO ASSE 1010. PROVIDE FOR HOT WATER AND COLD WATER LINES AND REFER TO WATER HAMMER ARRESTOR DETAIL FOR MORE INFORMATION AND SIZING.
13. INSULATE PIPING AS FOLLOWS:
DOMESTIC COLD WATER PIPING:
INSULATE AND VAPOR SEAL ALL COLD AND SOFTENED WATER PIPE WITH GLASS FIBER PIPE INSULATION. (EXCEPTION : ALL PIPING EXPOSED TO THE EXTERIOR SHALL BE PROVIDED WITH ALUMINUM).
DOMESTIC HOT WATER PIPING:
INSULATE ALL HOT WATER PIPE WITH GLASS FIBER PIPE INSULATION WITH FACTORY-APPLIED WHITE JACKET.
DRAINS:
INSULATE AND VAPOR SEAL ALL ABOVEGROUND P-TRAPS AND HORIZONTAL DRAIN PIPING RECEIVING CONDENSATE OR ICE MAKER DRAINAGE WITH 1/2" GLASS PER FIBER INSULATION.
INSULATE AND VAPOR SEAL ROOF DRAIN AND OVERFLOW ROOF DRAIN SUMP, PIPING AND FITTINGS FROM DRAIN TO VERTICAL LEADER WITH 1/2" GLASS FIBER INSULATION.
A.D.A. ACCESSIBLE LAVATORIES AND SINKS:
INSULATE ALL EXPOSED DRAIN PIPING AND WATER SUPPLY PIPING BENEATH A.D.A. COMPLIANT LAVATORIES & SINKS WITH FULLY MOLDED CLOSED CELL VINYL INSULATION KIT AS MANUFACTURED BY TRUEBRO, BROCAR OR MCGUIRE.
14. SUPPORT UNBURIED PIPE AS FOLLOWS:
HORIZONTAL PIPING:
HUBLESS CAST IRON SOIL PIPING SHALL BE SUPPORTED AT LEAST AT EVERY OTHER JOINT EXCEPT THAT WHEN THE DEVELOPED LENGTH BETWEEN SUPPORTS EXCEEDS FOUR FEET, THEY SHALL BE PROVIDED AT EACH JOINT. SUPPORTS SHALL ALSO BE PROVIDED AT EACH HORIZONTAL BRANCH CONNECTION. SUPPORTS SHALL BE PLACED IMMEDIATELY ADJACENT TO THE COUPLING. SUSPENDED LINES SHALL BE BRACED TO PREVENT HORIZONTAL MOVEMENT.
COPPER TUBING SHALL BE SUPPORTED AT NOT MORE THAN SIX FOOT INTERVALS FOR PIPING 1-1/2" AND SMALLER AND NINE FOOT INTERVALS FOR PIPING 2" AND LARGER IN DIAMETER.
HANGERS FOR NON-INSULATED COPPER PIPING SHALL HAVE A COPPER FINISH. IN POTENTIALLY DAMP LOCATIONS, NON-INSULATED COPPER PIPING HANGERS OR SUPPORTS SHALL BE PLASTIC-COATED.
STEEL PIPING SHALL BE SUPPORTED AT INTERVALS OF NO GREATER THAN 6 FEET FOR 1/2" PIPING, 8 FEET FOR 3/4" & 1" PIPING AND 10 FEET FOR 1-1/4" AND LARGER PIPING.
VERTICAL PIPING:
PROVIDE RISER CLAMP AT BASE AND AT EACH FLOOR LEVEL
15. MARKING AND IDENTIFICATION:
IDENTIFY EACH PIPE WITH LABELING AT THE FOLLOWING LOCATIONS:
-AT EACH BRANCH TAKE-OFF FROM A MAIN
-ON EACH SIDE OF A WALL PENETRATION
-EVERY 20' OF STRAIGHT RUN OF PIPE
-AT EQUIPMENT CONNECTIONS IF MORE THAN 10' FROM A BRANCH TAKE-OFF
DOMESTIC HOT WATER:
INDICATE DELIVERED WATER TEMPERATURE ON DOMESTIC HOT WATER SUPPLY AND RETURN LINES.
INDICATE FLOW DIRECTION WITH ARROWS ON DOMESTIC HOT WATER SUPPLY AND RETURN LINES.
MEDIUM PRESSURE GAS PIPING:
MEDIUM PRESSURE GAS PIPING (14" WIC TO 5 PI) SHALL BE IDENTIFIED BY THE STATEMENT, "WARNING TO 5 PI NATURAL GAS." THESE LABELS SHALL BE PLACED AT INTERVALS NOT EXCEEDING 30 FEET. ALL REGULATORS IN MEDIUM PRESSURE LINES SHALL HAVE IDENTIFICATION TAGS IN ACCORDANCE WITH APPLICABLE CODES.
16. SLEEVES:
FLOORS: PROVIDE UL FIRE RATED ASSEMBLIES WERE PIPES PENETRATE ABOVE GRADE FLOORS.
WALLS: PROVIDE UL FIRE RATED ASSEMBLIES WERE PIPES PENETRATE FIRE RATED WALLS.
WHERE PIPING PASSES THROUGH NON CEILING OR WALL, CLOSE OFF SPACE BETWEEN PIPE OR DUCT AND CONSTRUCTION WITH NORMAL GYPSUM WALLBOARD, REPAIR PLASTER SMOOTHED AND FINISHED TO MATCH REMAINDER OF WALL.
INSTALL CHROME OR STAINLESS STEEL ESCUTCHEONS WHERE PIPING PASSES THROUGH FINISHED SURFACES.

BV02 MCGUIRE, 1/2 IPS X 3/8 OD, QUARTER-TURN BRASS BALL VALVE ANGLE STOP. 149 MCGUIRE, FLAT GRID STRAINER WITH 4" TAILPIECE. 8872 MCGUIRE, HEAVY CAST BRASS 1 1/4 X 1 1/4 ADJUSTABLE TRAP WITH CLEANOUT PLUG. 102-EZ-W TRUEBRO, "P" TRAP AND SUPPLY INSULATION KIT. LFUSG-B-SC WATTS THERMOSTATIC MIXING VALVE, MIXING VALVE WITH DOUBLE THROTTLING DESING, TEMPERATURE SHALL BE SET TO 110°.
EDF-1	ELECTRIC DRINKING FOUNTAIN W/ BOTTLE FILL	1 1/2"	2"	2"	1/2"	-	HTHB-HAC8BLSS-WF HAYLSEY TAYLOR, HYDROBOOST WATER COOLER & BOTTLE FILLER. 50F DRINKING WATER, MECHANICALLY ACTIVATED, SANITARY SENSOR ACTIVATED, VISUAL FILTER MONITOR, ANTI-MICROBIAL. DOUBLE BUBBLER AND ELECTRONIC BOTTLE FILLER SENSOR. 55898C REPLACEMENT FILTER. MLP200 IN-WALL CARRIER. 98324C CANE APRON. 36292C POWER BLOCK. BV02 MCGUIRE'S, 1/2 IPS X 3/8 OD, QUARTER-TURN BRASS BALL VALVE ANGLE STOP, CHROME PLATED, CONVERTIBLE LOOSE KEY HANDLE. SUPPLY STOP VALVE SHALL BE CERTIFIED BY CSA OR OTHER RECOGNIZED TESTING AUTHORITY AND SHALL BEAR MANUFACTURER AND TESTING MARK. STOP TO BE CERTIFIED TO 200 PSI LINE PRESSURE. 8872 MCGUIRE'S, HEAVY CAST BRASS 1 1/4 X 1 1/4 ADJUSTABLE TRAP WITH CLEANOUT PLUG AND 11INCH CENTER TO END. FURNISHED WITH SLIP NUTS, 17 GAUGE SEAMLESS TUBULAR BRASS WALL BEND, AND STEEL SHALLOW FLANGE. PROVIDE HALSEY TAYLOR, IN WALL CARRIER MOUNTING SYSTEM.
MS-1	MOP SINK (FLOOR MOUNTED)	3"	3"	2"	3/4"	3/4"	HL-1800 STERN WILLIAMS HILOW, 24"X24"X12" DRAIN SHALL CAST BRASS WITH STAINLESS STEEL STRAINER CAST INTEGRAL AND SHALL PROVIDE FOR CAULKED LEAD CONNECTION NOT LES THAN 1" DEEP TO A 3" PIPE. TERRAZZO RECEPTOR COMPOSED OF PEARL GREY MARBLE CHIPS AND WHITE PORTLAND CEMENT GROUND SMOOTH, GROUTED AND SEALED TO RESIST STAINS. STAINLESS STEEL CAP OF ONE PIECE 20 GA. 302 STAINLESS STEEL CAST INTEGRAL ON FROM DROP. 540-LD897SWXFABCP CHICAGO FAUCETS, 8" FIXED CENTERS, 6GPM, 897-SJKCP - 5 3/4" RIGID VACUUM BREAKER SPOUT WITH 3/4" MALE HOSE THREAD AND PAIL HOOK, 369-PR - 2 3/8" LEVER HANDLE, XT - QUATURN COMPRESSION OPERATING CARTRIDGE, WXF - STRAIGHT 2" INLET SUPPLY ARM WITH WALL FLANGE WITH 1/2" NPT FEMALE THREAD INLET, ATMOSPHERIC VACUUM BREAKER, NOT INTENDED FOR CONTINUOUS PRESSURE APPLICATIONS, CHROME PLATE FINISH. T-35 STERN WILLIAMS, HOSE AND WALL HOOK. HOSE 36" LONG, WITH 3/4" CHROME COUPLINGS. WALL BRACKET OF STAINLESS STEEL. T-40 STERN WILLIAMS, STAINLESS STEEL MOP HANGER OF STAINLESS STEEL WITH #4 FINISH. 24" LONG, WITH 3 RUBBER SPRING LOADED GRIPS. BP STERN WILLIAMS, SPLASH CATCHER PANELS OF 20 GA. TYPE 304 STAINLESS STEEL.
RVB-1	REFRIGERATOR/ ICE MAKER VALVE BOX	-	-	-	1/2"	-	BIM875 – GUY GRAY – REFRIGERATOR/ ICE MAKER VALVE BOX, FURNISHED WITH 1/2" FIP INLET X 1/4" OD OUTLET COMPERSSION ANGLE VALVE. PROVIDE FILTER WHEN MAKING FINAL CONNECTION. (FURNISH AND INSTALL AT ALL REFRIGERATORS AND ICE MACHINES)

NOTE: CONTRACTOR SHALL COORDINATE WITH STRUCTURAL ENGINEER PRIOR TO PENETRATING OR MODIFICATION TO THE FOUNDATION.

UNDERGROUND INSTALLATION OF PLASTIC PIPE

PLASTIC PIPE SHOULD ALWAYS BE BURIED IN STRICT ACCORDANCE WITH THE ASTM STANDARD RELEVANT TO THE TYPE OF PLASTIC PIPING SYSTEM BEING INSTALLED. THOSE STANDARDS ARE:

ASTM D2321 — STANDARD PRACTICE FOR UNDERGROUND INSTALLATION OF THERMOPLASTIC PIPE FOR SEWERS AND OTHER GRAVITY-FLOW APPLICATIONS.

ASTM D2774 — STANDARD PRACTICE FOR UNDERGROUND INSTALLATION OF THERMOPLASTIC PRESSURE PIPING.

NOTE: IN ADDITION TO THESE STANDARDS, PIPE SHOULD ALWAYS BE INSTALLED IN ACCORDANCE WITH ALL LOCAL CODE REQUIREMENTS.

RECOMMENDATIONS FOR UNDERGROUND INSTALLATION OF PLASTIC DRAINAGE PIPE:

1. THE MINIMUM WIDTH OF THE TRENCH SHOULD BE THE PIPE OD (OUTSIDE DIAMETER) PLUS 16 INCHES THIS WILL ALLOW ADEQUATE ROOM FOR JOINING THE PIPE, SNAKING THE PIPE IN THE TRENCH TO ALLOW FOR EXPANSION AND CONTRACTION WHERE APPROPRIATE AND SPACE FOR BACKFILLING AND COMPACTION OF BACKFILL. THE SPACE BETWEEN THE PIPE AND TRENCH WALL MUST BE WIDER THAN THE COMPACTION EQUIPMENT USED TO COMPACT THE BACKFILL.
2. PROVIDE A MINIMUM OF 4 INCHES OF FIRM, STABLE AND UNIFORM BEDDING MATERIAL IN THE TRENCH BOTTOM. IF ROCK OR UNYIELDING MATERIAL IS ENCOUNTERED, A MINIMUM OF 6 INCHES OF BEDDING SHALL BE USED. BLOCKING SHOULD NOT BE USED TO CHANGE PIPE GRADE OR TO INTERMITTENTLY SUPPORT PIPE OVER LOW SECTIONS IN THE TRENCH.
3. THE PIPE SHOULD BE SURROUNDED WITH AN AGGREGATE MATERIAL WHICH CAN BE EASILY WORKED AROUND THE SIDES OF THE PIPE. BACKFILLING SHOULD BE PERFORMED IN LAYERS OF 6 INCHES WITH EACH LAYER BEING SUFFICIENTLY COMPACTED TO 85% TO 95% COMPACTION.
4. A MECHANICAL TAMPER IS RECOMMENDED FOR COMPACTING SAND AND GRAVEL. THESE MATERIALS CONTAIN FINE-GRAINS, SUCH AS SILT AND CLAY. IF A TAMPER IS NOT AVAILABLE, COMPACTING SHOULD BE DONE BY HAND.
5. THE TRENCH SHOULD BE COMPLETELY FILLED. THE BACKFILL SHOULD BE PLACED AND SPREAD IN UNIFORM LAYERS TO PREVENT ANY UNFILLED SPACES OR VOIDS. LARGE ROCKS, STONES, FROZEN CLODS, OR OTHER LARGE DEBRIS SHOULD BE REMOVED. STONE BACKFILL SHALL PASS THROUGH AN 1-1/2" SIEVE. ROCK SIZE SHOULD BE ABOUT ONE-TENTH OF THE PIPE OUTSIDE DIAMETER. HEAVY TAMPERS OR ROLLING EQUIPMENT SHOULD ONLY BE USED TO CONSOLIDATE THE FINAL BACKFILL.
6. TO PREVENT DAMAGE TO THE PIPE AND DISTURBANCE TO PIPE EMBEDMENT, A MINIMUM DEPTH OF BACKFILL ABOVE THE PIPE SHOULD BE MAINTAINED. PIPE SHOULD ALWAYS BE INSTALLED BELOW THE FROST LEVEL. TYPICALLY, IT IS NOT ADVISABLE TO ALLOW VEHICULAR TRAFFIC OR HEAVY CONSTRUCTION EQUIPMENT TO TRAVERSE THE PIPE TRENCH.

MECHANICAL GENERAL NOTES

1. SEE ARCHITECTURAL PLANS FOR TYPE OF CEILING. FOR LOCATIONS OF WALL MOUNTED DEVICES AND LOCATION HEIGHTS COORDINATE WITH ARCH,
2. DO NOT OPERATE AIR HANDLERS, FAN COIL UNITS, OR EXHAUST FANS UNTIL ALL INTERIOR CLEANING AND PAINTING IS COMPLETE. THE CLEANING OF FOULED COILS OR FAN ASSEMBLIES DUE TO PAINT OR CONSTRUCTION DEBRIS WILL BE THE RESPONSIBILITY OF THE HVAC CONTRACTOR.
3. RECTANGULAR, OR ROUND DUCT SIZES INDICATED ARE ACTUAL SHEET METAL DIMENSIONS IN INCHES ALL ROUND DUCT SIZES INDICATE NET FREE INSIDE DIAMETER AND DO NOT ACCOUNT FOR ANY INSULATION. ROUND DUCTS ARE EXTERNALLY INSULATED PER SPECIFICATIONS.
4. SCHEDULED MANUFACTURERS ARE BASIS OF DESIGN. SEE SPECIFICATIONS FOR OTHER ACCEPTABLE MANUFACTURERS.
5. MAJOR EQUIPMENT SHOWN ON THE PLANS AND ELEVATIONS ILLUSTRATE THE GENERAL ARRANGEMENT AND SPACE ALLOCATION. VERIFY THE SPACE REQUIREMENTS FOR EACH SYSTEM COMPONENT USING MANUFACTURER CERTIFIED SHOP DRAWINGS AND MAKE THE NECESSARY ADJUSTMENTS IN EQUIPMENT PLACEMENT AND CONNECTIONS IN ORDER TO ACCOMMODATE THE EXACT EQUIPMENT TO BE INSTALLED.
6. REFER TO SPECIFICATIONS FOR SUPPORTS, ANCHOR BOLTS AND HANGERS FOR ALL EQUIPMENT. OTHER MISCELLANEOUS STEEL BRACING, SUPPORTS, AND REINFORCING STEEL REQUIRED TO SUPPORT EQUIPMENT SHALL BE FURNISHED AS PART OF THE SCOPE OF WORK OF DIVISION 15.
7. INSTALL SMOKE DETECTORS IN CONFORMANCE WITH 2015 IMC WITH CITY OF STAFFORD, TX AMENDMENTS.
8. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH ALL APPLICABLE CODES, STANDARDS AND AUTHORITIES HAVING JURISDICTION.
9. ALL SUPPLY AND RETURN AIR DUCTS LOCATED IN UNCONDITIONED ATTICS OR OUTSIDE SHALL BE INSULATED (R-5 UNCONDITIONED AND R-8 OUTSIDE BUILDINGS).
10. FLEX DUCTS SHALL BE SAME SIZE AS DIFFUSER NECKS.
11. SEAL ALL PENETRATIONS OF FLOORS, SMOKE WALLS, FIRE WALLS, LAB WALLS, AND EXTERIOR WALLS.
12. ARCHITECT SHALL APPROVE ALL THERMOSTAT OR TEMPERATURE SENSOR LOCATIONS.
13. DO NOT RUN DUCT OR PIPE OVER ELECTRICAL PANELS.
14. COORDINATE EXACT LOCATION OF EQUIPMENT, DUCTWORK, AIR DEVICES, AND THERMOSTATS WITH ARCHITECTURAL, STRUCTURAL AND REFLECTED CEILING PLANS.
15. ALL PENETRATIONS IN RATED WALLS SHALL BE SEALED WITH AN APPROVED FIRE RETARDENT SEALANT.
16. ALL DUCT RUN-OUTS TO SUPPLY AND EXHAUST, DIFFUSERS AND REGISTERS, SHALL HAVE MANUAL BALANCING DAMPERS. PROVIDE YOUNG REGULATORS WHERE CEILING IS INACCESSIBLE.
17. ALL DUCTWORK SHALL BE IN ACCORDANCE WITH LATEST SMACNA STANDARDS.
18. SECURE ALL PERMITS AND PROVIDE ANY REQUIRED TEMPORARY UTILITIES.
19. GUARANTEE LABOR AND MATERIAL FOR 1 YEAR AND PER DIV.1.
20. PROVIDE AUTOMATIC AIR VENTS ON ALL HIGH POINTS OF PIPING SYSTEMS AND DRAIN VALVED CONNECTIONS AT ALL LOW POINTS OF PIPING SYSTEMS.
21. REFER TO SPECIFICATIONS FOR ADDITIONAL INFORMATION ON SCOPE OF WORK AND REQUIRED INSTALLATION.
22. VERIFY FINAL LOCATION OF THERMOSTATS WITH ARCHITECT AND BUILDING ENGINEER PRIOR TO INSTALLATION.
23. ALL FLEXIBLE DUCT SHALL BE UL 181, CLASS 1 AIR DUCT BLACK LINER. MAXIMUM LENGTH OF FLEXIBLE DUCT SHALL NOT EXCEED 6'-0". PROVIDE RIGID ROUND INSULATED AIR DUCT RUNOUT AS REQUIRED. FLEXIBLE DUCT SHALL HAVE THE EQUIVALENT OF ONLY TWO 90 DEG. ELBOWS MAXIMUM. FLEXIBLE DUCT SIZE SHALL MATCH THE DIFFUSER NECK SIZE.
24. THE AIR QUANTITIES SHOWN ON THE DRAWINGS FOR INDIVIDUAL OUTLETS MAY BE CHANGED TO OBTAIN UNIFORM TEMPERATURE WITHIN EACH SPACE OR ZONE, BUT THE TOTAL AIR QUANTITY SHOWN FOR EACH ZONE MUST BE OBTAINED.
25. PROVIDE SMOKE DETECTOR FOR ALL UNITS WITH CAPACITY OF 2000 CFM AND HIGHER AS REQUIRED BY CODE. COORDINATE WITH 2015 IMC SECTION 606.
26. WITHIN 90 DAYS AFTER THE DATE OF SYSTEM ACCEPTANCE RECORD DRAWINGS OF THE ACTUAL INSTALLATION SHALL BE PROVIDED TO THE BUILDING OWNER OR THE DESIGNATED REPRESENTATIVE OF THE BUILDING OWNER. RECORD DRAWINGS SHALL INCLUDE AS A MINIMUM THE LOCATION AND PERFORMANCE DATA ON EACH PIECE OF EQUIPMENT, GENERAL CONFIGURATION OF DUCT AND PIPE DISTRIBUTION SYSTEM INCLUDING SIZES, AND THE TERMINAL AIR OR WATER DESIGN FLOW RATES.
27. OPERATING AND MAINTENANCE MANUALS SHALL BE PROVIDED TO THE BUILDING OWNER OR THE DESIGNATED REPRESENTATIVE OF THE BUILDING OWNER WITHIN 90 DAYS AFTER THE DATE OF SYSTEM ACCEPTANCE. THESE MANUALS SHALL BE IN ACCORDANCE WITH INDUSTRY-ACCEPTED STANDARDS (SEE APPENDIX E), AND SHALL INCLUDE, AT A MINIMUM, THE FOLLOWING:
   (A) SUBMITTAL DATA STATING EQUIPMENT SIZE AND SELECTED OPTIONS FOR EACH PIECE OF EQUIPMENT REQUIRING MAINTENANCE.
   (B) OPERATION MANUALS AND MAINTENANCE MANUALS FOR EACH PIECE OF EQUIPMENT REQUIRING MAINTENANCE, EXCEPT EQUIPMENT NOT FURNISHED AS PART OF THE PROJECT. REQUIRED ROUTINE MAINTENANCE ACTIONS SHALL BE CLEARLY IDENTIFIED.
   (C) NAMES AND ADDRESSES OF AT LEAST ONE SERVICE AGENCY.
   (D) HVAC CONTROLS SYSTEM MAINTENANCE AND CALIBRATION INFORMATION, INCLUDING WIRING DIAGRAMS, SCHEMATICS, AND CONTROL SEQUENCE DESCRIPTIONS. DESIRED OR FIELD-DETERMINED SET-POINTS SHALL BE PERMANENTLY RECORDED ON CONTROL DRAWINGS AT CONTROL DEVICES OR, FOR DIGITAL CONTROL SYSTEMS, IN PROGRAMMING COMMENTS.
   (E) A COMPLETE NARRATIVE OF HOW EACH SYSTEM IS INTENDED TO OPERATE, INCLUDING SUGGESTED SET-POINTS.
28. HOT WATER PIPE INSULATION SHALL BE MINIMUM 1.5" IF THE PIPE DIAMETER IS LESS THAN 1-1/2", 2" IF THE PIPE DIAMETER IS BIGGER THAN 1-1/2".
29. THE CONTRACTOR TO ENSURE THAT ALL DUCTWORK EITHER STORED ON SITE OR INSTALLED IN THE BUILDING IS THOROUGHLY, SEALED TO PROTECT AGAINST DIRT AND MOISTURE UNTIL SUCH TIME THAT THE BUILDING IS DEEMED BY THE OWNER TO BE ADEQUATELY CLEAN TO ALLOW FOR START-UP OF THE ASSOCIATED AIR HANDLING EQUIPMENT. IF DUCTWORK IS NOT BE SEALED AS SPECIFIED, THEN THE CONTRACTOR TO HAVE SUCH DUCTWORK PROFESSIONALLY CLEANED TO AN AS-NEW CONDITION AT NO COST TO THE OWNER.
30. NO PORTION OF THE TOTAL CONTRACT WILL BE DECLARED SUBSTANTIALLY COMPLETE UNTIL THE AUTOMATIC TEMPERATURE CONTROL SYSTEM HAS BEEN DEMONSTRATED TO BE COMPLETE AND FUNCTIONING AS INTENDED. THE TEMPERATURE CONTROL SYSTEM WILL BE COMPLETE AND FUNCTIONING AS INTENDED WHEN ALL OF THE SPACE TEMPERATURES ARE MAINTAINED AT PLUS OR MINUS TWO DEGREES OF SET POINT.
31. LOCATE VALVES WITHIN 18 INCHES OF CEILING SO THAT THEY ARE WITHIN REACH.
32. ALL EXPOSED PIPING INTERIOR AND EXTERIOR SHALL BE PAINTED. INTERIOR COLOR SHALL BE ACCORDING TO THE ADOPTED COLOR CODES AND SHALL BE APPROPRIATELY LABELED AT INTERVIEWS IN SPECIFIED HEIGHT LETTERS. PIPING EXPOSED TO VIEW SHALL BE PAINTED TO COMPLY TO COLOR SCHEME PER SPECIFICATIONS. PIPING ON ROOF/EXTERIOR SHALL BE PAINTED WITH EPOXY POLYURETHANE INDUSTRIAL COATING.

NOTES:
1. PROVIDE UNIT SUITABLE FOR LOW AMBIENT OPERATION.
2. PROVIDE UNIT WITH FACTORY INSTALLED AND WIRED SINGLE POINT ELECTRICAL POWER CONNECTION, FUSED DISCONNECT SWITCH, AND CONTROL VOLTAGE POWER SUPPLY IN NEMA 4 ENCLOSURE.
3. PROVIDE UNIT WITH TEFC CONDENSER FAN MOTORS.
4. PROVIDE CHILLERS WITH SCROLL COMPRESSORS.
5. PROVIDE FACTORY INSTALLED THERMAL DISPERSION TYPE FLOW SWITCH.
6. PROVIDE UNIT WITH FACTORY INSTALLED DIGITAL CONTROLS AND BACNET INTERFACE.
7. SELECT THE CHILLERS FOR VARIABLE PRIMARY CHILLED WATER FLOW APPLICATION.
8. PROVIDE CHILLER WITH FOLLOWING EFFICIENCIES:
   - RATED OPERATING CONDITION (105 °F AMBIENT) = FULL LOAD EER 8.70 BTU/WH AND IPLV 16.24 BTU/WH.
   - RATED AHRI CONDITION (95 °F AMBIENT) = FULL LOAD EER 10.58 BTU/WH AND IPLV 17.40 BTU/WH.
9. PROVIDE CONDENSER COILS WITH E-COAT CORROSION PROTECTION AND HAIL GUARDS.

NOTES:
1. PROVIDE CONDENSATE DRAIN, TRAP AND RUN TO THE NEAREST DRAIN OUTLET AS INDICATED ON DRAWINGS.
2. PROVIDE MATCHING CONDENSING UNIT AS INDICATED.
3. MANUFACTURES SHALL RECONFIRM ALL REFRIGERANT LINES, SIZES INDICATED AND SUBMIT A PART OF EQUIPMENT SUBMITTAL.
4. PROVIDE WASHABLE FILTER WITH THE UNIT.
5. UNIT EER MUST COMPLY WITH LATEST IECC REQUIREMENTS.
6. INDOOR UNIT SHALL RECEIVE ITS POWER FROM OUTDOOR UNIT.
7. PROVIDE UNIT WITH LOCAL DIGITAL THERMOSTAT.
8. PROVIDE UNIT WITH REFRIGERANT R410A.
9. PROVIDE COOLING ONLY UNIT.

GENERAL NOTES:

1. PROVIDE DOUBLE WALL CONSTRUCTION SPIRAL ROUND DUCTWORK IN ALL AREAS WITH EXPOSED CEILINGS. COORDINATE FINISH WITH ARCHITECT.

KEYED NOTE LEGEND

1	PROVIDE RETURN AIR TRANSFER BOOT AND GRILLE AS SHOWN.
2	PROVIDE 14"X14" RETURN AIR OPENING ABOVE CEILING ON WALL GOING TO DECK.
3	PROVIDE RETURN AIR TRANSFER DUCT AS SHOWN. OFFSET DUCTS AS REQUIRED FOR CLEARANCE.
4	ROUTE CONDENSATE TO NEAREST SINK. PROVIDE P-TRAP MODEL J.R. SMITH 9200 OR SIMILAR. PROVIDE CONDENSATE PUMP.
5	PROVIDE ACCESS DOOR IN CEILING FOR FPT MAINTAINANCE.
6	ROUTE 8" EXHAUST DUCT THROUGH CHASE TO ROOF. SEE 1/M202 FOR CONTINUATION.
7	PROVIDE 20"X18" TRANSFER DUCT AND GRILLE AS SHOWN. LOCATE GRILLE AS HIGH AS POSSIBLE WITHOUT CONFLICT WITH OTHER DICSIPLINES' WORK.
8	PROVIDE 36"X24" LOUVER MODEL RUSKIN EME 520DD OR SIMILAR FOR BUILDING RELIEF. PROVIDE 36"X24" PLENUM BOX WITH COUNTERBALANCE BACKDRAFT DAMPER FOR CONNECTION TO 20"X18" GRILLE AS SHOWN.
9	PROVIDE 36"X30" RETURN GRILLE AND RETURN AIR OPENING AS SHOWN. LOCATE GRILLE AS HIGH AS POSSIBLE WITHOUT CONFLICT WITH OTHER DICSIPLINES' WORK.
10	PROVIDE 16"X16" TRANSFER DUCT WITH BOOT AND GRILLE AS SHOWN. LOCATE GRILLE AS HIGH AS POSSIBLE WITHOUT CONFLICT WITH OTHER DICSIPLINES' WORK.
11	ROUTE 14"X8" EXHAUST DUCT THROUGH CHASE TO WEATHER HOOD ON ROOF. SEE 1/MEP102 FOR LOCATION ON ROOF.

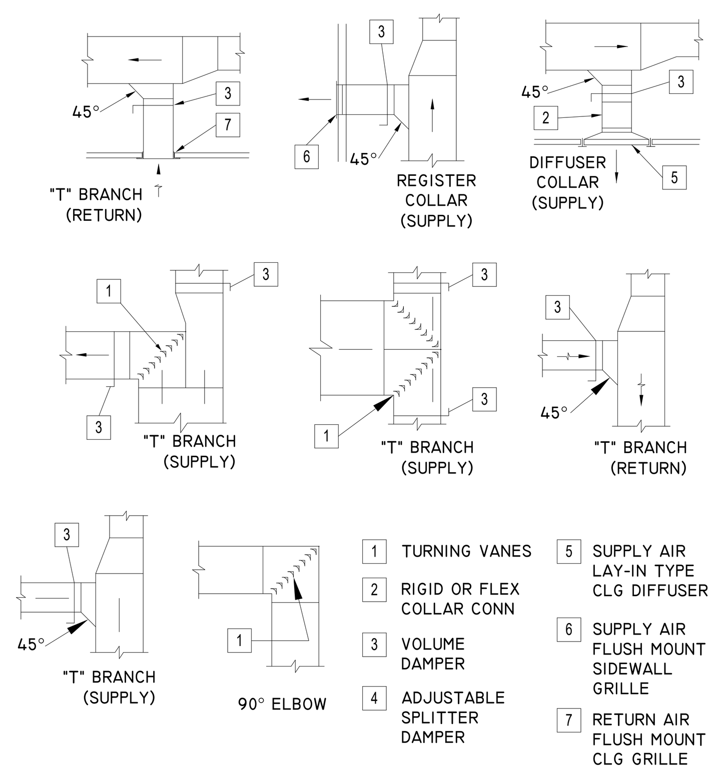
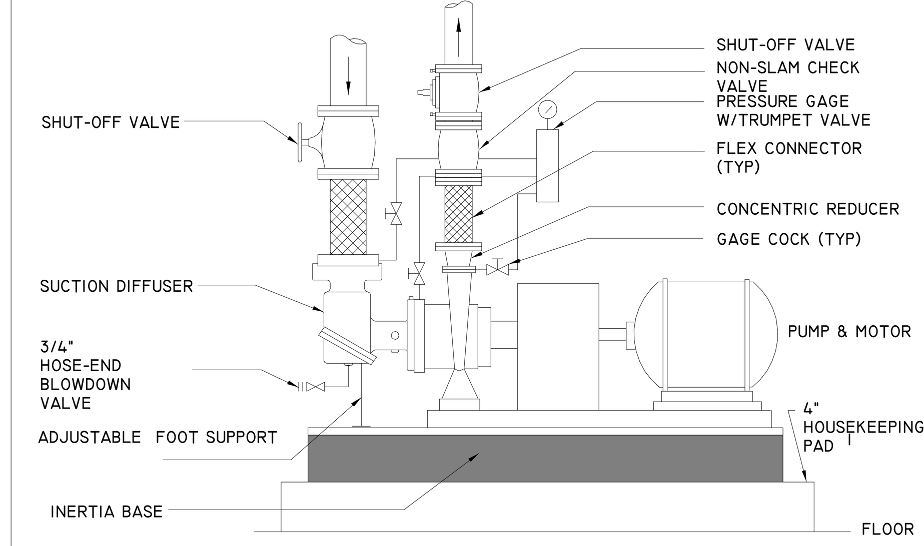
AIR COOLED CHILLER PIPING DETAIL (TYPICAL) — NOT TO SCALE — 12

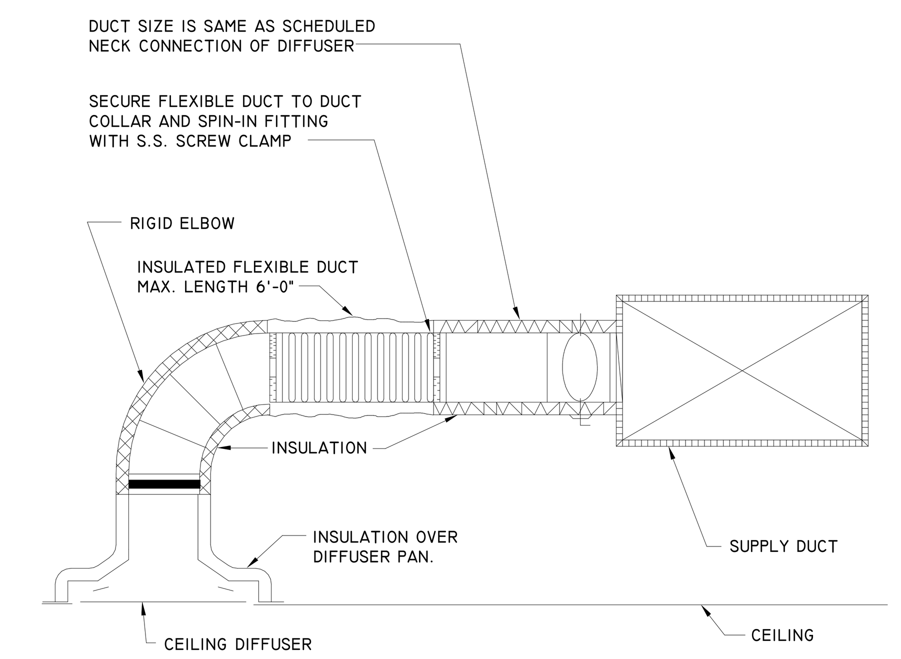


NOTE: SEE FLOOR PLANS FOR DIMENSIONS

DUCTWORK FITTINGS DETAIL — NOT TO SCALE — 9

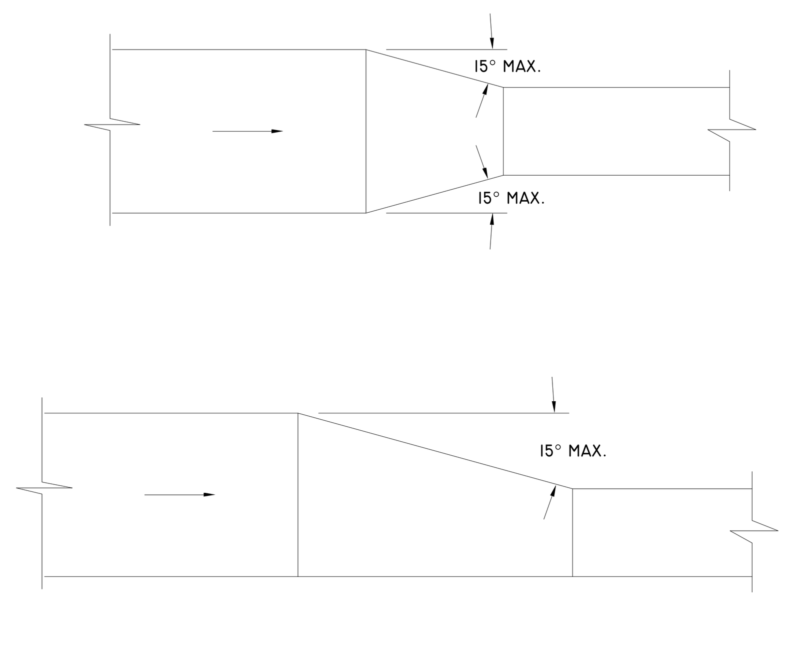


END-SUCTION PUMP PIPING DETAIL — NOT TO SCALE — 6

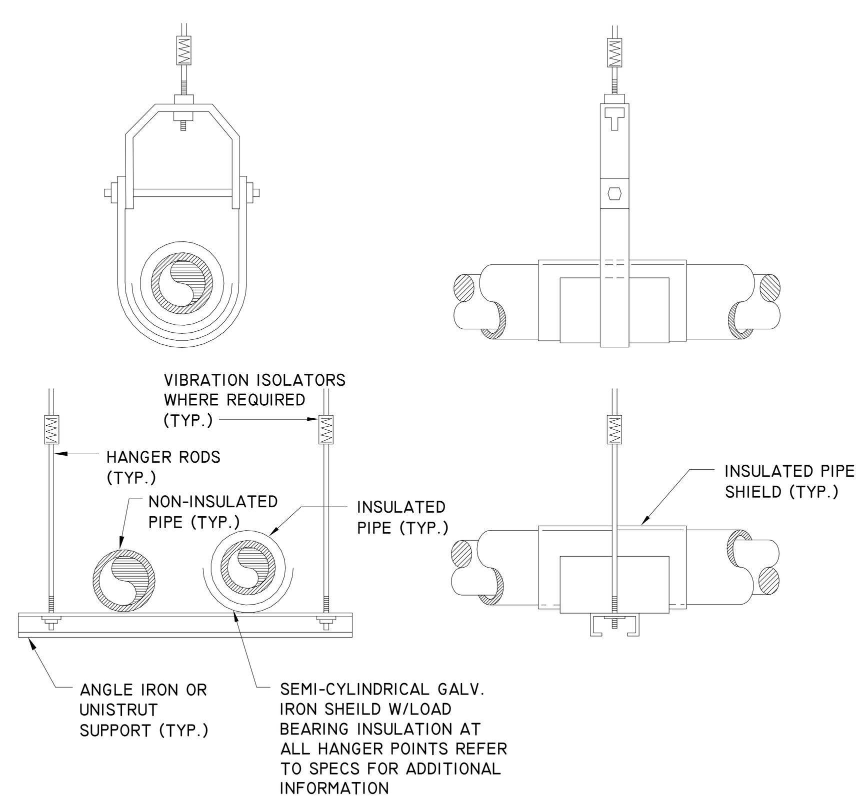


NOTE:
THE FLANGED BELLMOUTH FITTING MUST BE PROVIDED, WHERE HEIGHT OF DUCT SHOWN ON PLANS CAN ACCOMODATE THE FITTING. ONLY WHERE THE DUCT HEIGHT DOES NOT ALLOW THE INSTALLATION OF BELLMOUTH FITTING, PROVIDE STRAIGHT FITTING. FLEX DUCT MAY BE LOCATED IN RISER OR HORIZONTAL RUN.

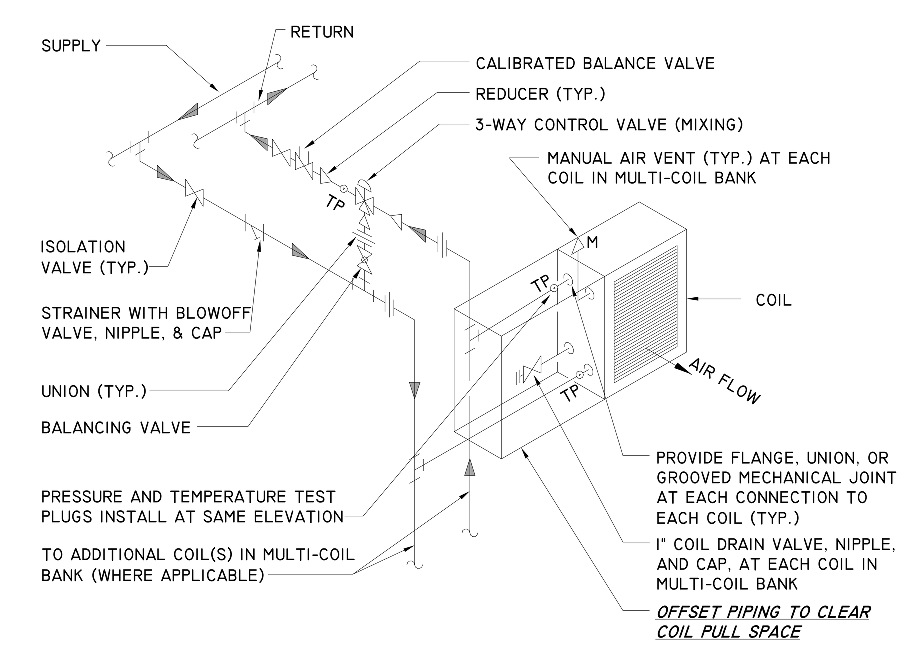
CEILING DIFFUSER CONNECTION DETAIL — NOT TO SCALE — 3



DUCT TRANSITION DETAIL — NOT TO SCALE — 11



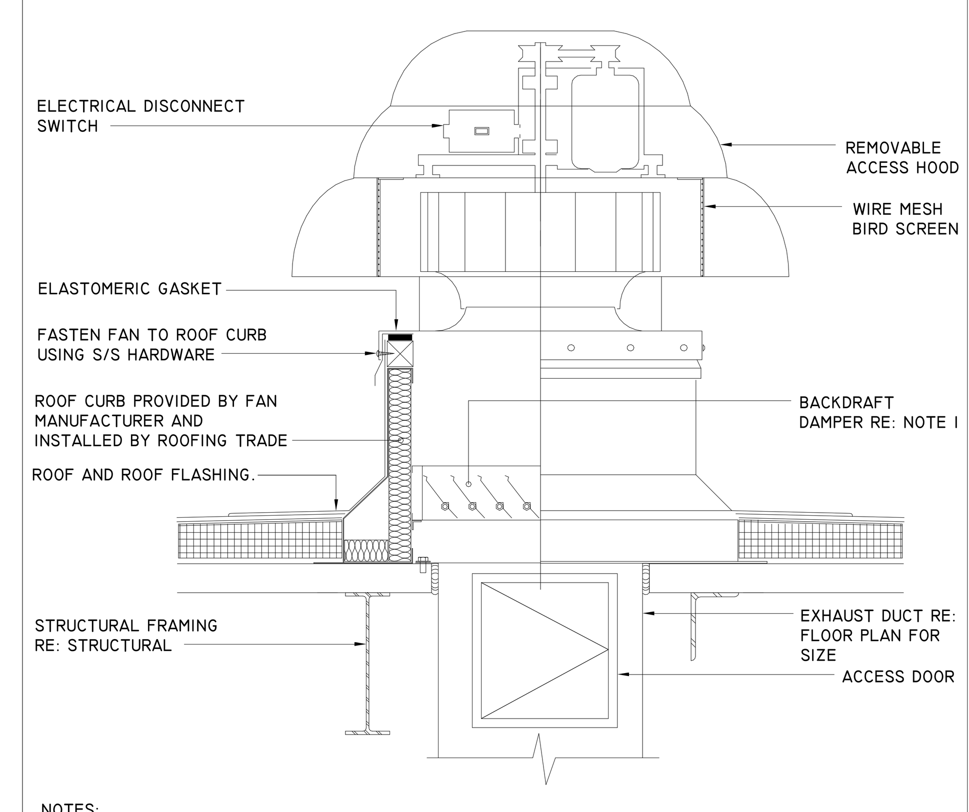
PIPE HANGER DETAIL — NOT TO SCALE — 8



NOTES:

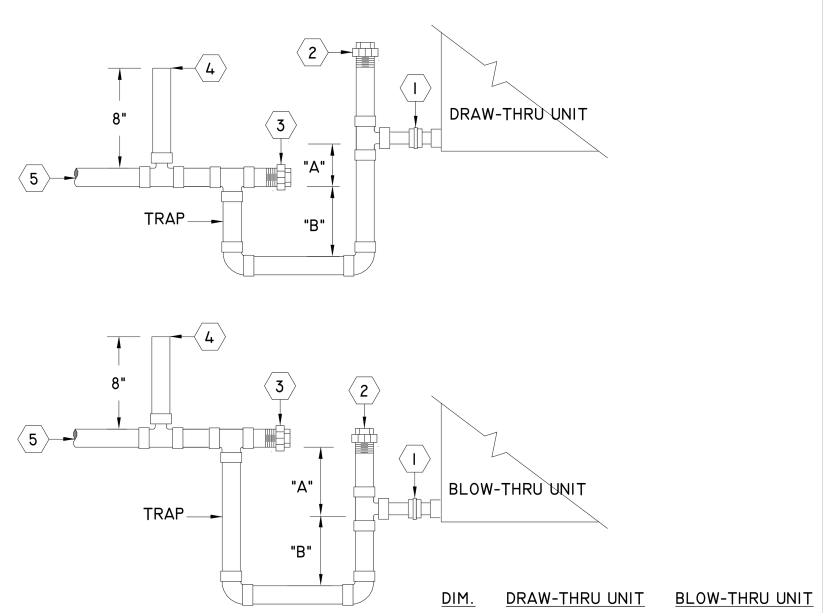
1. SHUT-OFF VALVE SHALL BE BUTTERFLY TYPE FOR 2-1/2" AND LARGER AND BALL VALVE FOR 2" AND SMALLER.
2. PROVIDE BALANCING METER FOR COIL WITH 50 GPM OR LARGER FLOW.
3. PROVIDE DRAIN LINE FOR STRAINER VALVE.
4. CONFIRM T&P PLUGS LOCATIONS WITH TAB CONTRACTOR BEFORE INSTALLATION.

3-WAY AHU CHILLED WATER COIL PIPING DETAIL — NOT TO SCALE — 5



NOTES:
1. DAMPER FURNISHED BY FAN MANUFACTURER AND INSTALLED BY MECHANICAL TRADE.

ROOF EXHAUST FAN DETAIL — NOT TO SCALE — 2

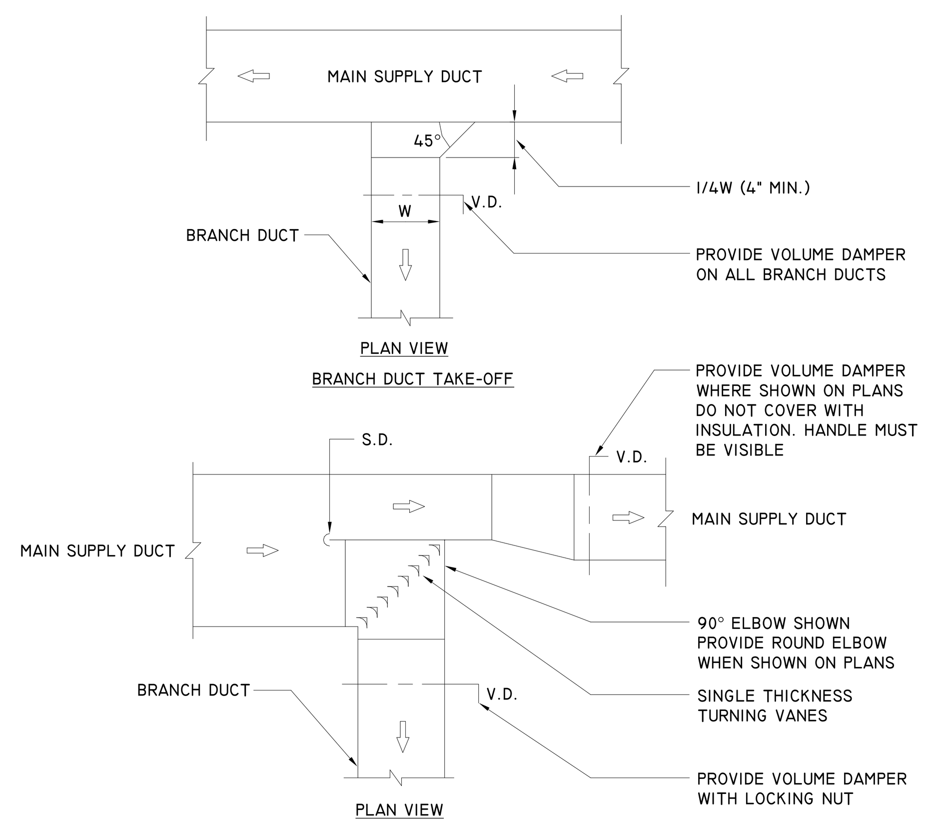


DIM.	DRAW-THRU UNIT	BLOW-THRU UNIT
"A"	FAN T.S.P. + 1"	FAN T.S.P. - 1"
"B"	FAN T.S.P./2 + 1"	FAN T.S.P./2 + 1"

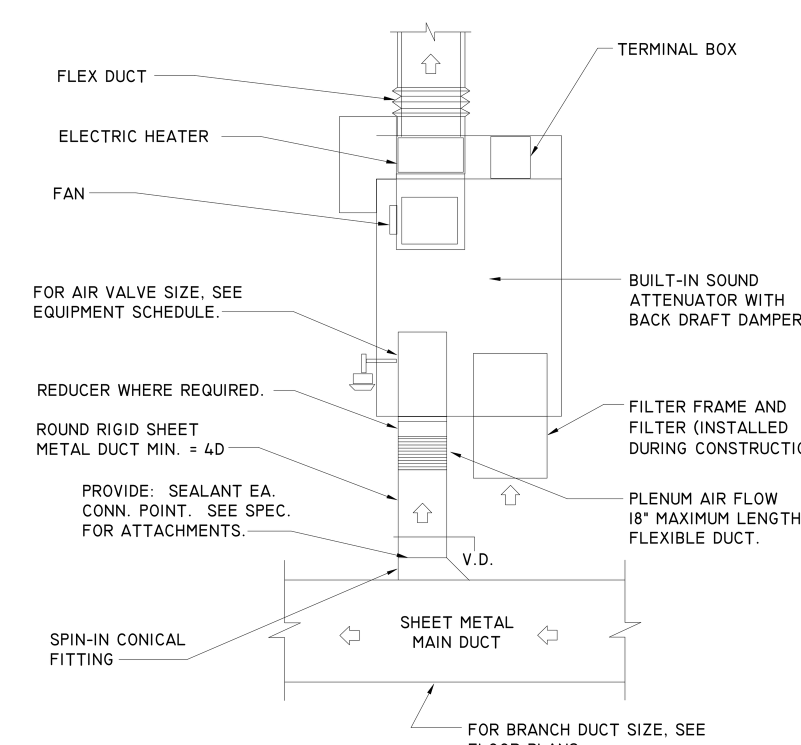
KEYED NOTES:

1. SIZE DRAIN PIPING AT LEAST ONE PIPE SIZE LARGER THAN DRAIN PAN CONNECTION. PROVIDE UNION AT UNIT CONNECTION.
2. UPSTREAM CLEANOUT WITH REMOVABLE CAP OR PLUG. EXTEND ABOVE TOP RIM OF DRAIN PAN.
3. DOWNSTREAM PLUGGED CLEANOUT AT HEAD END OF DRAIN.
4. OPEN VENT - DO NOT CAP.
5. ROUTE DISCHARGE TO INDIRECT DRAIN. PITCH DOWN AT 1/8" PER FOOT. PROVIDE CLEANOUTS AT CHANGES OF DIRECTION.

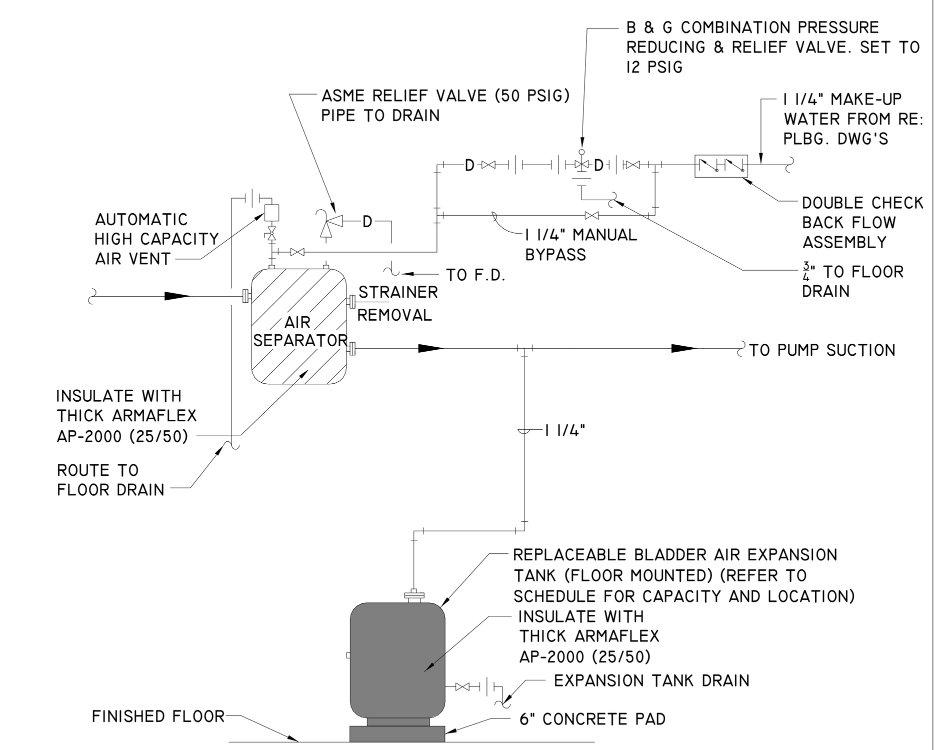
TYPICAL CONDENSATE DRAIN DETAIL — NOT TO SCALE — 10



BRANCH DUCT DETAIL — NOT TO SCALE — 7



FAN POWERED VAV UNIT DETAIL — NOT TO SCALE — 4



NOTE :
1. AIR SEPARATOR SHALL BE SUSPENDED FROM STRUCTURE.

EXPANSION TANK AND AIR SEPARATOR DETAIL — NOT TO SCALE — 1

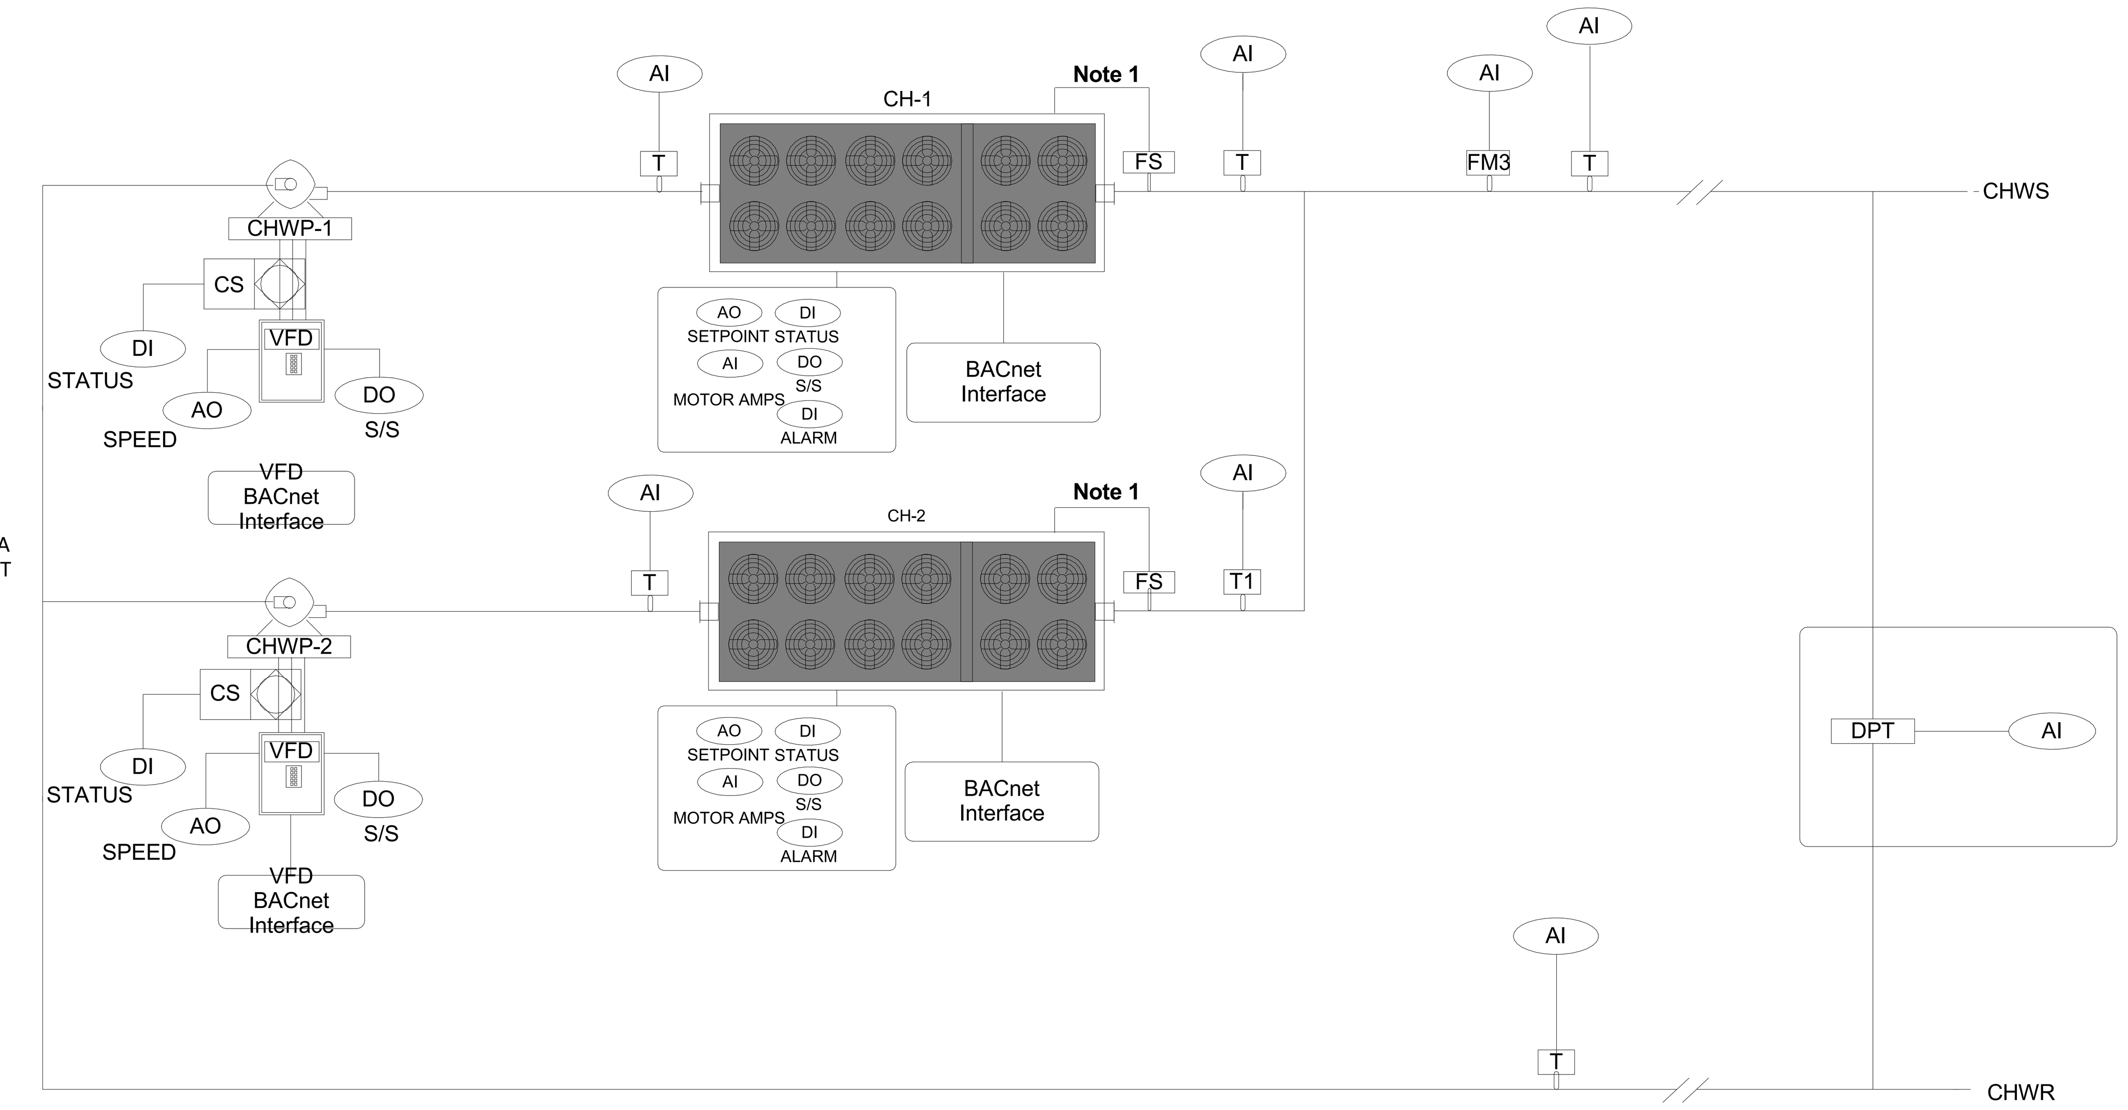
DP	DIFFERENTIAL PRESSUE
HSL	HIGH STATIC LIMIT
CSR	CURRENT RELAY SWITCH

SEQUENCE OF OPERATION:

ENGAGE MAIN CHW SYSTEM (CH-1 & CH-2) ON SCHEDULE DURING OPERATING HOURS, ON DEMAND, AND/OR ON MANUAL COMMAND.

UPON MAIN SYSTEM ENGAGEMENT, ENGAGE LEAD CHW PUMP AND ENGAGE LEAD CHILLER. MODULATE CHW PUMP SPEED TO MAINTAIN CHW DP ABOUT SET POINT. A DECREASE IN DP ACTS TO INCREASE PUMP SPEED AND VISE VERSA. UPON PERSISTENT LOW CHW DP OR PERSISTENT HIGH CHW SUPPLY TEMPERATURE, ENGAGE LAG CHW PUMP AND ENGAGE LAG CHILLER IN SEQUENCE. MODULATE LAG CHW PUMP SPEED IN TANDEM WITH LEAD PUMP SPEED. DISENGAGE LAG CHILLER WHEN LAG CHILLER MOTOR AMPS FALL PERSISTENTLY BELOW 45% (ADJUSTIBLE) OF FULL LOAD VALUE. ALTERNATE LEAD AND LAG CHILLER AND PUMP DESIGNATIONS TO EQUALIZE TOTAL ACCUMULATED RUN TIME. DISENGAGE ASSOCIATED PUMP, ISOLATION VALVE, AND CHILLER UPON CHILLER FAULT ALARM. ALARM ON PERSISTENT HIGH OR LOW CHW SUPPLY TEMPERAURE. ALARM ON PERSISTENT HIGH OR LOW CHW DP.

PROVIDE CHILLER REMOTE SETPOINT ADJUSTMENT THROUGH BAS USER INTERFACE. MONITOR AND DISPLAY CHW SYSTEM FLOW, CHS & CHR TEMPERATURE, AND CALCULATE TONNAGE.



Notes:
1.Flow switch shall be furnished, mounted by mechanical contractor and wired by controls contractor.

VARIABLE VOLUME AIR HANDLER (WITH TERMINAL UNITS)

SUPPLY FAN CONTROL

ENGAGE AHU SUPPLY FAN DURING SCHEDULED OPERATING HOURS, OR UPON TERMINAL UNIT COOLING DEMAND DURING SCHEDULED NON-OPERATING HOURS, OR UPON MANUAL COMMAND, AND VISE VERSA. ALARM ON PERSISTENT FAN STATUS FAILURE. MODULATE FAN SPEED TO MAINTAIN SUPPLY AIR STATIC PRESSURE (SP) ABOUT SETPOINT. AN INCREASE IN STATIC PRESSURE ACTS TO DECREASE FAN SPEED AND VISE VERSA. RESET SP SETPOINT FROM MAX TO MIN LIMITS IN .05" WC (ADJ) INCREMENTS AT 15 MINUTE (ADJ) INTERVALS BY POLLING TERMINAL UNIT SUPPLY PRIMARY AIR DAMPER POSITIONS. DECREASE SP SETPOINT WHEN ALL POLLED TERMINAL UNIT AIR DAMPER POSITIONS ARE LESS THAN 85% OPEN (ADJ). INCREASE SP SETPOINT WHEN ANY ONE TERMINAL UNIT PRIMARY AIR DAMPER POSITION IS MORE THAN 95% OPEN (ADJ). PROGRAM DEFAULT SP SETPOINT AT MAX SETPOINT LIMIT. PROGRAM MAX SETPOINT LIMIT AS DETERMINED BY AIR BALANCER. PROGRAM MIN SETPOINT LIMIT AT 0.5" WC (ADJ). ALARM ON PERSISTENT HIGH OR LOW STATIC PRESSURE. INTERLOCK MANUAL RESET HI LIMIT SUPPLY AIR STATIC PRESSURE SWITCH TO DISABLE FAN ON TRIP. ADJUST PRESSURE SWITCH TO NOT EXCEED STATIC PRESSURE RATING OF ATTACHED DUCTWORK.

COOLING COIL CONTROL

MODULATE CHILLED WATER (CHW) CONTROL VALVE TO MAINTAIN SUPPLY AIR TEMPERATURE ABOUT SUPPLY AIR (SA) TEMPERATURE SETPOINT. AN INCREASE IN SA TEMPERATURE ACTS TO INCREASE CHW FLOW AND VISE VERSA. RESET SA TEMPERATURE SETPOINT FROM MIN TO MAX LIMITS IN 0.5F INCREMENTS AT 15 MINUTE (ADJ) INTERVALS BY POLLING TERMINAL UNIT PRIMARY AIR FLOW AS A % OF TERMINAL UNIT MAX PROGRAMMED AIRLOW. INCREASE SA TEMPERATURE SETPOINT WHEN ANY ONE POLLED TERMINAL UNIT PRIMARY AIRFLOW % IS AT ITS MINIMUM LIMIT AND WHEN ALL POLLED TERMINAL UNIT PRIMARY AIRFLOW % ARE LESS THAN 85%. DECREASE SP TEMPERATURE SETPOINT WHEN ANY ONE TERMINAL UNIT PRIMARY AIRFLOW % IS MORE THAN 95% (ADJ). PROGRAM DEFAULT SA TEMPERATURE SETPOINT AT MIN LIMIT = SCHEDULED COOLING COIL LEAVING DB TEMPERAURE. PROGRAM MAX SETPOINT LIMIT AT MIN LIMIT + 10F (ADJ). ALARM ON PERSISTENT HIGH OR LOW SA TEMPERATURE.

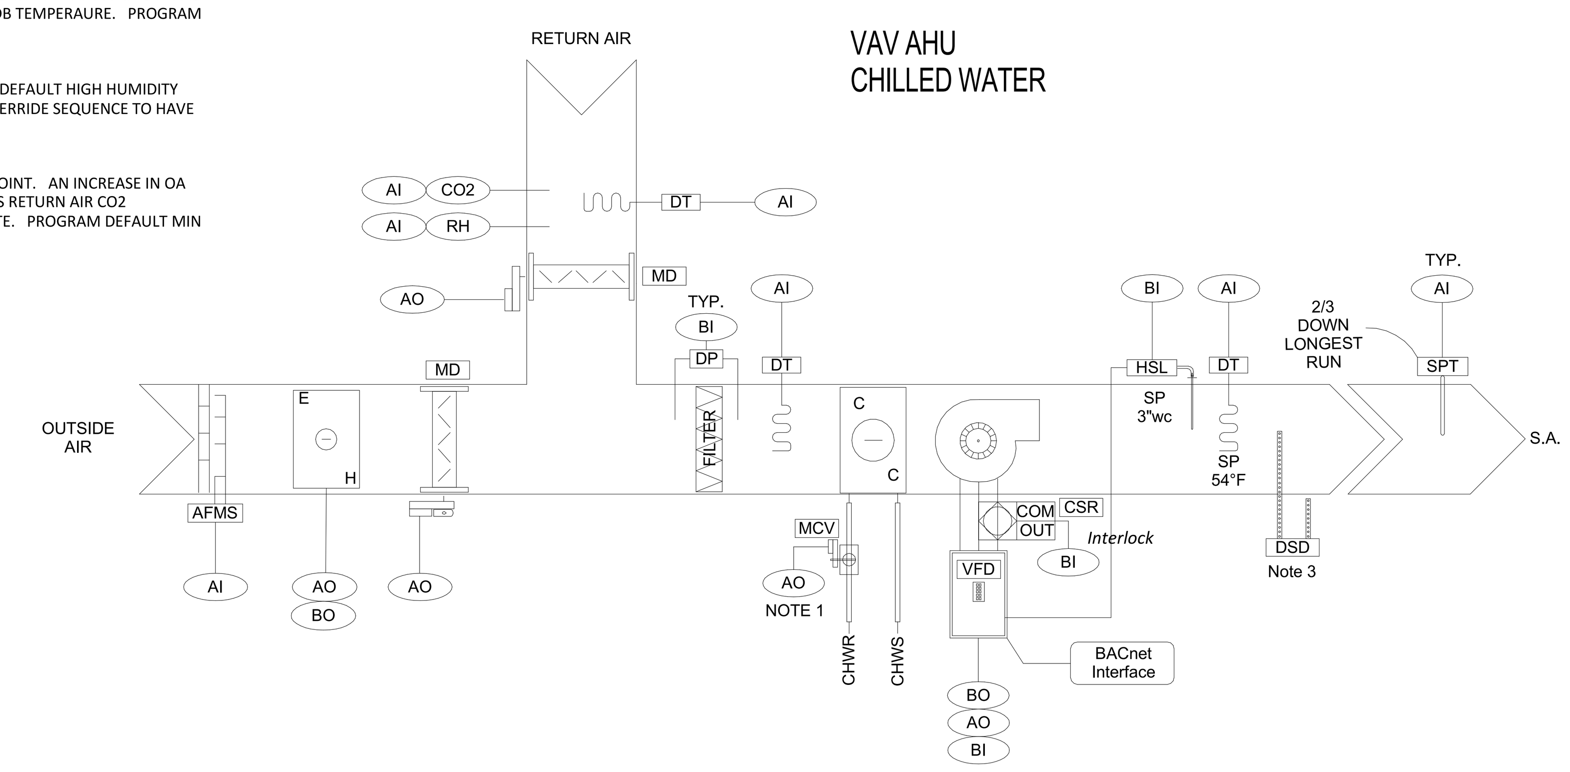
HUMIDITY OVERRIDE CONTROL

OVERRIDE SA TEMPERAURE SETPOINT TO MIN LIMIT UPON PERSISTENT HIGH RETURN AIR (RA) RELATIVE HUMIDITY. PROGRAM DEFAULT HIGH HUMIDITY LIMIT AT 65% RH (ADJ). RELEASE HUMIDITY OVERRIDE AS RA HUMIDITY DECREASES TO 55% RH (ADJ). PROGRAM HUMIDITY OVERRIDE SEQUENCE TO HAVE FULL AUTHORITY OVER NORMAL SA TEMPERAURE SETPOINT RESET.

OUTSIDE AIR CONTROL

DURING SCHEDULED OPERATING HOURS, MODULATE OUTSIDE AIR (OA) DAMPER TO MAINTAIN OUTSIDE AIRFLOW ABOUT SETPOINT. AN INCREASE IN OA AIRFLOW ACTS TO CLOSE OA DAMPER AND VISE VERSA. CONTINUOUSLY RESET OA SETPOINT FROM MIN LIMIT TO MAX LIMIT AS RETURN AIR CO2 CONCENTRATION INCREASES FROM 700 PPM (ADJ) TO 1100 PPM. PROGRAM DEFAULT MAX LIMIT AT SCHEDULED OA FLOWRATE. PROGRAM DEFAULT MIN LIMIT = MAX LIMIT X 20% (ADJ). ALARM ON PERSISTENT LOW OA FLOW OR PERSISTENT HIGH RA CO2.

MONITOR AND DISPLAY ALL I/O CONTROL POINT VALUES.



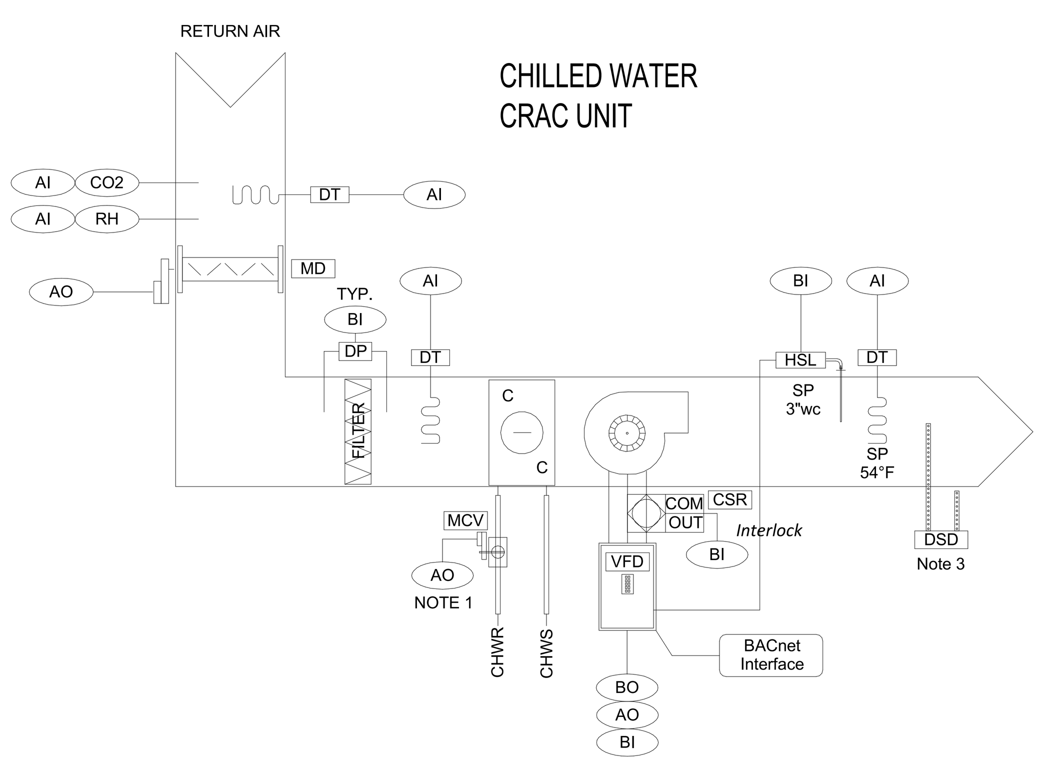
NOTES:
1. PROVIDE 2-WAY OR 3-WAY CONTROL VALVES AS INDICATED ON PIPING DIAGRAM.
2. AFMS (AIR FLOW MONITORING STATION) TO BE PROVIDED AND INSTALLED BY CONTROLS CONTRACTOR. COORDINATE AFMS INSTALLATION WITH SHEET METAL INSTALLATION.
3. DUCT SMOKE DETECTOR FURNISHED, MOUNTED, AND WIRED FOR UNIT SHUT-DOWN BY DIVISION 26.

VAV AIR HANDLER SYSTEM CONTROL - CHILLED WATER WITH OUTSIDE AIR (AHU-1, AHU-2, AHU-3) | NOT TO SCALE | 2

SEQUENCES OF OPERATION

CRAC UNITS:

PROVIDE CRAC UNITS WITH MANUFACTURER S PREPROGRAMMED STANDARD CONTROL SEQUENCES INCLUDING, AT MINIMUM, UNIT START/STOP, SPACE TEMPERTURE CONTROL WITH SUPPLY AIRFLOW AND CHILLED WATER FLOW MODULATION, FIRE/SMOKE DETECTION AND SHUTDOWN, SPACE TEMPERATURE ALARM, UNIT FAULT DETECTION AND ALARM.



NOTES:
1. PROVIDE 2-WAY OR 3-WAY CONTROL VALVES AS INDICATED ON PIPING DIAGRAM.
2. AFMS (AIR FLOW MONITORING STATION) TO BE PROVIDED AND INSTALLED BY CONTROLS CONTRACTOR. COORDINATE AFMS INSTALLATION WITH SHEET METAL INSTALLATION.
3. DUCT SMOKE DETECTOR FURNISHED, MOUNTED, AND WIRED FOR UNIT SHUT-DOWN BY DIVISION 26.

CHILLED WATER CRAC UNIT SYSTEM CONTROL | NOT TO SCALE | 3

FAN POWERED TERMINAL SEQUENCES

FAN CONTROL

ENGAGE FANS AUTOMATICALLY TO OPERATE CONTINUSOULY DURING SCHEDULED OPERATING HOURS.
CYCLE FANS AUTOMATICALLY DURING SCHEDULED NON-OPERATING HOURS IN TANDEM WITH SPACE HEATING OR COOLING DEMAND.
AUTOMATICALLY COMMAND FAN MOTOR SPEED TO ACHIEVE SCHEDULED S/A (MAX) CFM WHEN PRIMARY AIR IS GREATER THAN MIN LIMIT VALUE.
AUTOMATICALLY COMMAND FAN MOTOR SPEED TO ACHIEVE SCHEDULED HEATING (MIN) CFM VALUE WHEN PRIMARY AIRFLOW IS AT MIN LIMIT VALUE.
FOR TERMINAL UNITS WITH SPACE CO2 SENSORS INDICATED, OVERRDE FAN MOTOR SPEED TO SCHEDULED S/A (MAX) CFM WHEN SPACE CO2 EXCEEDS 1100 PPM (ADJ).

PRIMARY AIRFLOW CONTROL

MODULATE PRIMARY AIR DAMPER TO MAINTAIN PRIMARY AIRFLOW SETPOINT.
RESET PRIMARY AIRFLOW SETPOINT BETWEEN SCHEDULED MIN AND MAX CFM LIMITS IN TANDEM WITH SPACE COOLING PROPOTIONAL BAND. AN INCREASE IN COOLING DEMAND INCREASES AIRFLOW SETPOINT AND VISE VERSA.
MONITOR AND DISPLAY PRIMARY DAMPER POSISTION AND AIRFLOW.
ALARM ON PERSISTENT HIGH OR LOW AIRFLOW

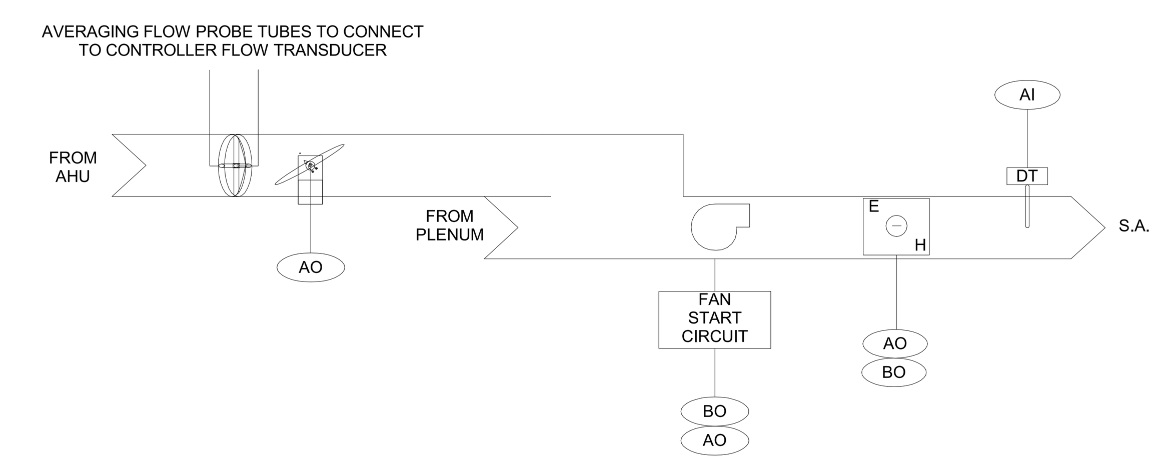
HEATING CONTROL

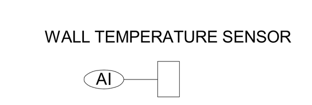
MODULATE CYCLE HEATING IN SEQUENTIAL STAGES TO MAINTAIN SPACE TEMP ABOUT HEATING SETPOINT.

SPACE SETPOINT CONTROL

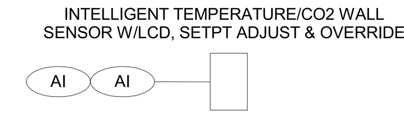
PROGRAM SPACE COOLING TEMP SETPOINT AT 72 F (ADJ) AND HEATING TEMP SETPOINT AT 68 F (ADJ) DURING SCHEDULED OPERATING HOURS.
PROGRAM SPACE COOLING TEMP SETPOINT AT 77 F (ADJ) AND HEATING TEMP SETPOINT AT 65 F (ADJ) DURING SCHEDULED NON-OPERATING HOURS.
RESET SPACE COOLING TEMP SETPOINT +5 F (ADJ) AND HEATING SETPOINT -3 F (ADJ) DURING SCHEDULED OPERATING HOURS WHEN NO SPACE OCCUPANCY IS DETECTED FOR A 15 MIN (ADJ) INTERVAL.
CANCEL SPACE TEMP RESET IMMEDIATELY UPON DETECTION OF SPACE OCCUPANCY.
RESET SPACE COOLING TEMP SETPOINT +10 F (ADJ) AND HEATING SETPOINT -5 F (ADJ) DURING SCHEDULED NON-OPERATING HOURS.
MONITORI AND DISPLAY ALL I/O VALUES.
ALARM ON PERSISTENT HIGH OR LOW SPACE TEMP.

MONITOR AND DISPLAY ALL I/O CONTROL POINT VALUES.





LOCATED 48" ABOVE FINISHED FLOOR OR IF ADJACENT TO LIGHT SWITCH MOUNTED EVEN WITH TOP OF LIGHT SWITCH PLATE IN ACCORDANCE WITH ADA (FOR CORRIDORS ONLY)



(LOCATED 42" ABOVE FINISHED FLOOR OR IF ADJACENT TO LIGHT SWITCH MOUNTED EVEN WITH TOP OF LIGHT SWITCH PLATE)

FAN POWERED VAV TERMINAL BOX SYSTEM CONTROL | NOT TO SCALE | 1

1 SITE PLAN - MEP
MEP101
SCALE : 1" = 20'-0"

ELECTRICAL GENERAL SITE NOTES:

1. ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR COORDINATION OF ELECTRICAL SERVICE ENTRANCE FOR THE PROJECT. CONTRACTOR SHALL SUBMIT INFORMATION DEVELOPED BY ENGINEER IN FORM OF SITE PLAN, DRAWINGS, ONE LINE DIAGRAM, AND LOAD ANALYSIS TO THE POWER COMPANY REPRESENTATIVE FOR PROCESSING SERVICE REQUEST. LOCATION OF TRANSFORMER SHALL BE COORDINATED WITH POWER COMPANY AS SHOWN ON THE PLAN. CONTRACTOR IS ALSO RESPONSIBLE FOR FILING ALL REQUESTS AND APPLICATIONS FOR SERVICE TO THE POWER COMPANY. DETERMINATION OF LENGTH, QUANTITIES, PULL BOXES/MANHOLES AND STANDARD OF CONSTRUCTION FOR UNDERGROUND PRIMARY LINES (AS REQUIRED) AND TRANSFORMER PAD SHALL BE RESPONSIBILITIES OF THE CONTRACTOR. DETAILS FOR ELECTRICAL SERVICE TRANSFORMERS PAD AND UNDERGROUND PRIMARY CONDUIT SHOWN ON THESE DOCUMENTS SHALL BE APPROVED BY POWER COMPANY BEFORE ANY CONSTRUCTION BEGINS. CONTRACTOR SHALL EXPEDITE COORDINATION EFFORT FOR ANY CONTRACTUAL ARRANGEMENTS FOR EASEMENT RELATED TO PRIMARY OVERHEAD OR UNDERGROUND LINES IF REQUIRED BY POWER COMPANY. ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR ALL FEES ASSOCIATED WITH THE NEW SERVICE REQUEST.
2. UNDERGROUND CONDUIT ROUTING SHALL BE COORDINATED WITH EXISTING PAVEMENT AND UNDERGROUND UTILITIES. COORDINATE WITH CIVIL PLANS FOR MORE INFORMATION. PROVIDE PULL STRING FOR ALL UNDERGROUND EMPTY CONDUITS. REFER TO SPECIFICATIONS AND DETAILS FOR INSTALLATION METHODS AND MATERIALS.
3. PRIOR TO TRENCHING, UNDERGROUND CONDUIT ROUTING SHALL BE MARKED FOR REVIEW AND ROUTING PATH APPROVAL OBTAINED BY THE OWNER REPRESENTATIVE. COORDINATE WITH EXISTING IMPROVEMENTS, TREES, ROOT SYSTEMS, EXISTING PAVEMENT, AND UNDERGROUND UTILITITES. PROVIDE PULL ROPE FOR ALL UNDERGROUND EMPTY CONDUITS.
4. ELECTRICAL CONTRACTOR SHALL SEAL INSIDE AND OUT ALL CONDUITS WHICH TRAVEL BETWEEN CONDITIONED AND NON-CONDITIONED SPACES (OR OUTDOOR TO INDOOR) AFTER PULLING CONDUCTORS SO THAT MOISTURE CONDENSATION THROUGH THE CONDUITS IS MITIGATED.
5. ELECTRICAL CONTRACTOR SHALL FULLY COORDINATE WITH TELECOMMUNICATIONS AND SECURITY DRAWINGS AND SPECIFICATIONS. PROVIDE ALL CONDUITS, BACKBOXES, JUNCTION BOXES, AND PULL BOXES SPECIFIED. WHERE THERE ARE DRAWING DISCREPANCIES, THE CONTRACTOR SHALL INSTLAL THE GREATER QUANTITY OF DEVICES.
6. ALL EQUIPMENT (I.E. GENERATOR, CHILLERS, CHWP) SHALL BE MOUNTED 36" ABOVE 500 YEAR FLOOD PLAIN. PROVIDE PLATFORMS AS REQUIRED TO MAINTAIN ALL EQUIPMENT MANUFACTURERS REQUIRED MAINTENANCE ACCESS AND CLEARANCES.

ELECTRICAL SPECIFICATIONS

(BOOKS SPECIFICATIONS SUPERCEDE ANY NOTES BELOW)

1. SCOPE: THIS DIVISION SHALL INCLUDE ALL EQUIPMENT, MATERIALS, AND LABOR REQUIRED FOR COMPLETE INSTALLATION OF THE ELECTRICAL SYSTEM. PROJECT INCLUDES INSTALLATION OF NEW ELECTRICAL DISTRIBUTION SYSTEM, HVAC SYSTEM CONNECTIONS, NEW LIGHTING SYSTEM, NEW RECEPTACLES AND OUTLETS, FIRE ALARM AND NOTIFICATION SYSTEM, AND OTHER ELECTRICAL WORK AS INDICATED ON THE PLANS. CONTRACTOR SHALL PROVIDE CONDUITS, CONDUCTORS FOR POWER, CONTROLS, AND LIGHTING, LIGHTING CONTACTOR AND CONTACT CLOSURES, AND ALL REQUIRED APPARATUS REQUIRED FOR FULL OPERATION OF THE ELECTRICAL SYSTEM.
2. SITE VISIT AND FAMILIARIZATION: CONTRACTORS PROPOSING TO UNDERTAKE WORK UNDER THIS DIVISION SHALL VISIT THE SITE OF THE WORK, AND FULLY INFORM THEMSELVES OF ALL CONDITIONS THAT AFFECT THE WORK, OR COST THEREOF. CONTRACTOR SHALL EXAMINE THE DRAWINGS AND SPECIFICATIONS AS RELATED TO THE SITE CONDITIONS. ANY DISCREPANCY SHALL BE REPORTED TO THE ENGINEER.
3. NOTICE: CONSIDERATION WILL NOT BE GRANTED FOR ANY ALLEGED MISUNDERSTANDING OF THE AMOUNT OF WORK TO BE PERFORMED. TENDER OF A PROPOSAL SHALL CONVEY FULL AGREEMENT TO ALL ITEMS AND CONDITIONS SPECIFIED, INDICATED ON THE DRAWINGS, AND/OR REQUIRED BY NATURE OF THE SITE.
4. DISCREPANCIES: SHOULD CONTRACTOR FIND DISCREPANCIES OR OMISSIONS IN THE CONTRACT DOCUMENTS, OR BE IN DOUBT AS TO THE INTENT THEREOF, HE SHALL IMMEDIATELY OBTAIN CLARIFICATION FROM THE ARCHITECT BEFORE SUBMITTING PROPOSAL FOR WORK IN THIS DIVISION.
5. DEMOLITION: ALL ELECTRICAL COMPONENTS OF THE EXISTING SYSTEM WHICH ARE NOT UTILIZED FOR NEW CONFIGURATION SHALL BE REMOVED AND DISPOSED OF BY CONTRACTOR. REFER TO DEMOLITION NOTES AND DRAWINGS FOR EXTENT OF WORK.
6. TIMELY PLACING OF MATERIALS AND EQUIPMENT: ALL ELECTRICAL APPARATUS SHALL BE INSTALLED AT THE PROPER TIME DURING PROGRESS OF CONSTRUCTION. COORDINATE WORK OPERATIONS WITH OTHER CRAFTS.
7. SPACE REQUIREMENTS: CONTRACTOR FOR WORK UNDER THIS DIVISION SHALL BE FULLY RESPONSIBLE FOR DETERMINING IN ADVANCE OF PURCHASE THAT EQUIPMENT AND MATERIALS PROPOSED FOR INSTALLATION SHALL FIT INTO THE CONFINES INDICATED.
8. MANUFACTURERS' LITERATURE: DELIVER ALL PRINTED TAGS, INSTRUCTIONS, CERTIFIED DRAWINGS, PARTS LISTED, CERTIFICATES, ETC., SUPPLIED WITH EQUIPMENT ITEMS, TO THE OWNER.
9. CODES, PERMITS, AND FEES: WORK UNDER THIS DIVISION SHALL BE CONSTRUCTED IN STRICT CONFORMANCE WITH PERTINENT PROVISIONS OF CITY AND STATE BUILDING CODES.
   - A. ALL WORK SHALL COMPLY WITH THE 2023 EDITION OF NATIONAL ELECTRIC CODE (NEC).
   - B. OBTAIN ALL REQUIRED PERMITS. PAY ALL LEGAL FEES FOR PERMITS AND INSPECTIONS BY AUTHORITIES HAVING JURISDICTION.
   - C. ALL WORK SHALL COMPLY WITH REQUIREMENTS OF AUTHORITIES HAVING JURISDICTION.
10. CUTTING AND PATCHING:
    - A. CONTRACTOR FOR THIS DIVISION SHALL LAYOUT TO DIMENSION AND LOCATIONS, CUT AND PATCH ALL OPENINGS ON SURFACES TO BE FORMED, FRAMED, OR CUT.
    - B. SHOULD CONTRACTOR FOR THIS DIVISION FAIL TO ADHERE WITH THIS REQUIREMENT, AS WORK PROGRESSES, ANY OPENINGS SHALL BE CUT AND PATCHED BY GENERAL CONTRACTOR AT THE EXPENSE OF THIS CONTRACTOR FOR THIS DIVISION.
11. PROTECTION OF APPARATUS: TAKE ALL PRECAUTIONS NECESSARY FOR PROPER PROTECTION OF NEW EQUIPMENT, APPARATUS, AND MATERIALS FROM DAMAGE. FAILURE TO DO SO WILL BE CAUSE FOR REJECTION OF ANY ITEM COMING UNDER QUESTION.
12. SHOP DRAWINGS: CONTRACTOR FOR THIS DIVISION SHALL SUBMIT SHOP DRAWINGS AND CATALOGUE DATA ON ALL MAJOR ITEMS OF EQUIPMENT AND SYSTEMS AND OTHER MATERIAL REQUESTED BY ARCHITECT/ENGINEER. SUBMIT PRODUCT DATA FOR SWITCHBOARDS, PANELBOARDS, TRANSFORMERS, WIRES, CABLE, SUPPORTING DEVICES, IDENTIFICATION COMPONENTS, LIGHT FIXTURES, FIRE ALARM SYSTEM AND COMPONENTS, WIRING DEVICES, MULTI-OUTLET RACEWAYS, CABINETS, AND BOXES. SUBMIT SIX COPIES WITHIN THIRTY (30) DAYS AFTER CONTRACT AWARD, AND IN NOT MORE THAN TWO GROUPS OF SUBMITTALS. SUBMITTALS SHALL CONSIST OF LAYOUTS, WORKING DRAWINGS, CUTS, AND OPERATING AND PERFORMANCE DATA. ALLOW FOUR (4) WEEKS FOR REVIEW AND APPROVAL OF THE SHOP DRAWINGS BY ENGINEER.
13. MATERIALS AND WORKMANSHIP: ALL MATERIALS AND EQUIPMENT SHALL BE NEW, OF BEST GRADE OF STANDARD MANUFACTURE. APPROVED BY UL, AND BE SO LABELED. FOR WIRE AND CABLE, MARKED AS REQUIRED BY ART. 310-2, NEC. INSTALLED BY SKILLED ELECTRICIAN, WORKING UNDER THE DIRECT SUPERVISION OF COMPETENT EXPERIENCED FOREMAN AND/OR SUPERINTENDENT. PRODUCTS SHALL BE INSTALLED IN A THOROUGH WORKMANLIKE MANNER, PRESENTING A NEAT, CLEAN-CUT APPEARANCE WHEN COMPLETED. ANY PART OR PARTS NOT MEETING THIS REQUIREMENT SHALL BE REPLACED OR REBUILT WITHOUT EXTRA EXPENSE TO OWNER.
14. PROTECTION OF EXISTING: PLENUM CABLE SHALL BE PROPERLY SECURED ABOVE CEILING PER APPLICABLE CODES.
15. WIRING METHODS: THE DRAWINGS ARE DIAGRAMMATIC AND ARE INTENDED TO SHOW THE LOCATIONS OF EQUIPMENT AND ARRANGEMENT OF CIRCUITS ONLY. EXACT LOCATIONS SHALL BE DETERMINED BY ACTUAL MEASUREMENT AT THE SITE. CONTRACTOR SHALL BE FULLY RESPONSIBLE FOR ALL RISES, DROPS, OFFSETS, ETC. NECESSARY TO AVOID CONFLICT WITH STRUCTURAL MEMBERS, AND SIMILAR ITEMS, WHEN INSTALLING ELECTRICAL CONDUITS. INSTALL EXPOSED CONDUIT AS SHOWN OR NOTED, PARALLEL TO HORIZONTAL AND VERTICAL LINES OF STRUCTURES. MAKE BENDS WITH 90 DEGREE TURN ONLY, OR WITH APPROVED FITTINGS.
16. CONDUIT: FURNISH A COMPLETE RACEWAY SYSTEM FOR BUT NOT LIMITED TO FEEDER, BRANCH CIRCUITS, CONTROL WIRING, AND AUXILIARY SYSTEM WIRING.
    - A. USE LIQUID TIGHT FLEXIBLE METAL CONDUIT AND FITTINGS FOR ALL MOTORIZED CONNECTIONS, WHERE EQUIPMENT IS SUBJECT TO MOVEMENT, OR LOCATED OUTDOOR.
    - B. WHERE ENTERING PANELS, PULL BOXES, J-BOXES, OR OUTLET BOXES, SECURED IN PLACE WITH WITH LOCK-NUTS INSIDE AND OUTSIDE, AND INSULATED BUSHING INSIDE.
    - C. BENDS AND OFFSETS MADE WITH APPROVED TOOLS ONLY. BENDS OR OFFSETS IN WHICH THE PIPE IS CRUSHED OR DEFORMED SHALL NOT BE INSTALLED.
    - D. USE EMT FOR INTERIOR DRY LOCATIONS, PVC FOR UNDERGROUND INSTALLATION, AND RIGID GALVANIZED STEEL FOR EXPOSED LOCATIONS SUBJECT TO DAMAGE.
17. OUTLET AND JUNCTION BOXES: FURNISH AND INSTALL ALL JUNCTION BOXES REQUIRED TO FACILITATE INSTALLATION OF THE VARIOUS CONDUIT SYSTEMS. JUNCTION BOXES SHALL BE SUITABLE FOR ENVIRONMENT AND APPLICATION USED FOR.
18. WIRE AND CABLE: ALL WIRE AND CABLE SHALL:
    - A. BE NEW AND OF SOFT DRAWN, ANNEALED, COPPER HAVING A CONDUCTIVITY OF NOT LESS THAN 98% OF THAT OF PURE COPPER; EACH WIRE CONTINUOUS WITHOUT WELD, SPLICE OR JOINT THROUGHOUT ITS LENGTH; UNIFORM IN CROSS SECTION AND FREE FROM FLAWS, SCALES, AND OTHER IMPERFECTIONS.
    - B. UNLESS OTHERWISE SPECIFIED OR NOTED, WIRES SHALL BE #12 AWG (FOR PHASE, NEUTRAL, AND GROUND CONDUCTORS) TYPE THW, THWN, THHN, AS MANUFACTURED BY TRIANGLE, GENERAL ELECTRIC, OKONITE, OR ANACONDA.
    - C. ALL WIRE #8 AND LARGER SHALL BE STRANDED.
    - D. NOT BE DRAWN INTO A CONDUIT UNTIL ALL WORK WHICH MAY CAUSE INJURY TO INSULATION IS COMPLETE. WHERE TWO OR MORE CIRCUITS RUN TO A SINGLE OUTLET BOX, TAG EACH CIRCUIT AS A GUIDE.
    - E. HAVE ALL STRANDED CONDUCTORS FURNISHED WITH COPPER CONNECTING LUGS, DRILLED, OR REAMED THE FULL DIAMETER OF THE BARE CONDUCTORS. MAINS AND FEEDERS SHALL BE RUN THEIR ENTIRE LENGTH IN CONTINUOUS PIECES WITHOUT JOINTS OR SPLICES.
19. IDENTIFICATION OF CONDUCTORS AND PANELBOARD ELEMENTS:
    - A. EACH AND EVERY MAIN AND FEEDER CONDUCTOR SHALL BE IDENTIFIED AT EACH OUTLET POINT WHERE SUCH CONDUCTOR TERMINATES. FEEDER BUNDLES PASSING THROUGH A JUNCTION OR SUPPORT BOX SHALL ALSO BE IDENTIFIED WITHIN SUCH ENCLOSURE, BUT MAY BE IDENTIFIED IN SUCH LOCATIONS AS A GROUP.
    - B. IDENTIFY BY USE OF PERMANENT TYPE BANDS, BRADY, OR T AND B. A DEFINITE NUMBER AND/OR LETTER CODE SHALL BE EMPLOYED AND BE UNIFORM THROUGHOUT EACH CONDUCTOR.
    - C. IDENTIFY EACH SWITCH, INCLUDING MAIN DISCONNECT AND MOTOR STARTER WITH WHITE-ON-BLACK NAMEPLATE, EACH HAVING 1/4" HIGH LETTERS. NEATLY AND SECURELY ADHERE NAMEPLATES TO THE UNIT.
20. SWITCHES: FURNISH AND INSTALL ALL FUSIBLE AND NON-FUSIBLE SWITCHES AS REQUIRED BY CODES, WHETHER OR NOT SHOWN AND/OR NOTED. SWITCHES SHALL BE:
    - A. HEAVY DUTY WITH NEMA-1 OR 3R ENCLOSURE, AS REQUIRED, AND BE PROVIDED WITH PAD-LOCKING FEATURE.
    - B. PROVIDED AT EACH MOTOR THAT IS OUT OF SIGHT OF THE SWITCH OR PANEL FROM WHICH FED; AND BE NON-FUSIBLE DISCONNECT FOR SUCH USE.
    - C. SWITCH MANUFACTURER SHALL BE GE, WESTINGHOUSE, OR SQUARE D.
    - D. DISCONNECT SWITCHES INSTALLED OUTSIDE THE BUILDING SHALL BE IN NEMA-3 ENCLOSURES.
    - E. FUSIBLE SWITCH-STARTER UNITS: EACH UNIT SHALL BE TOTALLY ENCLOSED AND EFFECTIVELY BARRIERED, MANUALLY OPERATED QUICK-MAKE, QUICK BREAK, HORSEPOWER RATED STARTER. PROVIDE CLASS R TYPE REJECTION FUSE CLIPS.
    - F. IDENTIFY EACH DEVICE WITH NAMEPLATE SHOWING THE LOAD SERVED, MATCHING THE EXISTING NAMEPLATES.
21. WIRING DEVICES: FURNISH AND INSTALL ALL WIRING DEVICES AS INDICATED ON THE DRAWINGS. DEVICES SHALL IN ALL CASES BE SUITABLE FOR THE USE INTENDED AND SHALL HAVE VOLTAGE AND CURRENT RATINGS ADEQUATE FOR THE LOADS TO BE SERVED.
    - A. MOUNTING: HEIGHTS OF ALL DEVICES ARE FROM FINISH FLOOR TO CENTERLINE OF DEVICE. DEVICES SHOWN ON THE DRAWINGS IN GROUPS OF TWO OR MORE SHALL BE LOCATED HORIZONTALLY IN SUCH A MANNER AS TO BE CLOSE AS POSSIBLE FROM THE CENTERLINE OF THE FIRST DEVICE TO THE CENTERLINE OF THE NEXT DEVICE UNLESS OTHERWISE NOTES.
    - B. WALL SWITCHES: SHALL BE LEVITON DECORA TYPE, WHITE IN COLOR. USE CORRESPONDING DOUBLE POLE, THREE-WAY, FOUR-WAY, KEYED AND DIMMER SWITCHES WHERE NOTES. MOUNT AT 3'-10" A.F.F. AND WITHIN 6" OF ADJACENT DOOR JAMB, UNLESS OTHERWISE NOTED. USE "KEYED" SWITCHES IN LOCATIONS INDICATED.
    - C. CONVENIENCE OUTLETS: SHALL BE GROUNDING TYPE, 20 AMP, 125 VOLT, LEVITON, WHITE COLOR. WEATHERPROOF DUPLEX OUTLETS SHALL BE LEVITON 5342 WITH SIERRA NO. WPD-8 PLATE. MOUNT AT 18" A.F.F., UNLESS OTHERWISE NOTED. PROVIDE NEMA 5-20R DEVICES UNLESS OTHERWISE INDICATED. PROVIDE SPECIFICATION (SPEC) GRADE HEAVY DUTY STRAIGHT BLADE DEVICES UNLESS OTHERWISE NOTED. PROVIDE HOSPITAL GRADE DEVICES WHERE INDICATED, OR AS REQUIRED BY CODES.
    - D. ACCEPTABLE ALTERNATE MANUFACTURERS: SHALL BE LSI, H.E. WILLIAMS, HUBBELL, P&S AND BRYANT, PROVIDED THEIR DEVICES ARE OF THE SAME TYPE AND QUALITY AND THAT ONLY ONE MANUFACTURER SHALL BE USED THROUGHOUT THE WORK.
    - E. PLATES: SHALL BE MATCHING TYPE FOR FINISHED AREAS AND GALVANIZED STEEL FOR AREAS WITH EXPOSED CONDUIT. PROVIDE STAINLESS STEEL PLATES FOR FLUSH MOUNTED DEVICES. PROVIDE CAST ALUMINUM WET LOCATION TYPE COVER PLATES WITH HINGED COVERS FOR DEVICES LOCATED OUTSIDE. GANG OUTLETS GROUPED TOGETHER UNDER A SINGLE WALL PLATE.
    - F. INCANDESCENT DIMMERS: 120V SLIDE TO OFF, DECORA STYLE SIMILAR TO SWITCHES, WITH WATTAGE AS REQUIRED PER MANUFACTURER'S RECOMMENDATIONS. POWER FAILURE MEMORY. RFI SUPPRESSION. WHERE SWITCHES ARE SHOWN NEXT TO DIMMERS, PROVIDE MULTI-GANG COVER PLATES. PROVIDE DIMMERS WITH IVORY FINISH, SAME AS SWITCHES UNLESS OTHERWISE DIRECTED.
    - G. INSTALL WIRING DEVICES AND ACCESSORIES PLUMB AND LEVEL, IN ACCORDANCE WITH MANUFACTURER'S WRITTEN INSTRUCTIONS, APPLICABLE REQUIREMENTS OF NEC AND IN ACCORDANCE WITH RECOGNIZED INDUSTRY PRACTICES TO FULFILL PROJECT REQUIREMENTS.
    - H. TIGHTEN CONNECTORS AND TERMINALS, INCLUDING SCREWS AND BOLTS, IN ACCORDANCE WITH EQUIPMENT MANUFACTURER'S PUBLISHED TORQUE VALUES FOR WIRING DEVICES.
    - I. COORDINATE WITH OTHER WORK, INCLUDING PAINTING, ELECTRICAL BOXES AND WIRING INSTALLATIONS, AS NECESSARY TO INTERFACE INSTALLATION OF WIRING DEVICES WITH OTHER WORK.
    - J. INSTALL WIRING DEVICES AFTER WIRING WORK IS COMPLETED. INSTALL ONLY IN ELECTRICAL BOXES THAT ARE CLEAN; FREE FROM EXCESS BUILDING MATERIALS, DIRT, AND DEBRIS. INSTALL WALL PLATES AFTER PAINTING WORK IS COMPLETED.
    - K. NO RECEPTACLE OR SWITCH OUTLETS SHALL BE MOUNTED BACK TO BACK. A MINIMUM OF ONE (1) STUD MUST BE BETWEEN OUTLETS.
    - L. INSTALL RECEPTACLES WITH GROUND PIN UP. INSTALL SWITCHES WITH THE "ON" POSITION UP.
    - M. ALL EXTERIOR DEVICES TO BE WEATHER PROOF AND EXTERIOR RECEPTACLES SHALL BE A GFCI TYPE DEVICE.
    - N. ALL 120-VOLT RECEPTACLES OUTLETS LOCATED WITHIN SIX FEET OF SINKS SHALL HAVE GROUND FAULT CIRCUIT INTERRUPTION PROTECTION. GROUND FAULT OUTLETS SHALL BE CONNECTED ON DEDICATED NEUTRAL WIRE SERVING ONLY THE INDIVIDUAL OUTLET WITH THE GROUND FAULT PROTECTION.
    - O. USE JUMBO SIZE WALL PLATES FOR OUTLETS INSTALLED IN MASONRY WALLS.
    - P. DO NOT SHARE NEUTRAL CONDUCTORS ON DIMMERS.
22. PANELBOARD: PANELBOARDS SHALL BE GE TYPE AL, AQ, OR AE OR APPROVED EQUAL. REFER TO CONSTRUCTION DOCUMENTS FOR THE TYPE AND NUMBER OF BRANCH CIRCUIT BREAKERS. ALL PANELBOARD BUSSING SHALL BE COPPER. PANELBOARDS SHALL BE IN OUTDOOR ENCLOSURE WHERE INSTALLED OUTDOOR. MINIMUM INTERRUPTING RATING FOR PANELS SHALL BE AS INDICATED ON DRAWINGS.
23. TRANSFORMERS: DRY TYPE, TWO_WINDING OF THE SIZE AND ELECTRICAL CHARACTERISTICS SHOWN AND SCHEDULED ON DRAWINGS. TRANSFORMERS SHALL BE EQUIPPED WITH 2 2-1/2% TAPS ABOVE AND BELOW RATING. TRANSFORMERS SHALL HAVE A BONDING JUMPER INSTALLED BETWEEN THE SECONDARY NEUTRAL TERMINAL AND METAL CASE, AND SHALL INCLUDE A GROUND TERMINAL OF PROPER SIZE TO RECEIVE GROUND CONDUCTOR. TRANSFORMERS SHALL BE RATED AT FULL LOAD IN A 40°C AMBIENT WITH 30°C ULTIMATE HOT SPOT TEMPERATURE RISE ALLOWANCE, WITH CLASS F INSULATION HAVING A UL 185°C RATING LIMITING SYSTEM TEMPERATURE TO 115°C ON UNITS SMALLER THAN 15 KVA AND CLASS H INSULATION HAVING UL 220°C RATING LIMIT SYSTEM TEMPERATURE TO 150°C ON 15 KVA AND LARGER UNITS. PROVIDE COPPER WINDINGS.
24. FUSES: FUSES IN MAIN, FEEDER, AND BRANCH CIRCUIT SWITCHES, RATED 600 AMPS AND BELOW, FEEDING MOTORS, TRANSFORMERS, AND GENERAL PURPOSE CIRCUITS (UNLESS OTHERWISE SPECIFIED), SHALL BE UL LISTED AND LABELED AS CURRENT LIMITING, TIME-DELAY, 200,000 A.I.C., CLASS RK-5 FUSES SHALL BE BUSSMAN TYPE FRN-R (250V), AND FRS-R (600V).
25. GROUNDING: ALL CONDUIT WORK, MOTOR, STARTERS, AND OTHER ELECTRICAL EQUIPMENT WIRED AND CONNECTED BY THIS CONTRACTOR SHALL BE EFFECTIVELY AND PERMANENTLY GROUNDED IN FULL ACCORDANCE WITH NEC 250.
26. OTHER MATERIALS: FURNISH AND INSTALL ALL OTHER MATERIALS SUCH AS HARDWARE, TAPE, CLAMPS, CONNECTORS, FITTINGS, SUPPORTS, AND ALL OTHER APPURTENANCES REQUIRED TO COMPLETE THE WORK TO THE FULL INTENT OF THE CONTRACT. TERMINAL LUGS SHALL BE FURNISHED BY THE ELECTRICAL CONTRACTOR.
27. ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR ALL TEMPERATURE, CO2, AND HUMIDITY SENSOR STUB-UPS FOR THE MECHANICAL HVAC SYSTEM. REFER TO MECHANICAL PRINTS FOR SENSOR QUANTITY AND LOCATIONS.
28. ELECTRICAL CONTRACTOR WILL CONNECT ALL LOW VOLTAGE PLUMBING CONTRACTOR SUPPLIED TRANSFORMERS (FOR AUTOMATIC FLUSH) TO THE NEAREST 120V CIRCUIT (OR IF INDICATED ON PLANS WITH A CIRCUIT NUMBER). CONTRACTOR TO ASSUME ONE TRANSFORMER PER BATHROOM. THE PLUMBING CONTRACTOR WILL BE RESPONSIBLE FOR LOW VOLTAGE WIRING TO THE FIXTURES.
29. SWITCHGEAR AND DISTRIBUTION PANELS: SHALL BE FIELD MARKED TO WARN QUALIFIED PERSONS OF POTENTIAL ELECTRIC ARC FLASH HAZARDS. THE MARKING SHALL BE LOCATED SO AS TO BE CLEARLY VISIBLE TO QUALIFIED PERSONS BEFORE EXAMINATION, ADJUSTMENT, SERVICING, OR MAINTENANCE OF THE EQUIPMENT, NEC 110.16.
30. ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR COORDINATING THE LOCATIONS OF ALL GTD'S (GENERATOR TRANSFER DEVICES), LIGHTING CONTROL EQUIPMENT, LOW VOLTAGE TRANSFORMERS AND OTHER ELECTRICAL ITEMS WHICH ARE ABOVE CEILINGS. THESE DEVICES SIMILAR TO ELECTRICAL JUNCTION BOXES ARE NOT ALLOWED BY NEC TO BE ABOVE HARD CEILINGS. THE ARCHITECT/OWNER WILL NOT ALLOW THE INSTALLATION OF ACCESS PANELS IN THE CEILINGS. BE AWARE THAT EQUIPMENT IN THOSE AREAS OF HARD CEILINGS WILL HAVE TO BE REMOTELY LOCATED TO THE NEAREST ACOUSTICAL LAY-IN CEILING AREAS.
31. ELECTRICAL MATERIAL AND EQUIPMENT: NO ELECTRICAL MATERIALS, APPARATUS, DEVICES, APPLIANCES, FIXTURES, OR EQUIPMENT SHALL BE SOLD OR INSTALLED IN THE CITY UNLESS THEY ARE IN CONFORMANCE WITH THE PROVISIONS OF THIS CODE, THE LAWS OF THE STATE OF TEXAS AND ANY APPLICABLE RULES AND REGULATIONS ISSUED UNDER THE AUTHORITY OF THE STATE STATUTES. THE MAKER'S NAME, TRADEMARK, OR OTHER IDENTIFICATION SYMBOL SHALL BE PLACED ON ALL ELECTRICAL MATERIALS, APPARATUS, DEVICES, APPLIANCES, FIXTURES, AND EQUIPMENT USED OR INSTALLED UNDER THE PROVISIONS OF THIS CODE. ALL ELECTRICAL MATERIALS AND EQUIPMENT SHALL BE LISTED AND LABELED FOR THE INTENDED USE AND SHALL BE INCLUDED IN A LIST PUBLISHED BY AN APPROVED AGENCY.
32. THE ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR COORDINATING ALL CONDUIT ROUTING TO ANY MECHANICAL ROOF TOP EQUIPMENT AND ROUTE THE CONDUIT THRU THE EQUIPMENT CURB SO THERE IS NOT A SEPARATE ROOF PENETRATION.

ELECTRICAL SYMBOL LEGEND

SYMBOL	DESCRIPTION
PANEL-XX	HOME RUN TO INDICATED PANEL AND CIRCUIT NUMBER REFER TO PANEL SCHEDULE FOR BRANCH CIRCUIT INFORMATION, INCLUDING: BREAKER RATING, WIRE SIZE/QUANTITY, AND CONDUIT SIZE/TYPE

ABBREVIATION DEFINITIONS

2S1W	TWO-SPEED, ONE-WINDING MOTOR
2S2W	TWO-SPEED, TWO-WINDING MOTOR
(A)	ABANDONED TO REMOVE
A	PHASE "A" IN THREE-PHASE SYSTEM
A	AMPERES
AF	AMPERE FUSE OR FRAME RATING
AFCI	ARC FAULT CIRCUIT INTERRUPTER
AFF	ABOVE FINISHED FLOOR
AFG	ABOVE FINISHED GRADE
Ag	SILVER
AL	ALUMINUM
AT	AMPERE TRIP SETTING
Au	GOLD
B	PHASE "B" IN THREE-PHASE SYSTEM
BF	BALLAST FACTOR
BFC	BELOW FINISHED CEILING
BFF	BELOW FINISHED FLOOR
BFG	BELOW FINISHED GRADE
C	PHASE "C" IN THREE-PHASE SYSTEM
C	CONDUIT
CB	CIRCUIT BREAKER
CH	CONSTANT HORSE POWER (2S1W MOTOR)
CKT	CIRCUIT
CS	COMBINATION STARTER (MOTOR STARTER / DISCONNECT)
CT	CONSTANT TORQUE (2S1W MOTOR)
CT	CURRENT TRANSFORMER
Cu	COPPER
(D)	EXISTING TO BE DEMOLISHED AND REMOVED
DETD	DUAL ELEMENT, TIME DELAY
DS	DISCONNECT SWITCH
(E)	EXISTING TO REMAIN
EGC	EQUIPMENT GROUNDING CONDUCTOR
EMT	ELECTRICAL METALLIC TUBING
EPM	ELECTRONIC POWER METER
EPR	ETHYLENE PROPYLENE RUBBER
FAAP	FIRE ALARM ANNUNCIATOR PANEL
FACP	FIRE ALARM CONTROL PANEL
Fe	IRON
FRP	FIBERGLASS REINFORCED POLYESTER
FVNR	FULL VOLTAGE NON-REVERSING
G	GROUND
GEC	GROUNDING ELECTRODE CONDUCTOR
GFI/GFCI	GROUND FAULT CIRCUIT INTERRUPTER
HMT	HARMONIC-MITIGATING TRANSFORMER
HOA	HAND / OFF / AUTO SWITCH (FOR FVNR CONTACTOR)
HLOA	HIGH / LOW / OFF / AUTO (FOR 2S1W OR 2S2W CONTACTOR)
IG	ISOLATED GROUND
IMC	INTERMEDIATE METAL CONDUIT
J/R	JAMMING RATIO
KAIC	KILO AMPERE INTERRUPTING CAPACITY
KCMIL	KILO CIRCULAR MILS
KVA	KILO VOLT AMPERES COMPLEX OR APPARENT POWER
KVAR	KILO VOLT AMPERES REACTIVE POWER
KW	KILO WATT REAL POWER
L1, L2	HOT LEG 1, 2 IN SINGLE-PHASE SYSTEM < 250 VAC
LSI+G	LONG TERM, SHORT TERM, INSTANTANEOUS, AND GROUND-FAULT
MCB / MF	MAIN CIRCUIT BREAKER / MAIN FUSE
MCC	MOTOR CONTROL CENTER
MLO	MAIN LUGS ONLY
(N)	NEW
N	NEUTRAL
NEC	NATIONAL ELECTRICAL CODE (NFPA 70)
NEMA	NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION
NF	NON-FUSIBLE
NFPA	NATIONAL FIRE PROTECTION ASSOCIATION
NSL	NON-SWITCHED HOT LEG
OFCI	OWNER FURNISHED, CONTRACTOR INSTALLED
OS	OCCUPANCY SENSOR
P	POLES
PC	POLYCARBONATE
PF	POWER FACTOR
PFCC	POWER FACTOR CORRECTION CAPACITOR
PVC	POLY VINYL CHLORIDE (RNC CONDUIT)
PVDF	POLYVINYLIDENE FLUORIDE
PT	POTENTIAL TRANSFORMER
RAL	RIGID ALUMINUM
RGS	RIGID GALVANIZED STEEL
RMC	RIGID METAL CONDUIT
SEC	SECTION OF LIGHTING-CLASS PANEL
SF6	SULFUR HEXAFLOURIDE INSULATING GAS
Sn	TIN
SPD	SURGE PROTECTION DEVICE
SS-xxx	STAINLESS STEEL, "xxx" = ALLOY TYPE (E.G. 304, 316)
ST	SHUNT-TRIP FOR CIRCUIT BREAKER
THD	TOTAL HARMONIC DISTORTION
TVSS	TRANSIENT VOLTAGE SURGE SUPPRESSION
TYP	TYPICAL
UON	UNLESS OTHERWISE NOTED
XLPE	CROSS-LINKED POLYETHYLENE
XLPO	CROSS-LINKED POLYOLEFIN
V	VOLTS
VAC	VOLTS, ALTERNATING CURRENT
VDC	VOLTS, DIRECT CURRENT
VFCI	VENDOR FURNISHED, CONTRACTOR INSTALLED
VFD	VARIABLE FREQUENCY DRIVE
VS	VACANCY SENSOR
VT	VARIABLE TORQUE (2S1W MOTOR)
W	WIRES, NOT INCLUDING EGC
WP	WEATHER PROOF
#	AMERICAN WIRE GAGE
Ø	PHASE
μF	MICRO FARAD
Ω	OHMS

GENERAL NOTES:

1. SYMBOL LEGEND MAY CONTAIN SYMBOLS THAT ARE NOT USED ON ALL DRAWINGS.
2. ABBREVIATION DEFINITIONS ARE NOT COMPREHENSIVE, AND NOT ALL ABBREVIATIONS MAY APPLY TO ALL DRAWINGS. SUBMIT FORMAL REQUEST FOR INFORMATION WHEN ENCOUNTERING CONFLICTS OR AMBIGUOUS SYMBOLS OR ABBREVIATIONS, AS THESE WILL NOT CONSTITUTE DISMISSAL OF CONTRACTOR RESPONSIBILITY.
3. ALL COVER PLATES FOR RECEPTACLES, SWITCHES, AND DATA SHALL BE SS-302 (UON).
4. PROVIDE DECORA TYPE SWITCHES FOR LIGHT SWITCHES THAT ARE NOT OCCUPANCY SENSOR TYPE.

GENERAL COORDINATION NOTES

COORDINATE WITH FIRE SPECIFICATIONS AND INSTALLING CONTRACTOR FOR CONSTRUCTION SHOP DRAWINGS ALL EXPOSED (OR ABOVE HARD CEILINGS) LOW VOLTAGE FIRE ALARM WIRING WILL BE ROUTED BACK TO THE FACP ROOM IN EMT CONDUIT. THE CONTRACTOR WILL BE RESPONSIBLE FOR SIZING AND ROUTING: PAINT AND LABEL AS REQUIRED BY ARCHITECT.

COORDINATE WITH SECURITY SPECIFICATIONS AND INSTALLING CONTRACTOR FOR CONSTRUCTION SHOP DRAWINGS ALL LOW VOLTAGE SECURITY ALARM WIRING WILL BE ROUTED BACK TO THE MDF ROOM IN EMT CONDUIT. THE CONTRACTOR WILL BE RESPONSIBLE FOR SIZING AND ROUTING: PAINT AND LABEL AS REQUIRED BY ARCHITECT.

REFER TO DIVISION 28 DRAWINGS AND SPECIFICATIONS AND COORDINATE WITH DIVISION 28 FOR ADDITIONAL CONDUIT AND PATHWAY REQUIREMENTS.

TELECOM COORDINATION NOTES

COORDINATE WITH CABLING CONTRACTOR FOR CONSTRUCTION SHOP DRAWINGS ALL LOW VOLTAGE DATA CABLES WILL BE ROUTED BACK TO THE CABLE TRAY IN MINIMUM 1"C EMT THE CONTRACTOR WILL BE RESPONSIBLE FOR SIZING AND ROUTING UNDER THE FOLLOWING PRETENSES:

- CABLE TRAY AND OR WIRE NOT IN CONDUIT IS NOT ALLOWED IN ANY EXPOSED AREAS
- NO MORE THAN 100' BETWEEN PULL BOXES.
- NO MORE THAN 270 DEGREES OF TURNS BETWEEN PULL BOXES
- UTILIZE SWEEPING BENDS
- PULL BOXES MUST NOT BE USED AS TURNS. THE BEND MUST COME BEFORE OR AFTER THE PULL BOX.
- ALL EXPOSED CONDUITS ARE TO BE PAINTED PER ARCHITECT COLOR SELECTION. CONDUITS /JUNCTION BOXES MUST BE LABELED WITH WHAT ROOM NUMBERS THEY ARE FEEDING AND WHAT SYSTEM.
- CONDUITS SHOULD BE ROUTED AT HIGH LEVEL TO EITHER SIDE OF THE CORRIDOR.
- ELECTRICAL CONTRACTOR WILL COORDINATE THE SIZES AND ROUTING WITH THE DATA CONTRACTOR AND OTHER TRADES PRIOR TO INSTALLING.
- ALL CONDUITS WILL BE INSTALLED WITH MEASURED PULL TAPE

REFER TO DIVISION 27 DRAWINGS AND SPECIFICATIONS AND COORDINATE WITH DIVISION 27 VENDOR FOR ADDITIONAL CONDUIT AND PATHWAY REQUIREMENTS.

LIGHTING NOTES:

1. PROVIDE LIGHT FIXTURES IN STAIRWELLS WITH INTEGRAL BATTERY BACKUP, TEST SWITCH, AND GREEN-LED CHARGING INDICATOR FOR EMERGENCY EGRESS OPERATION. THIS IS IN ADDITION TO THEM BEING CIRCUITED TO EMERGENCY LIGHTING PANEL IN AREA.
2. ALL LIGHT FIXTURES APPENDED WITH E (EMERGENCY) TO HAVE GENERATOR TRANSFER DEVICE FOR AUTOMATIC FULL INTENSITY LIGHTING WHEN NORMAL POWER IS LOST, PROVIDE CONNECTION FROM EMERGENCY LIGHTING PANEL CIRCUIT IN AREA AND UNSWITCHED NORMAL POWER FOR LOSS DETECTION.
3. PROVIDE ADDITIONAL, NON-SWITCHED HOT CIRCUIT LEG TO FIXTURE FOR BATTERY CHARGING AND POWER-LOSS DETECTION FOR ALL EMERGENCY EGRESS OR EXIT SIGN FIXTURES AS PART OF BASE BID.
4. ALL OUTDOOR LIGHTING FIXTURES REQUIRE CORROSION-RESISTANT OPTION.
5. COORDINATE MOUNTING HEIGHT OF ALL FIXTURES WITH ARCHITECTURAL PLANS.
6. COORDINATE FINISH OF ALL FIXTURE WITH ARCHITECT PRIOR TO ORDERING.
7. REFER TO ARCHITECTURAL PLANS FOR GRID/FLANGE AREAS, PRIOR TO BIDDING OF LIGHT FIXTURES. ORDER CORRECT QUANTITY OF EACH VARIATION.
8. ALL (10) ADDITIONAL EXIT SIGNS (TYPE 'X') FIXTURES NOT SHOWN ON PLANS WITH CIRCUITING FOR FIRE MARSHALL WALK.

LIGHTING CONTROL COMMISSIONING

1. UPON COMPLETION OF THE INSTALLATION, THE LIGHTING CONTROL SYSTEM SHALL BE COMMISSIONED BY THE MANUFACTURER'S FACTORY AUTHORIZED REPRESENTATIVE WHO WILL VERIFY A COMPLETE FULLY FUNCTIONAL SYSTEM.
2. THE LIGHTING CONTROL SYSTEMS SHALL BE TESTED TO ENSURE THAT CONTROL HARDWARE AND SOFTWARE ARE CALIBRATED, ADJUSTED, PROGRAMMED AND IN PROPER WORKING CONDITION IN ACCORDANCE WITH THE CONSTRUCTION DOCUMENTS AND MANUFACTURER'S INSTRUCTIONS. FUNCTIONAL TESTING SHALL BE IN ACCORDANCE WITH IECC 2015 SECTIONS C408.3.1.1 THROUGH C408.3.1.3 FOR THE APPLICABLE CONTROL TYPE. PROVIDE A DETAILED REPORT TO THE ARCHITECT / COMMISSIONING AGENT.
3. THE ELECTRICAL CONTRACTOR SHALL REQUEST FACTORY COMMISSIONING BY SUBMITTING A STARTUP REQUEST FORM AT LEAST FOUR WEEKS BEFORE STARTUP IS REQUIRED.
4. THE ELECTRICAL CONTRACTOR SHALL PROVIDE AT LEAST ONE JOURNEYMAN ELECTRICIAN, FAMILIAR WITH THE INSTALLATION OF THE SYSTEM, DEDICATED TO ASSISTING THE FACTORY START-UP TECHNICIAN FOR THE ENTIRE DURATION OF THE COMMISSIONING PROCESS.

FIRE ALARM SYMBOLS LEGEND

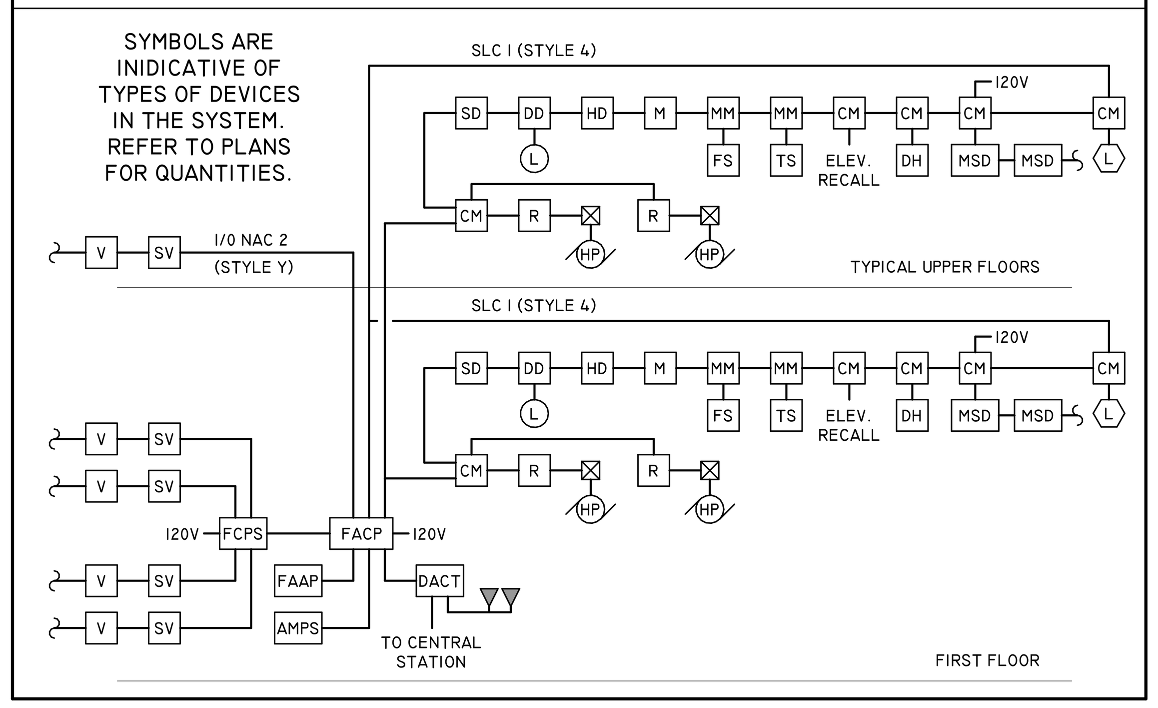
FIRE ALARM TYPICAL SYSTEM DIAGRAM



FIRE ALARM DELEGATED DESIGN NOTE

THE BIDDING CONTRACTOR IS RESPONSIBLE FOR A COMPLETE FIRE ALARM SYSTEM DELEGATED-DESIGN. THE CONTRACTOR IS REQUIRED TO PROVIDE ALL DEVICES REQUIRED TO MEET ALL APPLICABLE CODES, PROJECT SPECIFICATIONS REQUIREMENTS, AND THE AHJ REQUIREMENTS. THE CONTRACTOR IS REQUIRED TO COMPLY WITH PERFORMANCE REQUIREMENTS AND DESIGN CRITERIA, INCLUDING SIGNED AND SEALED CALCULATIONS BY A QUALIFIED PROFESSIONAL ENGINEER RESPONSIBLE FOR SHOP DRAWING PREPARATION. THE CONTRACTOR SHALL PRODUCE SHOP DRAWINGS, REQUIRED BATTERY POWER CALCULATIONS, INTERCONNECTION WIRING DIAGRAMS, POWER SUPPLY DESIGN AND REQUIREMENTS, ETC. THESE DOCUMENTS SHALL BE SUBMITTED BY THE CONTRACTOR FOR REVIEW AND/OR APPROVAL BY THE AHJ AND A/E TEAM AS REQUIRED. ALLOW FOR 10% ADDITIONAL DEVICES WITH ASSOCIATED CABLING RESULTING FROM DELEGATED DESIGN.

GENERAL PANEL SCHEDULE NOTES

PANEL SCHEDULES DEPICT ALL LOADS FOR MULTI-SECTION PANELS:

1. PROVIDE MULTIPLE SECTIONS BETWEEN 42 AND 60 POLES TOTALING POLE QUANTITY INDICATED, INCLUSIVE OF SPD IF BRANCH MOUNTED.
2. PROVIDE REQUIRED FEED-THRU LUGS.
3. PROVIDE INTERMEDIATE FEEDERS MATCHING LINE-SIDE FEEDER FOR FIRST SECTION.
4. ALL OPERABLE HANDLES AND CIRCUIT BREAKERS MUST BE LOCATED WITHIN NEC REQUIRED MOUNTING HEIGHTS AFTER PANEL IS FULLY INSTALLED.
5. ALL PANELBOARDS AND DISTRIBUTION PANELBOARDS SHALL HAVE A STABILITY HINGED FRONT COVER. THE PANEL BOX SHALL HAVE ENOUGH LIP TO HOLD THE WEIGHT OF THE FRONT HINGED COVER. BOLTED FRONT COVER IS NOT ALLOWED.
6. ALL WIRING SHALL BE INSTALLED NEAT, ORDERLY AND TIE-WRAP, LABEL THE PHASES AND NEUTRALS CIRCUITS, TYPE WRITTEN HARD PAPER DIRECTORY.
7. ALL GROUNDING WIRING SHALL BE INSTALLED ON A SINGLE GROUND BAR. NO DOUBLE LUGGING.
8. NEUTRALS SHALL BE INSTALLED ON SEPARATE NEUTRAL BAR AND NO OTHER WIRING INSTALLED. REMOVE THE MANUFACTURED GROUNDING SCREWS TO ISOLATE BOTH THE GROUNDING BAR AND NEUTRAL BAR.
9. EACH PANELBOARD SHALL HAVE A HARD STOCK DIRECTORY CARD. A TYPE WRITTEN DIRECTORY CARD IDENTIFYING THE LOAD SERVED BY EACH BRANCH CIRCUIT IN THE FRAME ON THE PANEL DOOR UNDER A CLEAR PLASTIC COVER. SPARES AND SPACES SHALL BE WRITTEN WITH ERASABLE PENCIL FOR FUTURE USE.
10. LABEL ALL CONDUITS, DEAD FRONT COVER, CONDUCTORS IN THE PANEL (PHASE AND NEUTRAL) WITH THE CIRCUIT NUMBERS OF THE LOAD SERVED.
11. ALL NEUTRAL AND GROUNDING CONDUCTORS MUST BE INSTALLED ON SEPARATE GROUND BARS.
12. ALL BRANCH CIRCUIT CONDUCTORS IN THE PANEL, NEUTRAL CONDUCTORS MUST IDENTIFY OR BE LABELED WITH THE CIRCUIT NUMBER OF THE LOAD SERVED.
13. INSTALL SURFACE-MOUNTED CABINETS AND PANELBOARDS WITH A MINIMUM OF FOUR ANCHORS AND MUST MAINTAIN A 1/4" CLEARANCE FROM THE WALL. USE UNISTRUT AS MOUNTING STRUCTURE.
14. USE COPPER BUS BARS IN ALL PANELBOARDS.

GENERAL WIRING / LABELING NOTES

1. PIGTAILING
   - A. CIRCUITING TO ALL NON DEDICATED ELECTRICAL RECEPTACLES AND SWITCHES ARE REQUIRED TO UTILIZE PARALLEL CIRCUITING BY THE USE OF "PIG TAILS" TO EACH DEVICE SO THAT IF AN OUTLET IS REMOVED OR FAILS ELECTRICAL CONTINUITY THE CIRCUIT WILL NOT BE COMPROMISED.
   - B. ALL ELECTRICAL WIRING MUST BE PROPERLY SPLICED BY TWISTING THE WIRES TOGETHER AND USE OF APPROVED AND LISTED COMPRESSION WIRE NUTS FOR ANY WIRING.
   - C. DO NOT USE END TO END BUTT-SPLICING CONNECTORS FOR ANY WIRING.
2. CIRCUIT LABELING
   - A. ALL RECEPTACLE PLATES, LIGHT SWITCH PLATES AND OUTLET BOXES SHALL BE PERMANENTLY LABELED WITH PANEL AND CIRCUIT NUMBER ON OUTSIDE OF COVER PLATE AND INSIDE OF OUTLET BOX.
   - B. RECEPTACLES/SWITCHES: IDENTIFY PANEL BOARD AND CIRCUIT NUMBER FROM WHICH SERVED. USE HOT, STAMPED OR ENGRAVED MACHINE PRINTING WITH BLACK-FILLED LETTERING ON FACE OF PLATE, AND DURABLE WIRE MARKERS OF TAGS INSIDE OUTLET BOXES.
   - C. CIRCUIT WIRING AND NEUTRALS INSIDE OF ALL PANELBOARDS ARE REQUIRED TO BE LABELED WITH WIRE TAGS SHOWING CIRCUIT NUMBERS.
3. EQUIPMENT LABELING
   - A. PROVIDE SWITCHBOARD WITH ENGRAVED NAMEPLATE INDICATING DESIGNATION, VOLTAGE, AND NUMBER OF PHASES. PROVIDE ENGRAVED ID TAGS (BAKELITE) FOR EACH OVER CURRENT DEVICE INDICATING LOAD SERVED. PROVIDE ENGRAVED ID TAGS (BAKELITE) FOR LABELING OF CIRCUIT NUMBERS.
   - B. PROVIDE DISTRIBUTION AND LIGHTING CLASS PANELBOARDS WITH ENGRAVED NAMEPLATES INDICATING DESIGNATION, VOLTAGE, AND NUMBER OF PHASES. PROVIDE ENGRAVED ID TAGS (BAKELITE) FOR LABELING OF CIRCUIT NUMBERS.
   - C. PROVIDE TRANSFORMERS WITH ENGRAVED NAMEPLATE INDICATING DESIGNATION, SOURCE PANEL NAME, AND LOAD SERVED.
   - D. ALL DISCONNECT SWITCHES, VFDS, AND MOTOR STARTERS SHALL HAVE AN ENGRAVED NAMEPLATE INDICATING DESIGNATION OF LOAD SERVED, VOLTAGE, NUMBER OF PHASES, AND SOURCE PANEL.
   - E. ALL NAMEPLATES SHALL BE ENGRAVED BAKELITE TYPE WITH BLACK LETTERS ON WHITE BACKGROUND. NAMEPLATES SHALL BE LOCATED SO AS TO BE CLEARLY VISIBLE AND NOT INTERFERE WITH MANUFACTURER NAMEPLATES.

FIRE ALARM SEQUENCE OF OPERATION

A. DETECTION & ALARM

WHEN A FIRE ALARM CONDITION IS DETECTED BY ANY ALARM INITIATING DEVICE (SMOKE DETECTOR, DUCT DETECTOR, PULL STATION, OR SPRINKLER FLOW SWITCH), THE FOLLOWING FUNCTIONS WILL OCCUR:

1. THE FIRE ALARM CONTROL PANEL COMMON ALARM INDICATOR WILL FLASH AND THE AUDIBLE DEVICE WILL SOUND. ACKNOWLEDGING THE ALARM CONDITION WILL SILENCE THE AUDIBLE DEVICE AND CAUSE THE COMMON ALARM INDICATOR TO ILLUMINATE STEADILY.
2. THE DISPLAY WILL INDICATE ALL APPLICABLE INFORMATION ASSOCIATED WITH THE ALARM CONDITION INCLUDING ZONE, DEVICE TYPE, DEVICE LOCATION, AND TIME OF ALARM. LOCATION AND ZONING MESSAGES WILL BE CUSTOM FIELD-PROGRAMMED TO MATCH THE RESPECTIVE PREMISES. LOCAL ANNUNCIATOR LED's ASSOCIATED WITH THE ALARM POINT WILL FLASH UNTIL PANEL IS SILENCED.
3. DISPLAY SYSTEM STATUS CHANGES ON ANY REMOTE ANNUNCIATOR(S) VIA AN ALPHANUMERIC MESSAGE ON THE DISPLAY.
4. ACTIVATE AN ALARM CONTACT CLOSURE TO ACTIVATE A DIGITAL ALARM COMMUNICATOR TRANSMITTER (DACT) FOR SIGNALING TO A UL-APPROVED CENTRAL MONITORING STATION VIA TELEPHONE LINES FURNISHED BY OWNER.
5. ACTIVATE ALL AUDIO/VISUAL SIGNALS THROUGHOUT THE ENTIRE FACILITY.
6. ACTIVATE ALL VISUAL SIGNALS. VISUAL SIGNALS WILL BE HIGH INTENSITY STROBES (75 cd MINIMUM) TO MEET THE REQUIREMENTS OF THE AMERICANS WITH DISABILITIES ACT (ADA) & TEXAS ACCESSIBILITY STANDARDS (TAS). ACTIVATE THROUGHOUT THE ENTIRE FACILITY.STROBES SHALL SHALL BE XENON TYPE AND WHITE OR CLEAR IN COLOR. THE MAX PULSE DURATION WILL BE 0.2 SECONDS WITH A MAXIMUM DUTY CYCLE OF 40%. THE FLASH RATE WILL BETWEEN 1-Hz AND 3-Hz.
7. DEACTIVATE ALL FANS RATED OVER 2,000 CFM.
8. ALARM VERIFICATION WILL BE FIELD-PROGRAMMABLE FOR EACH SMOKE DETECTOR. THE VERIFICATION SEQUENCE IS ACTIVATED AFTER A "CHECK" PROCEDURE AND THE PANEL WILL WAIT FOR A TIME THEN RESAMPLE THE DETECTOR FOR CONTINUED PRESENCE OF SMOKE. IF THE ALARM CONDITION CONTINUES OR A NON-VERIFIED DEVICE IS ACTUATED DURING THIS VERIFICATION PERIOD, THE PANEL WILL INITIATE ALL ALARM SEQUENCES. THIS ENTIRE SEQUENCE WILL OCCUR WITHIN 60 SEC. THE SYSTEM WILL LOG INTO MEMORY THE NUMBER OF VERIFICATION EVENTS.
9. CLOSE ALL SMOKE FIRE DAMPERS ASSOCIATED WITH THE HVAC UNIT(S).
10. ALL NON-SILENCEABLE AUXILIARY CONTROL FUNCTIONS (FANS, CENTRAL STATION INTERFACE, ELEVATOR RECALL INTERFACE, ETC) WILL REMAIN IN OPERATION, EVEN WHEN A/V DEVICES ARE SILENCED, UNTIL THE PANEL IS CLEARED AND RESET.
11. IF GAS WATER HEATERS OR BOILERS (DOMESTIC OR HYDRONIC) ARE PROVIDED FOR THE PROJECT PROVIDE A MANUAL RESET CARBON MONOXIDE (CO) DETECTOR ADJACENT TO THE WATER HEATER(S). INTERLOCK THE CO DETECTOR TO DISABLE THE WATER HEATER BURNERS UPON DETECTION OF 100 PPM OR HIGHER CO CONCENTRATION AND UPON LOSS OF POWER TO THE CO DETECTOR. SUBMIT PRODUCT DATA FOR CO DETECTOR AND CERTIFICATE OF CALIBRATION.

B. SYSTEM TROUBLE DETECTION

WHEN A TROUBLE CONDITION IS DETECTED BY THE FIRE ALARM CONTROL PANEL, THE FOLLOWING FUNCTIONS SHALL OCCUR:

1. THE FIRE ALARM CONTROL PANEL TROUBLE INDICATOR WILL FLASH AND THE INTERNAL AUDIBLE DEVICE WILL SOUND. ACKNOWLEDGMENT OF THE AUDIBLE DEVICE WILL SILENCE THE AUDIBLE DEVICE AND CAUSE ALL TROUBLE INDICATORS TO ILLUMINATE STEADY.
2. THE DISPLAY WILL DISPLAY ALL APPLICABLE INFORMATION ASSOCIATED WITH THE RESPECTIVE TROUBLE CONDITIONS. LOCAL ANNUNCIATOR LEDs ASSOCIATED WITH THE ALARM POINT WILL ILLUMINATE.
3. ACTIVATE A TROUBLE CONTACT CLOSURE TO ACTIVATE A DACT FOR SIGNALING TO A UL-APPROVED CENTRAL MONITORING STATION VIA PHONE LINES FURNISHED BY OWNER.
4. DISPLAY THE SYSTEM STATUS CHANGES ON THE REMOTE ANNUNCIATOR(S) VIA AN ALPHANUMERIC MESSAGE ON THAT DISPLAY.

C. SYSTEM SUPERVISORY ALARM DETECTION

WHEN A SUPERVISORY ALARM CONDITION IS DETECTED DUE TO A FIRE SPRINKLER VALVE BEING PLACED IN AN "OFF-NORMAL" POSITION, THE FOLLOWING FUNCTIONS WILL OCCUR:

1. THE FIRE ALARM CONTROL PANEL SUPERVISORY INDICATOR WILL FLASH AND THE INTERNAL AUDIBLE DEVICE WILL SOUND. ACKNOWLEDGMENT OF THE SUPERVISORY CONDITION WILL SILENCE THE AUDIBLE DEVICE.
2. THE DISPLAY WILL DISPLAY ALL APPLICABLE INFORMATION ASSOCIATED WITH THE RESPECTIVE SUPERVISORY CONDITION. LOCAL ANNUNCIATOR LED's WILL ILLUMINATE FOR THE ALARM POINT.
3. DISPLAY THE SYSTEM STATUS CHANGE ON THE REMOTE ANNUNCIATOR(S) VIA AN ALPHANUMERIC MESSAGE ON THAT DISPLAY.
4. ACTIVATE A SUPERVISORY ALARM CONTACT CLOSURE TO ACTIVATE THE DACT FOR SIGNALING TO A UL-APPROVED CENTRAL MONITORING STATION VIA PHONE LINES FURNISHED BY OWNER.

D. FIRE ALARM PANEL

FIRE ALARM PANEL SHALL BE INTELLIGENT DIGITAL PROTOCOL ANALOG ADDRESSABLE FIRE ALARM SYSTEM. THIS SYSTEM SHALL INCLUDE, BUT NOT BE LIMITED TO SYSTEM CABINET, POWER SUPPLY, BUILT SIGNALING LINE CIRCUIT (SLC), 80 CHARACTER LCD ANNUNCIATOR, SIX PROGRAMMABLE "FLEXPUT" CIRCUITS, BUILT IN DUAL LINE DIGITAL COMMUNICATOR ASSOCIATED PERIPHERAL DEVICES, BATTERIES, WIRING, CONDUIT AND OTHER RELEVANT COMPONENTS AND ACCESSORIES REQUIRED TO FURNISH A COMPLETE AND OPERATIONAL LIFE SAFETY SYSTEM. THE SYSTEM SHALL BE TESTED AFTER COMPLETION OF INSTALLATION IN ACCORDANCE WITH MANUFACTURE RECOMMENCED TESTING PROCEDURE AND GOVERNING LIFE SAFETY CODES. REFER TO SPECIFICATIONS FOR ADDITIONAL INFORMATION AND REQUIREMENTS.

GENERAL ONE LINE DIAGRAM NOTES

1. ALL CIRCUIT BREAKERS INDICATED ON THE ONE LINE DIAGRAM ARE THERMAL-MAGNETIC UNLESS NOTED OTHERWISE AS "ELECTRONIC" EXCLUDING THE MAIN WHICH WILL BE ELECTRONIC AND INSULATED CASE.
2. PROVIDE CONDUCTORS WITH INSULATION TYPES INDICATED ON ONE LINE DIAGRAM. SUBSTITUTION OF THWN OR THHN IN LIEU OF INDICATED XHHW-2 IS NOT ACCEPTABLE.
3. LOAD SIDE FEEDERS OF INDIVIDUALLY-MOUNTED DISCONNECT SWITCHES AND ENCLOSED CIRCUIT BREAKERS SHALL MATCH LINE SIDE FEEDERS UNLESS LOAD SIDE FEEDER IS SPECIFICALLY INDICATED OTHERWISE.
4. UNDERGROUND FEEDERS SHALL HAVE SCHEDULE-40 PVC CONDUIT BELOW GRADE WITH LONG-SWEEP, TRANSITIONAL ELBOWS TO RGS CONDUIT WHEN STUBBING-UP ABOVE GRADE.
5. WHERE FEEDER DESCRIPTION IS NOT SHOWN ON LOAD-SIDE OF ELECTRICAL EQUIPMENT, USE SAME FEEDER AS LARGEST LINE-SIDE FEEDERS; EXCEPT, FOR TRANSFORMER SECONDARY USE SIMILAR FEEDER WITH TWO TIMES AMPACITY OF PRIMARY.
6. WHERE PANEL SCHEDULE DOES NOT INDICATE FULLY-RATED SHORT-CIRCUIT WITHSTAND, SERIES-RATED EQUIPMENT WITH MINIMUM 22 KAIC BRANCH BREAKERS MAY BE USED FOR THAT PANEL.
7. OUTDOOR TRANSITION FROM UNDERGROUND PVC TO ABOVEGROUND RGS FOR CONDUITS > 1"C PROVIDE LONG-SWEEP (≥ 8R) ELBOWS AND WRAP FIRST 12" OF RGS WITH 3M SCOTCHRAP #51 4" CORROSION-PROTECTION TAPE WITH ≥ 2" OVERLAP.
8. ALL VARIABLE FREQUENCY DRIVES (VFD) SHOWN ON PLANS ARE TO BE PROVIDED BY DIVISION 26 CONTRACTOR; MEANWHILE, VFDS NOT SHOWN BUT LISTED IN MECHANICAL EQUIPMENT SCHEDULES ARE TO BE FACTORY MOUNTED AND PREWIRED AS PART OF DIVISION 23 EQUIPMENT TO BE TERMINATED BY DIVISION 26 CONTACTOR.
9. ALL EQUIPMENT SHALL HAVE A FACTORY APPLIED ANSI 61 GRAY FINISH APPLIED OVER A RUST INHIBITING TREATMENT. ANY ITEMS WHICH HAVE THE FINISH MARRED SHALL BE TOUCHED UP OR REFINISHED TO A NEW CONDITION BEFORE FINAL ACCEPTANCE. THIS SHALL INCLUDE, BUT SHALL NOT BE LIMITED TO, SANDING AND PROPERLY REMOVING RUST OR OTHER CONTAMINANTS AND COMPLETELY REPAINTING EQUIPMENT IF DAMAGE IS EXTENSIVE.

GENERAL SWITCHBOARD NOTES

1. PROVIDE CONCRETE PAD, 6" MIN. ABOVE FINISH FLOOR. MAINTAIN A MINIMUM OF 6" OF POURED CONCRETE PAD ALL AROUND THE SWITCHBOARD. PROVIDE STEP AS REQUIRED, COORDINATE WITH ARCHITECT & STRUCTURAL ENGINEER.
2. BUS (COPPER) SHALL BE CONTINUOUS RATED. CONSTRUCT THROUGH-BUS OF COPPER WITH SILVER-PLATED CONNECTIONS, WITH AMPACITY RATING, AND WITH SHORT-CIRCUIT CURRENT RATING.
3. NAMEPLATE: PROVIDE SWITCHBOARD WITH ENGRAVED NAMEPLATE INDICATING DESIGNATION, VOLTAGE, AND NUMBER OF PHASES. PROVIDE ENGRAVED ID TAGS (BAKELITE) FOR EACH OVER CURRENT DEVICE INDICATING LOAD SERVED.
4. PROVIDE FULLY RATED COPPER MAIN BUS, FULL CAPACITY NEUTRAL BUS, GROUND BUS FULL LENGTH OF SWITCHBOARD, FIRMLY CONNECTED TO EACH VERTICAL SECTION OF THE SWITCHBOARD.
5. SWITCHBOARDS SHALL BE PROVIDED WITH A FULL HINGED FRONT COVER AND BE FULLY ACCESSIBLE FROM THE FRONT. SWITCHBOARD SHALL NOT REQUIRE REAR ACCESSIBILITY.
6. SURGE PROTECTION: FURNISH AND INSTALL INTERNAL SURGE PROTECTION UNIT CONNECTED TO THE MAIN SWITCHBOARD. THE SURGE PROTECTION SHALL HAVE AN ISOLATION ENCLOSURE FROM THE REST OF THE EQUIPMENT.

FIRST RESPONDER COVERAGE NOTES

1. TYPICAL SYSTEM OPERATION IS CONTINUOUS OR AUTOMATIC.
2. PER IFC SIGNAL STRENGTH INTO AND OUT OF THE BUILDING TO HAVE A DELIVERED AUDIO QUALITY OF 95/95 @ 3.4 DAQ.
3. THE EQUIPMENT MUST BE APPROVED. THE SYSTEM DESIGN AND OPERATION MUST BE SPECIFICALLY DESIGNATED FOR USE AS AN IN-BUILDING EMERGENCY RADIO COMMUNICATION ENHANCEMENT SYSTEM BY THE MANUFACTURER.
4. THE SYSTEM MUST MEET SPECIFIC SURVIVABILITY REQUIREMENTS TO ENSURE IT WILL CONTINUE TO OPERATE DURING A FIRE.
5. THE SYSTEM MUST HAVE REDUNDANT PRIMARY POWER SOURCES AND STAND-BY OR BACKUP POWER TO OPERATE AT 100% CAPACITY FOR AT LEAST 12 HOURS.
6. THE SYSTEM MUST BE MONITORED THROUGH THE BUILDING FIRE ALARM SYSTEM FOR LOSS OF POWER; FAILURE OF THE BATTERY CHARGER; LOW-BATTERY CAPACITY INDICATION WHEN 70% OF THE 12-HOUR OPERATING CAPACITY HAS BEEN DEPLETED; MALFUNCTION OF THE DONOR ANTENNA AND ACTIVE RF-EMITTING DEVICE(S); AND FAILURE OF ANY CRITICAL SYSTEM COMPONENTS AND PROVIDE EITHER AN AUDIBLE WARNING OR TROUBLE SIGNAL.
7. THE SYSTEM PERFORMANCE AND RELIABILITY MUST BE TESTED ON INSTALLATION AND MAINTAINED OPERATIONAL AT ALL TIMES. AN ANNUAL INSPECTION IS ALSO REQUIRED.

GENERAL TRANSFORMER SCHEDULE NOTES:
1. CONCRETE HOUSE-KEEPING PAD TO BE 6" THICK AND EXTEND 6" BEYOND INSTALLED TRANSFORMER ON ALL SIDES.
2. SUSPENDED TRANSFORMERS TO BE SUPPORTED BY STRUCTURE ABOVE.
3. ALL TRANSFORMERS TO MEET DOE-2016 EFFICIENCY REQUIREMENTS.
4. HARMONIC-MITIGATING TRANSFORMERS (HMT) TO BE POWERSMITH T1000-30H WITH THE FOLLOWING OPTIONS:
   - A. IRP (INFRARED SCANNING PORT)
   - B. HD (HINGED DOOR)
   - C. 2S (DUAL ELECTROSTATIC SHIELD)
   - D. SPD-PRO240 (240 KA/MODE, 7-MODE SURGE PROTECTION WITH SECONDARY FUSES)
   - E. LKC (COMPRESSION LUG KIT)
   - F. IMP-*% (CUSTOM IMPEDANCE, * = VALUE IN %Z COLUMN)
5. NON-HMT BASIS OF DESIGN IS SQUARE D EX DISTRIBUTION TRANSFORMERS.

ELECTRICAL GENERAL NOTES:

1. PROVIDE BACK BOXES AND CONDUITS FOR TELECOM AND SECURITY. COORDINATE WITH TELECOM AND SECURITY DRAWINGS FOR LOCATIONS AND REQUIREMENTS.

KEYED NOTE LEGEND

1	PROVIDE POWER FOR RETRACTABLE PARTITION. COORDINATE FINAL POWER INPUT LOCATION WITH RETRACTABLE PARTITION INSTALLER.
2	PROVIDE POWER/DATA ON CEILING FOR PROJECTOR. COORDINATE FINAL OUTLET LOCATION WITH PROJECTOR LOCATION.
3	PROVIDE J–BOX FOR PROJECTION SCREEN POWER ABOVE ACCESSIBLE CEILING (COORDINATE FINAL LOCATION WITH PROJECTION SCREEN POWER INPUT LOCATION). PROVIDE 3/4"C FROM MOTOR TO PROJECTION SCREEN CONTROLLER LOCATION (COORDINATE EXACT LOCATION WITH ARCHITECT PRIOR TO ROUGH–IN). CONTROLLER PROVIDED BY PROJECTION SCREEN VENDOR.
4	FIRE ALARM ANNUNCIATOR PANEL (FAAP) TO BE LOCATED IN LOBBY AT MAIN BUILDING ENTRANCE. PROVIDE 1"C EMT FROM FIRE ALARM ANNUNCIATOR PANEL TO MAIN FIRE ALARM CONTROL PANEL WITH PULLSTRING FOR FIRE ALARM VENDOR USE.
5	GENERATOR ANNUNCIATOR PANEL, LOCATE ADJACENT TO FAAP. PROVIDE 1"C EMT FROM GENERATOR ANNUNCIATOR PANEL TO GENERATOR WITH REQUIRED DATA CABLING.
6	PROVIDE AND INSTALL (2) J–BOXES MOUNTED FLUSH WITH THE FINISHED WALL, (1) FOR POWER AND (1) FOR DATA TO THE ELECTRICAL FURNITURE SYSTEM. CONNECT FURNITURE THROUGH FURNITURE WHIP TO J–BOX FOR CIRCUITING INDICATED. ROUTE (1)3/4"C FOR POWER AND (1)1–1/2"C FOR DATA UP TO ACCESSIBLE CEILING SPACE. COORDINATE WITH ARCHITECT AND POWERED FURNITURE VENDOR FOR EXACT LOCATIONS TO ROUGH–IN OF POWER AND DATA PRIOR TO BEGINNING WORK.
7	PROVIDE AND INSTALL FURNITURE FEED FLOORBOX AND PROVIDE FINAL CONNECTION TO THE ELECTRICAL FURNITURE SYSTEM. CONNECT FURNITURE THROUGH FURNITURE WHIP TO FLOORBOX FOR CIRCUITING INDICATED. PROVIDE (1)3/4"C FOR POWER AND (1)1–1/2"C FOR DATA. COORDINATE WITH ARCHITECT AND POWERED FURNITURE VENDOR FOR EXACT LOCATIONS TO ROUGH–IN OF POWER AND DATA PRIOR TO BEGINNING WORK.

KEYED NOTE LEGEND

1	PROVIDE POWER FOR ELEVATOR. COORDINATE POWER INPUT LOCATION AND BUSSMAN ELEVATOR POWER MODULE LOCATION WITH ELEVATOR INSTALLER PRIOR TO ROUGH–IN.
2	PROVIDE POWER FOR ELEVATOR CAB LIGHTING. COORDINATE POWER INPUT LOCATION WITH ELEVATOR INSTALLER PRIOR TO ROUGH–IN. PROVIDE LOCAL 30AS/NF/IP/NEMA–I LOCAL DS.
3	PROVIDE POWER FOR ELEVATOR CAB FANS. COORDINATE POWER INPUT LOCATION WITH ELEVATOR INSTALLER PRIOR TO ROUGH–IN. PROVIDE LOCAL 30AS/NF/IP/NEMA–I LOCAL DS.
4	PROVIDE 30AS/30AT/3P BUS PLUG AT 'BUS–A' AND POWER FEED CORD DROP TO NEMA L2I–30R OUTLET MOUNTED TO CABLE TRAY ABOVE RACK. PROVIDE 4#10 (A/B/C+N), I#10 (G) IN 3/4"C POWER FEED FROM BUS PLUG TO RECEPTACLE. PROVIDE UNISTRUT SUPPORTS AND MOUNTING HARDWARE AS REQUIRED. COORDINATE INSTALLATION WITH TELECOM CONTRACTOR PRIOR TO ROUGH–IN.
5	PROVIDE 30AS/30AT/3P BUS PLUG AT 'BUS–B' AND POWER FEED CORD DROP TO NEMA L2I–30R OUTLET MOUNTED TO CABLE TRAY ABOVE RACK. PROVIDE 4#10 (A/B/C+N), I#10 (G) IN 3/4"C POWER FEED FROM BUS PLUG TO RECEPTACLE. PROVIDE UNISTRUT SUPPORTS AND MOUNTING HARDWARE AS REQUIRED. COORDINATE INSTALLATION WITH TELECOM CONTRACTOR PRIOR TO ROUGH–IN.
6	PROVIDE 30AS/30AT/IP BUS PLUG AT 'BUS–B' AND POWER FEED CORD DROP TO NEMA L5–30R OUTLET MOUNTED TO CABLE TRAY ABOVE RACK. PROVIDE 2#10, I#10 (G) IN 3/4"C POWER FEED FROM BUS PLUG TO RECEPTACLE (ALTERNATE PHASES ON BUS TAP TO EVENLY DISTRIBUTE LOAD). PROVIDE UNISTRUT SUPPORTS AND MOUNTING HARDWARE AS REQUIRED. COORDINATE INSTALLATION WITH TELECOM CONTRACTOR PRIOR TO ROUGH–IN.
7	PROVIDE 30AS/30AT/IP BUS PLUG AT 'BUS–A' AND POWER FEED CORD DROP TO NEMA L5–30R OUTLET MOUNTED TO CABLE TRAY ABOVE RACK. PROVIDE 2#10, I#10 (G) IN 3/4"C POWER FEED FROM BUS PLUG TO RECEPTACLE (ALTERNATE PHASES ON BUS TAP TO EVENLY DISTRIBUTE LOAD). PROVIDE UNISTRUT SUPPORTS AND MOUNTING HARDWARE AS REQUIRED. COORDINATE INSTALLATION WITH TELECOM CONTRACTOR PRIOR TO ROUGH–IN.
8	PROVIDE 30AS/20AT/IP BUS PLUG AND POWER FEED TO GENERAL PURPOSE 5–20R OUTLETS IN THIS ROOM. PROVIDE 2#12, I#12 (G) IN 3/4"C POWER FEED TO RECEPTACLES (ALTERNATE PHASES ON BUS TAP TO EVENLY DISTRIBUTE LOAD).
9	PROVIDE 30AS/20AT/IP BUS PLUG AND POWER FEED TO VISUAL/AUDIO ALARM AND CONTROL PANEL FOR FM200 TANK. PROVIDE 2#12, I#12 (G) IN 3/4"C POWER FEED TO RECEPTACLES (ALTERNATE PHASES ON BUS TAP TO EVENLY DISTRIBUTE LOAD). COORDINATE FINAL EQUIPMENT LOCATIONS WITH FM200 TANK SYSTEM INSTALLER PRIOR TO ROUGH–IN.

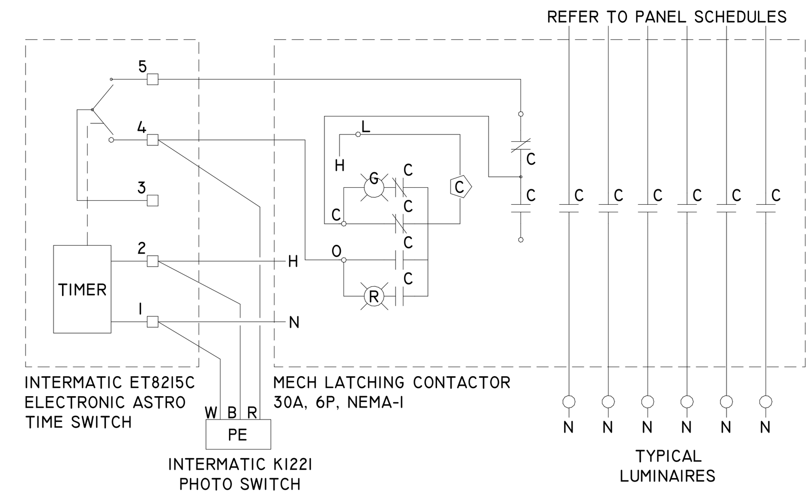
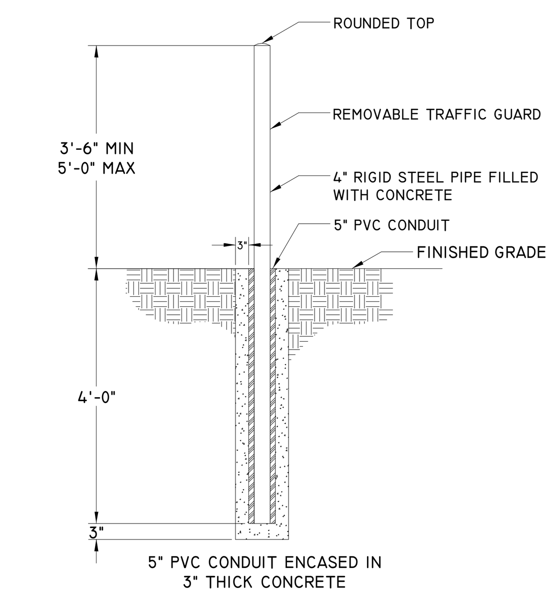
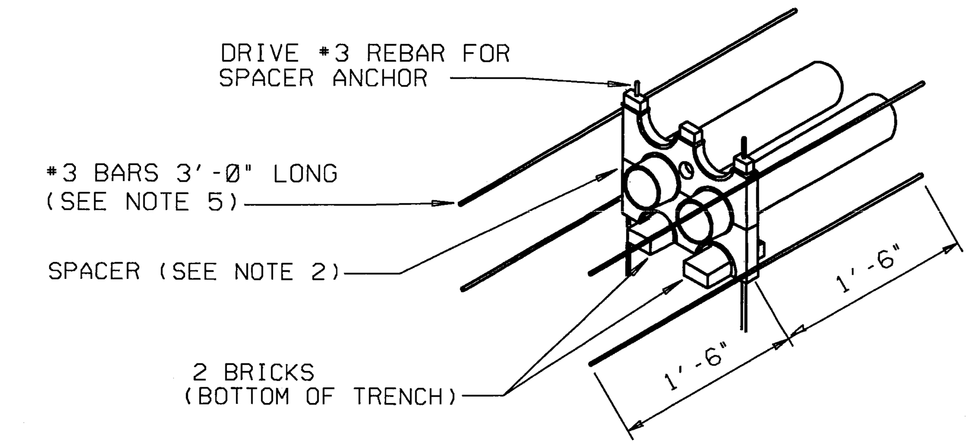
DETAIL - CONDUIT RACK | NOT TO SCALE | 13



DETAIL - LIGHTING CONTACTOR | NOT TO SCALE | 10



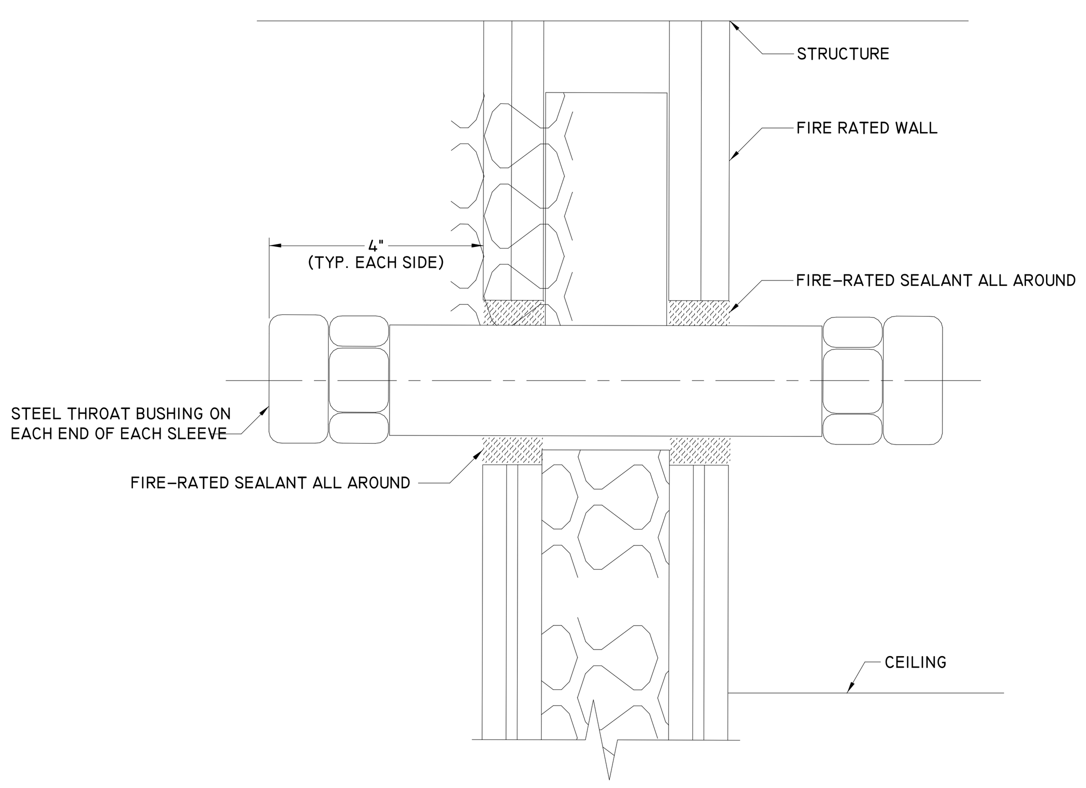
DETAIL - BOLLARD | NOT TO SCALE | 6



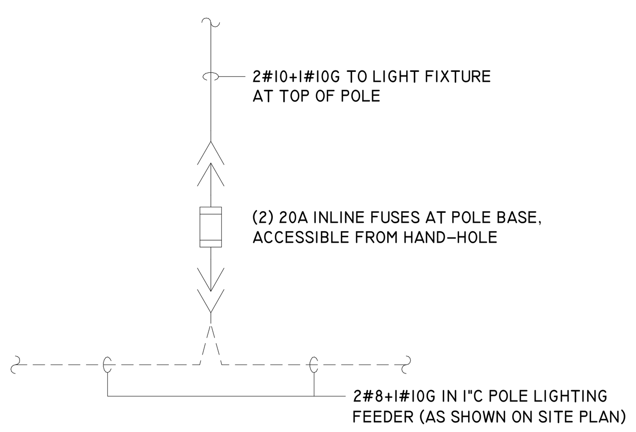
NOTES:

1. CONDUIT TO BE PVC, MINIMUM GRADE TYPE EB
2. SPACES SHOULD BE INSTALLED NOT MORE THAN 10'-0" APART.
3. ALL EXTERIOR CONCRETE COVER DIMENSIONS ARE MINIMUM.
4. CONCRETE SHALL BE IN ACCORDANCE WITH CNP SPECIFICATION 007-221-01, LATEST REVISION.
5. PLACE REINFORCING BARS IN 4 CORNERS OF THE CONCRETE WHERE SPACERS ARE USED.
6. ON COLD JOINT CONCRETE POUR USE #5 REBAR (3'-0" IN LENGTH, EXPOSED 1'-6").
7. LENGHT OF REBAR FOR SPACER ANCHOR WILL VARY PER DUCT BANK HEIGHT.
8. CONDUITS ENDS SHALL BE PLUGGED WITH A DUCT CAP OR OTHER TYPE OF CAPPING DEVICE.
9. A ONE (1') VERTICAL CLEARANCE MUST BE MAINTAINED BETWEEN CNP'S DUCTBANK AND ALL NON-CNP FACILITIES CROSSING THE DUCT BANK.
10. A FIVE FOOT (5') HORIZONTAL CLEARANCE MUST BE MAINTAINED BETWEEN CNP'S DUCT BANK AND ALL NON-CNP FACILITIES CROSSING THE DUCT BANK (JOINT TRENCHING IS NOT PERMITTED).
11. INSTALL JET LINE IN ALL CONDUITS AND A #14 AWG WIRE IN ONE CONDUIT.

DETAIL - PRIMARY DUCT BANK CROSS SECTION | NOT TO SCALE | 4

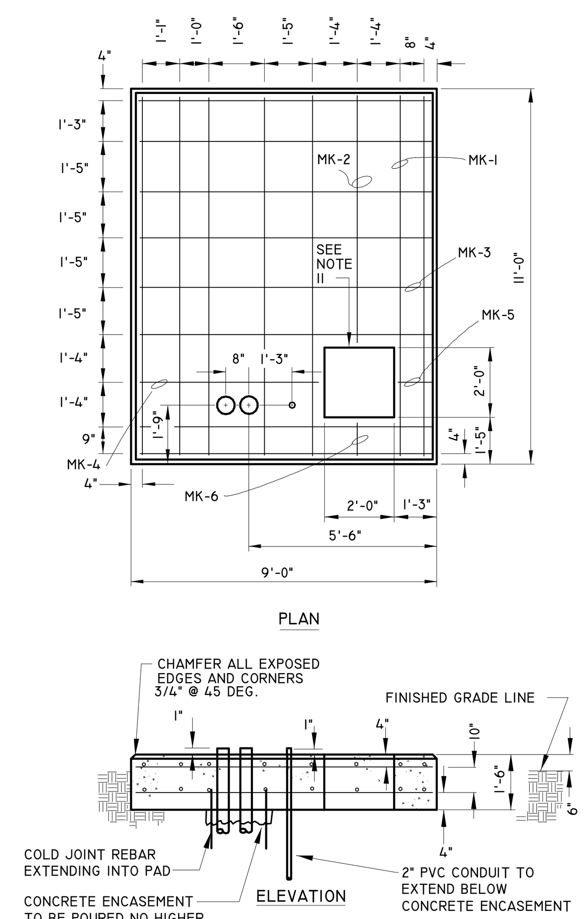


DETAIL - WALL SLEEVE | NOT TO SCALE | 12



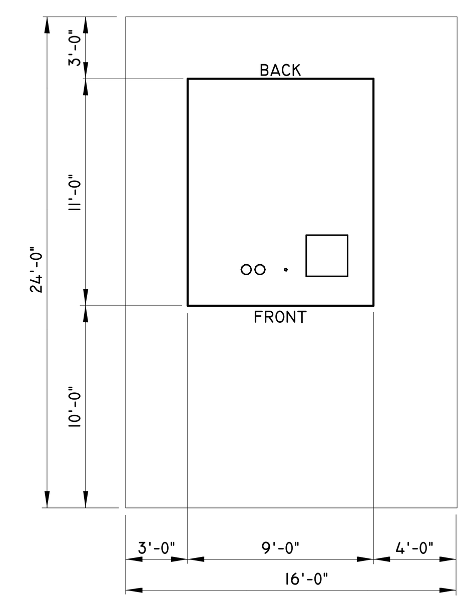
DETAIL - POLE LIGHT WIRING DIAGRAM AT BASE | NOT TO SCALE | 9

VERIFY WITH POWER CURRENT REQUIREMENTS WITH POWER COMPANY PRIOR TO CONSTRUCTION



REINFORCING SCHEDULE PER FOUNDATION				
MARK	QTY.	SIZE	LENGTH	REMARKS
MK-1	14	#7	10'-6"	STRAIGHT
MK-2	2	#7	7'-0"	STRAIGHT
MK-3	16	#7	8'-6"	STRAIGHT
MK-4	2	#7	5'-3"	STRAIGHT
MK-5	2	#7	0'-9"	STRAIGHT
MK-6	2	#7	1'-0"	STRAIGHT

MATERIAL ESTIMATE PER FOUNDATION	
DESCRIPTION	QUANTITY
REINFORCING STEEL #7	636 LBS
CONCRETE (5 SACK)	5 CU. YDS.
TYPE EB OR BETTER PVC CONDUIT, 90 DEG, 60" R	2
2" PVC CONDUIT	5 FT



MINIMUM EASEMENT REQUIREMENTS

EQUIPMENT WEIGHT 43,000 LBS MAXIMUM

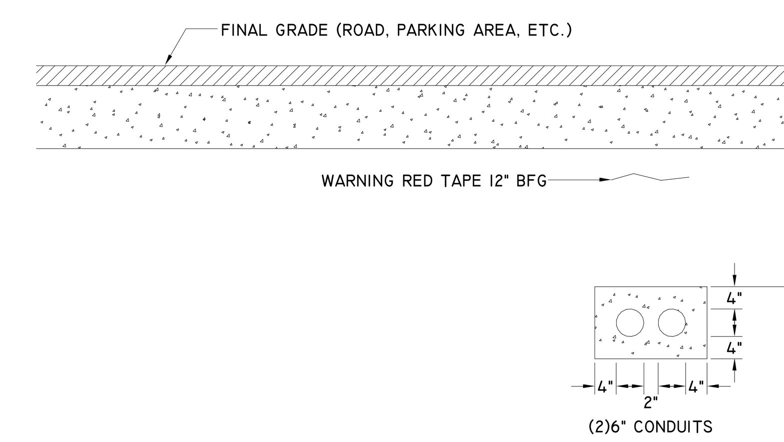
500-5000 KVA PMT FOUNDATION, 12KV & 35KV

BASED ON DISTRIBUTION STANDARD 80-400

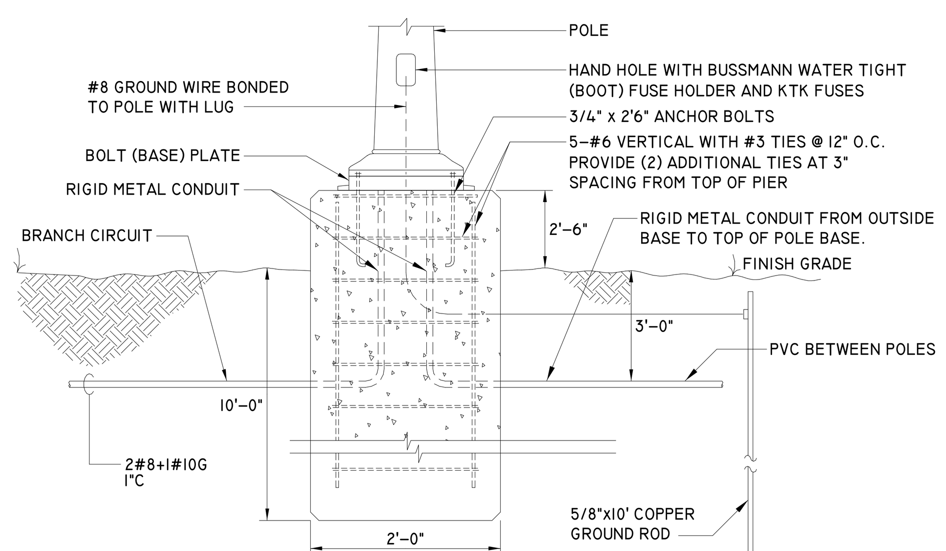
NOTES:

1. CONCRETE SHALL BE IN ACCORDANCE WITH CNP SPECIFICATION 007-221-01, LATEST REVISION (MINIMUM COMPRESSION IN 28 DAYS, 3000 PSI).
2. REINFORCING STEEL SHALL BE INTERMEDIATE GRADE DEFORMED BARS IN ACCORDANCE WITH A.S.T.M. SPECIFICATION A-615, GRADE 60, OR BETTER.
3. ALL SPLICES IN REINFORCING SHALL LAP A LENGTH EQUAL TO 24 BAR DIAMETERS.
4. ALL DIMENSIONS ON REINFORCING ARE TO THE CENTER OF BARS.
5. CONCRETE SHALL BE THOROUGHLY WORKED AROUND REINFORCING, ANY EMBEDDED FIXTURES AND INTO ALL CORNERS OF FORMS.
6. IF REQUIRED, GROUT SHALL BE A MIXTURE OF 1 PART CEMENT TO 2 PARTS SAND WITH ENOUGH WATER TO PRODUCE A WORKABLE MIXTURE.
7. CONCRETE IS TO BE POURED ONLY WHEN THE ATMOSPHERIC TEMPERATURE IS A MINIMUM 40\ F. (5\ C.) AND RISING.
8. STRIP BACK ALL VEGETATION AND APPROXIMATELY 12" OF TOP SOIL. REMOVE ALL LOOSE CLODS AND STONES. BACKFILL AND THOROUGHLY COMPACT ALL CONDUIT TRENCHES AND HOLES BEFORE CONCRETE IS PLACED.
9. REINFORCING SHALL HAVE A MINIMUM OF 2" CONCRETE COVER.
10. SLOPE PAD 1" FRONT TO BACK.
11. THE SQUARE OPENING IS FOR THE CUSTOMER'S SECONDARY CONDUITS.
12. CNP WILL NOT ALLOW OTHER FACILITIES TO PASS BENEATH ITS EQUIPMENT PADS. A ONE FOOT MINIMUM HORIZONTAL CLEARANCE SHALL BE MAINTAINED BETWEEN CNP PADS AND ALL OTHER FACILITIES.
13. THE SECONDARY OPENING IS TO BACKFILLED WITH SAND TO WITHIN 4" OF THE TOP OF THE PAD.

DETAIL - PRIMARY TRANSFORMER PAD | NOT TO SCALE | 5



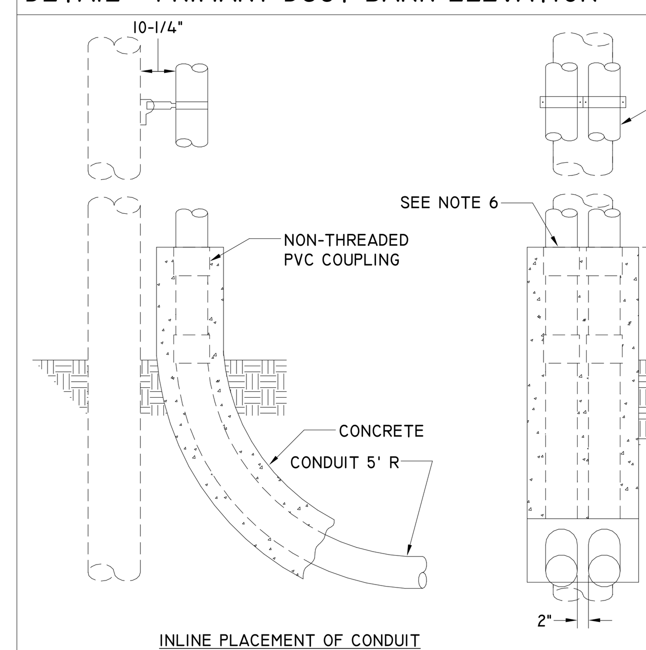
DETAIL - PRIMARY DUCT BANK ELEVATION | NOT TO SCALE | 3



NOTES:

1. DESIGN WIND LOAD FOR 139 MPH WIND SPEED.
2. POLE BASE HEIGHT ABOVE FINISHED GRADE IS FOR PARKING LOT POLE LIGHTS ONLY. POLE BASE HEIGHTS IN PEDESTRIAN WALK AREAS SHALL BE COORDINATED WITH THE ARCHITECT BEFORE FORMING THE BASE.
3. PROVIDE NEAT SONOTUBE FINISH. NO APPLIED CEMENT SLURRY FINISH WILL BE ALLOWED.
4. ALL ANCHOR BOLTS SHALL BE FULL LENGTH HOT DIP GALVANIZED INCLUDING ALL HARDWARE.

DETAIL - POLE BASE | NOT TO SCALE | 8

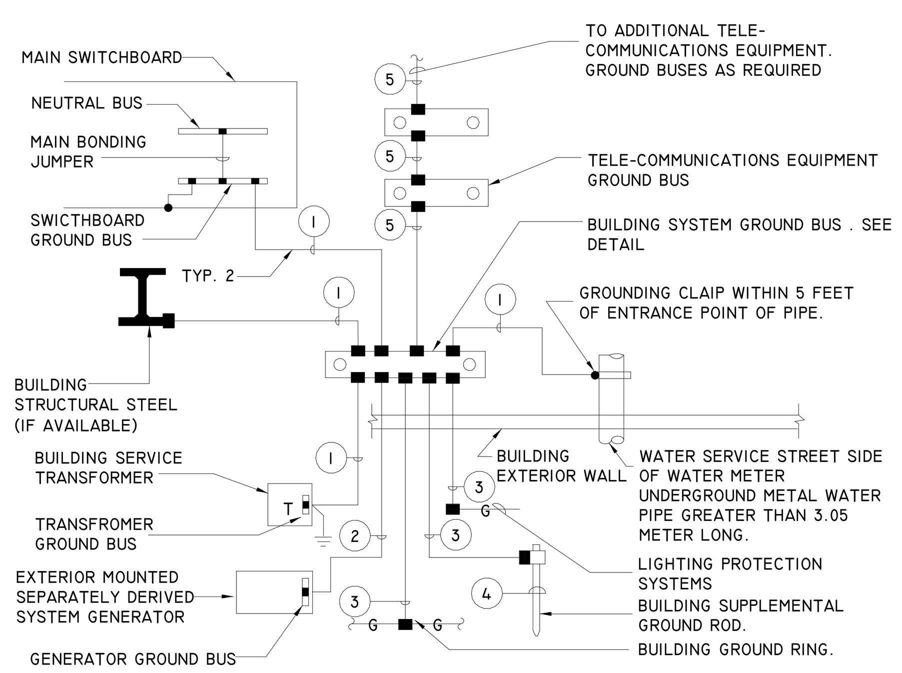


NOTES:

1. CONDUIT BENDS AT TERMINAL POLE SHALL BE PVC.
2. BRACE THE POLE SECURELY BEFORE TRENCHING.
3. INSTALL CONDUIT BENDS TO BASE OF POLE. ADD PORTIONS OF STRAIGHT CONDUIT AS NECESSARY TO OBTAIN THE PROPER HEIGHT ABOVE FINAL GRADE.
4. ATTACHE COUPLING TO END OF CONDUIT.
5. INSERT, BUT DO NOT GLUE A SHORT PEICE OF SCRAP PVC CONDUIT INTO THE TOP COUPLING. TIE CONDUIT TO BRACKET.
6. FORM AREA AROUND PEDESTAL TO THE TOP OF THE COUPLING. FORM PEDESTAL SO THAT NO CONCRETE WILL CONTACT POLE.
7. AFTER INSPECTION BY CNP, POUR CONCRETE TO TOP OF COUPLINGS.
8. ALL CONDUITS SHALL HAVE A MINIMUM 4" CONCRETE COVER.

DETAIL - TERMINAL POLE CONDUIT PLACEMENT | NOT TO SCALE | 2

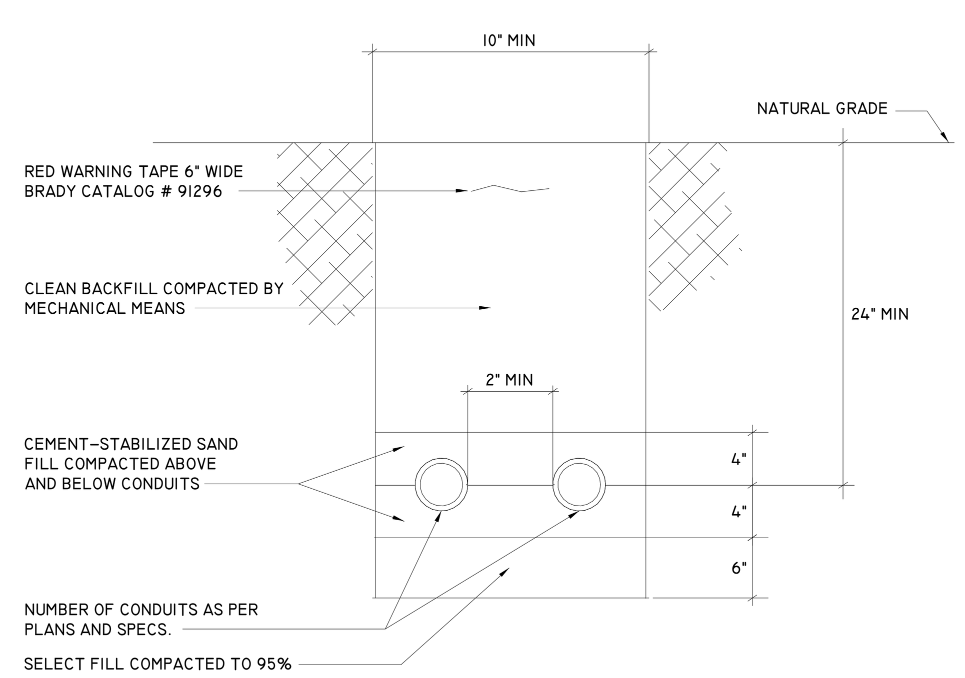
NOTE:
THIS INFORMATION MAY NOT CONTAIN ALL DETAILS REQUIRED FOR CONSTRUCTION. APPROPRIATE MODIFICATION MAY BE REQUIRED TO ENSURE SUITABILITY OF THESE DRAWINGS FOR THE SPECIFIC APPLICATION. IT IS THE USER'S RESPONSIBILITY TO ENSURE INSTALATION OF EQUIPMENT/SYSTEM IS IN ACCORDANCE WITH BUILDING/PROJECT SPECIFICATIONS, APPLICABLE CODES AND STANDARDS.



LEGEND:

- ● INDICATES BOLTED CONNECTION.
- ■ INDICATES EXOTHERMIC WELD CONNECTION, COMPATIBLE WITH MATERIALS BEING JOINED.
- (1) #4/0 AWG INSULATED COPPER GROUND CONDUCTOR IN 3/2"C.
- (2) #4/0 AWG COPPER GROUND CONDUCTOR ENCASED IN CONCRETE.
- (3) #4/0 AWG BARE COPPER GROUND CONDUCTOR.
- (4) 3/4" x 10' LONG COPPER-CLAD GROUND ROD DRIVEN WITH TOP 12" BELOW GRADE IN GROUNDING WELL.
- (5) #3/0 AWG INSULATED COPPER GROUND CONDUCTOR IN 1-1/4" CONDUIT.

DETAIL - BUILDING GROUNDING ELECTRODE SYSTEM | NOT TO SCALE | 11



DETAIL - TRENCH (OTHER THAN SERVICE FEEDERS) | NOT TO SCALE | 7

KEYED NOTES:

1. #4 BARS IN THE CONCRETE ENVELOPE AT ROAD AND VEHICLE CROSSING, OR AS SPECIFIED ON THE DRAWINGS. USE #5 STIRRUPS ON 18" CENTERS.
2. SEE ONE LINE DIAGRAM FOR NUMBER & SIZE OF CONDUITS
3. SPACERS 8'-0" TO 10'-0" O.C. OR A MINIMUM OF ONE SUPPORT PER JOINT.
4. COVER SHALL BE 4'-0" MINIMUM BELOW SOIL SURFACE AND 4'-0" MINIMUM BELOW STREET AND PARKING LOTS, SIDEWALKS.
5. ENVELOPE OF CONCRETE COLORED RED. IT WILL HAVE A NOMINAL COMPRESSIVE STRENGTH OF 2800 PSI AT 28 DAYS. CONCRETE ENVELOPE NOT REQUIRED UNDER BUILDING SLABS.
6. SCOTCH NO. 88 TAPE. APPLY 2 LAYERS, HALF-LAPPED, 2" ABOVE AND BELOW CONCRETE LEVEL.
7. PROTECT EXPOSED CONDUIT ENDS DURING CONSTRUCTION WITH PIPE PLUG OR CAPS. FUTURE AND SPARE CONDUITS ENDS SHALL HAVE PIPE PLUGS OR CAPS.
8. CONNECT BONDING JUMPER TO GROUND BUS OR GROUND GRID. CONNECT TO STEEL ELBOW WITH BURNDY TYPE "GAR".
9. ADAPTER FROM NON-METALLIC CONDUIT.
10. LONG RADIUS RIGID GALVANIZED STEEL CONDUIT ELBOW AND COUPLING USED AS REQUIRED.
11. EQUIPMENT BONDING JUMPER PER TABLE 250.122.
12. CONDUIT COUPLING WITH GROUNDING TYPE INSULATED BUSHING.
13. RIGID GALVANIZED STEEL OR PVC COATED CONDUIT NIPPLE.
14. WHEN ENTERING INTO THE BOTTOM OF ENCLOSURE, TOP OF INSULATED BUSHING IS 2" ABOVE FLOOR.
15. MINIMUM IS 6" IN UNPAVED AREAS.

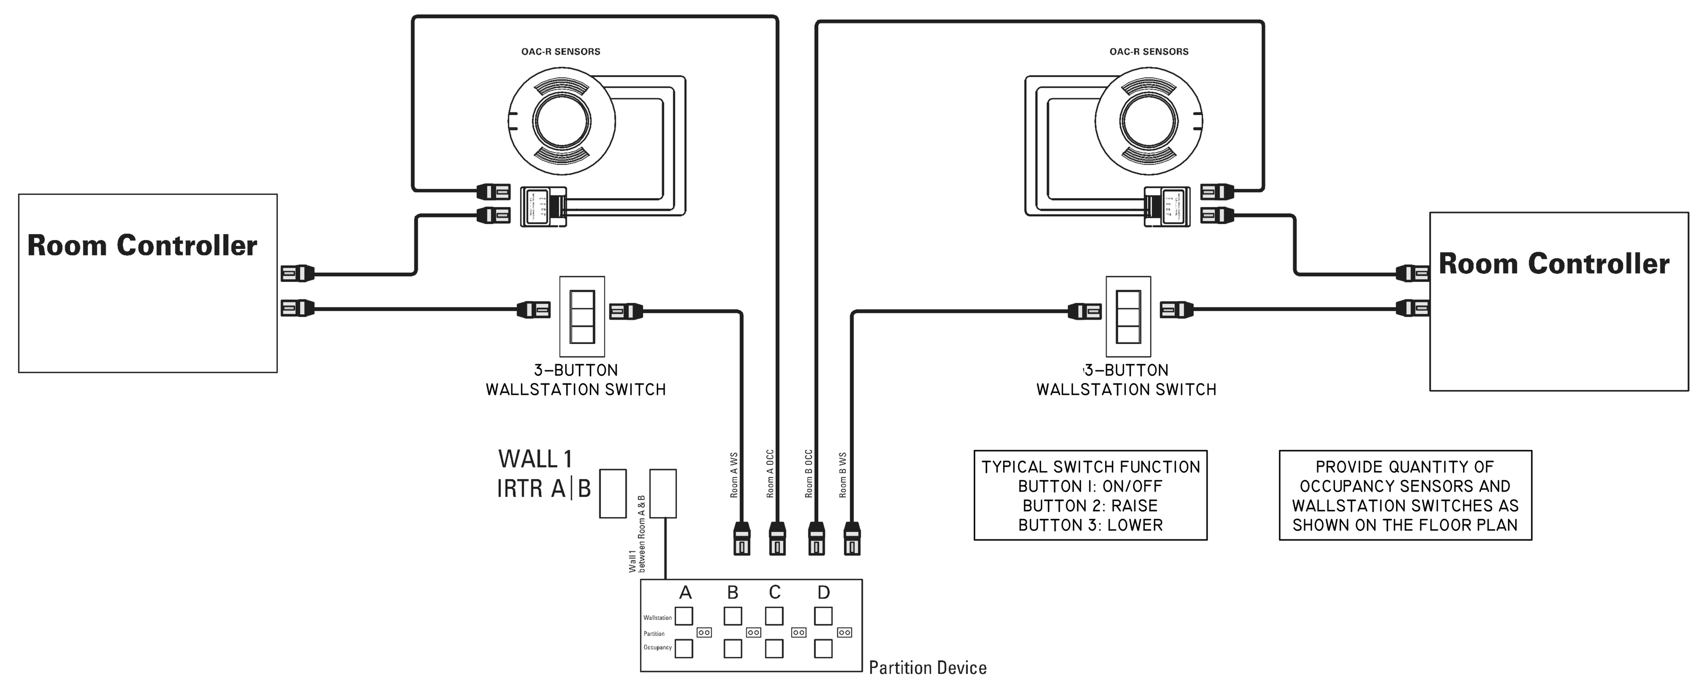
ADJUST AND PROGRAM FOR SEQUENCE OF OPERATIONS

WHEN THE REMOVABLE PARTITION IS IN THE CLOSED POSITION EACH TRAINING ROOM SHALL BE CONTROLLED INDEPENDENTLY AS SEPARATE SPACES:

1. (1) WALLSTATION SWITCH SHALL BE USED TO TURN LIGHTS ON/OFF AND ADJUST LIGHTING LEVEL FOR PROJECTOR ZONE.
2. (1) WALLSTATION SWITCH SHALL BE USED TO TURN LIGHTS ON/OFF AND ADJUST LIGHTING LEVEL FOR REST OF SPACE ZONE.
3. (1) WALLSTATION SWITCH SHALL BE USED TO TURN LIGHTS ON/OFF AND ADJUST LIGHTING LEVEL FOR CORRIDOR ZONE.
4. THE OCCUPANCY SENSOR SHALL TURN LIGHTS OFF AFTER NO OCCUPANCY IS DETECTED FOR 20 MINUTES IN ACCORDANCE WITH IECC 2015.

WHEN THE REMOVABLE PARTITION IS IN THE OPEN POSITION THE TRAINING ROOM SHALL BE CONTROLLED AS ONE SPACE:

1. (1) WALLSTATION SWITCH SHALL BE USED TO TURN LIGHTS ON/OFF AND ADJUST LIGHTING LEVEL FOR BOTH PROJECTOR ZONES.
2. (1) WALLSTATION SWITCH SHALL BE USED TO TURN LIGHTS ON/OFF AND ADJUST LIGHTING LEVEL FOR BOTH REST OF SPACE ZONES.
3. (1) WALLSTATION SWITCH SHALL BE USED TO TURN LIGHTS ON/OFF AND ADJUST LIGHTING LEVEL FOR BOTH CORRIDOR ZONES.
4. THE OCCUPANCY SENSOR SHALL TURN LIGHTS OFF AFTER NO OCCUPANCY IS DETECTED FOR 20 MINUTES IN ACCORDANCE WITH IECC 2015.



TYPICAL SWITCH FUNCTION
BUTTON 1: ON/OFF
BUTTON 2: RAISE
BUTTON 3: LOWER

PROVIDE QUANTITY OF OCCUPANCY SENSORS AND WALLSTATION SWITCHES AS SHOWN ON THE FLOOR PLAN

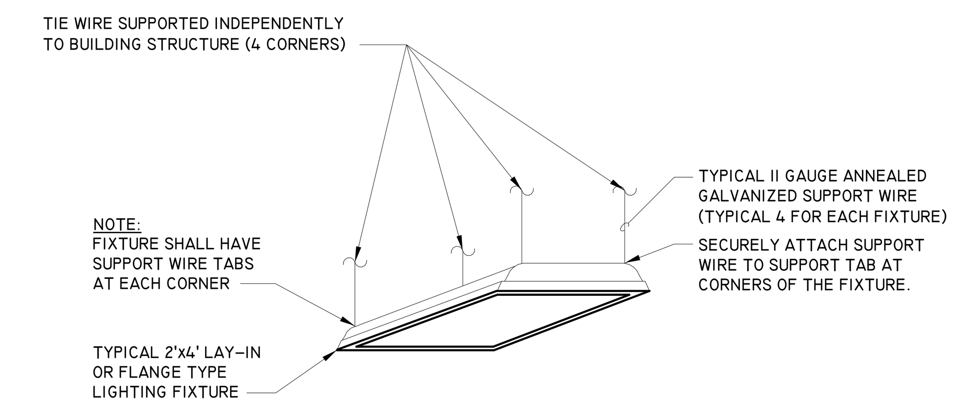
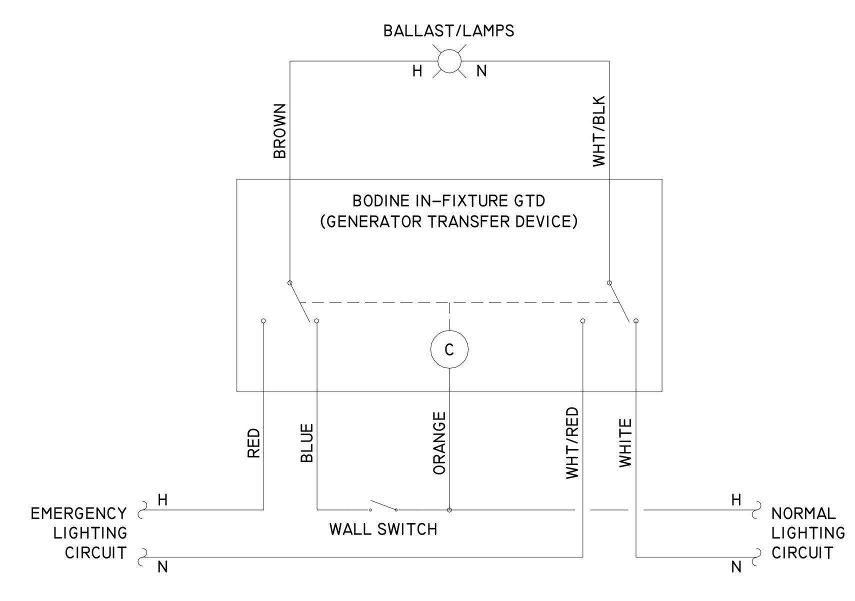
DETAIL - ASYMMETRIC 30 ∅ SIMULTANEOUS WATER HEATER | NOT TO SCALE | 8

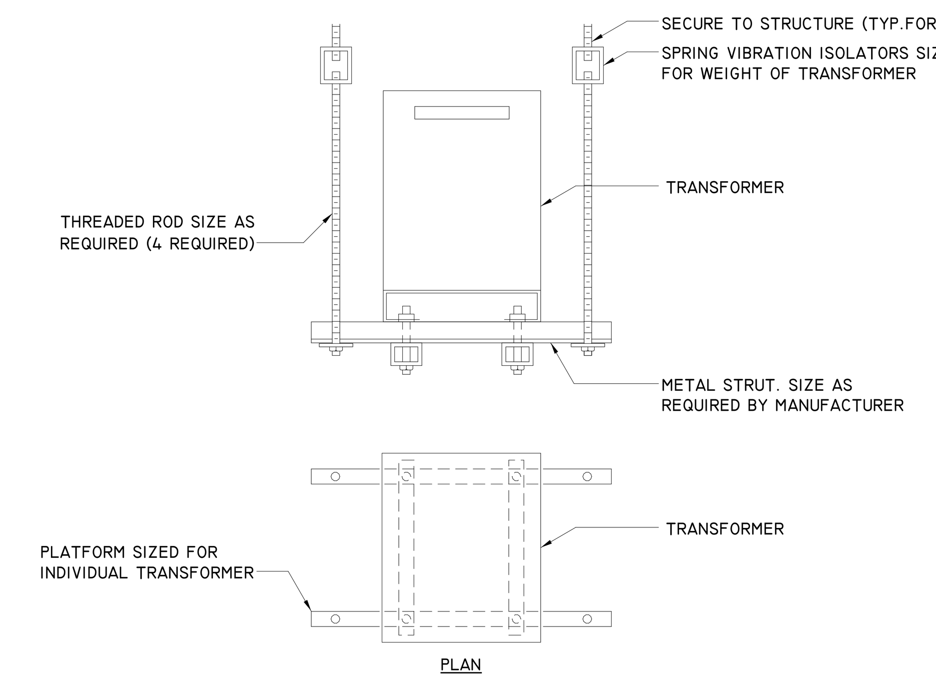


DETAIL - LIGHT FIXTURE SUPPORT | NOT TO SCALE | 4



PROVIDE A BODINE GTD (GENERATOR TRANSFER DEVICE) WIRED AS SHOWN BELOW IN EACH FIXTURE INDICATED AS EMERGENCY EGRESS LIGHTING ON LIGHTING PLANS AND LIGHT FIXTURE SCHEDULE WITHIN THE FACILITY.

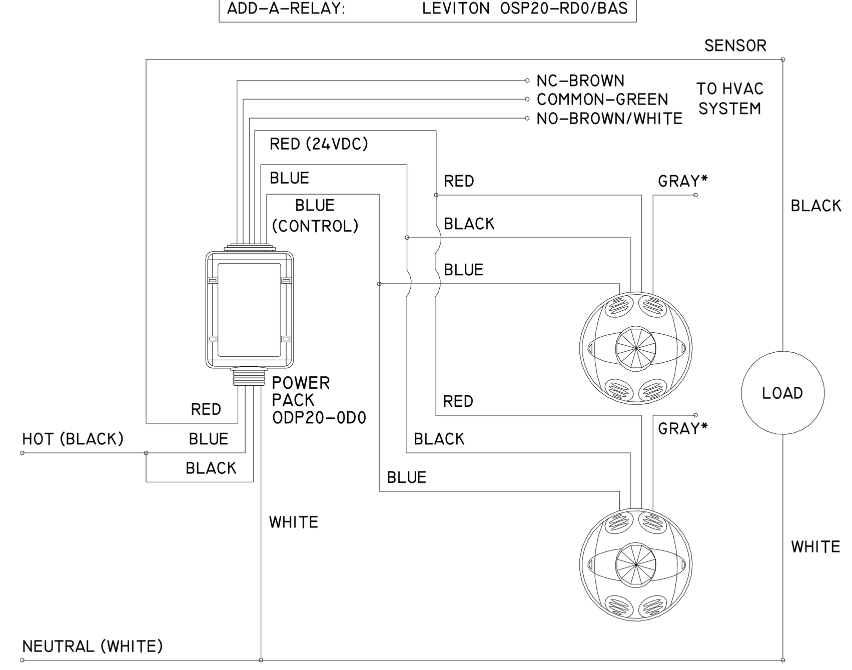
DETAIL - EMERGENCY GENERATOR TRANSFER DEVICE (GTD) | NOT TO SCALE | 7



DETAIL - TRANSFORMER SUSPENDED FROM STRUCTURE | NOT TO SCALE | 3

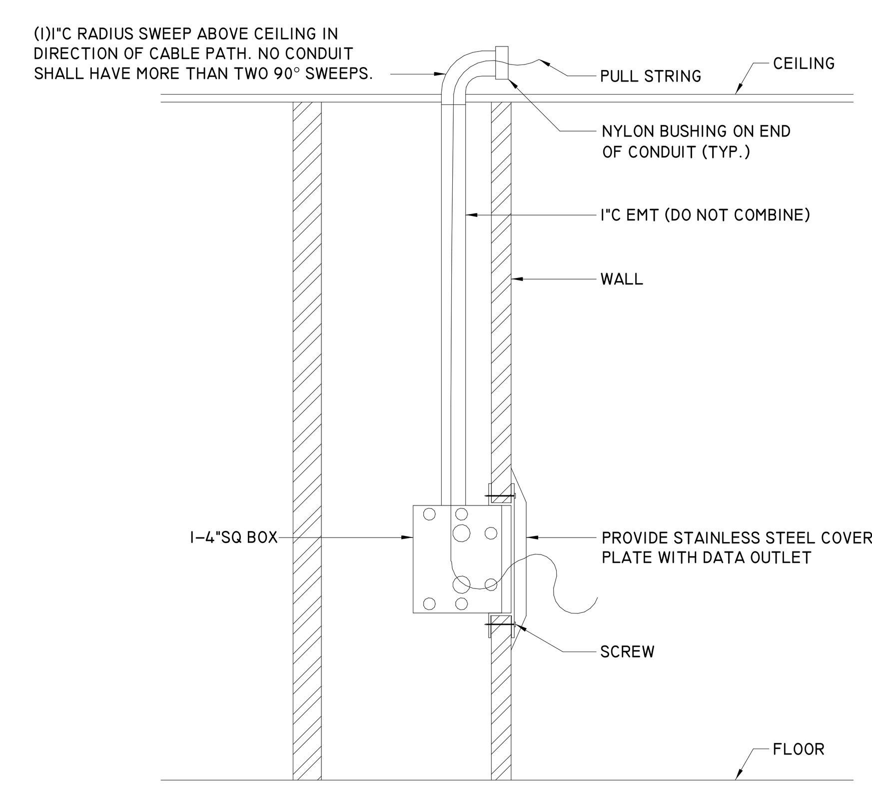
DETAIL - | NOT TO SCALE | 13

OCCUPANCY SENSORS: LEVITON OSC20-M0W
POWER PACK: LEVITON OSP20-0D0
ADD-A-RELAY: LEVITON OSP20-RD0/BAS

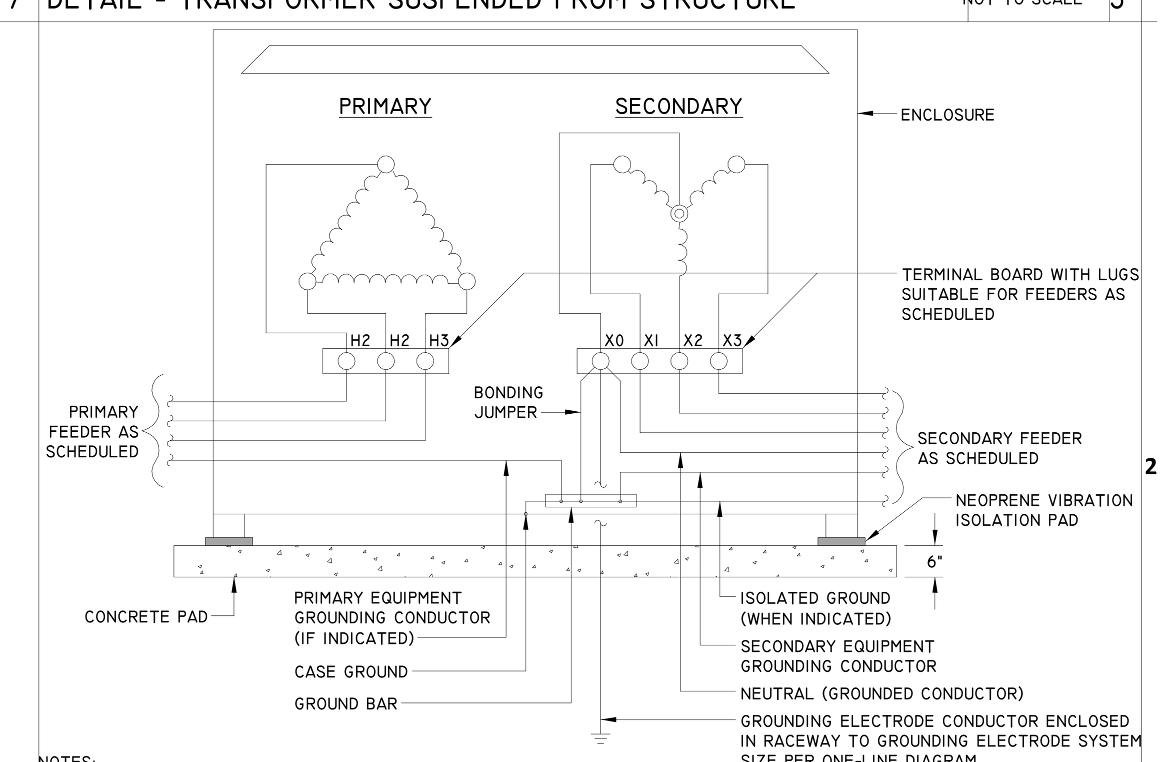


OCCUPANCY SENSOR SHALL BE PROGRAMMED AUTOMATIC OFF / AUTOMATIC ON
VACANCY SENSOR SHALL BE PROGRAMMED AUTOMATIC OFF / MANUAL ON

DETAIL - CEILING OCCUPANCY / VACANCY SENSOR | NOT TO SCALE | 10



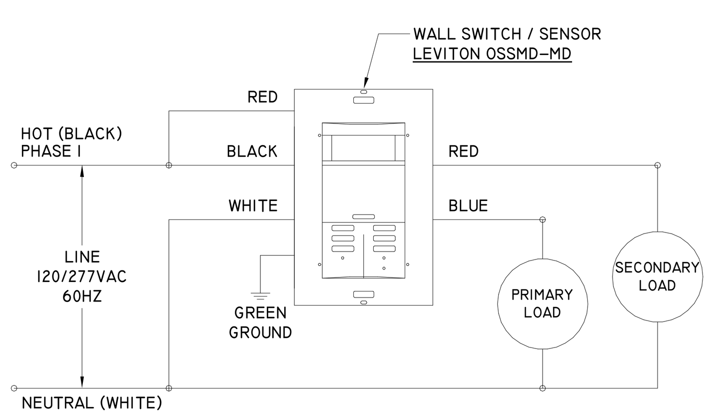
DETAIL - DATA OUTLETS | NOT TO SCALE | 6



NOTES:
INSTALL ALL FLOOR MOUNTED TRANSFORMERS AS INDICATED ON 6" HOUSEKEEPING PAD 3" LARGER THAN THE TRANSFORMER (6" AT THE REAR), COMPLYING WITH MANUFACTURER'S WRITTEN INSTRUCTIONS, APPLICABLE REQUIREMENTS OF NEC, NESC, NEMA, ANSI, AND IEEE STANDARDS, AND IN ACCORDANCE WITH RECOGNIZED INDUSTRY PRACTICES TO ENSURE THAT PRODUCTS FULFILL REQUIREMENTS. PROVIDE NEC WORKING CLEARANCE IN FRONT OF TRANSFORMERS ASSUMING THEY WILL REQUIRE EXAMINATION WHILE ENERGIZED.

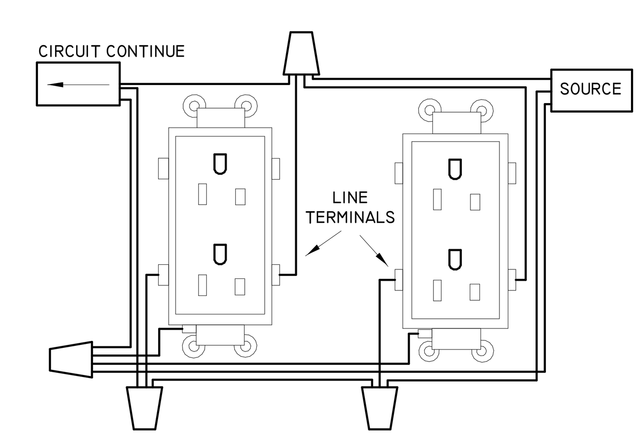
DETAIL - TRANSFORMER GROUNDING | NOT TO SCALE | 2

DETAIL - | NOT TO SCALE | 12



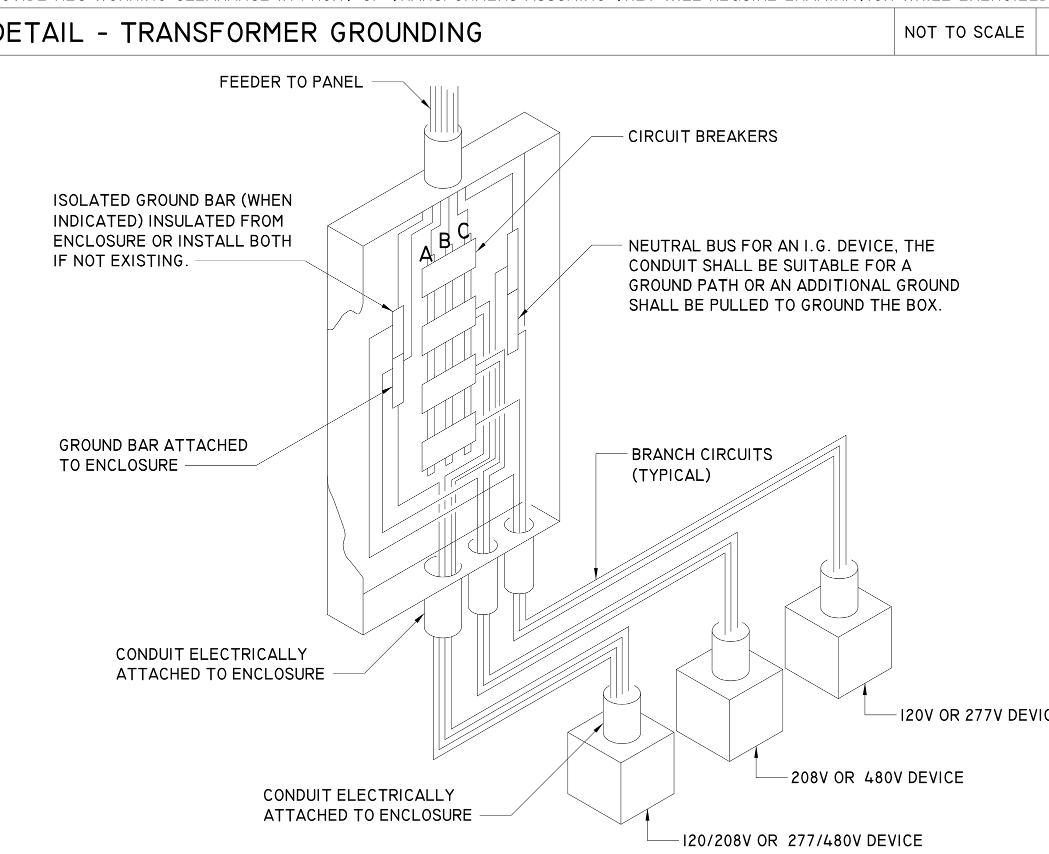
OCCUPANCY SENSOR SHALL BE PROGRAMMED AUTOMATIC OFF / AUTOMATIC ON
VACANCY SENSOR SHALL BE PROGRAMMED AUTOMATIC OFF / MANUAL ON

DETAIL - WALL OCCUPANCY / VACANCY SENSOR SWITCH | NOT TO SCALE | 9



NOTES:
1. CIRCUITING TO ALL NON DEDICATED ELECTRICAL RECEPTACLES AND SWITCHES ARE REQUIRED TO UTILIZE PARALLEL CIRCUITING BY THE USE OF "PIG TAILS" TO EACH DEVICE SO THAT IF AN OUTLET IS REMOVED OR FAILS ELECTRICAL CONTINUITY OF THE CIRCUIT WILL NOT BE COMPROMISED.
2. ALL ELECTRICAL WIRING MUST BE PROPERLY SPLICED BY TWISTING THE WIRES TOGETHER AND USE OF APPROVED AND LISTED COMPRESSION WIRE NUTS FOR ANY WIRING.
3. DO NOT USE END TO END BUTT-SPLICING CONNECTORS FOR ANY WIRING.
4. WRAP AROUND THE TERMINALS WITH ELECTRICAL TAPE.

DETAIL - PIGTAIL RECEPTACLE WIRING | NOT TO SCALE | 5



DETAIL - PANEL GROUNDING | NOT TO SCALE | 1

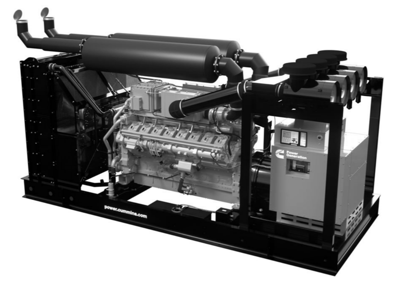
Specification sheet

Gaseous fuel generator set

1000 kW - 1300 kW
60 Hz



Description

You can count on the 1000-1300 kW natural gas generator set (GenSet) for the reliability, quality, and dependability that is genuine Cummins performance. EPA-certified, this fully-integrated power generation system provides optimum performance and versatility for demand response and stationary standby power applications.

Features

- Over 100 years of Cummins power generation technology and innovation
- Listed to UL 2200 and CSA standards for all low voltage models
- Stamford rugged and reliable alternator with state-of-the-art technology
- One-year (demand response) and two-year (standby) base warranty supported by a worldwide Cummins twenty-four hour, seven days-a-week, distributor network
- Accepts 100% rated load in a single step
- Capable of meeting NFPA 110 Type 10 for Level 1 emergency or standby power supply systems (EPSSs) when installed and operated per Cummins and NFPA guidelines
- Standard Power Command Control (PCC) 3300 technology provides digital (precise) frequency and voltage regulation
- Efficient and convenient operation monitoring and control options:
  - Modbus over the Internet (monitor and control)
  - Remote HMI (monitor and control)

Model	Power rating 60 Hz kW (kVa) Standby and demand response	Emissions	Data sheet
C1000N6B	1000 (1250)	EPA-certified for stationary emergency and non-emergency applications	NAD-C1000N6B
C1300N6	1300 (1625)		NAD-C1300N6

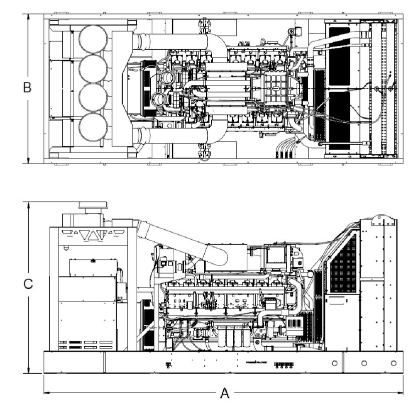
Engine specifications

Base engine	Cummins QSK 60G
Displacement	3671 in^3 (60.1 L)
Minimum battery capacity	1800 amps at minimum ambient temperature of 0 °F (-18 °C)
Battery charging alternator	55 amps
Starting voltage	24-volt, negative ground
Standard cooling system	104 °F (40 °C)

Alternator specifications

Design	Brushless, 4-pole, drip-proof revolving field
Stator	2/3 pitch
Rotor	Direct-coupled by flexible disc
Insulation system	Class H per NEMA MG1-1.65 or better
Standard temperature rise	125 °C
Exciter type	Permanent Magnet Generator (PMG)
Phase rotation	A (U), B (V), C (W)
Alternator cooling	Direct-drive centrifugal blower

Outline drawing



This outline drawing is for reference only.
Do not use for installation design.

All models	Dim "A" in. (cm)	Dim "B" in. (cm)	Dim "C" in. (cm)
Open set	240 (610)	102 (259)	115 (292)
Sound-attenuated Level II enclosure	403 (1024)	102 (259)	128 (325)

NOTE: Consult drawings for applicable weights. Contact the factory for additional information.

GenSet options and accessories

Alternator
- 80 °C rise
- 105 °C rise
- 125 °C rise
- 120/240 V, 200 W anti-condensation heater

Fuel system - flexible fuel connector and fuel strainer

Exhaust system - critical grade silencer

Generator set
- Batteries
- Battery charger - 120/208/240 V, 20A
- Main line circuit breaker
- Electronically-operated (E.O.) generator breaker
- PowerCommand Network I/O module
- PowerCommand Network Aux 101, 102 module
- Remote control HMI with extension harness
- Remote annunciator panel
- Spring isolators
- Audible alarm
- Sound-attenuated enclosure Level II with silencer
- Warranty - five-year standby including parts, labor, and travel

Applicable codes and standards

The Underwriters Laboratory (UL) 2200 Listing is a comprehensive safety standard encompassing the design, construction, and performance of stationary GenSets.

CSA Group tests products under a formal process to ensure that they meet the safety and/or performance requirements of applicable standards. This GenSet is certified to: CSA 22.2 No. 100 Motors and Generators; CSA 22.2 No. 0.4-044 Bonding of Electrical Equipment; CSA 22.2 No. 14 Industrial Control Equipment; and CSA 22.2 No. 0 General Requirements - Canadian Electrical Code, Part II. All low voltage models are CSA-certified to product class 4215-01.

Engine is certified to Stationary Emergency and Non-Emergency U.S. EPA New Source Performance Standards (NSPS), 40 CFR 60 subpart JJJJ.
U.S. applications must be applied per EPA regulations.

ISO 9001:2015 **This product has been manufactured under the controls established by an approved management system that conforms with ISO 9001:2015.**

TECHNOLOGY GENERAL NOTES

1. FOLLOW TELECOM STANDARDS AND PRACTICES. SEE DIVISION 27 SPECIFICATIONS AND T DRAWINGS.
2. REGISTERED COMMUNICATIONS DISTRIBUTION DESIGNER (RCDD) SUPERVISOR SHALL REVIEW, APPROVE AND STAMP ALL SHOP DRAWINGS. COORDINATE DRAWINGS AND RECORD DRAWINGS.
3. ALL WALL PENETRATIONS SHALL BE SEALED WITH APPROVED FIRE STOPPING.
4. REFER TO THE ELECTRICAL FLOOR PLAN DRAWINGS FOR ADDITIONAL ROUGH-IN REQUIREMENTS. WHERE THERE ARE DRAWING DISCREPANCIES, THE CONTRACTOR SHALL INSTALL THE GREATER QUANTITY OF DEVICES.
5. REFER TO THE SITE PLAN ON AND RISER DIAGRAM FOR TELECOMMUNICATION BACKBONE CONDUITS/CABLES. FIELD COORDINATE EXACT ROUTING WITH OTHER TRADES.
6. ALL COMMUNICATIONS EQUIPMENT SHOWN SHALL BE PROVIDED AND INSTALLED BY CONTRACTOR UNLESS NOTED OTHERWISE.
7. BOND ALL COMMUNICATIONS CABINETS, RELAY RACKS, CABLE TRAYS, AND OTHER METALLIC SUPPORTING DEVICES TO TELECOMMUNICATIONS GROUND BUSBAR INSIDE COMMUNICATIONS ROOM. BOND WITH A #6 GROUND CONDUCTOR.
8. ALL HORIZONTAL VOICE AND DATA CABLES SHALL BE DISTRIBUTED VIA MINIMUM 1" CONDUIT AND/OR CABLE TRAY. NO EXCEPTIONS.
9. SINGLE LINE DIAGRAMS, SCHEMATICS, DETAILS AND CONDUIT PATHS SHOWN HEREIN ARE CONCEPTUAL AND ILLUSTRATE ONLY THE FUNCTIONAL RELATIONSHIPS BETWEEN COMPONENTS OF THE SYSTEM. ACCORDINGLY, FULL SHOP DRAWING DEVELOPMENT IS REQUIRED TO REALIZE THE SPECIFIED FUNCTIONS.
10. DEVICE LOCATIONS ON PLANS ARE CONCEPTUAL. LOCATE AS SITE CONDITIONS REQUIRE AND AS APPROVED BY GC.
11. REFER TO THE BID SPECIFICATION FOR ADDITIONAL REQUIREMENTS REGARDING THIS WORK.
12. PAINTING, PATCHING AND FINISHES FOR DEVICES LOCATED IN EXISTING AREAS SHALL MATCH EXISTING FINISHES AS APPROVED BY GC.
13. FINISHES OF DEVICES IN NEW/REMODEL AREAS SHALL BE APPROVED BY GC.
14. WORK AND MATERIALS SHALL CONFORM TO THE MOST CURRENT UNIFORM STANDARD SPECIFICATIONS AND DETAILS FOR CONSTRUCTION AS FURNISHED BY GC. WORK AND MATERIALS NOT IN CONFORMANCE WITH THESE SPECIFICATIONS AND DETAILS ARE SUBJECT TO REMOVAL AND REPLACEMENT AT THE CONTRACTOR'S EXPENSE.
15. IN SOME INSTANCES THE IDF MAY BE OVER 90 METERS FROM THE IP DEVICE DUE TO LEGACY DESIGN STANDARDS WHEN THE BUILDING WAS CONSTRUCTED. IF TESTED CABLE DOES NOT PASS CERTIFICATION, CONTRACTOR MUST USE MIDSPAN EXTENDER INSTALLED INSIDE OF ENCLOSURE. REFERENCE DETAIL SHEETS FOR INSTALLATION DIAGRAM.
16. CABLING INSTALLATION PRACTICES SHALL CONFORM TO ANSI/BICSI N1, AS APPLICABLE. INSTALLED.
17. CABLING SHALL MET THE REQUIREMENTS OF APPLICABLE STANDARDS (E.G., ANSI/TIA-568.2 ANSI/TIA-568.3, ISO/IEC 11801-1). ALL CONNECTORS SHALL BE SELECTED AND PROTECTED AS APPROPRIATE FOR THE ENVIRONMENTAL (E.G., PLENUM SPACE,
18. FOR PASSIVE DAS DISTRIBUTION SYSTEMS, INSTALLATION PROCEDURES SHALL CAREFULLY FOLLOW THE MANUFACTURER'INSTRUCTIONS TO ENSURE A HIGH-QUALITY INSTALLATION WITH MINIMUM PIM.
19. INSTALLED SYSTEMS SHALL BE TESTED WITH A PIM TESTER. ANY DEFECTS FOUND SHALL BE CORRECTED AND THE SYSTEM RETESTED.

GENERAL NOTES

1. FOLLOW TELECOM STANDARDS AND PRACTICES. SEE DIVISION 27 SPECIFICATIONS AND DRAWINGS.
2. REGISTERED COMMUNICATIONS DISTRIBUTION DESIGNER (RCDD) SUPERVISOR SHALL REVIEW, APPROVE AND STAMP ALL SHOP DRAWINGS. COORDINATE DRAWINGS AND RECORD DRAWINGS.
3. ALL WALL PENETRATIONS SHALL BE SEALED WITH APPROVED FIRE STOPPING.
4. REFER TO THE ELECTRICAL FLOOR PLAN DRAWINGS FOR ADDITIONAL ROUGH-IN REQUIREMENTS. WHERE THERE ARE DRAWING DISCREPANCIES, THE CONTRACTOR SHALL INSTALL THE GREATER QUANTITY OF DEVICES.
5. REFER TO THE SITE PLAN ON AND RISER DIAGRAM FOR TELECOMMUNICATION BACKBONE CONDUITS/CABLES. FIELD COORDINATE EXACT ROUTING WITH OTHER TRADES.
6. ALL COMMUNICATIONS EQUIPMENT SHOWN SHALL BE PROVIDED AND INSTALLED BY CONTRACTOR UNLESS NOTED OTHERWISE.
7. BOND ALL COMMUNICATIONS CABINETS, RELAY RACKS, CABLE TRAYS, AND OTHER METALLIC SUPPORTING DEVICES TO TELECOMMUNICATIONS GROUND BUSBAR INSIDE COMMUNICATIONS ROOM. BOND WITH A #6 GROUND CONDUCTOR.
8. ALL HORIZONTAL VOICE AND DATA CABLES SHALL BE DISTRIBUTED VIA MINIMUM 1" CONDUIT AND/OR CABLE TRAY. NO EXCEPTIONS.
9. SINGLE LINE DIAGRAMS, SCHEMATICS, DETAILS AND CONDUIT PATHS SHOWN HEREIN ARE CONCEPTUAL AND ILLUSTRATE ONLY THE FUNCTIONAL RELATIONSHIPS BETWEEN COMPONENTS OF THE SYSTEM. ACCORDINGLY, FULL SHOP DRAWING DEVELOPMENT IS REQUIRED TO REALIZE THE SPECIFIED FUNCTIONS.
10. DEVICE LOCATIONS ON PLANS ARE CONCEPTUAL. LOCATE AS SITE CONDITIONS REQUIRE AND AS APPROVED BY GC.
11. REFER TO THE BID SPECIFICATION FOR ADDITIONAL REQUIREMENTS REGARDING THIS WORK.
12. PAINTING, PATCHING AND FINISHES FOR DEVICES LOCATED IN EXISTING AREAS SHALL MATCH EXISTING FINISHES AS APPROVED BY GC.
13. FINISHES OF DEVICES IN NEW/REMODEL AREAS SHALL BE APPROVED BY GC.
14. WORK AND MATERIALS SHALL CONFORM TO THE MOST CURRENT UNIFORM STANDARD SPECIFICATIONS AND DETAILS FOR CONSTRUCTION AS FURNISHED BY GC. WORK AND MATERIALS NOT IN CONFORMANCE WITH THESE SPECIFICATIONS AND DETAILS ARE SUBJECT TO REMOVAL AND REPLACEMENT AT THE CONTRACTOR'S EXPENSE.
15. IN SOME INSTANCES THE IDF MAY BE OVER 90 METERS FROM THE IP DEVICE DUE TO LEGACY DESIGN STANDARDS WHEN THE BUILDING WAS CONSTRUCTED. IF TESTED CABLE DOES NOT PASS CERTIFICATION, CONTRACTOR MUST USE MIDSPAN EXTENDER INSTALLED INSIDE OF ENCLOSURE. REFERENCE DETAIL SHEETS FOR INSTALLATION DIAGRAM.

GENERAL NOTES:

1. REFER TO GENERAL NOTES, SYMBOLS, AND ABBREVIATIONS SHEETS FOR ADDITIONAL INFORMATION.
2. COORDINATE EQUIPMENT INSTALLATION INSIDE IDF ROOMS WITH IT PROJECT MANAGER.
3. ALL LOW VOLTAGE CABLING SHALL BE INSTALLED IN ACCORDANCE WITH DIVISION 27 SPECIFICATIONS.

KEYED NOTES:

1. TYPE 3 75" FLAT PANEL DISPLAY WITH A/V BACK BOX AT 60" AFF.
2. HDMI OVER CAT6 VIDEO RECEIVER.
3. HDMI OVER CAT6 VIDEO TRANSMITTER.
4. MOTORIZED SCREEN. THROW DISTANCE IS APPROXIMATE, A/V CONTRACTOR SHALL SUBMIT SHOP DRAWING FOR PROJECTOR PLACEMENT.
5. MOTORIZED PROJECTOR LIFT
6. OVERHEAD PROJECTOR (TYPICAL). REFERENCE SPECIFICATIONS, DETAIL D3/TA-601.
7. LOUDSPEAKER TYPE 1. CEILING SURFACE MOUNT. A/V CONTRACTOR SHALL SUBMIT SHOP DRAWING FOR SPEAKER PLACEMENT.
8. TYPE 2 65" FLAT PANEL DISPLAY WITH A/V BACK BOX AT 60" AFF.
9. DSP, PROCESSOR, AND VIDEO MATRIX LOCATION. REFERENCE SCHEDULE.
10. WIRELESS MICROPHONE SYSTEM. REFER TO SPECIFICATIONS FOR SYSTEM DETAILS AND QUANTITIES.
11. COMBINATION OF A/V, DATA, ELECTRICAL FLOOR BOX. A/V BY AV CONTRACTOR (DIV. 27). DATA BY TELECOM (DIV. 27). FLOOR BOXES AND CONDUITS BY ELECTRICAL (DIV. 26). REFERENCE ELECTRICAL AND TELECOM DRAWINGS. TYPICAL FOR ALL FLOOR BOXES.
12. CABLE CUBBY TYPE 1 (TYPICAL) REFERENCE SPECIFICATIONS, A/V DEVICE SCHEDULE.
13. TOUCH PANEL DISPLAY TYPE 1 (TYPICAL).
14. TOUCH PANEL DISPLAY TYPE 2 (TYPICAL).
15. A/V CABINET MOUNTED IN CREDENZA. A/V CONTRACTOR SHALL COORDINATE WITH FURNITURE AND PROVIDE SHOP DRAWING FOR CREDENZA DETAIL.
16. ROOM SCHEDULER.
17. VIDEO CONFERENCE CAMERA SYSTEM WITH WIRELESS VIDEO CAPABILITY. CENTER TO DISPLAY AND MOUNTED MINIMUM 48" AFF.
18. WIRELESS VIDEO RECEIVER.
19. VIDEO CONFERENCE PTZ CAMERA.
20. LOUDSPEAKER TYPE 2. CEILING PENDANT MOUNT. A/V CONTRACTOR SHALL SUBMIT SHOP DRAWING FOR SPEAKER PLACEMENT.
21. 70V AUDIO AMPLIFIER.

GENERAL NOTES:

1. TELECOMMUNICATIONS INFRASTRUCTURE SHALL BE INSTALLED IN ACCORDANCE WITH DIVISION 27
2. REFERENCE ELECTRICAL DRAWINGS FOR CONDUIT ROUGH INS
3. REFERENCE TELECOMMUNICATIONS DRAWINGS FOR NETWOK CABLING
4. SUBMIT SHOP DRAWING AS REQUIRED AND FOR APPROVAL PRIOR TO THE INSTALLATION OF ALL A/V EQUIPMENT
5. A/V EQUIPMENT LISTED IN AV SCHEDULE ARE SELECTED AS A BASIS OF DESIGN AS PER THE SPECIFICATIONS. CONTRACTOR SHALL SUBMIT DATASHEETS AND SHOP DRAWINGS FOR APPROVAL AS REQUIRED. ALTERNATE EQUIPMENT WILL BE REVIEWED FOR APPROVAL AS IT COMPARES TO THE BASIS OF DESIGN. THE FINAL ACCEPTANCE OF THE ALTERNATE PRODUCT IS THE SOLE DISCRETION OF THE CONSULT AND/OR OWNERS REPRESENTATIVE.

* THIS TABLE IS REFERENCED AND IS SHOWN AS AN EXAMPLE OF ACCEPTABLE CABLE DESIGNATIONS. CONTRACTOR SHALL UTILIZE CABLE DESIGNATION TABLE FOR SHOP DRAWING AND RECORD DRAWING SUBMITTALS.

CCVS SYSTEM NOTES

1. ALL OUTDOOR CAMERAS, TERMINATION BOXES, AND PULLBOXES SHALL BE INSTALLED WITH WEATHER RESISTANT HARDWARE.
2. PROVIDE ALL INTEGRATION WITH ALARM ACCESS CONTROL SYSTEM COMPONENTS AND SECURITY COMMUNICATIONS SYSTEM.
3. PROVIDE ALL COORDINATION WITH OTHER DISCIPLINES FOR INSTALLATION OF EQUIPMENT.
4. COORDINATE ALL SITE WORK WITH OWNER'S REP.
5. DRAWINGS INDICATE CAMERA 'HOME POSITIONS'. VERIFY FIELD OF VIEW WITH MDACC AND DESIGN CONSULTANT DURING INSTALLATION. SUBSTITUTION OF LENS TYPE & SIZE TO ACCOMPLISH INTENDED FIELD OF VIEW SHALL BE AT NO ADDITIONAL COST.
6. CAMERAS MAY INCLUDE MULTIPLE TRANSMISSION METHODS. VERIFY EACH CAMERA PRIOR TO INSTALLATION.
7. FIELD VERIFY ALL CAMERA LOCATIONS PROIR TO INSTALLATION. CAMERA MAY BE RELOCATED WITHIN 25' OF LOCATION SHOWN ON FLOOR PLANS WITHOUT ADDITIONAL COST.

ACS SYSTEM NOTES

1. ALL OUTDOOR MOUNTED CARD READERS SHALL BE INSTALLED WITH WEATHER RESISTANT AND TAMPER PROOF HARDWARE.
2. CARD READER PEDESTALS SHALL BE SIZED FOR VOICE COMMUNICATIONS.
3. PROVIDE ALL INTEGRATION WITH CLOSED CIRCUIT VIDEO SURVEILLANCE COMPONENTS AND SECURITY COMMUNICATION SYSTEM.
4. PROVIDE ALL COORDINATION WITH OTHER DISCIPLINES FOR INSTALLATION OF EQUIPMENT.
5. COORDINATE ALL SITE WORK WITH OWNERS REP.

SECURITY COMMUNICATION SYSTEM

1. ALL OUTDOOR STATIONS SHALL BE INSTALLED WITH WEATHER RESISTANT AND TAMPER PROOF HARDWARE.
2. PROVIDE ALL INTEGRATION WITH CLOSED CIRCUIT VIDEO SURVEILLANCE (CCVS) SYSTEM AND ACS.
3. COORDINATE WITH OWNER PROVISION OF TELEPHONE CIRCUIT FOR THE COMMUNICATION STATIONS.
4. PROVIDE ALL COORDINATION WITH OTHER DISCIPLINES FOR INSTALLATION OF EQUIPMENT.
5. COORDINATE ALL SITE WORK WITH OWNERS REP.

GENERAL NOTES

1. THE FOLLOWING GENERAL NOTES ARE APPLICABLE AS STATED BELOW, EXCEPT WHERE SPECIFICALLY INDICATED OTHERWISE, ON THE DRAWINGS OR IN THE BID SPECIFICATION.
2. SINGLE LINE DIAGRAMS, SCHEMATICS, DETAILS AND CONDUIT PATHS SHOWN HEREIN ARE CONCEPTUAL AND ILLUSTRATE ONLY THE FUNCTIONAL RELATIONSHIPS BETWEEN COMPONENTS OF THE SYSTEM. ACCORDINGLY, FULL SHOP DRAWING DEVELOPMENT IS REQUIRED TO REALIZE THE SPECIFIED FUNCTIONS.
3. DEVICE LOCATIONS ON PLANS ARE CONCEPTUAL. LOCATE AS SITE CONDITIONS REQUIRE AND AS APPROVED BY THE OWNER.
4. REFER TO THE BID SPECIFICATION FOR ADDITIONAL REQUIREMENTS REGARDING THIS WORK.
5. INSTALL WALL MOUNTED CARD READERS, PUSH BUTTON SWITCHES, KEYPADS, KEY SWITCHES AND OTHER WALL MOUNTED FIELD DEVICES, AT 48 INCHES MAXIMUM ABOVE FINISHED FLOOR, UNLESS OTHERWISE NOTED. MOUNTING HEIGHT SHALL COMPLY WITH TEXAS ACCESSIBILITY STANDARD (TAS).
6. PROVIDE PAINTING, PATCHING AND FINISHES, OF MATERIALS AND DEVICES, AS APPROVED BY THE OWNER.
7. DOOR DETAILS ILLUSTRATE FUNCTIONAL RELATIONSHIPS. ACTUAL ARCHITECTURAL CONDITIONS (SUCH AS DIRECTION OF SWING AND HAND OF DOOR) MAY VARY.
8. WORK AND MATERIALS TO CONFORM TO THE MOST CURRENT UNIFORM STANDARD SPECIFICATIONS, ASSOCIATED CODES REFERENCED BY THE (AHJ) AUTHORITY HAVING JURISDICTION, AND DETAILS FOR CONSTRUCTION, AS FURNISHED BY THE OWNER. WORK AND MATERIALS, NOT IN CONFORMANCE WITH PROJECT SPECIFICATIONS AND DETAILS, ARE SUBJECT TO REMOVAL AND REPLACEMENT AT THE CONTRACTOR'S EXPENSE.
9. FOR INFORMATION REGARDING FIRE RATINGS AND OCCUPANCY SEPARATIONS, REFER TO ARCHITECTURAL PLANS AND SPECIFICATIONS.
10. NEW CONDUIT CONNECTIONS TO INCLUDE INTEGRAL PROTECTIVE BUSHINGS OR CHASE NIPPLES.
11. NEW CONDUIT FOR FUTURE USE TO BE FILLED WITH 200 POUND STRENGTH PULL LINE. PROVIDE LABELING ON EACH END OF THE PULL LINE TO INDICATE LOCATION OF OTHER END.
12. NEW CONDUITS SHALL BE CONCEALED WHENEVER POSSIBLE. SURFACE MOUNTED CONDUITS ARE PERMISSIBLE ONLY WHERE APPROVED. USE ONLY CONCEALED CONDUITS WITHIN FINISHED SPACES. THE ABOVE STANDARDS ALSO APPLY TO EXTERIOR SPACES. SEEK APPROVAL FROM THE OWNER FOR EACH AREA WHERE SURFACE CONDUIT IS NECESSARY.
13. JUNCTION BOXES SHALL BE MINIMUM 4 INCH SQUARE DEEP STYLE, SIZED AS REQUIRED TO ACCOMMODATE CONDUITS UNLESS OTHERWISE NOTED. PROVIDE MOUNTING RING AS REQUIRED. PROVIDE A BLANK COVER PLATE FOR JUNCTION BOXES AND PULL BOXES WITH NO DEVICE.
14. EXPOSED BOXES AND PANELS, MOUNTED IN OR ON EXTERIOR WALLS, TO BE NEMA 4.
15. NEW CONDUIT TO BE 3/4 INCH EMT MINIMUM, UNLESS OTHERWISE NOTED. EXTERIOR CONDUIT TO BE RIGID.
16. USE 120VAC CIRCUITS UNLESS OTHERWISE NOTED. VERIFY CURRENT LOAD ON EXISTING CIRCUITS BEFORE CONNECTING NEW LOADS. COORDINATE WITH OWNER IF ADDITIONAL CIRCUITS ARE REQUIRED.
17. CONTRACTOR TO VERIFY CONDUIT AND PLENUM CABLE PATHS INDICATED ON THE DRAWINGS. CONTRACTOR MAY PROPOSE ALTERNATE ROUTING WHERE CONFLICTS ARE FOUND.
18. CONTRACTOR IS RESPONSIBLE FOR CEILING INTEGRITY, THIS INCLUDES ROUTING ABOVE CONCEALED SPLINE INTERLOCKING TILES.
19. CONTRACTOR TO OBTAIN RECERTIFICATION FOR FIRE RATED DOOR FRAME AND DOOR MODIFIED BY THIS PROJECT.
20. ACCESS CONTROL LOW VOLTAGE WIRING TO BE PLENUM RATED.
21. DO NOT EXCEED 180° IN AGGREGATE CONDUIT BENDS WITHOUT PULLBOX.
22. PROVIDE GROUND BUSHING ON ALL CONDUIT END IN EQUIPMENT ROOM. BOND TO APPROVED BUILDING GROUND.
23. LABEL CONDUIT EVERY 50' WITH DEVICE ID & EQUIPMENT ROOM ID WITH PERMANENT INK CABLE MADE WITH LASER CABLE MAKER. SECURE TO CONDUIT WITH CLEAR TAPE.
24. ALL WALL AND FLOOR PENETRATIONS SHALL BE SEALED WITH APPROVED FIRE STOP.
25. ALL CABLES NOT IN CONDUIT ABOVE DROP CEILING SHALL BE INSTALLED IN MIN, 1" J-HOOK EVERY 5'-8". DO NOT EXCEED 40% FILL.
26. LABEL CABLE NOT IN CONDUIT EVERY 50' WITH DEVICE ID & EQUIPMENT ROOM ID. USE PERMANENT INK LABEL MAKER. SECURE TO CABLE WITH CLEAR TAPE.
27. LOCATE DEVICES AS SITE CONDITIONS REQUIRE.
28. FIELD VERIFY ALL DIMENSIONS.
29. REFER TO THE SPECIFICATION FOR ADDITIONAL REQUIREMENTS REGARDING THIS WORK. CONTRACTOR TO PREPARE PROPOSAL FOR EACH DISCIPLINE. PROVIDE COORDINATION BETWEEN DISCIPLINES FOR CONSTRUCTION.
30. NOTIFY DESIGN CONSULTANT AND OWNER WHERE EXISTING CONDITIONS REQUIRE REPAIR PRIOR TO INSTALLATION.
31. COORDINATE ALL WORK WITH GENERAL CONTRACTOR.
32. ALL CABLE PULLS WITHIN EXISTING AND NEW CONDUITS TO BE MADE AT SAME TIME.
33. COORDINATE WITH FIRE ALARM CONTRACTOR TO MAKE CONNECTION TO ACCESS CONTROL SYSTEM FOR CARD READER CONTROLLED AND ELECTRICALLY LOCK DOOR RELEASE. FIRE ALARM RELAY SHALL BE BY FIRE ALARM CONTRACTOR. CONNECTIVITY TO ACCESS CONTROL PANEL SHALL BE BY SECURITY CONTRACTOR.

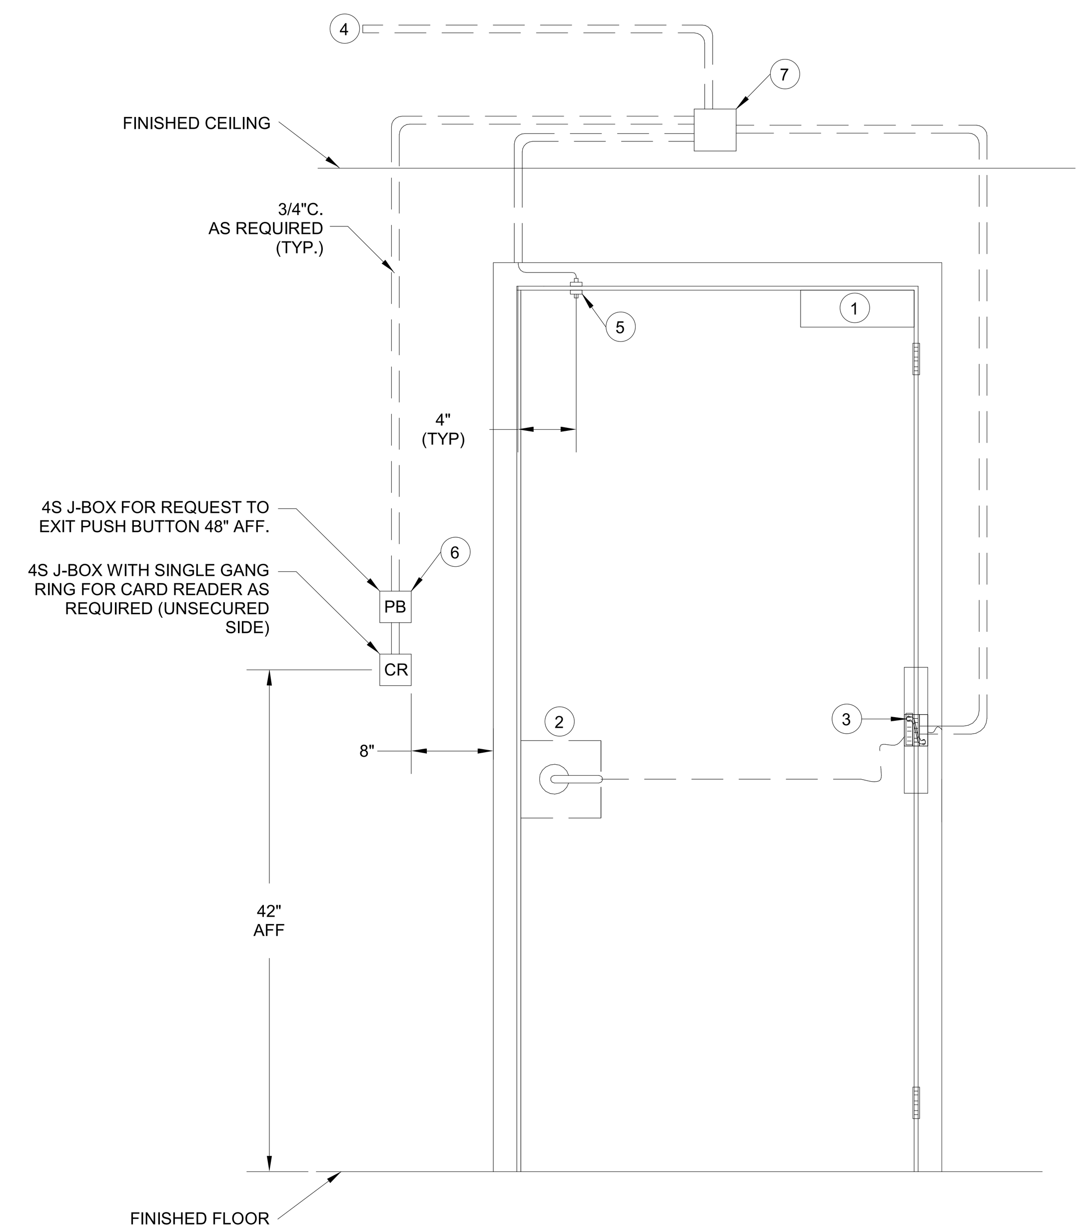
E2 SECURITY DOOR - ELECTRIC MORTISE LOCK (DOUBLE DOOR)
NTS

GENERAL NOTES:

1. VIEW SHOWN IS FROM SECURED SIDE OF PORTAL. CONDUIT, BOXES AND EQUIPMENT SHALL BE MOUNTED ON SECURED SIDE OF PORTAL, UNLESS OTHERWISE NOTED.
2. CONDUITS MAY BE COMBINED. IF COMBINED, CONTRACTOR SHALL ENSURE CONDUIT IS SIZED TO ACCEPT REQUIRED CONDUCTORS PER NEC.
3. COORDINATE MOUNTING LOCATIONS, ROUGH-IN AND FINISHES WITH THE OWNER.
4. CONDUIT SHALL BE CONCEALED UNLESS OTHERWISE NOTED.
5. DOOR HARDWARE SHOWN FOR REFERENCE ONLY. TYPE OF HARDWARE MAY VARY. ALL DOOR HARDWARE SHALL HAVE KEY CYLINDER UNLESS NOTED OTHERWISE. DOOR HARDWARE BY DIV.8.
6. PROVIDE CONDUIT ONLY WHERE WIRING CANNOT ROUTE IN DOOR FRAME.
7. ALL SECURITY DOORS SHALL HAVE DOOR CLOSER.

KEY NOTES:

1. DOOR COORDINATOR (PROVIDED BY DIV.8).
2. ELECTRIFIED MORTISE LOCK WITH BUILT-IN REX (BY DIV.8).
3. ELECTRIC POWER TRANSFER (BY DIV.8).
4. 1"C. TO NEAREST CABLE TRAY. EXTEND CABLES TO MDF/IDF ROOM FOR CONNECTION TO ACP.
5. DOOR POSITION SWITCH, FLUSH MOUNT.
6. MANUAL FLUSH BOLT (BY DIV. 8.)
7. REQUEST TO EXIT (REX) PUSH BUTTON.
8. CONCEALED 8"x8"x4" JUNCTION BOX ACCESSIBLE FROM SECURE SIDE OF DOOR.



C2 SECURITY DOOR - ELECTRIC MORTISE LOCK (SINGLE DOOR)
NTS

GENERAL NOTES:

1. VIEW SHOWN IS FROM SECURED SIDE OF PORTAL. CONDUIT, BOXES AND EQUIPMENT SHALL BE MOUNTED ON SECURED SIDE OF PORTAL, UNLESS OTHERWISE NOTED.
